Dewey apparently took the point of view that, although the law gives the Secretary of the Treasury only one vote, the board is only a Treasury bureau; and therefore, like any other department, must accept Treasury dictation. This is not fact. Like the Federal Reserve or the Federal Trade Commission, the Farm Loan Board is empowered with autonomy and independence.

The board demonstrated, in June, 1926, its feeling by excluding Mr. Dewey from its meetings on the ground that the Secretary alone was a member. The term of Cooper, the Farm Loan Commissioner, was almost at an end; Mr. Mellon did not renew Cooper's appointment, but promoted Williams to the commissionership, with the understanding that it was a temporary appointment. And the Treasury prepared legislation, known later as the McLean-McFadden bill, providing for Treasury domination of the banks. The great importance of this is treated later. The legislation failed to pass. The testimony of several members of the board so displeased the Treasury that their resignations occurred. Having failed to achieve by the McLean-McFadden proposal the desired control of the board by the Treasury, the obvious alternative means was utilized; to the memberships vacated the Treasury dictated the appointments, securing a board which would subordinate every consideration to the dictates of Treasury policy.

Eugene Meyer was appointed farm-loan commissioner, after repeated rumors for 18 months that he was to have the place. The other new appointees are war finance subordinates of Meyer, Cooksey, and Harrison. With Williams's and Mellon's votes, no opposition to Treasury policy could be effective. In effect, the farmers' great property is thus completely federalized, although such a result is obviously unjust administration of the law.

NEW ATTEMPT TO ORGANIZE BORROWERS VIOLENTLY OPPOSED BY LAND BANKS AND POLITICAL APPOINTEES

After the adoption of the Farm Bureau's resolutions, Carl Vrooman was appointed head of a national federation of farm-loan borrowers, and the work of organizing the actual members of the system commenced. The officials of various land banks denounced this body, the president of the Texas bank going to the length of writing a vigorous condemnation to associations, warning them to have nothing to do with it. The land banks used publicity resources at their command to check the growth of this perfectly proper federation, charging that Mr. Vrooman was making political capital of the matter, instead of actually taking an intelligent forward step.

III

PRESENT SITUATION

FEDERAL BANKS' REAL-ESTATE ASSETS AND DIVIDENDS

The Federal Farm Loan Board early set up but did not announce an arbitrary and discriminatory policy concerning acquired real estate. Explanation first appears in the 1925 annual report of the board. About 18 months ago notation began to appear on the monthly mimeographed statement of the bank's condition, "All real estate acquired by foreclosure or deed charged off immediately upon acquisition." This meant that lands worth millions in some years (an amount never stated until about 18 months ago, when a new item began to appear—"Less real estate acquired" * * * seven millions or more) was not shown in any way as possession of the system, not valued at a cent as admitted assets. Meanwhile joint-stock banks were allowed to count acquired lands as assets, and are at present only required to write off such holdings at the rate of 20 per cent annually. Had Federals not been handicapped by a charge-off of 100 per cent, stockholders on the farm must have enjoyed greatly increased dividends. Now the handicap is reduced only to 80 per cent.

Furthermore, these actual assets in lands were held in what amounted to secret accounts; and other assets, entered in the financial statements as undivided profits, were held up from year to year—several millions appear in successive statements. Neither of these practices would have been permitted in national banks. The national banking act forbids the keeping of any secret account. If directors do not voluntarily distribute net earnings as dividends in reasonable amount, provision is made that stockholders may apply to the courts to compel such distribution.

Despite the facts that at least two of the Federal banks are known to have been disposing of lands as fast as possible, and that Treasury policy, as expressed in the controversial rules and advices to banks by the board, has dictated that all banks should close out acquired lands as rapidly as possible, the monthly figures for acquired lands have risen steadily month after month, until they stood June 30, 1927, at $14,004,738, practically double the amount of November 30, 1925. This amount was listed neither among assets nor liabilities, but deducted from net earnings in accordance with the charge off of 100 per cent. July 30 this amount had been reduced to $12,000,000, suggesting that Meyer, in power, is pressing for disposal of these assets.

In regard to the subject of acquired lands, it is of the greatest importance that this admittedly huge property of the banks should be safeguarded: (1) By full information about every farm that has been taken in; (2) real and appraised value and loan upon it; (3) by close scrutiny of all transactions by which farms have been disposed of; (4) by amendments to the law which will compel a proper set-up of this real estate account; and (5) removal of discrimination between the Federals and joint stocks in regard to accounting such acquired real estate as assets. In just such discrimination lies a large advantage unfairly enjoyed by joint stocks.

LOCAL SITUATIONS

By 1924 the Spokane Federal Land Bank was heavily overburdened with land. In 1925 delinquencies were such that the bank faced serious trouble. Before default or interest on their bonds occurred—the only condition stated by the act as warranting calling upon other banks for help—the other 11 banks "anticipated the difficulty." They set up without legal authority the Spokane commission. In hearings before the Appropriations Committee is found testimony that the overburden of land amounted to eight or ten millions—whether by appraisal or reappraisal, of what date is not stated. Other banks pledged out of their undivided profits some four million, paying in one million in 1925. No details of the terms of the agreement have yet been furnished and the annual statements of Federal land banks do not usually furnish the highly pertinent facts to stockholders concerning why they have not received full dividends, or upon what basis they will eventually receive dividends from the funds so diverted, assuming that the Spokane Land Bank pays out. It appears that information has deliberately been withheld.

This bank's situation points an important moral. Stockholders of all banks should be assured of information and protection in case of such distress. It should be impossible to hide a secret insolvency, or the terms of agreement by which funds available for dividends are diverted to another bank's use. Stockholders in the distressed bank, which may be unable for many years to pay dividends, should have full facts.

The affairs of the Spokane commission, conducted by three commissioners—one of whom is Willard D. Ellis, of the Berkeley bank—appear to be conducted without sufficient light upon them.

ST. PAUL FEDERAL LAND BANK

Something like a year ago a considerable body of farms held by the banks was dumped at forced sale, some of it going as low, it is said, as $4 an acre. The total price brought by real estate valued close to $1,000,000 was less than $350,000.

This transaction, as well as the Spokane case, indicates the necessity for close scrutiny of all transactions in the disposal of acquired real estate; not merely how much the land brought is necessary to know, but who bought it; what those lands would probably be worth if held the entire five years allowed by law; whether the method of disposal deflated the value of surrounding farm lands; in every particular whether the bank's stockholders have had to accept an unavoidable loss.

Other banks in the system must have suffered heavily from flood losses in 1927. This and the long-continued depression eloquently illustrated by the $14,000,000 of lands the farmer's system had on hand June 30, bespeak the continuing character of this problem and the importance of safeguarding not merely stockholders but all farmers against losses by deflation in land values precipitated by a country-wide policy of dumping any overburden of lands at periods when forced sale on a glutted market means deeper depression for agriculture as a whole.

BERKELEY

A defalcation of some $17,000 or more occurred in the Berkeley Federal Land Bank in June, 1924. Burke, the cashier, confessed to embezzlement. Later he committed suicide. The assistant treasurer of the bank confessed to petty peculations at the time, it is alleged, that Burke's theft was discovered. Later, examiners found that many entries attributed to Burke were in the second man's handwriting. The California Farm Bureau Federation and George H. Sawyer, a stockholder-director of the Berkeley Federal Land Bank, jointly charged that Willard D. Ellis, the president, withheld the information of the assistant treasurer's confession from bank examiners. Discovery of evidence did not result in the assistant treasurer's dismissal. He was retained in bank employ with only slightly limited opportunity for further falsification of the books and only restricted opportunity for further embezzlement. He left in January, 1926.

After delays, hearings were conducted by the Federal board. No steps were taken toward prosecution.

Charges against this president, Ellis, included malfeasance and misapplication of funds: (a) withholding information from stockholders and directors; (b) favoring Utah in the allocation of bank moneys (he is a Utahan); (c) raising the amount of a loan in the absence of the required unanimous approval of the association's officials of the amount; (d) refusing to carry out the orders of the board of directors of the bank; (e) ignoring the requests of local associations; (f) barring directors from access to the bank's records; etc.

It was early in 1927 before the Federal Farm Loan Board gave down its decision whitewashing Mr. Ellis. No steps were taken to interfere with the liberty of the assistant treasurer. The accusation that Mr. Ellis was an abettor of Mr. Shaw implied that if the shielded employee who had confessed to guilt were prosecuted, Mr. Ellis also might have been.

Stockholders in the land banks must rely on prompt and thoroughgoing prosecution of offenders under the penal clauses of the act. That the Farm Loan Board should take two and one-half years to make a decision whether or not to act, and apparently dismiss the charges without specific discussion of each allegation, does not tend to increase the faith of investigators in the competency of that body nor promote belief that the system is even relatively free from political pressures.

The California Farm Bureau Federation renewed these charges in 1927, on the ground that intermediate credit funds and loans had been mismanaged. The charges come before a new commissioner who has opportunity to demonstrate his real interest in justice by conducting clearly impartial hearings.

NATIONAL PROBLEMS

SHALL LOST INDEPENDENCE OF FEDERAL FARM LOAN BOARD BE REGAINED?

Independence of the Farm Loan Board is as important to farmers' banks as the independence of the Federal Reserve Board is to national banks. Formulation of policy should be independent of changing administrations. The handling of immense credit problems should be by specially equipped men who devote their whole time to that and continue in long-term appointments without regard to shifts of Federal administrations; and, finally, in position and empowered to adopt policy not necessarily a unit with Treasury practices.

Subjugation of the Federal board to the Treasury was one of the main issues involved in the joint-stock row. This is vastly important to Federal land banks because:

(a) The farm-loan system has vast possibilities if used as a reserve system for agricultural credit, as the Federal reserve system is used for commercial credits.

(b) Salaries and expenses of the board and land banks and all employees of the farm-loan system are paid for out of land-bank funds, farmers' money. This is a private, not a Federal, bureau, not subject even to Treasury rules of civil service or audit, although nominally connected with the Treasury.

If new appointees who favor subjugation of the Federal Farm Loan Board to the Treasury and the reduction of the board to a mere bureau of that department are confirmed, the complete loss of independence of the board will probably immediately be reflected in a still further loss to the system, even of hope of independence in the operation of the farmers' banks, to the end that interest will be lowered, bond sale controlled, and banks operated by real representatives of stockholders.

Recommendation: That appointees to the Federal board be closely scrutinized and their affiliations and records examined. Those who do not pass muster should be consistently opposed in the Senate. This is a major matter at the present time.

(2) That the autonomy of this board be reestablished by securing an amendment striking out the phrase "a bureau of the Treasury" from the act.

RESTRICT THE FEDERAL BOARD TO SUPERVISION ONLY

Return management to stockholders: Independence of the banks and associations depends on the restriction of the Farm Loan Board to powers of supervision only. The Treasury aptly pointed out at hearings in 1927 that the Farm Loan Board was both managing and supervising; that it was impossible for one body to perform both functions. This is a fundamental truth. The act gave management to stockholders, supervision to the Federal board.

Recommendation: That a complete audit be made of the affairs of the Federal land banks, covering not merely recent transactions but the eight hundred and eighty millions which passed through the Treasury up to May, 1924. Congress may be appealed to to order an investigation and to require strict periodic audit both of Treasury and land-bank accounts and records of the fiscal agent's transactions and expenses of his office. (Specific recommendations later indicate how the Federal board may be restricted to supervision only.)

PREVENT FARMERS' SYSTEM FROM BECOMING AN EXPLOITED SUPERSTATE POLITICAL STRUCTURE SUPPORTED OUT OF FARMERS' FUNDS

Consider the network of associations, averaging about two to a county, over the entire United States; divided between 12 land banks, each covering several States, all under the control of the Federal Farm Loan Board, at present under the Treasury—an ideal machine when manned by political appointees (as it is) for developing a new superstate political system of 12 units, with power to divert from States or areas needed loans; and in command of a huge traveling field force of political appointees upon whose recommendations depend the ability of farmers to secure loans.

This system offers the largest number of appointments not under civil service. Members of the Senate, of both parties, have usually nominated appointees. Appraisers appointed have naturally been assigned to the districts with which they are familiar, usually covering the district of the Senator to whom they are particularly indebted for appointment. These appraisers may never be called on to do favors, but venal legislators could secure a return of favors, if the appraiser proved willing; such as, favoritism in recommending loans in a certain congressional district; a liberal allowance in individual loans; keeping up political fences at no expense to the politician involved. (Appraisers travel at farmers' expense, but stockholders never see the bills and have no power to insist upon economy if they did see them.)

Reports of such occurrence are already current. The land bank is already a political power in numerous districts. The huge power of the millions it annually lends makes Members of Congress in practically every land-bank district take notice. It has power to punish a recalcitrant Senator, without being found out, by refusing him desired patronage, cutting his State short in loans, or instructing these traveling forces to work against this or that man. Similarly it can reward a "good" one.

Federations of secretary-treasurers, most of whom are nonstockholders, have, it is said, on occasion spent stockholders' money with land-bank approval to secure passage of legislation or confirmation of appointees not in stockholders' best interests.

Formerly this was a bipartisan situation. Now, with the Federal board subjugated to the position of a bureau in the Treasury, a single political party—that in power—may utilize all these appointments, for the banks are part of the spoils system. The Treasury now is nominating all appointees.

Recommendation: It is therefore all important that civil service, however deficient a safeguard, be instituted. This may be done without amendment to the law if the President so orders.

Citizens generally should note the inimical possibilities in this situation if one party, or members of both in agreement, sanction or wink at the abuse of lending power or use of farmers' funds to accomplish political results or sustain appointees in power.

FARM LOAN STRUCTURE AND PRACTICES

RECOMMENDATIONS

(a) Voting: Every stockholder should cast one vote. Cooperatives are associations of persons rather than of capital. Instead of the present method of voting of all stock by a secretary-treasurer, who more often than not is not even a stockholder, relieving stockholders of a responsibility that cooperation requires they should personally discharge, the one-man-one-vote plan would encourage participation in land-bank affairs.

This step appears relatively insignificant but is actually important to the responsibile assumption of full control by stockholders.

(b) Stock: Each shareholder should receive actual certificates when he purchases stock in the land bank. These may not be hypothecated nor sold, but actual possession of these securities is important to increasing both sense of property in and responsibility for participation of control in the land bank. Stockholders now receive only receipts; the association holds the shares and the secretary casts one vote for every 20 shares. This constitutes prexy voting, which is noncooperative.

(c) Stockholders only should be secretaries: This is the key position of the association. The man who holds it should have a pocket interest in the association and the land bank. Federations of secretaries now maintained in some districts would become stockholders' federations automatically.

(d) Stockholders only should be eligible to election as directors.

(e) Control of land bank boards should be restored, reducing Government representation to a minority and giving stockholders a clear and full majority of elected directors.

(f) Elections: It would appear desirable to revamp election machinery to permit direct casting of votes locally by stockholders; the safeguarding of the work of land-bank tellers; perhaps by providing for review by stockholders' election committee; the limitation of election expense chargeable to stockholders; stated publicity for stockholder candidates; and provisions concerning the furnishing of lists of names of officers and addresses of all associations in each district. Printed directions to stockholders regarding elections should be sent out.

(g) Cooperative education: The act now provides for the expenditure of moneys, at the discretion of the Federal board, to promote necessary knowledge of cooperation. This has been sparingly availed of in any real sense. District or subdistrict courses might readily be offered to instruct stockholders in the potentialities of cooperative organization for credit of the three particularly needed types: Productive, intermediate, and mortgage; the cooperative spirit might be greatly encouraged.

Secretaries might be offered instruction in farm-loan accounting and business methods which would render them efficient. Without such instruction, able-enough farmers might necessarily stumble along for a considerable period. This is a farmers' enterprise in which their training to self-help requires more than a crutch. Education is essential. Discussion should be promoted, not stifled.

(h) All Federal appointments should go under civil service and a scale of remuneration consistent with both good service and economy.

(i) Except in Territorial or insular possessions branch banks should be abolished. There is no excuse for having a district bank and a branch in the same State. In fact, it would appear that there is no need for expensive branches anywhere.

(j) The membership of the Federal Farm Loan Board should be decreased to five, the original number. Two extra mean unnecessary expense, not only in their own salaries but in assistants, etc. Corey promptly required a subordinate at $7,500, besides other service.

(k) Procedure by which the 12 banks may, if advisable, set up extra bodies like the Spokane commission in anticipation of default, instead of after default as specified in the act, should be authorized by law and duties, responsibilities, and powers defined. Stockholders of all 12 banks should be informed what part of their dividends are devoted to the support of any one or more of the banks in the system requiring assistance.

(l) Information: Two sources of information, the annual report of the Farm Loan Board and the annual statement of each bank, now prove deficient in information to protect stockholders. Reports of financial condition of each bank should contain salient features of the actual conditions and problems of other banks to whose support any actual earnings of other banks of the system must be pledged.

Not merely should full figures be given so that experts employed by farmers would possess all essential information to judge the static condition of their business, but (a) its rate of progression, (b) the basis upon which dividends were declared, (c) expenses of operation and of bond sale, and (d) all items of genuine importance to understanding sources of profit and loss, and essential policies.

RECOMMENDATIONS

(1) That Congress lay down for the Federal Farm Loan Board methods by which, as a Government agency, it can give a model account of its activities; and require that board to provide for all land banks a uniform model report covering all desirable points and such interpretation that such stockholders as are conversant with financial matters would find before them all necessary data.

(2) That an annual statement, not expensively gotten up, be sent to each stockholder, not merely to each association.

(3) That all land-bank monthly bulletins shall go to all stockholders or cease publication. They are now for the most part ballyhoo sheets for their politically appointed managers. Only one of those available appears to contain the right sort of information, and so far as known none go to all stockholders of the district, but only to associations. Their purpose should be cooperative education rather than to strengthen the position of the political land-bank organization. If genuinely cooperative, such a sheet could promote stockholders' meetings which would make for good spirit and acquaintance that would further the election of men of good ability from amongst them.

(4) Publicity through the press and magazines should use all sources, and supply full facts and figures to any willing to help publish discussions of this great agency. The stockholders, rather than the Federal board, should set this policy.

BOND SALE

Recommendation: That with or without stockholder control all arbitrary assumptions concerning bond sales should be tested; for example, that farmers are securing their huge funds at the cheapest market price for money. The bond rate on farm-loan securities is not infrequently 4¾ per cent and never below 4. Would not these tax-exempt securities be tempting to investors, small as well as large, at 4 per cent or lower?

Another arbitrary assumption is that the market will absorb only about one hundred and twenty-five to one hundred and fifty millions of these bonds a year? Is this true? Or is it the preference of the present bond syndicate to offer only this amount?

The needs of agriculture would apparently dictate that every means be tested by which sufficient funds bearing the lowest tempting rate of interest on the bonds be found to lend on all approved applications. A low bond rate means a low rate for farmers.

Continuous marketing would appear advantageous. National banks with trust companies attached sell short-term real estate bonds over their counters. By cultivation of a market for long-term mortgage securities an entirely new type of universal and continuous distribution might be worked out for farm-loan securities. Or former stockholders may market their own securities by setting up a full-fledged fiscal agency which will develop the never-realized anticipation of sale of farm-loan bonds of small denomination to hosts of people rather than big blocks to the rich.

In any case, bond distribution should not be by agreements preferential, exclusive and actually secret, as at present. Contracts should govern sale, and the Farm Loan Board as a Federal agency should furnish a model to corporations by supplying stockholders and bondholders with the facts concerning terms, fees, commissions, and all pertinent data of these important transactions by which the funds to lend farmers are found.

FISCAL AGENT

If stockholders consider a fiscal agent desirable they may properly demand that his duties, powers, and responsibilities be defined by amendment to the act.

Full and direct report should be required in connection with expenses and salary for himself and staff as well as all bond-sale transactions, to stockholders or their elected representatives.

If the secondary market or resale transactions require the use of farmers' land bank funds the act should specifically empower the banks through the fiscal agent to buy and sell securities and safeguard stockholders by the best devisable means.

INTEREST RATE

Farmers, entitled to a sympathetic administration of the farm loan act, may properly insist upon such efficiency of employees and economy of administration, that the interest rate may either be lowered outright, or the same end accomplished by dividends returned if the net earnings warrant, without reference to what may happen to the margin of competitors' profit.

With the greatest land-mortgage system on nonprofit lines in the world we have the highest interest rates. It would appear reasonable that farm organizations and stockholders in the banks insist upon the original construction of the law and the elimination of all unnecessary expense of operation.

LENDING POLICY

This system was started to supply loans, especially to the small farmers whose business was unattractive to regular mortgage concerns because so little could be made upon their business. The raise in the loan limit of Federal banks brings the temptation to favor the large loans which can be written at no greater expense than small loans, excluding many small loans.

If this nonprofit system does not supply small farmers it is acting contrary to principles and assumptions of both law and cooperation.

Recommendation: That new safeguards be set up either by the Federal board or the law to assure that these men get the service it was intended they should have.

INTERMEDIATE CREDIT SYSTEM

Separation of the two sets of banks is clearly indicated. Why? Intermediate credit business clogs the neck of the already jammed farm-loan bottle and renders poorer the mortgage credit service.

Intermediate banks are Government owned. Their securities and their staffs should be subject to such rules as prevail under Treasury regulations. The Government should pay the necessary rents, salaries,

and expenses without asking for estimated apportionment of overhead from political appointees accustomed to assess farmers' Federal banks with nine-tenths of salary and other expenses. Economy in farm-loan overhead will be difficult, if not impossible, to effect so long as the intermediates are housed in land banks and run by the same political employees. Lowered interest rates may follow lowered overhead.

COMPETITION AND OPPOSITION

Organized opposition to both legs of the bifurcated farm-loan system has not only never disappeared but is scarcely less intense to-day than for the last 15 years. From the point of view of certain people the recent troubles of the joint stocks are in the main the result of this opposition.

Dangers take new forms. Predatory interests already discuss means of "developing"—really controlling—agriculture by securing vast areas of land and instituting corporate farming. Corporate farming, if ever instituted, will destroy certain inherent values in farm life and American people. No effort should be spared to prevent the farm-loan system from being used as a means by which detrimental ends may be served. While stockholders may see fit to continue employing investment houses to market securities, they should be independent of the consent or refusal of any group to sell farm-loan bonds. To prevent them from securing access to the market should be impossible. Likewise it should be impossible for any group to obtain control of land banks by the cheap securing of vast quantities of acquired real estate from either branch of the system.

There are two factions within the joint stock land bank system, one allied to big banking interests. The internal fighting in that wing of the system jeopardizes Federal land bank interests to no small extent, even though occasionally joint stocks have actually protected land banks. Field competition is keen between the two branches. Joint stocks are on no ground entitled to tax exemption. Their possession of the privilege endangers the Federal or nonprofit banks' enjoyment of it. Doing business at cost, and presumably serving all comers, whether their business is profitable or not, the cooperatives earn their tax exemption. Rumors of an aggressive campaign on the part of joint stocks to eliminate the Federal banks through securing congressional amendments, lend weight to discussion of the advisability of refunding all joint stock banks' bonds, and terminating the life of this branch of the system.

To the end that Federal land banks may be protected from opposition within or without the system itself, and that abuses of all sorts, only the more obvious of which have been here reviewed, may be corrected, we add the final—

RECOMMENDATION

That Congress be asked to survey the whole farm-loan system with a view to the propriety of eliminating the joint stock land banks and promoting genuine cooperative banking in the Federal land banks through genuine democratic control.

The alternative to actual protection for stockholders by congressional survey and resultant legislation is to demand that the Government, having operated these banks for 10 years without allowing stockholders to protect their own interests as guaranteed, buy out the stockholders of the Federal land banks, voting sixty millions from the Federal Treasury, an amount equal to that authorized for intermediate banks, and operate the two systems thus synchronized under one ownership, under such new safeguards against political exploitation as can be devised.

## IV

LEGISLATION

All pending legislation died with the ending of the last Congress. Measures up the last session and probable new bills of importance in this situation which will be introduced or reintroduced are as follows:

GOOD IN PRINCIPLE

A bill (S. 1036) to permit farm-loan associations to federate to form among themselves State or national unions for advancing the general welfare of all stockholders contributing not in excess of $25 annually to their support from funds of the association. (Senator WALSH of Montana.) This desirable bill has been pending several sessions, but is always killed in committee.

A bill (S. 4048) providing that control of land banks shall be restored to stockholders. Each bank board is reduced to seven directors. Stockholders shall elect six. One shall be appointed by the Farm Loan Board and serve as treasurer at a salary of $7,500 "to represent public interest." Four out of six elected by farmers must be stockholders experienced in farming. No director may act as officer, director, or employee of any other institution or partnership in banking or land-mortgage business. Directors are all to be paid $6,000. The president gets $8,000. This salary covers the intermediate's work also; and one-fourth is to be paid by the Government, three-fourths by the land banks. The main provisions of this bill are admirable; the last provision re salaries should be studied in the light of FRAZIER'S proposal, following. (Senator ASHURST.)

S. 5665: Provides reorganization of the Federal intermediate-bank system, creating a separate Federal intermediate bank bureau in Washington, with a bipartisan board of five members. Each of the 12 intermediate banks is to have a separate board of seven members, "who shall so far as practicable, have the same qualifications and be selected in the same manner and for the same terms as the members of the board of directors for the Federal land banks." Remuneration is to be fixed by the Federal bureau. Employees of the system are not subject to civil service. Loans may not exceed 75 per cent of the market value of warehoused products. Separation of the Federal land banks from the intermediate here proposed is wholly commendable. But the manner of selection of directors of intermediate banks in the same manner as land-bank directors is impossible. Since the Government holds all the stock, the Government will, of course, make all appointments. Employees of the system should positively be subject to civil service, else we shall have a new network of superstate political control through a vast system of paid appointees empowered to lend half a billion or so. (Senator FRAZIER.)

Both BORAH and FLETCHER introduced bills in 1925 or 1926 to reduce the Farm Loan Board to its original number—five. If requested, one or the other would doubtless reintroduce such a bill this coming session.

S. 616: Proposed to extend the rediscount privilege to farm-loan bonds to promote their sale, and for other purposes. If stockholders controlled their own bond sale, they would at once perceive the great value of this privilege. (Senator FLETCHER.)

S. 2001: Provides for the maintenance of a bureau of information by the Federal Farm Loan Board, and for other purposes. This is an idea that might be of value if properly developed.

NOT APPROVED IN PRINCIPLE

S. 4944 (known as the Treasury bill): Proposes to subjugate the Federal Farm Loan Board to the Treasury, transferring from the board to the Secretary of the Treasury fundamental powers of both supervision and management.

(a) The right to examine all land banks, taking over the regular examination forces, but leaving in the board right to make such other examinations as they saw fit. This is divided control of supervision.

(b) Right to impose rules and regulations, over and above stiff requirements of the law, of what shall constitute net earnings. As the law declares that all remaining after 25 per cent of gross earnings is put to reserves, and 5 per cent to suspense, is net earnings, the banks take the point of view that the Treasury proposes to interfere with proper functions of management vested in directorates of the bank in determining disposition of net earnings. After the banks have complied with law they properly hold that the Treasury should not be authorized to pass regulations to compel the setting up of further reserves, nor to interfere with other fiscal policies.

As reported, the Treasury did induce the Federal board so to compel them, an assumption of authority which the Treasury wanted to legalize and exercise itself rather than through the 1926 Federal board. Safeguards of fiscal policy should be adequate. But the law alone should determine what shall constitute net earnings. No supposedly supervising authority should dictate fundamental changes of management in fiscal policy.

Thorough supervision of all land banks is important. Vested in the Federal board by the act, power to examine should certainly not be left in both the board and the Treasury. Divided control means additional expense without compensatory results, and inefficiency arising from confusion.

This bill is wrong in its major assumption that any Federal authority should continue functions both of supervision and management. No bureau can properly exercise both. Management belongs to stockholders, supervision to a Federal bureau.

Other provisions in this bill are also important but not especially pertinent to farmers' Federal banks. (Senator MCLEAN-Congressman MCFADDEN.)

S. 4944 (amendment in the nature of a substitute) (FLETCHER): Does not cure these fundamental errors, and can not therefore be commended. It was compounded as a compromise. It includes, however:

(a) Provisions that farm-loan associations may federate and support their federation out of association funds.

(b) Also a provision that "any officer or employee of a Federal land bank who shall attempt to affect the result of a general election other than by his own vote shall be punished by a fine of $5,000 or by imprisonment not exceeding five years, or both." This may be remarked as the result of political abuses already discernible in the system.

FLETCHER himself protests the principles involved in this bill. "To place their control (the banks') in the hands of the Secretary of the Treasury would be contrary to every fundamental principle on which the system is founded. It would mean the destruction of the cooperative features provided for in the act. It gives one official power of life and death over any bank and the entire system."

Since subjugation of the board has been accomplished through the new appointments it is possible that neither of these bills will reappear.

H. R. 860. A bill permitting the farm loan board to make loans through agents appointed by the board where associations have not been formed or fail properly to serve the needs of the territory is unqualifiedly bad. This bill testifies to the fact that hope of eliminating or superseding associations still lives. (HASTINGS.)

H. R. 9269 passed the House and was pending in the Senate with favorable report when the session closed. It provided:

That every secretary-treasurer of a farm-loan association must be approved by the district land bank board; that the board could adjust compensation of secretaries; and altered (immaterially) the size of the association's board of directors.

This is the important current version of the attempt of political appointees to get rid of "interference" from secretaries—usually stockholders—who do not act with complete subservience to the land bank and Federal boards. Defeated in securing direct agents, finding it probable that the cooperative features of the law will be protected by this proposal, the banks would nevertheless, by the power of vote of association action, gain long-desired control.

While power of vote of any secretary is not so direct as power of appointment, since there is no possibility of associations compelling a reconsideration of a veto, this bill would in effect add 4,600 more paid places to the political patronage of the farm-loan system. Banks could remunerate secretaries as they saw fit, causing the resignation of men of whom they disapproved or rewarding men who served the interests of the political appointees.

If the Ashurst bill or some other restoring control of the land-bank boards to stockholders were to be passed, the sting would be taken out of this bill, although even then the power to adjust compensation would scarcely be needed.

It is probable that this bill, proposed by Representative STEVENSON, of South Carolina, may be revived. STEVENSON was also the inventor, it is said, of the 50-50 plan which deprived stockholders of their rights under the amendments of 1923.

H. R. 7485: Provides for the establishment of further branch land banks; and also that the rate charged to borrowers may be 1½ per cent in excess of the rate borne by the last preceding issue of farm-loan bonds.

The first provision certainly means increased places to be used as patronage and increased overhead.

The second is a raise of 50 per cent in the amount that the land banks may have to spend for salaries, expenses, commissions on bond sale, etc. The law now reads that the interest rate may not exceed 1 per cent—as against 1½ per cent proposed—the rate on the face of the bonds.

H. R. 17402, identical with S. 5832. Provides for the establishment of a Federal investment-bank system to be officered by the Federal land bank officers. These banks are to act as fiscal agents of the United States Government and have power to borrow money, issue and sell debentures, and to buy State and local bonds, issued for the purpose of draining, irrigating, or protecting from overflow land suitable for agriculture.

This investment corporation would be capitalized by the United States to the extent of sixty millions; earnings, if any, revert to the Treasury. Tax exemption is granted.

The proposal is, briefly, that the Government shall help finance local and State improvements by purchasing their securities. From the standpoint of the Federal land banks it is clear that the management of Federal investment banks, in addition to intermediates, would still further clog the small neck of the huge farm-loan bottle. Stockholders in the Federal banks would scarcely find essential mortgage service improved by an added diversion of attention of its board and executives to a new business for which their qualifications are uncertain. This proposal should stand on its own feet, not lean on the overburdened farmers' banks and complicate their administration.

NEW BILLS

Two proposals, the details of which are not yet known, are promised:

(1) The cooperative banking bill by Brookhart, by which the Federal Farm Loan Board, the land banks, and the intermediates are recognized as parts of a reserve system for agriculture, as national banks and the Federal reserve are the primary system for commerce. This measure will doubtless have much to commend it.

(2) A revision of the farm loan act at the hands of the Treasury and, possibly, the Federal Farm Loan Board, is indicated in Mellon's annual Treasury report for 1926. If this bill comes out, it should be closely scrutinized for provisions similar to provisions of the Stevenson amendment, H. R. 9286, the McLean-McFadden bill of last session—if that is not reintroduced—(S. 4944), the McFadden bill, H. R. 7485, and every section should be carefully analyzed. Many things may be done "to tighten up screws" in the system which will prevent stockholders from ever enjoying the best part of the great gift provided by Congress, self-management of their own land-credit system.

EXHIBIT

*Government Land Settlement in Foreign Countries*

[Compiled by Prof. W. W. Long, Clemson Agricultural College, Clemson, S. C., and used in connection with his address on the need of community organization before the conference on reclamation and land settlement, December 14, 1925]

| Countries | Rate of interest | Time given to pay for land or for repaying loan |
|---|---|---|
| | *Per cent* | *Years* |
| Denmark | 3–4 | 65 |
| Italy | 2.5 | 50 |
| Holland | 4.7 | |
| Norway | [1] | |
| Hungary | 4 | 50 |
| Austria | 4–4.5 | 54½ |
| Russia | [2] 4.5 | 55½ |
| Germany | 3.5–4 | 56½ |
| France | 4–4.5 | 75 |
| England | 4 | 50 |
| Ireland | 3.5 | 68 |
| Belgium | 4.5 | 30 |
| Switzerland | 4.5 | 57 |
| New Zealand | 4 | 36½ |
| Victoria, Australia | 4.5 | 36½ |
| New South Wales | 3–5 | 30–40 |
| Other Australian States | 4–5 | 30–40 |
| British and German South Africa | 4 | |
| Chile | 4 | 33 |
| Argentine | 4 | |
| British Columbia | [3] | 36½ |

[1] 3.5 to buy land and 4 to owners.
[2] Principal and interest.
[3] 1 per cent more than the interest on State bonds; 5 per cent at present.

AMENDMENT OF TRANSPORTATION ACT OF 1920

Mr. COPELAND. Mr. President, yesterday the Senate passed Senate bill 3723, a bill to which I had intended to offer an amendment. I give notice now of a motion to reconsider the vote by which that bill was passed, and I move that the House be requested to return it. I have told the Senator from Maryland [Mr. BRUCE] that I shall not stand on technicalities, but will deal with the matter promptly when the bill comes back.

Mr. BRUCE. Mr. President, there is no possible objection, but I would like to have the motion for reconsideration taken up at the earliest possible time. The bill was unanimously passed after being unanimously approved in the committee, and while I have no objection at all to the request of the Senator to make his motion for a reconsideration I would like to have it come up at as early a date as possible because it is getting late in the session and the bill will have to go to the House for action upon it there.

Mr. COPELAND. Would it be proper for me to offer my amendments to the bill at this time?

The PRESIDING OFFICER. The present occupant of the chair understands the Senator from New York is now offering a motion to recall the bill.

Mr. BRUCE. If there is no objection, I would like to have the motion taken up right now and disposed of, if possible, by unanimous consent.

The PRESIDING OFFICER. The bill must first be returned to the Senate from the House before the motion can be considered. All that can be done further at this time is to enter a motion to reconsider, which has been entered.

Mr. BRUCE. That is true, undoubtedly.

Mr. COPELAND. I move that the House be requested to return the bill to the Senate.

The PRESIDING OFFICER. The question is on agreeing to the motion.

The motion was agreed to.

ERADICATION OF PINK BOLLWORM AND CORN BORER

Mr. KING. Mr. President, yesterday the Senate passed Senate Joint Resolution 129, providing for the eradication of the pink bollworm, and House bill 12632, providing for the eradication or control of the European corn borer. In my opinion those measures need some further consideration in order to protect the Government and to adopt some policy that will not be a very dangerous precedent. I therefore desire to enter a motion to reconsider the votes by which each of those measures was passed.

The PRESIDING OFFICER. The RECORD will show that the motion has been made. Does the Senator desire to have the measures recalled?

Mr. KING. I move that those two measures be recalled from the House.

The motion was agreed to.

MESSAGE FROM THE HOUSE—ENROLLED BILL SIGNED

A message from the House of Representatives, by Mr. Haltigan, one of its clerks, announced that the Speaker had affixed his signature to the enrolled bill (S. 2126) to provide for compensation of Ona Harrington for injuries received in an airplane accident, and it was signed by the Vice President.

NAVAL APPROPRIATIONS

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 12286) making appropriations for the Navy Department and the naval service for the fiscal year ending June 30, 1929, and for other purposes, the pending question being on the amendment of Mr. BLAINE, as modified.

Mr. HEFLIN. Mr. President, I would like to inquire just what is the parliamentary status of the Blaine amendment. My understanding is that the Senator from Nevada [Mr. PITTMAN] has offered an amendment to the Blaine amendment, which is now pending, and that the Senator from Tennessee [Mr. MCKELLAR] has offered a substitute for the whole amendment as amended.

The PRESIDING OFFICER (Mr. LA FOLLETTE in the chair). The first question will be on the substitute offered by the Senator from Tennessee. After that is disposed of the question will recur on the adoption of the amendment offered by the Senator from Nevada to the amendment of the Senator from Wisconsin.

Mr. HEFLIN. Does the amendment of the Senator from Tennessee cover the whole proposition as a substitute for the Blaine amendment and the Pittman amendment?

The PRESIDING OFFICER. It is a substitute for the entire subject matter, in the opinion of the present occupant of the chair.

Mr. HEFLIN. Then I will wait until a vote is had on the amendment offered by the Senator from Tennessee before I offer an amendment to the other proposition.

Mr. EDGE. Let the amendment offered by the Senator from Tennessee be stated.

The PRESIDING OFFICER. The clerk will state the amendment.

The CHIEF CLERK. On page 53, after line 17, insert:

*Provided,* That no part of the appropriations made in this act shall be used for the purpose of maintaining marines or troops in the Republic of Nicaragua on and after February 1, 1929, unless specifically authorized by the Congress: *And provided further,* That the restrictions here imposed shall not apply if the President shall land troops temporarily for the protection of lives and property under international law or the Monroe doctrine.

Mr. WALSH of Massachusetts. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The Chief Clerk called the roll, and the following Senators answered to their names:

| | | | |
|---|---|---|---|
| Ashurst | Edge | Keyes | Schall |
| Barkley | Edwards | King | Sheppard |
| Bayard | Fess | La Follette | Shortridge |
| Bingham | Fletcher | Locher | Simmons |
| Black | Frazier | McKellar | Smith |
| Blaine | George | McMaster | Smoot |
| Blease | Gerry | McNary | Steck |
| Borah | Gillett | Mayfield | Stephens |
| Bratton | Goff | Metcalf | Swanson |
| Brookhart | Gooding | Moses | Thomas |
| Broussard | Gould | Norbeck | Tydings |
| Bruce | Greene | Norris | Tyson |
| Capper | Hale | Nye | Wagner |
| Caraway | Harris | Oddie | Walsh, Mass. |
| Copeland | Hawes | Overman | Walsh, Mont. |
| Couzens | Hayden | Phipps | Warren |
| Curtis | Heflin | Pittman | Waterman |
| Cutting | Howell | Ransdell | Wheeler |
| Dale | Johnson | Reed, Pa. | |
| Deneen | Jones | Robinson, Ind. | |
| Dill | Kendrick | Sackett | |

The VICE PRESIDENT. Eighty-one Senators having answered to their names, a quorum is present. The question is on agreeing to the amendment of the Senator from Wisconsin [Mr. BLAINE], as modified.

Mr. MCKELLAR. Mr. President, the Senator from Wisconsin [Mr. BLAINE] introduced the first amendment which was offered by anyone, and the amendment which I offered has been proposed as a substitute for his amendment. I think probably the amendment of the Senator from Wisconsin ought to be voted on first. I ask unanimous consent to withdraw my amendment, in the nature of a substitute, with the understanding that I may offer it immediately after the Blaine amendment is voted on, unless it should be adopted.

The VICE PRESIDENT. Without objection, the amendment in the nature of a substitute submitted by the Senator from Tennessee is withdrawn. The question is on agreeing to the amendment submitted by the Senator from Wisconsin [Mr. BLAINE], as modified.

Mr. NORRIS. Mr. President, I offer the substitute which I have heretofore submitted in order that it might be printed.

The VICE PRESIDENT. The clerk will read the proposed substitute.

The CHIEF CLERK. On page 53, after line 17, insert the following:

*Provided,* That after February 1, 1929, none of the appropriations made in this act shall be used in Nicaragua to pay any expenses incurred in connection with acts of hostility against that nation, or any belligerent intervention in the affairs of that nation, or any intervention in the domestic affairs of that nation, unless war has been declared by Congress: *Provided further,* That such limitation shall not apply in the case of actual physical attacks upon American citizens or their property, or the immediate danger of such attacks, at any time, when the forces of the United States may be used by the President for strictly protective purposes without the consent of Congress, and appropriations may be used to pay the expenses of such protective action.

The words "acts of hostility" and the words "belligerent intervention" shall include within their meaning the employment of coercion or force in the collection of any pecuniary claim or any claim or right to any grant or concession for or on behalf of any private citizen, copartnership, or corporation of the United States against the Government of Nicaragua, either upon the initiation of the Government of the United States or upon the invitation of any official or other person claiming to be an official of Nicaragua.

Mr. BLAINE. Mr. President, if it is within the rule, I desire to announce that I will accept the substitute proposed by the Senator from Nebraska for the amendment offered by myself.

Mr. BORAH. Mr. President, what is the effect of the acceptance? Does that make the amendment of the Senator from Nebraska the pending question before the Senate?

The VICE PRESIDENT. It does. The amendment of the Senator from Nebraska is, of course, open to amendment.

Mr. BORAH. Mr. President, so far as the principle stated in the amendment is involved, I have no objection to offer; but I am unable to escape the conclusion that by reason of this being an amendment to an appropriation bill we evidently would make the Comptroller General the determining judge of how this policy and this law should be executed. I have investigated the matter, based upon the practice obtaining with reference to such questions, and undoubtedly the President would be compelled to make his showing to the Comptroller General before he could execute this policy. Under those circumstances, I shall vote against the amendment. I am not willing to make the President's power to protect life and property of our citizens dependent upon his being able to satisfy the Comptroller General of the necessity of his doing so.

Mr. NORRIS. Mr. President, I stated a while ago, when there were only a few Senators present, what I wish now to restate in a brief way.

The argument made by the Senator from Idaho has, in substance, been also made by several other Senators. However, I call attention to the proposition, and it seems to me we can not escape from it, that any danger of running up against the Comptroller General exists now just as it would exist if my amendment were agreed to. If we agree to the amendment, the only way in which the Comptroller General could interfere would be to say, "The President has not the power in that limitation on the appropriation bill; in other words, the President has used the Army or the marines or the Navy in Nicaragua contrary to that limitation, and, therefore, I shall refuse to approve this expense, whatever it may be."

On the other hand, suppose we do not adopt this limitation, suppose we say nothing, then the Comptroller General can say, when any item of expenses comes from Nicaragua under the existing conditions, "The President has violated the Constitution of the United States when he incurred these expenses. The President has not complied with the law of Congress. There is no law that gives him permission to do this. What he has done is contrary to international law, and, therefore, I decline to approve it." I can not myself understand that that particular proposition has anything to do with the matter. It exists to the same extent now that it would exist if the amendment were adopted. I do not conceive that the Comptroller General will do anything of this kind, either under existing law or if the amendment is adopted. He will not question the discretion exercised by the President of the United States, without any doubt.

Mr. BROUSSARD. Mr. President——

The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from Louisiana?

Mr. NORRIS. I yield.

Mr. BROUSSARD. Who will inform the Comptroller General of the condition existing in Nicaragua?

Mr. NORRIS. Who informs the Comptroller General now of what exists in Nicaragua?

Mr. BROUSSARD. I do not think he has any information at all.

Mr. NORRIS. He probably has not and may never have any more.

Mr. BROUSSARD. That is the very question which arises.

Mr. LA FOLLETTE. Mr. President, will the Senator from Nebraska yield to me?

Mr. NORRIS. Certainly.

Mr. LA FOLLETTE. I will state that it is my information that the Comptroller General has passed upon the question in an order which he issued on the 15th of September last. In a ruling then issued he passed upon the field allowances of officers engaged in the Nicaraguan expedition, and approved them upon the ground that our forces were in a state of war with Nicaragua.

Mr. NORRIS. I did not know of that decision, but I am very glad to know that the Comptroller General agrees with me in what I have labored so hard to convince the Senate was the condition down there.

Mr. CARAWAY. Perhaps he knows war when he sees it.

Mr. LA FOLLETTE. I merely offer that in vindication of the statement made by the Senator from Nebraska, to the effect that the Comptroller General is forced now to pass upon this question indirectly.

Mr. NORRIS. The principal point I want to make is that, while this is liable to come before the Comptroller General, the adoption of the amendment, as far as I am able to see, does not have anything to do with it. It does not change the condition a particle as far as its liability to come before the Comptroller General is concerned.

Mr. BORAH. Mr. President, the amendment provides:

> That after February 1, 1929, none of the appropriations made in this act shall be used in Nicaragua to pay any expenses incurred in connection with acts of hostility against that nation, or any belligerent intervention in the affairs of that nation.

Now, who is to determine whether they are acts of hostility? The amendment lays down a specific rule, makes a specific condition upon which the appropriation may be utilized. It calls specifically upon the Comptroller General to determine in each particular instance whether the particular conditions specified in the amendment exist. Before the President could act he would undoubtedly, under this provision, have to make a showing to the Comptroller General as to whether the specific facts existing here were in existence at the time he was proposing to utilize the troops.

Mr. NORRIS. Why would he not have to do that now? Would not the President have to go to the Comptroller General if that theory is right and show now affirmatively, which we all know he has not done?

Mr. BORAH. The difference is that there is no specific rule now naming specific conditions upon which appropriations may be used. The President acts under the general authority which he has under the Constitution of the United States to do these things; but here we specifically provide that the appropriation is not available until certain conditions which we name herein are found to exist. This appropriation can not be used except upon certain conditions and those conditions must be determined under this amendment by the Comptroller General.

Mr. NORRIS. Mr. President, the Senator from Idaho says that under existing conditions at the present time the President acts under authority that he now has to use the Army or the Navy. What is to hinder the Comptroller General from saying, "Under the law as it stands now you have no authority to use the Army or the Navy or the marines for this purpose"? In my judgment, the President has not such authority. I suppose, from what the Senator from Wisconsin [Mr. LA FOLLETTE] said, the Comptroller General thought that and had to construe that a condition of war does exist in order to give him the authority.

The President has not gotten any authority from Congress directly, and he can not do anything contrary to law. There must be law under which he acts, whether it is statutory law, international law, or the common law. He must have some law or he can not send his troops down to Nicaragua. He goes on the theory that he is acting under the law right now. But suppose the Comptroller General says, "You are wrong about that. There is no such law that permits you to do it." He could hold him up now just as he could then.

Mr. PITTMAN. Mr. President, there is nothing to take place under the terms of the pending amendment until after the 1st of February next. By that time the election in Nicaragua will have taken place. By that time the new government will have been inaugurated. After February 1 we will assume that there will be some marines in Nicaragua. The question arises, Why are they there? The Comptroller General says, "Why should I authorize the payment of expenses for marines in Nicaragua after the 1st day of February?" The President would reply, "I am keeping a certain number of marines at certain points because I believe there is danger of attacks upon our citizens." Would not that be a sufficient answer? It would be a complete answer, because the amendment itself provides that there is no limitation on the appropriation in such a case.

Mr. BORAH. Does the Senator admit that the President would have to make that showing to the Comptroller General?

Mr. PITTMAN. He would have to make that showing then just as much as he would now, if the Comptroller General insisted.

Mr. BORAH. But does the Senator admit that under the pending amendment he would have to make a showing that the facts exist which justify the expenditure of the appropriation?

Mr. PITTMAN. Certainly not. As I said the other day, the President of the United States would not pay any attention to a question about the constitutional authority. The Comptroller General would not ask it. The Comptroller General, however, has just as much right to-day to inquire as to the facts in determining whether or not he is going to approve an act as legal as he would have after this amendment is agreed to.

Mr. SWANSON. Mr. President, will the Senator yield?

Mr. PITTMAN. Just a second.

This amendment has not anything on earth to do with the Comptroller General. As a matter of fact, you ask what is going to happen after February 1. Nothing is going to happen before that, because there is no limitation on the appropriation prior to that. One of two things is going to happen after February 1. Either the President is going to take the marines out of there, or else he is going to leave them in there. He should not leave them in there unless there is danger of attack upon our citizens. If there is danger of attack upon our citizens he has the constitutional right, irrespective of any amendment, to keep them there; and all that we have done in this proposition is to reaffirm his constitutional right, and say that no limitation shall be placed on it. There is but one excuse after February 1 to keep troops there, and that is the constitutional right he has, and the constitutional right is set up in this very amendment. If he keeps them there after February 1 under his constitutional right to protect American citizens against the danger of an attack, there is no question under any law or under this amendment that can be raised against it.

Mr. SWANSON. Mr. President——

Mr. BORAH. I yield to the Senator.

Mr. SWANSON. If the Senator will permit me a minute, the difference between the condition that would arise if this amendment should be adopted and the condition to-day is this:

We appropriate money for the marines. We appropriate money for the Navy. The only proof that the Navy Department has to make to get this money is that it is used for the marines or for the Navy. If we put this limitation on the marines or on the Navy, further proof will have to be furnished according to the limitations and conditions here imposed. It really makes the Comptroller General pass specifically and clearly on the facts as to whether this money is not spent for the marines, not spent for the Navy—they can not change from the marines to the Navy—but whether it is used for the purposes outlined in the limitation. There can be no doubt about that.

We had this thing all during the war, limitations sought to be put on; and I contended all the time that the foreign policy of this country ought to be settled by the Foreign Relations Committee in the regular way.

When you try to enforce a policy by a limitation on the use of money for certain purposes, you make the Comptroller General the arbiter of your foreign policies, as to whether the limitation is complied with.

If this amendment does not go on the bill, it will be necessary to prove that the money is spent for the marines or for the Navy or for the navy yards, and that is all; but if this limitation is put on, the Comptroller General must determine, and he alone, as to whether the limitations are complied with.

Mr. WHEELER. Mr. President, if I understand correctly the arguments made by the Senator from Virginia and the Senator from Idaho, both of them have stated that they felt that the President of the United States had exceeded his constitutional power in having the marines supervise the election that is about to take place in Nicaragua. I challenge my friend

from Virginia to point out any provision in the Constitution of the United States that gives the President of the United States any authority whatsoever to supervise an election down in Nicaragua. He has no more right to supervise that election than he has a right to supervise an election in Ireland or in China or in Russia or in any other country.

If the President has exceeded his constitutional power, then it seems to me it is not only the right but it is the duty of the Comptroller General at the present time to hold up the approval of the expenditure of money in that manner.

This amendment simply reiterates the President's constitutional power. If he is exceeding it here, then, of course, they should not go ahead and pay out the money for the marines if he keeps them there after February 1 in violation of the provisions of this law, which they themselves say is the same as the constitutional power.

It seems to me that the arguments presented by both of these distinguished Senators do not carry out the idea that they would seem to convey to the Senate; that they do not want the Comptroller General to direct the foreign policy of the United States.

I sincerely hope that the amendment will be agreed to. Frankly, I do not like the idea of bringing up the Nicaraguan matter in this manner; but, as I said the other day, this is the first time that any of the Members of the Senate have had a chance to vote upon any question that had to do with Nicaraguan matters. Resolutions have been introduced and referred to the Foreign Relations Committee asking for an investigation of Nicaraguan affairs; and while the Senator from Virginia says that investigation has been had, the fact of the matter is that the resolutions that were introduced and sent to the Committee on Foreign Relations were never reported out of the committee; never brought back for discussion upon the floor; and the only investigation that was made concerning the matter, as I understand—I may be wrong about it—was that some of the naval officers or the marine officers were called before the committee.

I submit that the President of the United States, in sending the marines to Nicaragua and in making an agreement to supervise the election, exceeded his authority in both instances. It has been stated upon the floor of the Senate, I think by the Senator from Virginia [Mr. SWANSON] as well as the Senator from Idaho [Mr. BORAH], if I recall his statement correctly, that in their judgment the lives of no Americans were in danger down there, and likewise that no American property was in danger down there at the time that they were sent in there.

Last summer, while I was in the Orient, I happened to meet a former general who was, I think, one of the first ones to be sent into Nicaragua, and he told me this rather amusing story. I shall withhold his name for obvious reasons, but he said:

> When we first went down to Nicaragua, we went down there because of the fact that the La Luz y Los Angeles Mining Co. wanted certain concessions from the government that was then in power. They were unable to get them, and for that reason the La Luz y Los Angeles Mining Co.—

Which was a Pittsburgh concern, and for which ex-Secretary Knox was attorney—

> started a revolution. The marines were sent down there, and they wanted to prevent the army of the Government from wiping out the revolutionists, so they wanted to get the marines into the interior. They did not have any excuse to get the marines into the interior, because of the fact that there were no white men and no American property in the interior where they wanted to get them. So they picked up a beach comber, and they took this beach comber into the interior and set him down there, and then took the marines in there for the purpose of protecting this beach comber, and then notified the regular army of the Government and said to them, "You can not shoot in this direction, because if you do here is an American life, and you might accidentally hit him."

He said:

> So the Government's army, the regular army, moved around to another place and started to come down toward the La Luz y Los Angeles mining property; and they again moved the beach comber and said, "Now, you can not shoot in this direction, because if you do you might hit this American who is over here."

So he said that they just constantly took this beach comber and moved him around from place to place until the regular army threw up their hands, and the revolution became successful because of the fact that they were unable to compete with the marines and the movements of this beach comber.

That, if you please, was the starting of our movements down there in Nicaragua.

Mr. SHORTRIDGE. Mr. President, may I ask the Senator a question?

Mr. WHEELER. Yes.

Mr. SHORTRIDGE. Does the Senator believe that fairy story?

Mr. WHEELER. I not only believe it, but it was told to me by a very responsible citizen who is at the present time connected with the Army of the United States, and I have not any reason in the world to doubt his honesty or his sincerity.

Mr. BORAH. Mr. President, the Senator will not object to giving his name to the Committee on Foreign Relations?

Mr. WHEELER. I shall be very glad to give it to them, and I will say to you that I am quite sure that if you ask for him he would be very glad, indeed, to come before your committee and testify to what took place.

That was the beginning of our movements in Nicaragua; and from that time on we have had the marines in there, off and on, from that day to this. Our whole relations in connection with Nicaragua, in my judgment, have been a disgrace to the United States of America; and the idea of sending somebody down into Nicaragua to supervise an election seems to me preposterous. As somebody has very well said, if we are going to use the marines to supervise elections we should have sent them out to Chicago and had them supervise the last election out there, or we should have even sent them up to Philadelphia and had them supervise the election in the last senatorial race in that great State. We ought to take the beam out of our own eye before we go down and say that these people down here in this little country of Nicaragua are not capable of ruling themselves.

For my part, I want to say that I think the Senate of the United States ought to go on record here and now and say to the country that we do not approve of the actions of the administration in sending marines down there and keeping them there for the purpose of supervising an election, or for chasing down bandits. If we are going to have them chase down bandits, let us have them go out and chase down the bandits out in the city of Chicago.

We have just as much right, I repeat, notwithstanding the statements made on the floor of the Senate, to send them into Ireland, we have just as much right to send them into Germany; we have just as much right to send them into France or Italy as we have to send them into Nicaragua; and I challenge anybody on the floor of the Senate to point out where there is a provision in the Constitution of the United States or the laws of the United States or any treaty of the United States that gives us a right to send them down there.

Mr. BROUSSARD. Mr. President, the Senate has found it necessary to organize proper committees in order to consider in an orderly way the business that is presented before this body. If the President of the United States has violated the Constitution in Nicaragua, this matter should be referred to the Judiciary Committee. On the other hand, we have another committee—the Foreign Relations Committee—to which this very matter was referred. The committee has not refused to act on this matter, but has reported unfavorably a bill which is now on the calendar, so that those who wish to find a pretext for violating the rules of another committee are not correctly stating the facts of the situation. Anybody may at any time ask that this bill which is now on the calendar be taken up.

Some people claim that this is the only way of expressing the wishes and the will of the Senate in this matter. I wish to make this inquiry, because, although I have not attended all of the discussion, I have not heard anybody refer to this particular phase of it:

We know that the officers of the Marine Corps are not in position to consult the Comptroller General when they have orders to go to Nicaragua or to go elsewhere. They must obey these orders. If the Judiciary Committee has failed to function, as some people seem to charge, or if the Foreign Relations Committee has functioned improperly, why should the Marine Corps be called upon to disregard orders and to consult the Comptroller General before they go? Who is to be punished if they are sent there and subsequently the Comptroller General rules that it was in violation of this amendment? These people would be deprived of their pay.

Let us deal with this proposition as we should, discuss it and take it up in its proper place, and not impose it upon this appropriation bill. I do not think we can get satisfactory results in that way. We ought to be advised by the Judiciary Committee on the constitutional question, and we ought to be advised by the Foreign Relations Committee as to these conditions, rather than to refer them in the future to the Comptroller General.

Mr. HEFLIN. Mr. President, I ask to have read as part of my remarks the joint resolution which I send to the desk.

The VICE PRESIDENT. Without objection, the joint resolution will be read.

The Chief Clerk read Senate Joint Resolution 127, introduced by Mr. HEFLIN on April 9 (calendar day, April 12), 1928, as follows:

Senate joint resolution (S. J. Res. 127) requesting the President to withdraw from Nicaragua the armed forces of the United States or obtain authority from Congress to keep them there

Whereas the Government of the United States is founded upon the principle of self-government; and

Whereas it is incumbent upon the constituted authorities of the United States to recognize and respect at all times the right of self-government in other nations; and

Whereas the sending of armed forces of the United States into a neighboring Republic for the purpose of overthrowing a government resulting from the expressed will of the people is wrong, inexcusable, and indefensible; and

Whereas American marines have been in Nicaragua, under the direction of the President, for more than a year, and have engaged in war with natives of Nicaragua, killing citizens of that Republic and having some of their own number killed by Nicaraguan natives; and

Whereas the sending of armed forces into Nicaragua to protect and defend Diaz, the impostor and usurper, and hold him, against the will of the people, in the office of President, to which he was never elected, is an act of imperialistic tyranny, and in injustice to the natives of Nicaragua, who love the principles of self-government well enough to fight and die for them; and

Whereas the Constitution of the United States provides that Congress and Congress alone shall declare war: Therefore be it

*Resolved, etc.*, That the President is hereby requested either immediately to withdraw from Nicaragua the armed forces of the United States or to obtain authority from the Congress to keep them there.

Mr. HEFLIN. Mr. President, I wanted that resolution of mine to appear in the proceedings at this time. I want to say to the able Senator from Louisiana that I have had a resolution pending in the Foreign Relations Committee for many weeks. The committee finally reported it adversely, but the opposition has prevented action upon it by the Senate. I introduced this other resolution, the one just read, later, and no action has been taken upon it by the committee.

Senators, this is a very important matter; this is a history-making period with this body and with the Senators who are participating in this particular discussion. We are face to face with the question as to whether or not we are going to insist upon the right of Congress to declare war. The Constitution positively declares that Congress and Congress alone can declare war. We are face to face with the question as to whether or not we are going to surrender and turn over this constitutional authority to the Chief Executive of the Nation. Senators who are familiar with the history of the governments that have perished know how they went to their death.

The chief executive, the monarch, king, the single head, has taken unto himself every other power he could possibly take. The people's representatives, under one influence and another, have surrendered their powers to him, until finally there is a one-man power, and then the representatives of the people became mere figureheads and rubber stamps; and I regret to say that this country has entered upon that same dangerous and deadly rôle.

We find the Senate divided to-day as to whether or not we are going to throw safeguards around the lives of American boys, and protect them against such useless slaughter as has been going on in Nicaragua, where they have been sent to follow people who slipped out of the United States, who have given up their citizenship, no doubt, many of them, and intend to live in Nicaragua always. They have gone abroad with money they made in the United States and invested it in hazardous situations in Nicaragua.

The people in that country have a right to have a revolution if they want it, and they have been having one. Jefferson laid it down as a fundamental principle that the people have a right to overturn the form of government under which they live and set up another if they want to, and our soldiers have gone down there following these reckless globe-trotters and adventurers, who have gone into Nicaragua and set up business amongst dangerous surroundings.

I get the impression, I can not escape it, that some people are moved more by their desire to protect the financial interests of just such adventurers than they are to protect the lives of these American boys already down there, and those back at home who are liable to be called at any moment to go there.

Senators, Lincoln laid down a great principle when he said, "I put the man above the dollar." We are reversing that doctrine to-day; we are putting the dollar above the man. Some seem to be asking what matters it if these boys are killed? They are protecting some man who, perhaps, has acquired a gold mine in Nicaragua under very questionable circumstances, and who may be holding it by the strong arm of the military power of the United States. What do we care about that? We have not time to investigate those things.

The dollar of the American imperialist has been carried on down the imperialistic road, and we are told that the flag must be carried to it and the boys must go to it, and if they must make that highway run red with their blood, what of it? That if they leave their bones along that road to bleach in the sun, what difference does it make?

As Frank Stanton, of Georgia, said:

> What care we for wrongs and crimes,
> Its dimes and dollars, dollars and dimes.

Has the Senate surrendered and expressed to the imperialists its willingness to enter upon this imperialistic road? Is the Congress, which Jefferson thought would be in an hour like this the saving power of the Nation, now to be sidetracked, surrender its power, or yield to the usurpation of its power, and say, "We do not want to offend the President or to ruffle his feelings. We should not let the Constitution stand between us and the discharge of our partisan obligations to him."

Senators, we have reached a critical point on this question in this country. The position taken by some Senators in this debate has shocked and astounded me. Senators who ought to be standing here fighting to protect these American boys in their right to live are talking about not interfering with the President's power. I would not interfere with his rights and powers, and I am not doing so. I take the position to-day, and I am ready to debate the question with any Senator here, or anybody elsewhere, that the President is overleaping the bounds fixed by the Constitution, is violating the Constitution when he keeps the armed forces of the United States in Nicaragua, engaging in warfare for more than a year, without ever consulting Congress, and asking its authority or consent to keep them there.

What objection have Senators to this amendment of mine? Let me read it. It is short. It does not go into the question of whether we shall stay there and hold this election or not. I hold that we have no right to do that. We have not any more right to do it, as the Senator from Montana [Mr. WHEELER] has said, than we have to go into France, or any other country, intrude ourselves upon the people there and hold an election because some interest in that country may form an alliance with some greedy interest in our country, and therefore make a demand upon our country to send troops over there into another foreign country.

This amendment of mine does not say anything about whether the troops are to remain there or not. It does not say anything about whether the policy is right or not. It does not attempt to lay down a plan for the future, as to what the President may do with the marines. Listen to the reading of it:

> That none of the appropriations made in this act shall be used to pay any expenses incurred in connection with acts of hostility by United States marines in Nicaragua unless and until the President shall obtain from Congress consent to keep them there.

Senators, what excuse are you going to give to the sovereign power back of you, the voting power of your States, the fathers and mothers of these boys, when they ask you why you were not willing to vote to call upon the President to come to the Congress and the country and tell the Congress why he wanted to keep these marines down yonder, and ask Congress to give him its consent to keep them there?

I have stated before that President Wilson did such a thing; he sent the troops to Tampico and to Vera Cruz, but he asked Congress to approve his course and Congress did so. If Mr. Coolidge has a good, sound reason for keeping the marines in Nicaragua, I dare say Congress would grant its consent for him to do so. Then, what harm can arise from having him come, as the head of the Nation, and consult with the law-making body of the Nation, the war-declaring power of the Nation, and getting its consent that he may keep the marines there? It would show a proper appreciation of the separate and distinct rights and powers of Congress. It would strengthen the President's position; it would satisfy everybody. If Congress should agree with the President, the people generally would say, "Oh, well, Congress has given him its consent, and I guess it is all right to stay down there until after the election."

If Congress should fail to give its consent to keep the marines in Nicaragua any longer under the circumstances, it would show that Congress had the patriotism, the intelligence, and the

courage to hold Congress and the President true to the Constitution of the United States.

Is Congress to be condemned for seeking to obey the Constitution? Here is the attitude some Senators are about to assume, it seems to me, that you are not willing to meet that question, or that you are going to vote for the mildest measure possible that will say, "He can stay there until after the election," and by such action commit Congress to the proposition that it is all right to go into foreign countries with our armed forces and hold elections there.

In voting for my amendment Senators would not have to go on record on that proposition. In voting for my amendment they would not be embarrassing the President. If it embarrasses the President to ask him to go to the lawmaking body of the Nation and get that body's consent to do a thing that will kill American boys in foreign countries, I am ready to embarrass to that extent any President, whether he is a Democrat or a Republican, because I think we should exhibit more concern for the well-being and safety of the American boy.

I think we are putting too low an estimate upon the rights and lives of American boys when we are ready to hurry them into our ships and send them down to Nicaragua by the thousands, put them into the jungles of Nicaragua, have them die with disease and be killed in war down there, the joint financial interests of certain Americans and Diaz. It is a deplorable situation.

The Senator from New York [Mr. COPELAND] this morning was telling us how sad it was that a man named Marshall, an American, had been killed down there. If that is true I am truly sorry. But frankly I would like to have a couple of days to confirm the report that that man has been killed just at this particular time. Senators will pardon me. I have been up here a few years with some of you who have been here for some time, and I have seen these war-scare dispatches in the papers in Washington when some critical hour struck this Capitol and the law-making body. The first dispatch telling us of new troubles in Nicaragua came yesterday morning. Do Senators recall it. In that hurriedly arranged dispatch Sandino's men had just taken into custody a few guards about a mine, but they had not killed anybody. That dispatch coming in here just before a vote is to be had on the Nicaragua question was too tame, but this morning they "have produced the goods." One man, they tell us now, has been killed.

Mr. NORRIS. Mr. President, will the Senator yield?

Mr. HEFLIN. I yield.

Mr. NORRIS. The dispatches yesterday said that this little band of Sandino's bandits had taken 250 men prisoners. Did it occur to the Senator that there must have been quite a band of them to do that?

Mr. HEFLIN. I thank the Senator for calling my attention to that. Two hundred! I did not think Sandino had more than enough men to make a baseball team. Must have more than 3,000 marines down there now.

Senators, let me give you this suggestion: If these marines who have been sent down there by the hundreds and thousands had been guarding that American property, this little bunch of Sandino's schoolboys could not have taken charge of the mine in question. Let us reason together a moment. Does it not look as if our forces kinder withdrew protection from that mine temporarily just at this particular time? Suppose you were trying this case in a court would not somebody ask, "Where were the marines when this American-owned mine was seized? Why had they left this property unprotected? Is not their neglect of duty responsible for this thing?" They would certainly ask those questions. Then why can not we ask them in this Chamber and in the great court of public opinion, and in the name of the fathers and mothers of America, and the boys in Nicaragua, and those who are yet to go down there to be killed, may I not ask, "Where were the marines?" They are down there, and they will be there, we are told, until the election, to guard the property. Where were they when this mine was taken? Had Sandino fooled them and lured them away, or had they drifted away in order to let something startling happen just before a roll call on this question in the Senate of the United States? Those questions would be asked in a court. Why not ask them here?

I told a Senator yesterday morning that I had read that "timely" dispatch from Nicaragua, and I said "the old war-scare artists are on the job." We were to vote the other night, and we got it to go over until the next day and when, no doubt, somebody communicated with them and told them that the vote had not been had and it would be helpful if something of interest and of a startling nature could appear next morning in the Washington papers. So lo and behold the next morning they had this startling statement the Senator from Nebraska told us about, a little bunch of Sandino's boys capturing 200 Americans. Were they Americans? Does the Senator from Nebraska know?

Mr. NORRIS. They were employees of this mining company.

Mr. HEFLIN. Employees of this mining company?

Mr. NORRIS. The Senator is wrong in the number; it was 250.

Mr. HEFLIN. Two hundred and fifty! It gets worse and worse.

So, Mr. President, it was 250 that they took, but no blood had been shed. This morning, however, they tell us that they have found an American who had been killed. I regret that if it is true, but I want to inquire of the Navy Department. It will probably take a couple of days to verify that, and find for certain just what the truth is. But this quick action on the part of the publicity bureau in Nicaragua in speeding these last two dispatches to Washington just preceding a roll call on the Nicaraguan question, and the prompt results produced right here in the papers at the Capital, remind me of what happened with one of our American negroes in France during the World War. They had them in the trenches, and told them to be very quiet. After sitting there for about four hours and hearing no noise, one of these negroes said, "Where is all dese Germans, anyhow? I don't believe there is any of them around. What's de use sittin' here all housed up and quiet like this?"

They told him he had better be quiet, that the Germans were not far away. He said, "Which way is dey?" They said, "Over this way." He said, "I'd just like to look at 'em. I aint never seen one of 'em." They said, "You put your head up above the surface and they will shoot it off." He said, "No, suh, dey couldn't do dat." They said, "They would shoot your hand off." He said, "I don't believe that." They said, "They would shoot your finger off." He said, "I know dey couldn't do dat." "Well," the men said, "hold your finger up there and see." He stuck his finger up and said, "Come on wid your bullets; come on wid your bullets, you Germans." Bing went one of the bullets, and shot his finger off right at the last joint next to his hand. The negro boy snatched it down and said, "They shore do give you quick service, don't dey?" [Laughter.]

So, Mr. President, that Nicaragua publicity bunch sure did give their hard-pressed friends here quick service. We were just about ready to vote, when something exciting and startling comes rolling in upon us from the Diaz régime in Nicaragua. Two hundred and fifty are held up and taken by, I suppose, three or four of Sandino's men, and are taken prisoners, and they are holding them now, depriving them of their liberty, and looting the mine, all just before we vote.

As the able Senator from New York told us this morning about the killing of this American citizen, I thought about those two American boys who were alive six weeks ago, and who were sent from Quantico, Va., down to Nicaragua, and they were sent out in their airplane, flying low, spying around the rocks on the mountain to see if they could find any rebels or bandits, as we call them, and a frightened buzzard flew up, got tangled with the propeller, broke the blades, and the plane fell and killed both of those fine young American boys. I have not seen any tears shed here over them. God bless them and their loved ones. They were sent down there and they lost their lives in a miserable, unholy, and inexcusable war.

What have we done? We have gone down there where four-fifths of the people of Nicaragua were up in arms against a bastard and bandit government? They were whipping them to a frazzle. They were marching against the capital to drive a usurper and imposter out, to put back their representative in the office of chief executive, when this big Government appeared on the scene, with unfurled flag and drawn sword, smiting the natives hip and thigh, and telling them, "Get back, back, back into the mountains. We have come here to protect Diaz and hold him in office." "What! Against the will of four-fifths of the natives?" "Yes"; and they stood guard over him and held him in that positon. The people of that nation were burning with righteous resentment and indignation against this great Government, this Christian Government of the western world, for drawing its sword and shedding the blood of and killing patriotic natives who are fighting for self-government.

Then what? Diaz said, "I can not last a day unless the American marines stay here and protect me." He told Congressman DRANE, of Florida, "If you withdraw your armed forces they will drive me from power in 24 hours." This Government was there to hold him in power despite the desire and will of the people of Nicaragua.

Then what? We offered to do a very generous act. We said, "Come up here, you Conservative fellows who are in the Diaz army. Stand there, you little group. Come up here, you Liberals"; and up came the frightened and intimidated Liberals, representing four-fifths of the people. "Now we are

going to disarm both of you and we are going to take charge. We are going to hold the national election."

Then what? Sandino and his followers finally said they would not be bound by such a plan and broke away. Then, when the Congress of Nicaragua found what had happened, what did it do?

The Nicaragua Congress stood with Sandino and four-fifths of the natives against Diaz and his little group of so-called Conservatives and the invaders of the United States. Now, let us inquire: "Mr. Diaz, where is your army?" "Out yonder, far removed from the battle line in places of ease and safety." "Are any of your soldiers in danger?" "Oh, no; not one of them." "Are any of your soldiers dying now to protect this bastard government?" Senators, American boys in a foreign land far from home, are fighting against the will of the natives, against the congress of the country, fighting to protect the property of adventurers, spilling the best blood in America, killing our boys in such an unholy cause, and we can not even get Congress to vote to say that the President shall not continue to have them killed in such an unholy cause unless Congress consents for him to do it.

Senators, I appeal to you in the name of the uncounted American dead already in Nicaragua; and I say "uncounted" because I have tried to find out and I do not know yet how many have been killed down there. I appeal to you in the name of the boys living who may yet go there to fight and relieve the army of Diaz so that the men of Diaz may sit back far removed from danger while our boys are ordered to march out on the battle front, shed their blood and give their lives in violation of the time-honored principles and policies of the United States, setting an example that will haunt this Government in the years to come, and stirring up strife in Central and South American republics that will disturb us and injure us in the days yet to be. I call upon the Senate to forget for a moment the plaint of the dollar of the imperialists and come back to the Constitution, back to our own country, and think for a little while of the American boy who is to be a citizen one day, who is entitled to enjoy his life, liberty, and property as a citizen in a Government which was created for and dedicated to the welfare of the citizens.

Mr. CARAWAY. Mr. President, I am conscious that the Senate is impatient, and I apologize to it for taking a moment of its time.

I had hoped that we might not vote upon this amendment for fear whichever side we might espouse, that we would be misunderstood. I do not believe that the President of the United States is disregardful of the Constitution of the country as he sees it. I do not believe that we are in Nicaragua for mercenary purposes. I do not believe that my country is doing consciously an act which brings it into disrepute.

But, on the other hand, I can not agree that the Constitution grants to the administration, whether it be Democratic or Republican, the right to use armed forces to supervise an election in Nicaragua. Therefore I am compelled to vote for this amendment. In so doing I shall be misunderstood.

I am not unmindful, Mr. President, that the discussion, and the vote which is to follow, may encourage those who are in arms in Nicaragua to continue their opposition to the policy to which we have committed ourselves. I am not unmindful that it may cost the lives of some of the marines who are down there now obeying the mandate of the President of the United States. Therefore, if I may be permitted to say it, without offense, I appealed to Senators on each side of the aisle who are most interested in the matter to reach some kind of an agreement by which we may carry over the discussion, and final vote to determine the policy of the Government, to a period beyond the date of the election in Nicaragua. No such agreement could be arrived at. Unfortunate then as it is, disastrous as it may be, certainly unpleasant as it must be, each of us has to face the situation and declare by his vote what he thinks the constitutional right of the President of the United States to be. We can not limit it; we can not enlarge it. We can merely declare our own views with reference to it. We can declare it effectively, of course, by limitations upon the right to expend money, because he who holds the purse strings can control the Government.

I want to be understood that I am not impugning the motives of anyone on either side of the controversy. I am not impugning the motives of the President of these United States, for let me say here, Mr. President, as a partisan—and I am—that upon occasions when partisanship might be permitted to have some leeway I have criticized the President when I thought he ought to be criticized.

I have never, however, in the Senate sought to hamper him in the discharge of his duties as President of the United States, nor have I ever said about him anything that could be truthfully construed as an intimation that I had any doubt of his patriotism. I do not want this vote to be so construed.

Again, I say, I wish we could have escaped the necessity of voting upon these matters at this time, because on whichever side we vote we will be misrepresented. If the amendment be voted down, it will be proclaimed that the Senate of the United States recognizes that the President has the authority of the Constitution and the law for the continuation of the marines in Nicaragua. If the amendment shall prevail, the hostile press will say we have rebuked the administration; that we have declared that we have been engaged in an unlawful enterprise; that the President has been willfully disregardful of constitutional limitations. Therefore, I say, we will be misunderstood whichever way we vote. It is unfortunate that we have to vote. I am compelled, however, to vote my honest conviction. I can find no warrant in the Constitution for the President to supervise an election in Nicaragua, especially where there is no treaty giving us such a right or imposing upon us such an obligation.

I fail to be impressed, however, by the suggestion made that we are compelling the President to submit his foreign policy to a subordinate department of the Government. I do not think any department ought to want to be above the law. I think it is always fortunate when the lines that a department may travel are well marked. The Department of Justice, the War Department, in fact, every department of the Government must finally submit their accounts to this agency which we have created to see that the people's money shall be expended only in accordance with law. I think this one department, though I have never seen the gentleman who presides over it, has been one of our most useful agencies.

I do not think there is any persuasive force in suggesting that the President ought not to be compelled to expend the people's money in accordance with the law and the Constitution. I can not imagine any friend of the Government or any friend of the President of these United States insisting that he ought to be above both the Constitution and the law. To argue that we ought not to make him submit to the agency which we have set up to supervise his expenditures, is to say that we ought not to require him to observe the law or to respect the Constitution. I can not think of a friend of the administration making such an appeal. Therefore I shall vote for the amendment, much as I think the time inopportune.

Mr. BORAH. Mr. President, I am in sympathy with the view expressed by the Senator from Arkansas that, however we may vote upon the pending amendment, that vote will not represent our full views with reference to all the conditions and facts and principles with which we have had to deal. It is impossible by a vote upon a brief amendment to an appropriation bill to express one's views.

Before the vote is taken I desire to give expression to some of the principles which I think are involved. They do not have an immediate bearing upon the amendment, and are not presented for that purpose, but rather as an expression of my view of the principles which ought to obtain in matters of this kind.

First. The Congress alone may declare war—this power is exclusive.

Second. The President is Commander in Chief of the Army and the Navy and enjoys this authority by virtue of the Constitution. He is also directed to faithfully execute the laws of the land. International law is a part of the law of the land.

Third. It is the duty of the Government, when necessity arises, to give protection to life and property of our citizens in foreign countries. The protection to life and property of our citizens in another country does not necessarily constitute war or intervention in the internal affairs of such country.

Fourth. The President is only authorized or justified in employing the armed forces of the United States in foreign countries when actual physical attacks are being made or threatened to the life and property of our nationals or when a condition of lawlessness prevails which endangers life and property. The justification for the exercise of that authority is immediate danger, actual or threatened, and the extent of the authority is protection to such life and property.

Fifth. In case of actual physical attacks upon our citizens or their property, or in case of threatened attacks or great danger thereof, the forces of the United States may be used for protective purposes without the consent of Congress. When, however, the action assumes the aggressive, consisting of taking over the control of territory, to interfere with the affairs of another government, or to engage in conflict with foreign troops, or to determine between two contending forces which is the government, these things can only be constitutionally done under the authorization of Congress.

Sixth. Mr. Cass, as Secretary of State, makes the distinction as follows:

Our naval officers have the right—it is their duty, indeed—to employ the forces under their command not only in self-defense but for the protection of the persons and property of our citizens when exposed to acts of lawless outrage, and this they have done both in China and elsewhere and will do again when necessary. But military expeditions into the Chinese territory can not be undertaken without the authority of the National Legislature.

Seventh. Thomas Jefferson said:

The law of nations makes an integral part of the laws of the land.

Alexander Hamilton said:

The customary law of nations binds the United States.

The Supreme Court of the United States has said:

International law is a part of our laws and must be ascertained and administered by the courts of justice of appropriate jurisdiction.

The President of the United States is charged with the duty of enforcing the laws of the United States. Under international law one nation has the right to use force, if necessary, for the protection of the life and property of its citizens located in another country.

The President is not only therefore justified, but the duty devolves upon him in the enforcement of the law to protect the lives and property of citizens in foreign lands, even if necessary by the employment of armed forces of the United States. But in protecting our citizens in a foreign country the President is limited to defensive acts. Beyond the giving of protection beyond security to life and property of citizens when attacked or threatened he has no power to go without the authority of Congress.

Eighth. In our effort to protect the life and property of our citizens in foreign countries when in danger, that effort should be free from aggression or deliberate interference with the domestic affairs of foreign governments or the people thereof; it should proceed upon a scrupulous regard for the independence and sovereignty and rights of foreign governments and peoples. Our efforts should be that of cooperation and stability, not of aggression and destruction.

Ninth. When our nationals seek investments in foreign countries, or travel abroad, they are under obligation, both by international law and every principle of justice, to submit themselves to the laws, courts, and institutions of that country and abide by and act in accordance with them. And it is only when government itself is unable to function or when such discrimination is practiced or lawlessness prevails as to amount to an attack, or threat of attack, upon life and property that our Government is justified in interference or extending its protection.

Tenth. The assumption of foreign investors that when they go into foreign countries, particularly backward countries, they carry with them as a part of the attributes and rights of citizenship and to be guaranteed and assured to them by their home government, the standards and practices and rules and enlightened principles of their home country, is not only based upon no principle of international law, but is a rank injustice to the taxpayers and citizens who remain at home. The ordinary risks and conditions of those countries they accept when they choose to enter such countries, and with them they must be content so long as they wish to reside or remain in such countries.

Mr. WHEELER. Mr. President, I realize that every Member is anxious to have a vote upon this question; but in view of the fact that the distinguished Senator from Idaho has just quoted from Thomas Jefferson and other illustrious statesmen, I desire to quote from a statesman who I know you will all agree is equally as great as Thomas Jefferson or Alexander Hamilton or Daniel Webster. I am going to read just a few passages from a book entitled "The Monroe Doctrine, an Obsolete Shibboleth," by Professor BINGHAM, in which he states:

Our policy toward the Republics of Central America has undergone a startling development since the beginning of President Roosevelt's administration. In the words of a recent minister to Honduras, our policy has changed "from simple mediation and scrupulous nonintervention, to a policy of active, direct intervention in their internal affairs; and secondly, these interventions have become as startlingly frequent as they have become increasingly embarrassing in character.

"The dangerous trend of such a policy toward an actual intermeddling in the administration of these countries, would seem fairly obvious. Such a result, from every point of view, whether of the United States, of the State immediately affected, or of other Spanish-American States, would be as lamentable as it would appear unnecessary."

Of our armed intervention in Cuba it is scarcely necessary to speak, except to refer in passing to the newspaper story, credited and believed in Cuba, that if American troops are again obliged to intervene in the political life of that country, they will not be withdrawn as has been the practice in the past.

Again, on page 43 the distinguished statesman from Connecticut says:

Personally, I believe that it ought to be an adopted principle of international law that the armed intervention of creditor nations to collect bad debts on behalf of their bankers and bondholders is forbidden. If this principle were clearly understood and accepted, these bankers and underwriters would be far more particular to whom they loaned any great amount of money, and under what conditions. They would not be willing to take the risks which they now take, and many unfortunate financial tangles would never have a beginning. It is natural for a republic which has great undeveloped resources, much optimism, and a disregard of existing human handicaps, to desire to borrow large amounts of money in order to build expensive railroads and carry out desirable public improvements. It is equally natural that capitalists seeking good interest rates and secure investments should depend on the fact that, if the debtor country attempts to default on its national loans, the government of the creditors will intervene with a strong arm. It is natural that the money should be forthcoming, even though a thorough, businesslike, and scientific investigation of the possessions and resources of the borrowing nation might show that the chances of her being able to pay interest, and eventually to return the capital, were highly problematical, and to be reckoned as very high risks.

Millions of dollars of such loans have been made in the past. It is perfectly evident that many of these loans can not be repaid; that the time is coming when the creditor nations will look to us as the policeman, or "elder brother," of the Western Hemisphere, to see to it that the little boys pay for the candy and sweetmeats they have eaten.

Again, Mr. President, he says on page 64:

Surely enough has been said to make it perfectly evident that the leading powers of South America are abundantly able to take care of themselves and are in a position to laugh at the old Monroe doctrine.

If these powers dislike and despise our maintenance of the old Monroe doctrine, it is not difficult to conceive how much more they must resent the new one. The very thought that we, proud in the consciousness of our own self-righteousness, sit here with a smile on our faces and a big stick in our hands, ready to chastise any of the American Republics that do not behave, fairly makes their blood boil. It may be denied that this is our attitude. Grant that it is not; still our neighbors believe that it is, and if we desire to convince them of the contrary, we must definitely and publicly abandon the Monroe doctrine and enunciate a new kind of foreign policy.

The present Monroe doctrine is simply a "petulant and insatiable imperialism," and its development is "a superb, audacious, and mortifying notification to the Latin peoples of the continent" of our strenuous desire either to absorb the small republic or to become the supreme arbiters of their destinies.

Again, the same distinguished statesman, on page 102, says:

At all events, let us face clearly and frankly the fact that the maintenance of the Monroe doctrine is going to cost the United States an immense amount of trouble, money, and men.

As has been repeatedly pointed out in Europe, the Monroe doctrine is as strong as the American Army and Navy, and no stronger.

Carried out to its logical conclusion, it means a policy of suzerainty and interference which will earn us the increasing hatred of our neighbors, the dissatisfaction of Europe, the loss of commercial opportunities, and the forfeiture of time and attention which would much better be given to settling our own difficult internal problems. The continuance of adherence to the Monroe doctrine offers opportunities to scheming statesmen to distract public opinion from the necessity of concentrated attention at home, by arousing mingled feelings of jingoism and self-importance in attempting to correct the errors of our neighbors.

If we persist in maintaining the Monroe doctrine, we shall find that its legitimate, rational, and logical growth will lead us to an increasing number of large expenditures, where American treasure and American blood will be sacrificed in efforts to remove the mote from our neighbor's eye while overlooking the beam in our own.

The character of the people who inhabit the tropical American republics is such, the percentage of Indian blood is so great, the little-understood difficulties of life in those countries are so far-reaching, and the psychological tendencies of the people so different from our own, that opportunities will continually arise which will convince us that our intervention is required if we continue to hold to the tenets of the Monroe doctrine.

It is for us to face the question fairly, and to determine whether it is worth while to continue any longer on a road which leads to such

great expenditures, and which means the loss of international friendships.

It goes on to the same effect.

Mr. NORRIS. Mr. President, may I interrupt the Senator?

Mr. WHEELER. Yes, indeed.

Mr. NORRIS. I do not know whether the Senator has been here during all the debate; but, in fairness to the debate which has taken place, which has been of a very high order, I should like to call the attention of the Senator from Montana to the fact that all the argument made in that book, every bit of it, has been completely repudiated and exposed and explained away by the very able speech of the Senator from Connecticut [Mr. BINGHAM] made a few days ago.

Mr. WHEELER. I did not know that he had inserted these paragraphs in the RECORD; and I felt, in view of the fact that other distinguished statesmen have been quoted here and their views given, that it was only fair to the Senate that we should have the quotations from the distinguished professor from Connecticut.

Mr. NORRIS. The Senator now is reading from Professor BINGHAM?

Mr. WHEELER. Yes.

Mr. NORRIS. I want to call his attention to the fact that Senator BINGHAM has completely overthrown the argument of Professor BINGHAM.

Mr. McKELLAR. Mr. President, will the Senator state what the date of that book is?

Mr. WHEELER. It was when he was a professor. It was first printed August, 1913, 1,500 copies; second printing, October, 1913, 1,000 copies; third printing, February, 1915, 750 copies.

Mr. BORAH. Mr. President, in fairness to the Senator from Connecticut, I think it is perfectly apparent that a Senator's judgment is much superior to the judgment of a professor.

Mr. WHEELER. I think the professor's judgment was much superior to that of the Senator.

Mr. BORAH. The Senator does not mean to say that he is in favor of abandoning the Monroe doctrine?

Mr. WHEELER. Oh, no; I do not go as far now as Professor BINGHAM went then.

Mr. NORRIS. The Senator is on his way.

Mr. WHEELER. I may eventually become as radical as Senator BINGHAM was when he was a professor.

On page 108 he continues:

So widespread and malevolent are the agencies now at work throughout Latin America to prejudice the public against the United States we ought to make every effort to have our real feelings known. Our foreign policy must be clearly formulated. We ought to take one road or the other, either to publicly repudiate this outgrown Monroe doctrine, or else accept the logical consequences and hold ourselves responsible for the maintenance of law and order throughout the Latin-American Republics.

On page 110 he states:

If it is necessary to maintain order in some of the weaker and more restless Republics why not let the decision be made, not by ourselves, but by a Congress of leading American powers? If it is found necessary to send armed forces into Central America to quell rebellions that are proving too much for the recognized governments, why not let those forces consist not solely of American marines, but of the marines of Argentina, Brazil, and Chile as well?

So it will be noticed that when the Senator from Connecticut has just returned from a trip through Central and South America he wrote this book absolutely repudiating the Monroe doctrine, stating that it ought to be abandoned entirely; yet I understand to-day that this same distinguished gentleman now takes the position that we not only ought not to abandon the Monroe doctrine but that we ought, as a matter of fact, to send the marines down there into Nicaragua to protect these vicious bankers that he talked about, and their property, and American lives, and that we ought actually to go down there and police their country, and run down bandits for them, and supervise their elections to see to it that their officials really give them a fair election down in that little backward country of Nicaragua.

Mr. President, it has been stated on the floor of the Senate that we owed it to the rest of the countries and to the people of the United States to keep our promises to the country of Nicaragua. I am very anxious indeed to keep the promises that we have made to Nicaragua; but, you know, the trouble is, we have made so many promises to them that I am at a loss to know just which one we ought to keep. I know that some say that it ought to be the last one that we made.

We first made a promise to the people of Nicaragua that when the five-power treaty was ratified we would not recognize anybody who came into power by means of a revolution or a coup d'état. We went back on that promise. I say "we went back on it"—the Senate of the United States did not go back on it, but the administration and the State Department went back on it, because they deliberately recognized Diaz, who came into power in violation of the five-power treaty. He came in there by means of a coup d'état, and was a part and parcel of Chamorro's coup d'état.

Then, secondly, after we recognized Diaz we sent marines down there, and we said—I say "we said"; the administration said—that we were going to be strictly neutral. Every Member of the Senate remembers when the administration, through the "official spokesman" at the White House, said to the press of the country, "We are sending these troops down there, but they are going to remain absolutely neutral." Then they came out and said, "We are sending them down there because we ought to do it under the Monroe doctrine." Then they said, "We are sending them down there because of the fact that we are going to protect lives and property"; and when they found that there were not any American lives and property in danger, then they said, "We are going down there to protect these men from the onslaughts of bolshevism that are coming on." They did not keep the marines neutral, as they had promised them to, but they went out and declared neutral zones from time to time and from time to time, until they actually made it possible, or attempted to make it possible, for the Diaz régime to win out. When even that was not successful, then they went down there and simply demanded that the Liberals lay down their arms, and said that when they did that they would see to it that they had a fair election.

So I say to you that we first promised them that we would not recognize anybody who came into power by reason of a coup d'état. We violated that promise that we made to those people. There is not a question of a doubt about it. Secondly, we promised them that our marines would be absolutely neutral. We violated that promise that we made to them. So when these distinguished statesmen get up here on the floor of the Senate and say, "We are in duty bound to keep our promises," I should like to see us keep our promises, but I should have liked to see the administration keep the first promise that we made, and then I should have liked to see them, if we did not keep the first one, keep the second one that we made.

I think we owe more to the people of the United States than we owe to the people of any of these Central American countries. I think we owe it to the men and women of this country to see to it that American boys are not sent down into Nicaragua or into any other country for the purpose of chasing bandits. I think we owe it to the mothers of this country to see to it that American boys are not sent down there to be slaughtered just because of the fact that somebody wants to protect some foreign investments down there.

You can vote as you please; but I am going to say to you this afternoon that the American people are going to hold you responsible for the vote that you cast here in the Senate this afternoon. They are going to say to you, as the paper said here the other day, and all the papers are going to say, that when you turn down this amendment you are voting to uphold the administration in sending the marines down to Nicaragua in violation of the Constitution of the United States, and that you are putting your stamp of approval upon American marines going in and supervising elections in foreign countries.

Mr. BINGHAM. Mr. President, I shall take only a moment. I think, in fairness to the author of the book from which the Senator from Montana has so fully and freely quoted, that it ought to be said that the book was written before the Great War, at a time when no one believed such a war was possible, and that as soon as possible after the Great War, the very year after the Army was disbanded, the author of that book wrote an essay on the future of the Monroe doctrine, in which he frankly stated that he had been entirely mistaken.

I ask unanimous consent that that article may be printed in connection with the quotation read by the Senator.

The VICE PRESIDENT. Is there objection?

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

[Reprinted from the Journal of International Relations, vol. 10, No. 4, April, 1920]

THE FUTURE OF THE MONROE DOCTRINE[1]

By HIRAM BINGHAM, Litt. D., professor of Latin American History, Yale University

Six years ago I published a little book in which I undertook to show that one of our most popular shibboleths, the Monroe doctrine, had become obsolete. It now becomes my duty to admit that the book was founded upon premises which have turned out to be false.

[1] A paper presented before the American Historical Association at its annual meeting in Cleveland, Ohio, December 30, 1919.

In the first place, I assumed that when we said Monroe doctrine we referred to that presidential message prepared in 1823 by President Monroe under the influence of his able Secretary of State, John Quincy Adams. A great part of that message has become obsolete. The sentence "With the existing colonies or dependencies of any European power, we have not interfered and shall not interfere," became obsolete in 1898 and has had no force since then. The sentences immediately preceding and following it, however, in which Monroe says that we should consider any attempt on the part of the European powers "to extend their system to any portion of this hemisphere as dangerous to our peace and safety," and that "we could not view any interposition for the purpose of oppressing * * * or controlling, in any other manner," the destiny of the independent American governments "by any European power, in any other light than as the manifestation of an unfriendly disposition toward the United States," are still very much alive and in the future must be extended so as to cover both European and Asiatic powers.

When the American people say they believe in the Monroe doctrine and that it has a future, they do not mean to subscribe to the balanced policy laid down by President Monroe, but rather to the spirit which prompted John Quincy Adams to reject the proposals of Canning and to enunciate the doctrine that the United States proposes to look out for the Western Hemisphere and does not need or care for European interference in so doing. Further than this it hardly needs to be said that the words of the Monroe doctrine have been twisted and turned to mean many different things or that public writers have never been willing to agree as to details.

In the second place, my thesis was based on the supposition that European nations had long since lost their tendency toward despotism and were quite as democratic as many American republics. And that therefore it seemed ridiculous for us to pretend that the Monroe doctrine was a necessary element in our foreign policy.

It is hard to realize to-day what things we regarded as axioms six years ago. Although in my little book I did say "it is conceivable that there may come a day when threatened foreign invasion or racial migration will make it appear advisable for us to reassert the principles of the original doctrine of America for the Americans," I had not the slightest inkling of an idea that one of the great world powers would begin in 1914 to give an exhibition of military despotism such as had not been seen since the days of the Huns and the Vandals. It hardly need be said that anyone who would have ventured to predict that a nation to which we looked for advanced ideas in education, science, and efficiency, which our students of municipal affairs visited in order to study improved social conditions, whose masterly handling of the difficult problems of foreign trade and international exchange won the admiration of our leading business men, and whose ability to promote scientific research for its own sake won the approval of our foremost educators—that such a nation would be capable of turning back the clock 1,000 years, carrying on piracy on a gigantic scale, rejoicing in the murder of women and children, approving the action of naval officers in sinking life boats filled with noncombatants, and breaking at pleasure scores of rules which had been formulated and adopted by the civilized nations of the world—anyone who would have ventured to predict such an event would have been considered to be mentally unbalanced or guilty of the wildest jingoism. Yet these are things which we have actually seen come to pass during the past six years.

In the third place, it was assumed that the stronger powers of South America would naturally be willing to join us in defending the Americas from any possible aggression on the part of the powers of the Old World. Although one of these powers—Brazil—always our best friend among the southern republics, did so join us during the World War, the most important Temperate Zone powers—Argentina and Chile—declined to sacrifice any chances of gain by placing themselves with the Allies, and refused to fight against the enemy of civilization. Furthermore, it is well known that Mexico stood ready to aid our enemy and the enemy of republican institutions as far as she possibly could. The case of Mexico was, perhaps, not surprising in view of her contempt for our citizens and their property.

The attitude of Argentina and Chile, however, was most surprising and unexpected. That Cuba should have been willing to join us immediately shows that our policy of intervention in Cuba whenever interior conditions have made it necessary has made us friends, instead of enemies as so many feared would be the case. On the other hand our unwillingness to intervene effectively in Mexico has made us enemies instead of friends. Furthermore, German influence in Argentina and Chile was sufficiently strong to prevent those Republics from joining the cause of France in her hour of trial.

Viscount Bryce said in summing up the question of South American affinities, the South Americans "have an intellectual affinity for France, for the brightness of her ideas, the gaiety of her spirit, the quality of her sentiment. * * * In South America * * * French influence reigns supreme." Yet the great Temperate Zone republics of South America refused to join us in helping France in her extremity.

In the fourth place, I believed that the great war of the future was to be fought with commercial rather than military weapons. Repeated visits to South America convinced me that Germany was getting tremendous advantage commercially. Her merchant marine was successfully competing with that of England and was keeping ours from raising its head.

The close combination between her bankers, manufacturers, and diplomats was proving a tremendous obstacle to our success. Many of the leading South Americans ridiculed the Monroe doctrine and hated us for supporting it. I felt that it would be greatly to our advantage in the coming commercial struggle to abandon the doctrine and establish a Pan American concert of the powers as had been suggested by Prof. Theodore S. Woolsey in Scribner's Magazine in 1908.

The World War and the events of the last few years have shown that I was mistaken.

The Monroe doctrine, which was becoming obsolete in 1913, is now no longer obsolete but is more firmly held than ever before and has a very definite future sphere of usefulness.

Germany has shown us that human nature has not changed in the possibilities to which it may go in acting on the unregenerate principle that might makes right. Germany has shown us that any foreign policy we may adopt which neglects the possibility of a world power seeking imperial conquest by force of arms is blind and feeble. Our foreign policy for the next generation must be based on lessons learned from what we have seen during the past five years. Germany has taught us many bitter lessons which we as lovers of life, liberty, and the pursuit of happiness would rather not have learned. If we show ourselves unwilling to face these lessons in all their ugly nakedness, if we prefer to obscure them with the smoke of sacrifices to some Utopian goddess of peace without preparedness, our children must suffer the consequences.

No one knows what will come out of present conditions in Russia. We hope for the best but we must prepare for the worst. If such selfish tyrants as Lenine and Trotski succeed in becoming the new czars of that great empire and utilizing its tremendous resources to crush the rule of government "of the people, by the people, and for the people," wherever they can do so, we must be prepared to demonstrate the efficacy of the Monroe doctrine to keep any such tyranny from operating successfully in the Western Hemisphere, no matter what ingenious phrases it may use to deceive lovers of liberty and independence.

* * * * * * *

The nature of the various republics that border on the Caribbean Sea, their proximity to us and to the Panama Canal, and the strategic importance of their ports, so far as our national defense is concerned, make our interests in the Caribbean Sea paramount to all others. The acquisition by Germany, Russia, or Japan of a naval base in the Caribbean is unthinkable. A close alliance between any of the Caribbean republics and one of the great powers of the Eastern Hemisphere could not be tolerated. The need of pursuing a carefully prepared policy of self-preservation has been borne in on us by the acts of Germany. As a people we do not wish to pursue an aggressive policy. At the same time, the fact that only a few months ago one of the greatest nations in the world was pursuing selfish aggrandizement in a thoroughgoing and pitiless manner, unrestrained by any handicaps of human sympathy, makes us realize the importance of looking fearlessly at the Caribbean problem. The condition of the Caribbean republics is such as to cause us grave concern for their welfare and for ours.

If there were more than one world power in the Western Hemisphere or if there were likely to be more than one during the present generation, we should be obliged to look at this problem from a different angle. In the Eastern Hemisphere there are half a dozen world powers. Many of them are constantly rubbing elbows. While it is true that the world is smaller than it was before the days of steamships and airships, nothing that man has done has served to make it as easy to cross the stormy Atlantic as it is to rush an army across a continental frontier. While it is true that the advance of the science of mechanical engineering has shortened the distance across the Pacific Ocean, it has also shortened the distance between Peking and Petrograd. Army motor cars, tanks, and airplanes can be operated successfully over continental boundaries but not across the Atlantic and Pacific Oceans. Everything that makes the world smaller intensifies the problems of the Eastern Hemisphere and of the Western Hemisphere, besides making each more cognizant of the problems of the other. Some writers seem to forget this and to feel that modern invention has overcome the handicap of oceans and the isolation made by stormy seas.

Since we are the only world power in the Western Hemisphere, our duty to ourselves, our desire to preserve our own institutions and our own independence as well as our duty to protect the other powers in this hemisphere against possible aggression on the part of European or Asiatic powers, and to prevent such powers from securing bases from which we or any other American Republic might be successfully attacked, becomes evident. If Argentina, Brazil, and Chile were world powers, the problem would be different. But they are not yet world powers, nor are they likely to become such until they have followed a rough and rugged road and given proof of their faithful adherence

to the cause of liberty as well as of their ability to take their place in world movements. Until such time we must not be accused of selfishness if we deem it our duty to maintain the Monroe doctrine alone against all comers.

It will be agreed that the Panama Canal is one of the most important units in our scheme of national defense. We built it because we saw how long it took the battleship *Oregon* to come from the Pacific to our Atlantic coast, and we desired to be able to use our Navy to protect whichever coast was most seriously threatened. As has been frequently pointed out by the highest naval authorities, to divide our fleet would be disastrous. To divide it and have it kept apart through hostile control of the Panama Canal would be doubly disastrous. Since the Panama Canal is surrounded by the Caribbean Republics, it is obvious that instincts of self-preservation will lead us to keep the Monroe doctrine alive so far as any countries are concerned whose boundaries are near enough to the Panama Canal to permit of their being used successfully as hostile naval bases for operations against the canal.

These are some of the reasons why the people of the United States have decided to stick to the Monroe doctrine and not to regard it as being obsolete. It now remains to be considered what form should be taken by the Monroe doctrine in the future. This is a subject on which everyone is bound to have his own opinions and on which as in the past there will be wide diversity of view.

Some of our people wish to see United States troops employed in any part of the world to prevent injustice and oppression. Some enthusiasts would even be willing to see United States troops employed to prevent aggression against any small Balkan State. Whether these Americans would be equally willing to see British troops employed in Nicaragua to prevent active interference on the part of the United States, whether they would be willing to see French troops used in Haiti to aid the French-speaking citizens of that black Republic in expelling American marines, is another question.

Certainly, the great majority of our people believe that we do not want to see any European or Asiatic troops operating in any part of America. Most of us believe that it would be better not to attempt to enter into acrimonious disputes around the Mediterranean Sea or use our troops for any such purpose. We can do our duty to the world by treating those nations that deserve it with generous consideration both as regards credit and raw material. We can always be counted upon to do what we did in 1917 and come to the armed assistance of France or Italy if Germany or Russia threaten to crush their civilization. But it is hardly feasible for us to consider entering into the rights and wrongs of disputes between the smaller European powers.

On the other hand, it is obvious that we must maintain a most active form of the Monroe doctrine so far as the Caribbean Republics are concerned. In this regard I have come to agree entirely with President Roosevelt's ideas on the Monroe doctrine. "Our attitude in Cuba is sufficient guaranty of our own good faith. We have not the slightest desire to secure any territory at the expense of any of our neighbors." "All that this country desires is to see the neighboring countries stable, orderly, and prosperous." "If every country washed by the Caribbean Sea would follow the program in stable and just civilization which Cuba has shown * * * all questions of interference by this Nation with their affairs would be at an end." "The adherence of the United States to the Monroe doctrine may force the United States, however reluctantly, in flagrant cases of such wrongdoing or impotence to the exercise of an international police power." In these sentences Theodore Roosevelt outlined what I believe to be necessary in the Monroe doctrine of the immediate future.

As a matter of fact, this has been our policy even under an administration that has made much of the phrase "racial self-determination." Nicaragua, Haiti, and Santo Domingo—flagrant cases of chronic wrongdoing and of inability to "act with reasonable efficiency and decency in social and political matters" (Roosevelt's message to the 58th Cong., 3d sess.), unable to guarantee peace to their own citizens, are kept in order by armed men wearing the uniform of the United States.

The history of some of the Caribbean Republics shows that "self-determination" is not necessarily a guaranty of liberty and that the right to rule sometimes leads to the practice of misrule. It seems to be our duty to say both for our own sake and for the sake of the other members of the family of nations that whenever a Carribbean republic makes it impossible for its citizens to enjoy the blessings of peace and to take their part in the work of the world, it must lose temporarily that delightful privilege of self-determination until such time as it will cease to abuse it and learn how to use it. "The privilege of independence creates the responsibility of recognizing certain obligations to the family of nations. If you want to be free to take your part as an independent unit of that family we shall be glad to help you acquire and maintain this freedom, but if you want to be free to hold a continuous revolution, to protect the operations of murderous bandits, to kidnap, and kill foreign engineers who happen to be American citizens, if you want to be free to steal from all those who are weak and defenseless, you must lose that form of freedom."

In other words, we owe it to the progress of the world and to the world's need for its natural resources to see to it that the republics of tropical America behave like citizens of the world rather than like pirates or members of savage head-hunting tribes.

It has been said that the Monroe doctrine is no stronger than our Army and Navy make it. That is partly true. An active Monroe doctrine such as it should be our policy to maintain in the future as regards the Caribbean Sea must be backed up by a sufficiently strong Army and Navy to make it immediately effective in case of necessity. This is the surest way of maintaining peace and prosperity in the Caribbean Sea.

As regards the Temperate Zone republics of South America, we may well maintain a latent Monroe doctrine—a Monroe doctrine whose strength will not depend on our actual Army and Navy, but on our potential military strength when called upon to exercise it.

As soon as Germany saw what our potential Army was going to be on the western front she realized that she could not possibly win and must accept the best possible terms that she could secure.

If we maintain a latent Monroe doctrine so far as concerns the republics of the South Temperate Zone in the Western Hemisphere, we need not have a sufficient military force for immediate action, but we should be ready to say that we would consider any attempt on the part of any Asiatic or European power to form close alliances with that or any other portion of this hemisphere "as dangerous to our peace and safety." Our attitude toward these republics, particularly toward the Governments of Argentine and Chile, should be one of dignified friendship. There is no necessity for us to adopt any air of patronage toward them, nor should we expect them to be grateful to us for maintaining a doctrine which is more to our advantage than to theirs, even though it would be of tremendous importance to them to realize that we should be ready to come to their assistance in case of possible aggression on the part of European or Asiatic powers.

* * * * * * *

Notwithstanding the dismal forebodings of our calamity howlers and the accusations leveled at all those who were willing to have America assume the burdens of war, we have a record that we may be proud of, not only in Cuba but also in France. There has been no demand in this country that Germany should pay us a great indemnity or should reimburse us for our heavy taxes and the dislocation of our normal activities. There has been no thought of securing a share of Germany's colonies. Our actions as well as our words have not shown any desire to profit from our entry into the European war except as we with the rest of the world are benefited by the downfall of the Prussian military caste. Consequently we need not fear to announce that in the future one of our duties to the world for the benefit of all concerned will be the maintenance of a strong Monroe doctrine—latent in temperate America and active in tropical America.

The VICE PRESIDENT. The question is on agreeing to the amendment offered by the Senator from Wisconsin [Mr. BLAINE], as modified.

Mr. BLAINE. I ask for the yeas and nays.

The yeas and nays were ordered, and the Chief Clerk proceeded to call the roll.

Mr. BROOKHART (when his name was called). I have a pair with the senior Senator from New York [Mr. COPELAND], and in his absence I withhold my vote. If I were permitted to vote, I would vote "yea."

Mr. GEORGE (when his name was called). On this question I have a pair with the senior Senator from Connecticut [Mr. MCLEAN]. In his absence, I withhold my vote. If the Senator from Connecticut were present, he would vote "nay," and if I were permitted to vote I would vote "yea."

Mr. NORRIS (when Mr. SHIPSTEAD's name was called). The senior Senator from Minnesota [Mr. SHIPSTEAD] is absent from the Senate on account of illness. He is paired with the Senator from Maryland [Mr. TYDINGS]. If the Senator from Minnesota were present, on this question he would vote "yea."

Mr. SMITH (when his name was called). I have a pair with the senior Senator from Indiana [Mr. WATSON]. In his absence, I withhold my vote.

Mr. MCNARY (when Mr. STEIWER's name was called). My colleague [Mr. STEIWER] has a pair with the junior Senator from Mississippi [Mr. STEPHENS]. If my colleague were present, he would vote "nay" on this question, and if the Senator from Mississippi were present he would vote "yea."

The roll call was concluded.

Mr. JONES. I desire to announce the following general pairs:

The Senator from Oklahoma [Mr. PINE] with the Senator from Mississippi [Mr. HARRISON], and

The Senator from Delaware [Mr. DU PONT] with the Senator from Florida [Mr. TRAMMELL].

Mr. CURTIS. I wish to announce that the Senator from Michigan [Mr. VANDENBERG] is unavoidably detained from the Senate. He is paired on this question with the Senator from West Virginia [Mr. NEELY]. If present, the Senator from Michigan would vote "nay."

Mr. OVERMAN. I desire to announce that my colleague [Mr. SIMMONS] is detained from the Senate on official business.

Mr. GERRY. I wish to announce that the junior Senator from Mississippi [Mr. STEPHENS] is necessarily detained on business of the Senate.

Mr. CARAWAY. I desire to announce that my colleague [Mr. ROBINSON of Arkansas] is unavoidably detained from the Senate on account of illness.

Mr. McKELLAR. I announce the unavoidable absence from the Senate of the senior Senator from West Virginia [Mr. NEELY], and that if he were present he would vote "yea." He is paired on this question.

The result was announced—yeas 22, nays 52, as follows:

YEAS—22

| | | | |
|---|---|---|---|
| Barkley | Gerry | Locher | Pittman |
| Black | Harris | McKellar | Sheppard |
| Blaine | Heflin | McMaster | Thomas |
| Caraway | Howell | Mayfield | Wheeler |
| Dill | King | Norris | |
| Frazier | La Follette | Nye | |

NAYS—52

| | | | |
|---|---|---|---|
| Ashurst | Deneen | Johnson | Robinson, Ind. |
| Bayard | Edge | Jones | Sackett |
| Bingham | Edwards | Kendrick | Schall |
| Blease | Fess | Keyes | Shortridge |
| Borah | Fletcher | McNary | Smoot |
| Bratton | Gillett | Metcalf | Steck |
| Broussard | Goff | Moses | Swanson |
| Bruce | Gooding | Norbeck | Tyson |
| Capper | Gould | Oddie | Wagner |
| Couzens | Greene | Overman | Walsh, Mass. |
| Curtis | Hale | Phipps | Walsh, Mont. |
| Cutting | Hawes | Ransdell | Warren |
| Dale | Hayden | Reed, Pa. | Waterman |

NOT VOTING—20

| | | | |
|---|---|---|---|
| Brookhart | Harrison | Robinson, Ark. | Stephens |
| Copeland | McLean | Shipstead | Trammell |
| du Pont | Neely | Simmons | Tydings |
| George | Pine | Smith | Vandenberg |
| Glass | Reed, Mo. | Steiwer | Watson |

So Mr. BLAINE's amendment as modified was rejected.

Mr. McKELLAR. Mr. President, I offer the following amendment.

The VICE PRESIDENT. The clerk will state the amendment.

The CHIEF CLERK. On page 53, after line 17, insert the following:

*Provided*, That no part of the appropriations made in this act shall be used for the purpose of maintaining marines or troops in the Republic of Nicaragua on and after February 1, 1929, unless specifically authorized by Congress; and,

*Provided further*, That the restrictions here imposed shall not apply if the President shall land troops temporarily for the protection of lives and property under international law or the Monroe doctrine.

The PRESIDENT pro tempore. The question is on agreeing to the amendment proposed by the Senator from Tennessee.

Mr. McKELLAR. Mr. President, I want to make just a brief statement about the amendment. This amendment, in my judgment, is not subject to the objections which have been raised here in reference to the other amendment. It does not attempt to interfere and does not interfere in any way whatsoever with the constitutional power of the President under international law, or under the Monroe doctrine. I express the hope that the amendment may be adopted.

Mr. BRATTON. I ask for the yeas and nays.

The yeas and nays were ordered, and the Chief Clerk proceeded to call the roll.

Mr. BROOKHART (when his name was called). Making the same announcement as before as to my pair, I withhold my vote. If permitted to vote, I would vote "yea."

Mr. GEORGE (when his name was called). Making the same announcement with respect to my pair as before, I withhold my vote.

Mr. NORRIS (when Mr. SHIPSTEAD's name was called). The senior Senator from Minnesota [Mr. SHIPSTEAD] is detained from the Senate on account of illness. If he were present, he would vote "yea."

Mr. SMITH (when his name was called). Making the same announcement as before, I withhold my vote.

Mr. TYDINGS (when his name was called). On this vote I am paired with the senior Senator from Minnesota [Mr. SHIPSTEAD]. I transfer that pair to the junior Senator from Virginia [Mr. GLASS], and vote "nay."

The roll call was concluded.

Mr. CARAWAY. I wish to announce that my colleague the senior Senator from Arkansas [Mr. ROBINSON] is necessarily detained from the Senate on account of illness.

Mr. McNARY. My colleague [Mr. STEIWER] is paired with the junior Senator from Mississippi [Mr. STEPHENS]. If my colleague were present, he would vote "nay," and if the Senator from Mississippi [Mr. STEPHENS] were present he would vote "yea."

Mr. McKELLAR. I desire to announce the unavoidable absence from the Senate of the senior Senator from West Virginia [Mr. NEELY], and that if he were present he would vote "yea." He is paired on this question.

Mr. JONES. I desire to announce the following general pairs:

The Senator from Oklahoma [Mr. PINE] with the Senator from Mississippi [Mr. HARRISON], and

The Senator from Delaware [Mr. DU PONT] with the Senator from Florida [Mr. TRAMMELL].

Mr. CURTIS. I wish to announce that the Senator from Michigan [Mr. VANDENBERG] is unavoidably detained from the Senate. He is paired on this question with the Senator from West Virginia [Mr. NEELY]. If present, the Senator from Michigan would vote "nay."

Mr. OVERMAN. I desire to announce that my colleague [Mr. SIMMONS] is detained from the Senate on official business.

Mr. GERRY. I wish to announce that the junior Senator from Mississippi [Mr. STEPHENS] is necessarily detained on business of the Senate.

The result was announced—yeas 20, nays 53, as follows:

YEAS—20

| | | | |
|---|---|---|---|
| Barkley | Frazier | La Follette | Norris |
| Black | Harris | Locher | Nye |
| Blaine | Heflin | McKellar | Sheppard |
| Bratton | Howell | McMaster | Thomas |
| Dill | King | Mayfield | Wheeler |

NAYS—53

| | | | |
|---|---|---|---|
| Ashurst | Edge | Jones | Schall |
| Bayard | Edwards | Kendrick | Shortridge |
| Bingham | Fess | Keyes | Smoot |
| Blease | Fletcher | McNary | Steck |
| Borah | Gerry | Metcalf | Swanson |
| Broussard | Gillett | Moses | Tydings |
| Bruce | Goff | Norbeck | Wagner |
| Capper | Gooding | Oddie | Walsh, Mass. |
| Caraway | Gould | Overman | Walsh, Mont. |
| Couzens | Greene | Phipps | Warren |
| Curtis | Hale | Ransdell | Waterman |
| Cutting | Hawes | Reed, Pa. | |
| Dale | Hayden | Robinson, Ind. | |
| Deneen | Johnson | Sackett | |

NOT VOTING—21

| | | | |
|---|---|---|---|
| Brookhart | McLean | Shipstead | Tyson |
| Copeland | Neely | Simmons | Vandenberg |
| du Pont | Pine | Smith | Watson |
| George | Pittman | Steiwer | |
| Glass | Reed, Mo. | Stephens | |
| Harrison | Robinson, Ark. | Trammell | |

So Mr. McKELLAR's amendment was rejected.

Mr. HEFLIN. Mr. President, I offer the following amendment.

The PRESIDENT pro tempore. The clerk will state the amendment.

The CHIEF CLERK. Add, on page 53, after line 17, the following:

*Provided*, That none of the appropriations made in this act shall be used to pay any expenses incurred in connection with acts of hostility by the United States marines in Nicaragua, unless and until the President shall obtain from Congress its consent to keep them there.

The PRESIDENT pro tempore. The question is on agreeing to the amendment offered by the Senator from Alabama.

Mr. HEFLIN. I ask for the yeas and nays.

The yeas and nays were ordered, and the Chief Clerk proceeded to call the roll.

Mr. BROOKHART (when his name was called). Making the same announcement as before as to my pair, I withhold my vote. If permitted to vote, I would vote "yea."

Mr. NORRIS (when Mr. SHIPSTEAD's name was called). The senior Senator from Minnesota [Mr. SHIPSTEAD] is detained from the Senate on account of illness. If he were present, he would vote "yea."

Mr. SMITH (when his name was called). Making the same announcement as before, I withhold my vote.

Mr. TYDINGS (when his name was called). On this vote I am paired with the senior Senator from Minnesota [Mr. SHIPSTEAD]. I transfer my pair to the junior Senator from Virginia [Mr. GLASS], and vote "nay."

The roll call was concluded.

Mr. JONES. I desire to announce the following general pairs:

The Senator from Oklahoma [Mr. PINE] with the Senator from Mississippi [Mr. HARRISON], and

The Senator from Delaware [Mr. DU PONT] with the Senator from Florida [Mr. TRAMMELL].

Mr. CURTIS. I wish to announce that the Senator from Michigan [Mr. VANDENBERG] is unavoidably detained from the Senate. He is paired on this question with the Senator from West Virginia [Mr. NEELY]. If present, the Senator from Michigan would vote "nay."

Mr. GERRY. I wish to announce that the junior Senator from Mississippi [Mr. STEPHENS] is necessarily detained on business of the Senate.

Mr. McKELLAR. I desire to announce the unavoidable absence from the Senate of the senior Senator from West Virginia [Mr. NEELY], and that if he were present he would vote "yea." He is paired on this question.

Mr. McNARY. My colleague [Mr. STEIWER] is paired with the junior Senator from Mississippi [Mr. STEPHENS]. If my colleague were present on this question he would vote "nay," and if the Senator from Mississippi were present he would vote "yea."

Mr. CARAWAY. I wish to announce that my colleague the senior Senator from Arkansas [Mr. ROBINSON] is necessarily detained from the Senate on account of illness.

The result was announced—yeas 15, nays 60, as follows:

YEAS—15

| | | | |
|---|---|---|---|
| Black | Heflin | McKellar | Sheppard |
| Blaine | Howell | Mayfield | Thomas |
| Dill | King | Norris | Wheeler |
| Frazier | La Follette | Nye | |

NAYS—60

| du Pont | McLean | Shipstead | Vandenberg |
| George | Neely | Smith | Watson |
| Glass | Pine | Steiwer | |

So Mr. HEFLIN'S amendment was rejected.

The PRESIDENT pro tempore. The bill is before the Senate as in Committee of the Whole, and open to amendment.

Mr. BARKLEY. Mr. President, I desire to call the attention of the Senate to a matter which is somewhat kindred to the Nicaraguan situation except that it has only proceeded far enough to bring about the introduction of a resolution. The senior Senator from Minnesota (Mr. SHIPSTEAD) has introduced a resolution, which is now pending before the Committee on Foreign Relations, providing for an investigation before that committee of the Government of Cuba. In that resolution it is charged that various acts of misgovernment have been committed in Cuba which, in the opinion of the Senator from Minnesota, require some investigation.

When the United States set Cuba free the Platt amendment provided that under certain circumstances the United States might have the right to intervene. In that amendment it was provided that the constitution of Cuba and a treaty which would subsequently be entered into between that country and ours should provide against Cuba entering into any treaty with any foreign country which in any way affected the rights of the United States. It provided that Cuba should not incur any indebtedness that could not be met out of the current revenues. It provided that under certain circumstances the United States might intervene to assure stability of government and protection of the rights and property, and that Cuba would cede to our country a coaling station.

I do not know what basis the distinguished Senator from Minnesota may have had for the introduction of the resolution calling for an investigation, but it seems to me that it would be peculiarly inopportune now for the Senate or our Government to take any action with respect to Cuba that might give rise to any misapprehension of our friendly attitude toward our relationship with her, especially in view of the fact that at the recent Pan American Conference held in Habana the Government of Cuba was one of the outstanding friends of the United States with respect to the delicate relations which exist between us and some of the countries of Central and South America.

There is $1,500,000,000 of American capital invested in Cuba. This money is invested in all forms of property, including real estate, manufacturing enterprises, railroads, street-car lines, and public utilities of all sorts. It seems to me that if there was any great evidence of misgovernment or a lack of proper protection of the rights of American citizens and their property in Cuba, or any failure on the part of the Cuban Government or the courts of Cuba to guarantee the rights to which we are entitled under the treaty and under her constitution, we would have heard something of it. I am frank to say I have heard no occasion for just criticism on the part of American citizens against the Government of Cuba.

I desire, therefore, to ask the clerk to read a letter which I have received from a distinguished Kentuckian who has spent considerable time in Cuba, and also an editorial from the Philadelphia Record of date April 9, 1928, touching upon the matter which I have just briefly discussed.

The PRESIDENT pro tempore. Without objection, the clerk will read, as requested.

Mr. CURTIS. Mr. President, would not the Senator be willing to have them printed in the RECORD without reading?

Mr. BARKLEY. It will not take long to read them. I would prefer to have them read.

The Chief Clerk read the letter, as follows:

FRANKFORT, KY., *April 20, 1928.*

Hon. ALBEN W. BARKLEY,
*United States Senate, Washington, D. C.*

MY DEAR SENATOR: I beg to call your attention to the resolution of Senator SHIPSTEAD, of Minnesota, recently referred to the Senate Committee on Foreign Relations, proposing a Senate investigation of charges against the Government and institutions of the Republic of Cuba.

You are familiar with my knowledge of prison conditions and criminal law enforcement in the United States based upon an experience of more than 30 years in industrializing prisons not only in Kentucky but in Illinois, Indiana, Iowa, Wisconsin, Connecticut, Massachusetts, and South Carolina. Having just returned from six months' investigation in Cuba of the prisons, in which I am known as a specialist, I deem it a public duty to register protest against the resolution of the Minnesota Senator, which can be interpreted in Cuba only as an unfriendly act.

In so far as these charges relate to alleged injustices of the Cuban court system and to administration of the Cuban criminal code, as in the days of General Weyler, I can state most positively that they are without justification.

The new national prison on the Isle of Pines is the most complete and modern reformatory institution in the world to-day; it is more humanely conducted than any similar institution in this country, with better discipline, lesser punishments, and larger proportion of criminals reformed and returned to citizenship, with a more effective parole system than in any State institution in this country.

The old prisons in Cuba are maintained with good discipline, cleanliness, and sanitation 100 per cent better than in the United States.

We would be fortunate if our State courts administered justice with the speed, fairness, and efficiency which one sees in the courts of Cuba. Reports of crime waves in the United States shock the sensibilities of our Cuban neighbors. They point to a prison population in Cuba approximately 50 per cent lower per capita than the prison population in such States as New York, Pennsylvania, Minnesota, or Illinois.

Delays in prosecution and laxity in execution of sentences are not known in Cuba.

During six months' sojourn in the island in association with American residents there I heard not a single complaint of the tenor of the Minnesota Senator's resolution in respect to denial of justice to American citizens. On the other hand, I heard from Americans and Cubans general commendation of President Machado and his government.

While it should be obvious to every American citizen that the Senate of the United States can not, as pointed out by the Cuban ambassador to Washington, conduct an investigation on Cuban soil, I am sure that a cordial welcome, safe conduct, a healthful and interesting vacation, and unlimited opportunity of observation await any American, the tourist or statesman, who cares to visit Cuba to see for himself.

Habana offers a surprising contrast to various metropoli of the United States which figure in the headlines as centers of crime. I believe it is no exaggeration to say that Habana is the safest, most sanitary, and satisfactory residential city in the Western Hemisphere.

Very truly yours,

A. D. MARTIN.

The Chief Clerk proceeded to read the editorial.

Mr. BARKLEY. Mr. President, as the letter has been read, it will be entirely satisfactory that the editorial be printed without reading.

Mr. NORRIS. The way the editorial began, I should like to have it read so that we may know what it has to say.

The PRESIDENT pro tempore. The clerk will read the editorial.

The Chief Clerk read the editorial, as follows:

[From the Philadelphia Record, April, 1928]

AN INTERVENTION PLAN THAT CAN WAIT A BIT

As the sole Farmer-Labor representative in the Senate, Mr. SHIPSTEAD enjoys singular freedom of action. While his Republican and Democratic colleagues are entitled and expected to follow the dictates of conscience, they owe a certain deference to their respective groups, and custom requires them to take counsel before urging controversial policies. But the Minnesota statesman can at a moment's notice mobilize himself into a caucus of his party and adopt a program without risking dissent or argument.

In the exercise of this agreeable independence the Senator has just made a proposal which would hardly be adopted offhand by either of the two large organizations. He has introduced a resolution asking the Foreign Relations Committee to "investigate and report whether the property and rights of American citizens resident in Cuba have been and are being fully protected."

His assertion is that "specific charges" have been made by publicists, educators, and other reliable sources" that the present Cuban régime is a virtual dictatorship, which has suppressed freedom of speech and other essential rights; that manipulation of the courts has made justice a farce and the judiciary an instrument of absolutism; that the criminal code is perverted to the uses of oppression and the punishment of legitimate political activity; that there have been partisan deportations, imprisonments, and assassinations; and that Americans, as well as Cubans, have been victimized by seizures of property without due process of law.

These allegations, in view of the historical record, are by no means incredible. Political methods in Latin-American countries are traditionally drastic, and from the time of its creation the Cuban Republic has exemplified at frequent intervals the rigors of partisan conflict. Self-governing since 1902, the country has had periodical uprisings, and each of the half dozen presidential elections has been marked by disorder. At the close of the first administration, under President Palma, there was an insurrection so serious that from September, 1906, to January, 1909, the island was provisionally ruled by the United States. There was a revolt in 1912 and another in 1916, and the election campaigns have been continuously embittered by charges of corruption and outbreaks of violence, despite the adoption of excellent ballot laws under American supervision.

Moreover, the right of the United States to interest itself in these matters is beyond question, since it is embedded in the Cuban constitution. That document provides, by what is known as the Platt amendment:

"The Government of Cuba consents that the United States may exercise the right to intervene for the protection of Cuban independence, the maintenance of a government adequate for the protection of life, property, and individual liberty, and for discharging the obligations with respect to Cuba imposed by the treaty of Paris on the United States."

But despite this status, which is perhaps unique in international relations, enforcement of the rights stated is a matter of extreme gravity, especially so in view of recent expressions of Latin-American sensitiveness regarding intervention, and in view of the whole-hearted support which the Cuban Government gave to the United States at the Habana conference. Even a proposal for investigation is a delicate matter. This is shown by the blunt observation of the Cuban ambassador that the complaints against his Government emanate from radical malcontents, and that in any case the proposed Senate inquiry "could not be carried out on Cuban territory."

It may be assumed, therefore, that the committee will not act precipitately upon the demand of Senator SHIPSTEAD and his unnamed "publicists." For the time being, at least, Nicaragua would seem to furnish adequate employment for our statesmanship in the Caribbean.

Mr. BORAH. Mr. President, I only desire to say that the resolution referred to by the Senator from Kentucky was introduced on the 17th day of April by the Senator from Minnesota [Mr. SHIPSTEAD] and has not yet had the consideration of the committee. I have no doubt the Senate can rely upon the committee when it comes to deal with it, to act with entire respect for the integrity and sovereignty of a friendly nation.

Mr. JOHNSON. Mr. President, it is my duty to offer an amendment to the naval appropriation bill. I do it, sir, with full knowledge of the parliamentary situation, but nevertheless events which have recently transpired in the harbor of San Diego render it essential that, at least, the amendment should be offered and the responsibility rest then where it ought in respect to the matter.

Not long ago the two great carriers which have been constructed for the United States Navy, the *Lexington* and the *Saratoga*, went to San Diego Harbor. There it is that the great airport of America exists. There it is that these two great airplane carriers must take on their burden and load with aircraft. They were able to go through a 1,000-foot channel to the particular point essential, but being ships 800 feet in length they can not turn around in that channel. It is absolutely necessary that there should be a dredging of the channel in order that another naval debacle may not be ours in the near future. I read, sir, just a paragraph from Admiral McKean's report upon the situation.

The contemplated presence of the two airplane carriers on the west coast, together with the urgent need for utilization of an extension of aeronautical facilities here, necessitate a revision of priorities of items for development, and the commandant places as item 1 on the priority list the need for dredging for a 4,000-foot 35-foot deep turning circle, with material deposited on the Marine Corps base, and as item two on the priority list the need for extension of the concrete wharf at the naval air station for berthing these carriers.

I ask as a part of my remarks that a letter from the Secretary of the Navy and the report of the commandant to which I have just referred may be inserted in the RECORD.

The PRESIDENT pro tempore. Without objection, it is so ordered.

The letter and report are as follows:

DEPARTMENT OF THE NAVY,
OFFICE OF THE SECRETARY,
*Washington, April 11, 1928.*

Hon. HIRAM W. JOHNSON,
*United States Senate.*

MY DEAR SENATOR: Inclosed herewith is a copy of the report of Rear Admiral McKean on the proposal relating to the Marine Corps flying field, including dredging for a turning basin, requested in your letter of March 30, 1928.

Sincerely yours,

CURTIS D. WILBUR.

---

MARCH 13, 1928.

From: Commandant.
To: Chief of Naval Operation, Navy Department, Washington, D. C.
Subject: Nolen plan—Suggested modifications of (turning basin for airplane carriers).
Reference: (a) Your letter Op–23X–SJC QH(16) (San Diego)/N22 (280301) of March 1, 1928.
Inclosures: (A) Marked copy of hydrographic chart No. 5107.
(B) Marked copy of blue print ND11/N1–2(2).
(C) Copy of letter from harbor department, San Diego, Calif., dated March 12, 1928.
(D) Copy of reference (a).

1. The San Diego city authorities, in dredging to fill Lindbergh Field, had planned to dredge about 1,040,000 cubic yards from the area on the north side of the channel opposite the concrete dock at the naval air station, to improve the turning circle for the airplane carriers. The city now plans to dredge an additional 1,080,000 cubic yards from this area, which will give practically a 3,600-foot diameter turning circle 33 feet deep (inclosure (C)). This will make a total of 2,120,000 cubic yards excavated from this area, and will quickly give to the Navy a dredged area in which it will be practicable to turn the U. S. S. *Saratoga*. This turning circle is shown in red on inclosure (A).

2. The commandant desires to express his appreciation of the cooperation of the city of San Diego in so planning this dredging as to meet the immediate needs of the Navy for this service.

3. While a 3,600-foot turning circle 33 feet deep will make it possible for the airplane carriers to proceed to and from the naval air station, the conditions of wind, tide, and navigational interferences, together with the size, draft, and value of these carriers make it most necessary that plans be prepared and funds secured sufficient to dredge a turning circle of at least 4,000 feet diameter, and not less than 35 feet deep. Such a circle is shown in black on inclosure (A). The amount of dredging involved, in addition to that which will be performed by the city, is approximately 4,700,000 cubic yards, and the estimated cost at 20 cents per cubic yard is $940,000.

4. The city also plans to dredge a smaller channel to serve the water front north of the municipal piers. The total dredging by San Diego will approximate 2,500,000 cubic yards, and the city will deposit this material to fill that part of Lindbergh Field lying on municipal property. This area to be filled by the city is shown in red on inclosure (B).

5. The Navy desires to fill immediately that portion of the Marine Corps base now partially filled and lying along the water front in front of the barracks and extending to the east of the barracks to secure a flying field for the marine aviation detachment of the West Coast Expeditionary Force now housed in temporary buildings at North Island. The quantity of fill required for this purpose is approximately 800,000 cubic yards. This would leave about 3,900,000 cubic yards toward filling in that portion of Lindbergh Field lying on naval property. This amount will be sufficient to fill that part of field shown in yellow on

marked print, inclosure (B), and will serve to connect the marine flying field with the municipal flying field, bringing this combined area to elevations suitable for flying purposes. Advantage should, therefore, be taken of the need for this additional dredging required for safe navigation of the airplane carriers to secure the fill required for this most vital flying field.

6. It was the original intention of the operating base to secure the fill required for a landing field from dredging a shoal area in front of the Marine Corps base to below 6 feet so as to render the area available for seaplane operations. Such extension of the seaplane maneuvering area in San Diego Harbor is very important, but is not so immediately vital to fleet needs as is the question of securing a safe turning circle for the airplane carriers. When in the future congestion increases and additional seaplane maneuvering area is imperative, and funds become available for this work, it should be performed, and the material obtained from dredging operations should be deposited to complete the work of filling in the Marine Corps base property lying west of Lindbergh Field and south of the marine flying field, extending this field to the new bulkhead lines recently approved by the War Department.

7. Coincident with the dredging by the Navy and city to secure a 4,000-foot turning circle 35 feet deep, the War Department should be called upon to remove from this main channel, within the turning circle, all shoal areas above 35 feet below mean low water. Some few soundings of 31 and 32 feet are noted in this area. An accurate estimate of the yardage involved can not be made at this time because of the large area and shallow cuts involved and the comparatively few soundings shown on the chart. The cut may vary from 50,000 to 170,000 yards.

8. The commandant earnestly recommends that immediate steps be taken to secure this necessary 4,000-foot turning circle 35 feet deep, now required for safe navigation of the airplane carriers in San Diego bay, in order that they may berth at and utilize the facilities of the naval air station.

9. The contemplated presence of the two airplane carriers on the West coast, together with the urgent need for utilization of an extension of aeronautical facilities here necessitate a revision of priorities of items for development, and the commandant places as item 1 on the priority list the need for dredging for a 4,000-foot 35 feet deep turning circle, with material deposited on the Marine Corps base, and as item 2 on the priority list the need for extension of the concrete wharf at the naval air station for berthing these carriers.

J. S. McKEAN.

Mr. JOHNSON. It is a fact, sir, that this dredging is absolutely necessary. I have a pride in the Navy. Every American may justly have a pride in it. It has a fighting personnel that is not equalled by any on earth. It has a medical unit, and a medical corps, sir, that stands as high as any in all the world. In its technical and scientific departments it rivals any. It fails only occasionally in a manana policy and an inability to administer and to execute where administration and execution may be necessary. This is one of those instances. The situation demands immediate action. The administrators of the Navy Department admit it, but wish to do it some other time. Now is the time. The amendment should be adopted.

The PRESIDENT pro tempore. The amendment will be stated.

The CHIEF CLERK. On page 33, after line 6, insert:

Marine flying field and water-front development, San Diego, Calif., $940,000.

Mr. HALE. Mr. President, I realize the ultimate need for the provision covered by the amendment which has been offered by the Senator from California. The great carriers, the *Lexington* and the *Saratoga*, will undoubtedly have to use the harbor of San Diego, and, as the Senator has said, they can not turn around in that harbor under their own steam, but at the present time I understand that they can be turned around by the use of tugs.

In view of the fact that the amendment is new legislation and that it has never been estimated for by the Budget, I must reluctantly make the point of order against it.

The PRESIDENT pro tempore. The point of order is sustained.

Mr. NORRIS. Mr. President, what I am about to say ought to have been said immediately after the Senator from Kentucky [Mr. BARKLEY] had the letter read, but the Senator from California [Mr. JOHNSON] obtained the floor ahead of me, so that I may be a little late.

I desire to inquire, first, who is the author of the letter which the Senator had read?

Mr. BARKLEY. Col. A. D. Martin, of Frankfort, Ky., a very prominent Kentuckian.

Mr. NORRIS. Does he live in Cuba?

Mr. BARKLEY. No; he lives in Frankfort, but travels considerably and has been in Cuba a number of times.

Mr. NORRIS. Is he interested there?

Mr. BARKLEY. I think not.

Mr. NORRIS. He writes such a beautiful letter and at such great length, showing such intimate knowledge of the conditions in Cuba, that it seemed to me he must spend most of his time there.

Mr. BARKLEY. He goes down during the winter very frequently. He has been there during the past winter. If he has any financial interests in Cuba, I know nothing about it.

Mr. NORRIS. Of course he shows a great interest, and a laudable one, in Cuba; but I think the Senator from Kentucky can very safely answer his friend, and might have done so without having his letter read—although I have not a particle of objection to it—and say to him that there is not any danger of the Senate passing the Shipstead resolution.

I know nothing whatever about it. I never knew there was such a resolution until it was called to my attention by that letter, but I have a copy of it now before me. It proposes to direct the Senate Committee on Foreign Relations, acting through a subcommittee or otherwise, to investigate and report to the Senate whether the property rights of American citizens residents in Cuba, and so forth, have been and are being protected.

The Senator from Kentucky, especially in view of the action of the Senate to-day, can safely write to his correspondent that under the amended Constitution of the United States the Senate has no jurisdiction over such matters. It has surrendered its right, and we have amended the Constitution and given to the Executive the sole authority to look after persons and property in foreign countries.

The Senator can safely say to his correspondent, however, that there is not any doubt now but that the executive department will fully protect him if he has any property in Cuba; that these arrangements are carried on, it is true, in secret; that even the Senate or the House does not know what is being done; that the subject is being looked after quietly and effectively and secretly by the Department of State; and that the Army and the Navy and the marines are ready at a moment's notice to take care of the property rights of anybody in Cuba.

So the correspondent of the Senator from Kentucky is perhaps unnecessarily alarmed about conditions down in Cuba; but he has taken the wrong course to get any action on the matter. He has supposed that Congress should have something to say about it, and so has the Senator from Minnesota; but he will certainly find out before very long, if he has not already been told by telephone, that the Senate of the United States has nothing to do with foreign relations; that that subject is in the hands of the executive department, and that through the secret channels best known to the Secret Service of the United States they will amply protect the property and the lives of American citizens in Cuba; that the entire naval force of the United States will be brought out, if necessary, to see that that protection is given; and if the Department of State finds upon the secret investigation which it makes, and the secret representations which may be made to it, that there is something wrong down in Cuba, and that it can best be remedied by putting men out of office who are in office in Cuba, our marines will be directed to hold an election down in Cuba, and they will see that the right people get in office.

I think there is no doubt but that the Senator's correspondent has been properly answered by the Senate; and perhaps when he reads the result of this vote he will be able to sleep without any difficulty, and slumber without any interruption.

Mr. BARKLEY. Does not the Senator from Nebraska think it is rather commendable, and ought to be made a matter of note and public record, that there is at least one American citizen who travels and who is concerned about affairs in South and Central America who does not desire his Government to intervene in his own behalf or in behalf of other American citizens?

Mr. NORRIS. Yes; I think it is very commendable.

Mr. WHEELER. But the Senator ought to inform him that the Senate of the United States, by its action this afternoon, has abdicated in favor of a dictator in the White House.

Mr. BORAH. Mr. President, between those who want to come out and those who want to go into these Central American countries, it is very difficult for the Foreign Relations Committee to establish any permanent policy.

Mr. EDGE. Mr. President, I offer an amendment to the pending bill on page 25. I move to strike out lines 18 to 23, inclusive, which read:

The Paymaster General of the Navy is authorized to enter into agreements with the proprietors of the piecework shops carried on the rolls of the naval clothing factory during the calendar year 1927 for the

manufacture of clothing from materials furnished by the Government, at such prices as may be approved by the Secretary of the Navy.

I have spoken to the chairman of the committee as to my reasons for asking that this language be stricken out, so that in conference a little further investigation can be made of its real meaning. I am informed that under this provision contracts have been made at a very high rate, and in more or less an exclusive way, with a very few concerns. I am not entirely positive as to the accuracy of my information; but if we pass the bill with this provision in it, of course we shall have no opportunity to correct it. So I ask the Senator in charge of the bill if he will not accept the amendment in order that it may be further investigated in conference.

Mr. HALE. Mr. President, I think the Senator is mistaken in saying that contracts have been made at very high rates with individuals; but in view of the fact that he questions the provision, I am willing to have it stricken out and have the matter go to conference.

The PRESIDENT pro tempore. The question is on agreeing to the amendment offered by the Senator from New Jersey [Mr. EDGE].

The amendment was agreed to.

Mr. KING. Mr. President, before a vote is taken upon the passage of the bill I desire to submit a few words. We are asked by this bill to appropriate approximately $370,000,000 for the Navy. This enormous sum is not for new construction but to cover the ordinary expenses alone of the naval establishment for the next fiscal year. No country in the world will make so large an appropriation for naval expenses as that which we are called upon to make for the coming year. For months the country has been filled with propaganda carried on by frenzied and excited militarists who have represented that the Navy was about to be "scrapped," and that our country was totally "unprepared" to meet some foe which threatened the safety of our country. I have received many letters and telegrams protesting against "scrapping the Navy" and demanding that nearly a billion dollars be appropriated for the construction of new war vessels.

The State Department, we are told, is engaged in negotiations to bring about disarmament among the nations and to secure the adoption of treaties calculated to "outlaw war," and yet with these professions in behalf of world peace, the Executive Department has urged direct appropriations and authorizations for military and naval expenditures aggregating nearly $2,000,000,000.

When Congress convened in December the Bureau of the Budget indorsed an authorization calling for $740,000,000 for new naval construction. The Secretary of the Navy upon many occasions since then has urged that Congress authorize this great outlay to build new war vessels. This huge sum did not include the ordinary expenses of the Navy for the coming year which the bill before us provides for, but the appropriation carried by the pending bill will not cover all the expenses of the Navy for the next fiscal year. Since Congress convened we have appropriated something like $20,000,000 for gun elevation and moderization of two of our capital ships.

Mr. HALE. Mr. President, I think the Senator is mistaken about that; $13,150,000 was authorized last year for modernizing the *Oklahoma* and the *Nevada*. It is the policy of the Navy and it is the policy of the Congress to modernize certain of our older ships and bring them up to date by putting on deck protection and blisters and certain other changes that have to be made to bring them up to date as modern ships. After these shall have been completed—and that will not be until the end of the next fiscal year—we will take two more ships, the *Pennsylvania* and the *Arizona*, and fix them up in the same way; but that will not come in the present bill or during this session of Congress.

The House has before it now a bill to authorize such a change, I believe, in the *Arizona* and the *Pennsylvania;* but no appropriation for that will come until later, and that is in regular line with what the Navy is doing.

Mr. KING. There will be an authorization for approximately $25,000,000 more. Then, in addition, there will doubtless be a measure passed before the adjournment authorizing an appropriation of more than $300,000,000.

Mr. HALE. What is that? I am not aware of any such appropriation.

Mr. NORRIS. The Senator has not been told yet.

Mr. HALE. The Senator said an appropriation, did he not?

Mr. KING. I said an authorization.

Mr. HALE. Oh! I beg the Senator's pardon.

Mr. KING. The Senator is certainly aware of the fact that the Secretary of the Navy and the President recommended an authorization of $740,000,000 for new naval construction, in addition to the amount carried in the bill before us which is approximately $370,000,000. The Senator also knows that the estimates of the Navy for naval construction are always far below the final cost. Secretary Wilbur states that the desired authorization of $740,000,000 is not the final cost but only an "approximation." If the "rough estimates," or approximation, of the Navy are $740,000,000 it is certain that the final cost will exceed $1,000,000,000. Congress will also appropriate before adjournment next month an additional sum to meet expenses of the Navy, including improvements and repairs upon naval craft. This sum will be approximately $20,000,000.

The House has not responded to the recommendations of the President and the Secretary of the Navy for $740,000,000, but it has authorized new construction that will cost, according to rough estimates, $300,000,000. So, Mr. President, before we adjourn Congress will have appropriated approximately $400,000,000 for naval expenses for the next fiscal year, and will have authorized appropriations to the amount of $300,000,000. Our naval bill then will amount to approximately $700,000,000, that is for direct and indirect appropriations. Yet, Mr. President, we are at peace with all the world except Nicaragua. We have already appropriated to meet the expenses of the Army for the next fiscal year approximately $300,000,000. No nation, no matter what her military ambitions or purposes were, has ever appropriated for military purposes so large a sum for a single year, except during the period of the World War.

We constantly aver that this is a Christian Nation, that it has no imperialistic policies and no desire for territorial conquest. Its responsible leaders avow that its purposes are peaceful, and that it desires amicable relations with all the world. These large military expenditures, for which we are providing, are not quite consistent with the oft-repeated proclamations of our desire for world peace and international disarmament. Our professions would inspire greater confidence if we were not projecting new war vessels at a cost of a billion dollars, and were not appropriating for the next fiscal year nearly $700,000,000 to meet the expenses of our Military Establishment.

Mr. NORRIS. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Utah yield to the Senator from Nebraska?

Mr. KING. I yield.

Mr. NORRIS. Does not the Senator think that is enough?

Mr. KING. It appears that the President, and he stands for economy, was in favor of a much larger authorization, and Secretary Wilbur judging from his numerous utterances, is dissatisfied with the appropriation, and the authorization made and to be made before this session of Congress terminates.

Mr. NORRIS. We have just started out now upon a new policy. I doubt whether that will be enough to carry out the new policy. If you are going to supervise the elections of the world it will take more than that.

Mr. KING. Perhaps the American people will have something to say about the foreign policy of the Government and demand that this Republic lead the way toward world peace. In my opinion they do not approve of a foreign policy which projects the United States into the domestic affairs of other nations, and which makes the Monroe doctrine a pretext to interfere in the affairs of Latin America. The American people, in my opinion, believe that the United States, because of its material strength and power and its moral strength, is in a position to profoundly influence all nations of the earth, and by example prepare the way not alone for the reduction in military armaments, but to effectuate practical world disarmament.

But recurring to the bill for new construction I understand that as it passed the House it authorizes new construction of war vessels to the amount of approximately $300,000,000; indeed, it will probably be considerably more.

Mr. HALE. But the bill as it came over from the House authorizes, I think, $270,000,000 for new construction of cruisers and one aircraft carrier.

Mr. KING. Yes; but we all know that the aircraft carrier will cost from twenty to thirty millions of dollars, and the entire estimated costs for the vessels authorized will exceed by many million the naval approximation.

Mr. HALE. I do not see where the Senator gets his $700,000,000 that he says we are authorizing.

Mr. KING. Perhaps the Senator did not understand what I stated. I said that before we adjourn Congress will have appropriated directly and authorized expenditures the total of which will be approximately $700,000,000. This bill, as I have stated, carries substantially $370,000,000. We have appropriated $13,500,000 for the modernization of two capital ships. There will be a further appropriation for repairs and improvements of approximately $20,000,000, and the House bill which is now before the Senate Naval Affairs Committee pro-

viding for new construction will carry authorizations of not less than $300,000,000. The Senator will see that these amounts will reach the $700,000,000 mark.

Mr. HALE. The $13,500,000 which the Senator speaks about was authorized last year.

Mr. KING. Whether authorized then or in December last, it will have to be met out of appropriations made before Congress adjourns. Mr. President, an examination of the huge appropriations already made and those which will be made before Congress adjourns for military purposes will furnish convincing proof that no nation in peace times since the dawn of history has appropriated so much for military expenses for one year as will be provided for in the measures passed by this Congress to meet the military budget of the United States for the next fiscal year.

The PRESIDENT pro tempore. The bill is still before the Senate as in Committee of the Whole and open to amendment.

Mr. HALE. Mr. President, I send to the desk an amendment which I ask to have stated. I will say that I have been instructed by the Appropriations Committee to offer this amendment on the floor.

The PRESIDENT pro tempore. The amendment will be stated.

The CHIEF CLERK. On page 46, in line 3, after the word "Columbia," it is proposed to insert:

: *And provided further,* That the Secretary of the Navy, in his discretion, may assign to the Chief of Naval Operations the public quarters now assigned to the Superintendent of the Naval Observatory, District of Columbia.

Mr. JONES. Mr. President, this building is assigned to the Superintendent of the Naval Observatory by the express terms of the statute that provided for its construction; so that this amendment is clearly subject to a point of order, because it changes existing law.

Mr. HALE. Mr. President, before the Senator makes that point I should like to explain the purpose of the amendment.

Mr. JONES. If the Senator will wait just a moment, perhaps he will be satisfied.

The Secretary of the Navy has appealed to me very strongly not to make a point of order against the amendment. He seems to think that the change that is suggested here is very desirable in the interest of the naval service. The Superintendent of the Naval Observatory himself has asked me not to make the point of order. He seems to think that the suggested action is wise.

Mr. President, while I do not like to see these legislative provisions on appropriation bills, because of the fact that the Secretary of the Navy himself thinks it is well for the service to make this change and the Superintendent of the Naval Observatory thinks it is desirable I am not going to make the point of order.

Mr. NORRIS. Mr. President, I should like to ask the Senator from Maine a question or two about this amendment.

Mr. HALE. I shall be very glad to explain it to the Senator.

Mr. NORRIS. The Senator from Washington has almost convinced me that I ought to make the point of order myself.

Mr. DILL. Mr. President, I should like to know just what the effect of this amendment is.

Mr. HALE. I shall be glad to explain it.

Mr. NORRIS. Mr. President, I think I have the floor, if Senators will permit me to continue my remarks.

The PRESIDENT pro tempore. The Senator from Nebraska is entitled to the floor.

Mr. HALE. I should like to explain the amendment, if given an opportunity.

Mr. NORRIS. Yes; but the Senator does not give me an opportunity to finish what I will say. He is too anxious. I was going to ask the same question which the Senator from Washington [Mr. DILL] asked. I should like to have a little further explanation of the amendment. What are they going to do with this observatory? Are they going to convert it into a clubhouse or a residence?

Mr. HALE. Mr. President, I was about to explain the amendment when the Senator from Washington [Mr. JONES] suggested that I wait until he got through. If permitted to do so, I shall be very glad to explain it.

Mr. NORRIS. I shall be glad to surrender the floor and have the Senator explain the amendment.

Mr. DILL. Mr. President, when the Senator in charge of the bill would not allow an amendment that was as badly needed for this bill as the amendment of the Senator from California [Mr. JOHNSON] I think that bringing legislation in here at this time is also unnecessary. As I understand, this is to take away the Naval Observatory.

Mr. HALE. Mr. President, will the Senator let me make the explanation?

Mr. DILL. I tried to get the Senator to make it a while ago.

Mr. HALE. I offered the amendment, and I think I am entitled to explain it.

Mr. DILL. All right.

Mr. HALE. Mr. President, for a number of years the Chief of Staff of the Army has been given quarters at Fort Myer. The present Chief of Operations of the Navy, Admiral Hughes—who corresponds to the Chief of Staff of the Army—has no quarters assigned to him here in Washington. There are very good quarters at the Naval Observatory, and the department felt that they would make adequate and fine quarters for the Chief of Operations, the ranking officer of the Navy.

The allowance of an admiral for rent is about $1,262 a year. That is $500 more than the allowance of a captain. The allowance of the present superintendent of the observatory therefore is $500 less than that of Admiral Hughes. If these quarters are given to Admiral Hughes, that will mean a saving to the Government of $500 a year and will give this distinguished officer adequate quarters while he is stationed here in Washington.

Mr. McKELLAR. Mr. President, will the Senator yield?

Mr. SWANSON. Mr. President——

The PRESIDENT pro tempore. To whom does the Senator yield?

Mr. HALE. I yield to the Senator from Tennessee.

Mr. McKELLAR. What will become of the superintendent of the observatory?

Mr. HALE. The superintendent of the observatory is to leave these quarters.

Mr. McKELLAR. Where will he go? How can he be superintendent if he leaves there?

Mr. HALE. I may say that he is entirely willing to do so, because under his pay as a captain he can not adequately keep up the quarters, which are expensive ones.

Mr. McKELLAR. Will he be away from the observatory? Will he be outside?

Mr. HALE. He would live away from the observatory, but that would not interfere with the administration of his duties in the observatory.

Mr. SWANSON. Mr. President, will the Senator yield to me for a minute?

Mr. HALE. I yield.

Mr. SWANSON. The Chief of Operations has no quarters; he has to rent a house. This has been assigned under the statute to the Hydrographic Office and the superintendent of that office lives there. It is such a large establishment that his allowances are not sufficient to keep it going, and he has asked that he be allowed to get out and get the allowance, so much for rent, and so on, whatever is fixed under the law for a house. The Chief of Operations is anxious to go into that place, and the amendment as originally introduced allowed the department to install the Chief of Operations anywhere. We would save about $500. They now give him $1,262 for the rental of a place. This man wants to get out because the house is too large and too expensive. Senators can see that house as they drive out Massachusetts Avenue. This is an arrangement agreeable to everybody. There has been no objection except on the part of the Senator from Washington, who objected at one time, but I think he has ascertained that the Chief of the Hydrographic Office is anxious to get out, as the place is very expensive.

Mr. DILL. Mr. President, I would like to ask the Senator from Maine, since this is a legislative provision, why it can not come up on the naval authorization bill that is to be taken up later? Why must it go into this appropriation bill?

Mr. HALE. I suppose it could go on that bill; but I hope the Senator will not block the amendment.

Mr. DILL. Then I make the point of order.

Mr. SWANSON. I hope the Senator will not do that. Admiral Hughes has just been appointed two or three months. He either has to make other arrangements or to be put into this place. The matter ought to be fixed up now. Admiral Hughes is the Chief of Operations. The Army assigns as nice a place as this, the Commandant of the Marine Corps has a place as nice as this, and the commandant of the navy yard has also. Admiral Hughes was transferred here only a few months ago, and the matter ought to be fixed up. Everybody is agreeable to it.

Mr. DILL. What are you going to do with the Superintendent of the Naval Observatory?

Mr. SWANSON. Instead of having this house assigned to him to live in, the Superintendent of the Naval Observatory will get an allowance for rent.

Mr. HALE. He will get an allowance, just as every other officer does.

Mr. DILL. I think it should come up on the regular naval bill, and I make the point of order.

The PRESIDENT pro tempore. The point of order is sustained.

The bill is still in Committee of the Whole and open to amendment. If there be no further amendment to be proposed, the bill will be reported to the Senate.

The bill was reported to the Senate as amended, and the amendments were concurred in.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

BOULDER DAM

Mr. JOHNSON. Mr. President, I move that the Senate proceed to the consideration of the bill (S. 728) to provide for the construction of works for the protection and development of the lower Colorado River Basin, for the approval of the Colorado River compact, and for other purposes.

The motion was agreed to; and the Senate, as in Committee of the Whole, proceeded to consider the bill, which had been reported from the Committee on Irrigation and Reclamation with amendments.

FLOOD PROTECTION ON WHITE RIVER, ARK.

Mr. CARAWAY. Mr. President, all Senators are familiar with the fact that we had a flood last year which destroyed practically all the property in the valleys of some of the rivers in my State. There were swept away also the levees which protected the farm lands. The levee districts expended every dollar they had last spring in trying to patch up the levees to protect what they were able to plant last year and make a crop.

There is a flood now in the valley of the White River that threatens to sweep away those temporary levees and destroy thousands of acres of crops that have been planted, some of which are in cultivation. Should the flood be unchecked, it will necessitate the moving out of everything the people have in that section.

Yesterday I introduced a joint resolution, which was referred to the Committee on Appropriations. Immediately thereafter I had a wire from the president of the levee district in Woodruff County, Ark., to whom I had sent a wire for the latest information. His reply was that the people themselves were going out and were doing the work, and that they hoped to save the levees.

The War Department, through the Chief of Engineers, communicated yesterday with the Mississippi River Commission, which has jurisdiction over the levees along that stream. A few hours ago the Mississippi River Commission communicated to the Chief of Engineers the information that unless they could get $25,000 immediately they could not save the levees. Their engineers are there, but it is necessary that they should have this much money.

I ask unanimous consent now that the Committee on Appropriations be discharged from further consideration of the joint resolution, that it be considered immediately, that it be amended to carry an appropriation of $25,000 and not $50,000, and passed.

The PRESIDENT pro tempore. Is there objection?

Mr. WARREN. Mr. President, the Committee on Appropriations has no objection to turning the matter back to the Senate. I understand that the object is to prevent the overflow of thousands of acres, and, so far as I know, the Committee on Appropriations do not object.

Mr. CARAWAY. I thank the chairman of the Committee on Appropriations.

The PRESIDENT pro tempore. Is there objection to the request of the Senator from Arkansas that the Committee on Appropriations be discharged from the consideration of the joint resolution, and that it be now considered?

There being no objection, the committee was discharged and the Senate, as in Committee of the Whole, proceeded to consider the joint resolution.

Mr. CARAWAY. I offer the amendments to the joint resolution which I send to the desk.

The PRESIDENT pro tempore. The amendments will be stated.

The CHIEF CLERK. It is proposed, on page 2, line 5, after the words "Sum of," to strike out "$50,000" and insert "$25,000"; in line 8, after the word "hold," to strike out the word "said"; and in the same line, after the word "levees," to insert the words "on the White River in Woodruff and Monroe Counties, Ark.," so as to make the joint resolution read:

Whereas the disastrous floods of 1927 destroyed millions of dollars worth of property along the White River, State of Arkansas; and

Whereas the efforts to hold the levees along that stream exhausted the entire resources of the levee districts; and

Whereas the funds to build said levees and keep them in repair is raised by a tax levied on the lands; and

Whereas the last dollar under the Constitution these lands can be taxed for that purpose has been exhausted; and

Whereas the Government under the flood control act has assumed jurisdiction over these levees; and

Whereas these levees are now being threatened with destruction by a flood now raging on White River; and

Whereas there are no available funds appropriated to strengthen and hold these levees against the impending flood: Therefore be it

*Resolved, etc.*, That there is hereby appropriated out of any money in the Treasury not otherwise appropriated the sum of $25,000, or so much thereof as may be required, to be expended under the direction of the Chief of Engineers of the United States Army and the Mississippi River Commission to strengthen and hold levees on the White River in Woodruff and Monroe Counties, Ark.

SEC. 2. The Chief of Engineers of the United States Army or the Mississippi River Commission, or both, are hereby authorized to expend said sum, or so much thereof as may be required, to strengthen or hold said levees.

The amendments were agreed to.

The joint resolution was reported to the Senate as amended, and the amendments were concurred in.

The joint resolution was ordered to be engrossed for a third reading, read the third time, and passed.

The preamble was agreed to.

RIKER MISSISSIPPI SPILLWAY PLAN FOR FLOOD CONTROL

Mr. FRAZIER. Mr. President, I ask unanimous consent, out of order, to be permitted to introduce a resolution, and then I shall ask unanimous consent for its immediate consideration. If there is to be any discussion of it, I will let it go over.

The PRESIDENT pro tempore. The resolution will be read for the information of the Senate.

The Chief Clerk read the resolution (S. 206), as follows:

Whereas a written request made by me was placed in the hands of Maj. Gen. Edgar Jadwin, Chief of Engineers, United States Army, more than a week ago for an opinion upon the Riker Mississippi spillway, after an examination of the model in the Senate Office Building, by him and his assistant; and no reply whatsoever to the aforesaid letter having been received: Now therefore be it

*Resolved*, That Major General Jadwin, Chief of Engineers, United States Army, be requested to immediately report to the Senate upon the merits of the Riker Mississippi spillway plan for flood control.

Mr. JONES. Mr. President, it has just occurred to me that it would be better to leave out the preamble of the resolution. I have no objection to the passage of the resolution, but it seems to me that we should not base a resolution upon the failure of an officer to answer a personal request, even of a Senator. I have no objection to the resolution, if the Senator will leave out the whereas.

Mr. FRAZIER. I have no objection to the whereases being stricken out.

The PRESIDENT pro tempore. Is there objection to the present consideration of the resolution, as modified?

There being no objection, the resolution, as modified, was considered and agreed to, as follows:

*Resolved*, That Major General Jadwin, Chief of Engineers, United States Army, be requested to immediately report to the Senate upon the merits of the Riker Mississippi spillway plan for flood control.

ADJOURNMENT

Mr. CURTIS. I move that the Senate adjourn.

The motion was agreed to; and (at 5 o'clock and 50 minutes p. m.) the Senate adjourned until to-morrow, Thursday, April 26, 1928, at 12 o'clock meridian.

## HOUSE OF REPRESENTATIVES

WEDNESDAY, *April 25, 1928*

The House met at 12 o'clock noon.

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

Our Father in Heaven, the light of this day and the silent watches of the night are evidences of Thy mercy. Bless us with vigor of mind and strength of body, and in manly courage we shall persevere in the things that are just and right. Guard us from all evil; make a way where there is no path; and if the shadows thicken, let the pressure of Thy hand be tenderest. We thank Thee for the warm, tender joys of life, for good friends, for the happiness of the hearthstone, and for the old

earth, whose soil our feet would love to press for a thousand years to come. Keep us looking upward, even unto the heights, beyond whose cliffs eternal rest abides. Through Jesus Christ, our Lord. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Craven, its principal clerk, announced that the Senate agrees to the amendment of the House of Representatives to the bill (S. 2126) entitled "An act to provide for compensation for Ona Harrington for injuries received in an airplane accident."

The message also announced that the Senate had ordered that the House of Representatives be respectfully requested to return to the Senate the bill (S. 3511) entitled "An act granting the consent of Congress to the State Highway Commission of Arkansas to construct, maintain, and operate a bridge across the White River at or near Cotter, Ark."

The message further announced that the Senate had passed with amendments bills of the House of the following titles, in which the concurrence of the House of Representatives was requested:

H. R. 126. An act to add certain lands to the Missoula National Forest, Mont.;

H. R. 2657. An act for the relief of Thomas Huggins;

H. R. 4378. An act to authorize the Secretary of the Interior to dispose by sale of certain public lands in the State of Florida;

H. R. 5297. An act for the relief of Christine Brenzinger;

H. R. 10141. An act granting pensions and increase of pensions to certain soldiers and sailors of the Regular Army and Navy, etc., and certain soldiers and sailors of wars other than the Civil War, and to widows of such soldiers and sailors;

H. R. 10360. An act to confer additional jurisdiction upon the Court of Claims under an act entitled "An act authorizing the Chippewa Indians of Minnesota to submit claims to the Court of Claims," approved May 14, 1926;

H. R. 11026. An act to provide for the coordination of the public-health activities of the Government, and for other purposes;

H. R. 11629. An act to amend the proviso of an act approved August 24, 1912, with reference to educational leave to employees of the Indian Service; and

H. R. 12875. An act making appropriations for the legislative branch of the Government for the fiscal year ending June 30, 1929, and for other purposes.

The message also announced that the Senate had passed without amendment bills and joint resolutions of the House of the following titles:

H. R. 484. An act to amend section 10 of the plant quarantine act, approved August 20, 1912;

H. R. 2654. An act for the relief of Anton Anderson;

H. R. 4068. An act for the relief of the Majestic Hotel, Lake Charles, La., and of Lieut. R. T. Cronau, United States Army;

H. R. 4126. An act authorizing the Secretary of the Interior to issue a patent to Katie Cassiday for a certain tract of land;

H. R. 6103. An act to amend an act entitled "An act making appropriations for sundry civil expenses of the Government for fiscal year ending June 30, 1884," and for other purposes;

H. R. 6862. An act authorizing and directing the Secretary of the Interior to investigate, hear, and determine the claims of individual members of the Sioux Tribe of Indians against tribal funds or against the United States;

H. R. 7184. An act authorizing J. L. Rowan, his heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across the Ohio River at or near Shawneetown, Ill.;

H. R. 7722. An act authorizing the health officer of the District of Columbia to issue a permit for the opening of the grave containing the remains of the late Nellie Richards;

H. R. 8128. An act to authorize a permanent annual appropriation for the maintenance and operation of the Gorgas Memorial Laboratory;

H. R. 8487. An act to adjudicate the claims of homestead settlers on the drained Mud Lake bottom, in the State of Minnesota;

H. R. 9047. An act to authorize appropriations for the construction of roads at the Presidio of San Francisco, Calif.;

H. R. 9485. An act authorizing Roy Clippinger, Ulys Pyle, Edgar Leathers, Groves K. Flescher, Carmen Flescher, their heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across the Wabash River at or near McGregors Ferry in White County, Ill.;

H. R. 9569. An act authorizing the payment of an indemnity to the British Government on account of the death of Reginald Ethelbert Myrie, alleged to have been killed in the Panama Canal Zone on February 5, 1921, by a United States motor truck;

H. R. 11212. An act authorizing Paul Leupp, his heirs, legal representatives, or assigns, to construct, maintain, and operate a bridge across the Missouri River at or near Stanton, N. Dak.;

H. R. 11265. An act authorizing the Cabin Creek Kanawha Bridge Co., its successors, and assigns, to construct, maintain, and operate a bridge across the Kanawha River at or near Cabin Creek, W. Va.;

H. R. 11266. An act authorizing the St. Albans Nitro Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Kanawha River at or near St. Albans, Kanawha County, W. Va.;

H. R. 11267. An act granting the consent of Congress to the board of county commissioners of Itasca County, Minn., to construct, maintain, and operate a free highway bridge across the Mississippi River at or near the road between the villages of Cohasset and Deer River, Minn.;

H. R. 11279. An act authorizing the Postmaster General to establish a uniform system of registration of mail matter, and for other purposes;

H. R. 11356. An act authorizing the State of Indiana to construct, maintain, and operate a toll bridge across the Ohio River at or near Rockport, Ind.;

H. R. 11473. An act granting the consent of Congress to the States of North Dakota and Minnesota to construct, maintain, and operate a bridge across the Red River of the North at Fargo, N. Dak.;

H. R. 11478. An act to amend an act to allot lands to children on the Crow Reservation, Mont.;

H. R. 11479. An act to reserve certain lands on the public domain in Valencia County, N. Mex., for the use and benefit of the Acoma Pueblo Indians;

H. R. 11578. An act authorizing the B & P Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Rio Grande River at or near Weslaco, Tex.;

H. R. 11583. An act granting the consent of Congress to the State Highway Commission of Arkansas to construct, maintain, and operate a bridge across the White River at or near Cotter, Ark.;

H. R. 11625. An act granting the consent of Congress to the State of Montana, Valley County, Mont., and Garfield County, Mont., or to any or either of them, jointly or severally, to construct, maintain, and operate a bridge across the Missouri River at or near Glasgow, Mont.;

H. R. 12179. An act to provide for the reimbursement of the Government of Great Britain on account of certain sums expended by the British chaplain in Moscow, the Rev. F. North, for the relief of American nationals in Russia in 1920;

H. R. 12320. An act to amend the longshoremen and harbor workers' compensation act;

H. R. 12632. An act to provide for the eradication or control of the European corn borer;

H. J. Res. 145. Joint resolution to provide for the payment of an indemnity to the Chinese Government for the death of Chang Lin and Tong Huan Yah, alleged to have been killed by members of the armed forces of the United States;

H. J. Res. 146. Joint resolution to provide for the payment of an indemnity to the Dominican Republic for the death of Juan Soriano, who was killed by the landing of an airplane belonging to the United States Marine Corps;

H. J. Res. 147. Joint resolution for the relief of the estate of the late Max D. Kirjassoff;

H. J. Res. 148. Joint resolution to provide for the payment of an indemnity to the British Government to compensate the dependents of Edwin Tucker, a British subject, alleged to have been killed by a United States Army ambulance in Colon, Panama;

H. J. Res. 149. Joint resolution to authorize an appropriation for the compensation of William Wiseman;

H. J. Res. 150. Joint resolution to provide for the payment of an indemnity to the Government of the Netherlands for compensation for personal injuries sustained by two Netherlands subjects, Arend Kamp and Francis Gort, while the U. S. S. *Canibas* was loading on May 1, 1919, at Rotterdam;

H. J. Res. 151. Joint resolution to provide for payment of the claim of the Government of China for compensation of Sun Jui-chin for injuries resulting from an assault on him by a private in the United States Marine Corps;

H. J. Res. 152. Joint resolution authorizing and requesting the President to extend invitations to foreign governments to be represented by delegates at the International Congress of Entomology to be held in the United States in 1928;

H. J. Res. 230. Joint resolution to provide for the membership of the United States in the American International Institute for the Protection of Childhood;

H. J. Res. 259. Joint resolution authorizing assistance in the construction of an inter-American highway on the Western Hemisphere; and

H. J. Res. 262. Joint resolution requesting the President to extend to the Republics of America an invitation to attend a conference of conciliation and arbitration to be held in Washington during 1928 or 1929.

The message also announced that the Senate had passed bills and joint resolutions of the following titles, in which the concurrence of the House was requested:

S. 162. An act for the relief of William M. Sherman;

S. 1458. An act providing for a survey of the natural oyster beds in the waters within the State of Florida;

S. 1480. An act authorizing certain Indian tribes and bands, or any of them, residing in the State of Washington, to present their claims to the Court of Claims;

S. 1530. An act for the relief of Gilpin Construction Co.;

S. 1645. An act for reimbursement of W. H. Talbert;

S. 2042. An act for the relief of Rolette County, N. Dak.;

S. 2076. An act authorizing the allotment of Carl J. Reid Dussome as a Kiowa Indian and directing issuance of trust patent to him to certain lands of the Kiowa Indian Reservation, Okla.;

S. 2139. An act conferring jurisdiction upon the Court of Claims to hear and determine claims of certain bands or tribes of Indians residing in the State of Oregon;

S. 2340. An act to transfer to the city of Duluth, Minn., the old Federal building, together with the site thereof;

S. 2538. An act for the construction of a road across the Makah Reservation to Neah Bay, Wash.;

S. 2821. An act for the relief of Capt. Will H. Gordon;

S. 2945. An act relating to the payment of advance wages and allotments in respect of seamen on foreign vessels, and making further provision for carrying out the purposes of the seamen's act, approved March 4, 1915;

S. 3438. An act authorizing a per capita payment to the Rosebud Sioux Indians, S. Dak.;

S. 3463. An act to recognize commissioned service in the Philippine Constabulary in determining rights of officers of the Regular Army;

S. 3501. An act to provide for the construction of a boarding school for Indian children at Belcourt, in the Turtle Mountain Indian Reservation, State of North Dakota;

S. 3503. An act to authorize the Secretary of the Interior to purchase certain lots in the city of Needles, San Bernardino County, Calif., for Indian use, and authorizing an appropriation of funds therefor;

S. 3565. An act to provide compensation for disability or death resulting from injury to employees in certain employments in the District of Columbia, and for other purposes;

S. 3581. An act authorizing the Commissioners of the District of Columbia to settle claims and suits against the District of Columbia;

S. 3674. An act to amend the act entitled "An act to provide that the United States shall aid the States in the construction of rural post roads, and for other purposes," approved July 11, 1916, as amended and supplemented, and for other purposes;

S. 3723. An act to amend and reenact subdivision (a) of section 209 of the transportation act, 1920;

S. 3744. An act to authorize the leasing of public lands for use as public aviation fields;

S. 3771. An act vacating the alley between lots 16 and 17, square 1083, District of Columbia;

S. 3809. An act conferring jurisdiction upon the Court of Claims of the United States or the district court of the United States to hear, adjudicate, and enter judgment on the claim of A. Roy Knabenshue against the United States for the use or manufacture of an invention of A. Roy Knabenshue, covered by Letters Patent No. 858875, issued by the Patent Office of the United States under date of July 2, 1902;

S. 3862. An act authorizing J. T. Burnett, his heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across the Mississippi River at or near Tiptonville, Tenn.;

S. 3903. An act to provide for the reinterment of bodies in the grounds of St. Francis de Sales Church in the District of Columbia;

S. 3917. An act for the relief of the State of Florida;

S. 3990. An act granting the consent of Congress to the boards of county commissioners of the counties of Escambia, Fla., and Baldwin, Ala., their successors and assigns, to construct, maintain, and operate a toll bridge across Perdido Bay in the States of Florida and Alabama;

S. 4036. An act to authorize the Secretary of War to transfer the control of certain land in Oregon to the Secretary of the Interior;

S. 4039. An act to exempt joint-stock land banks from the provisions of section 8 of the act entitled "An act to supplement existing laws against unlawful restraints and monopolies, and for other purposes," approved October 15, 1914, as amended;

S. 4170. An act to authorize plans for a hospital at the Home for Aged and Infirm in the District of Columbia, and for other purposes;

S. J. Res. 50. Joint resolution providing that the Secretary of Agriculture be directed to give notice that on and after January 1, 1929, the Government will cease to maintain a public market on Pennsylvania Avenue between Seventh and Ninth Streets NW.;

S. J. Res. 119. Joint resolution granting an easement to the city of Duluth, Minn.; and

S. J. Res. 129. Joint resolution to provide for eradication of pink bollworm and authorizing an appropriation therefor.

### HON. JOHN J. M'SWAIN, OF SOUTH CAROLINA—JEFFERSON DAY ADDRESS AT NEW PHILADELPHIA, OHIO

Mr. McSWEENEY. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by publishing statements concerning a speech made by the gentleman from South Carolina [Mr. McSWAIN] at New Philadelphia, Ohio, on April 13.

Mr. MADDEN. Reserving the right to object, what is the speech about?

Mr. McSWEENEY. It is a Jefferson banquet speech.

Mr. TILSON. Is it a speech made by a Member of the House?

Mr. MADDEN. It is an editorial. We ought not to print everything that is printed in every paper about what somebody says or does. I would have a wagonload of that kind of matter every morning if I would do everything people want me to do.

Mr. McKEOWN. Will the gentleman yield?

Mr. MADDEN. Yes.

Mr. McKEOWN. We all want to get along here, and there will be a lot of such requests from that side.

Mr. MADDEN. If the gentleman puts it on that ground, I object now.

Mr. HASTINGS. Mr. Speaker, I think every speech of this kind that has been made by a Member has been allowed to go in the RECORD.

Mr. SNELL. As I understand it, the gentleman is not objecting to the speech but to the editorial comments?

Mr. MADDEN. That is it.

Mr. CRAMTON. Is this the speech of Senator SIMMONS saying Al Smith could not be elected President if nominated?

Mr. McSWEENEY. No; it is a speech by the gentleman from South Carolina [Mr. McSWAIN].

Mr. CULLEN. It is a speech, not an editorial?

Mr. McSWEENEY. It is a letter, really, from me containing statements of Mr. McSWAIN, together with editorial comments.

Mr. MADDEN. Let me see it, please.

The SPEAKER. Is there objection to the request of the gentleman from Ohio [Mr. McSWEENEY] to extend his remarks in the RECORD?

Mr. MADDEN. Mr. Speaker, I have looked over the matter and it is not in the same category as editorial matter, and I withdraw my objection.

Mr. McSWEENEY. Mr. Speaker, at the request of the committee in charge of a proposed Jefferson Day banquet at New Philadelphia, Ohio, to be held on April 13, 1928, I arranged for one of the distinguished United States Senators to fill that engagement and a very few days prior to the date set, I was informed by the Senator that due to the unexpected turn of affairs he would be unable to go at the time fixed. By the instructions of the local committee I looked around for a substitute and finally invited Representative JOHN J. McSWAIN, of South Carolina, to go. It was a very great kindness on the part of Mr. McSWAIN, both to myself and to the committee in charge at New Philadelphia, to consent to go upon such short notice and as a substitute. I therefore take this occasion to tender him the thanks of myself and of the committee for his kindness in this respect.

Knowing Mr. McSWAIN as I do, I felt quite confident of his ability to entertain and to instruct the audience, but realized that he was an unknown quantity to the people of New Philadelphia, Ohio. I have therefore been highly gratified to observe the many very appreciative newspaper accounts of his address, including special editorial notices, and to receive a number of letters commending in the highest terms, not only the address of Mr. McSWAIN, but his personality in general.

I call special attention to an editorial which appeared in the Advocate Tribune, a newspaper published at New Phila-

delphia, Ohio, and commonly credited with being entirely Republican in its attitudes, policies, and sympathies. In view of this fact, praise from the Advocate Tribune is praise indeed. I respectfully print the following editorial account.

IMPRESSED WITH TUSCARAWAS COUNTY

Congressman JOHN J. MCSWAIN, of the fourth South Carolina district, who was the principal speaker at the Jefferson Club banquet held at Emmanuel Lutheran Church in New Philadelphia on last Friday evening and spent Saturday morning at Hotel Reeves, was very much impressed with Tuscarawas County.

Mr. MCSWAIN showed his interest by procuring literature pertaining to the history of the county and when he learns of Gnadenhutten, Schoenbrunn, and Fort Laurens, his interest, no doubt, will be intensified.

When the State highway program for new roads in Ohio is completed thousands of automobile tourists will be attracted to this county by reason of its rich historic value and the county will be advertised far and wide.

Strangers who have traveled extensively in this country and also abroad who come to Tuscarawas County remark and are enthusiastic over the scenery from Strasburg to Uhrichsville. They say there is no more beautiful valley to be found anywhere.

It may be that those of us who have lived here all our lives do not appreciate the historic eminence, natural resources, and beauty of our environment, but when persons from other States come here and make such complimentary observations we are reminded that we live in one of the garden spots of the world.

In a few more years Tuscarawas County will occupy a more prominent place on the Ohio map than at any time in its history.

AN INSTRUCTIVE SPEECH

Another indication that the world is growing better was manifested at the Tuscarawas County Jefferson Club banquet Friday night when Congressman JOHN J. MCSWAIN, of South Carolina, made a political speech that was instructive instead of the old-time bombastic denunciatory address that used to be deemed the only suitable thing at partisan dinners.

It is a far flight from the day of torchlight parades and epithetic speeches to the kindly discussion of this southerner whose address stamped him a gentleman and a scholar in the full sense of the phrase.

There were many Republicans in the audience who enjoyed the address as much as did the Democrats present, and who were no doubt surprised to find a southern Democrat talk with such moderation. They no doubt concurred entirely with Toastmaster E. W. Stiffler when he voiced the hope that the Congressman would be able to carry back to South Carolina as good an impression of Ohio and Tuscarawas County as he had given of South Carolina.

In a letter from the Hon. E. W. Stiffler, president of the Tuscarawas County Jefferson Club, of New Philadelphia, Ohio, I find the following paragraph:

I am writing to thank you and to compliment your good judgment for sending Mr. MCSWAIN as a speaker to your district. All who heard his address agree that it was one of the very best ever delivered before our club.

A letter from the Hon. J. E. Patrick, prosecuting attorney, with headquarters at New Philadelphia, Ohio, I find the following paragraph:

Just a note to let you know we were delighted with Congressman MCSWAIN. No one here had ever heard a better talk on Jefferson, and he had exactly the right attitude toward an address on such an occasion as this. In addition to being delighted with his talk, we were all delighted with his personality. I was fortunate enough to see him before and after the dinner and also to spend some little time with him the following morning before he left town, and found him to be a most charming gentleman.

Also in a letter from the Hon. Arthur L. Limbach, a prominent attorney of New Philadelphia, I find the following paragraph:

I want to thank you very much for your earnest efforts in securing for us a speaker. In my judgment he is one of the best speakers that I have been privileged to listen to, and he made a splendid impression upon the audience here. I liked him personally very much from the little talks I had with him, and was very much alarmed that he was going to leave with such a bad cold.

Mr. Speaker, permit me to take this public way of thanking Mr. MCSWAIN again for coming to my rescue and for going to my friends and constituents with a message which has been properly described as broad minded, instructive, and scholarly. Of course, it was just such an address as I expected Mr. MCSWAIN to deliver, and I am proud that my friends in New Philadelphia have appreciated his qualities.

ORDER OF BUSINESS

Mr. TILSON. Mr. Speaker, I would like to submit a unanimous-consent request. Mr. Speaker, I ask unanimous consent that upon completion of the consideration of the three bills which were indicated by the gentleman from Maine yesterday as coming from the Committee on the Merchant Marine and Fisheries, further Calendar Wednesday business be dispensed with for the day and that we may consider a rule modifying a former rule reported for the consideration of the farm relief bill.

The SPEAKER. The gentleman from Connecticut asks unanimous consent that at the conclusion of the consideration of the three bills which the Committee on the Merchant Marine and Fisheries proposes to call up to-day, that for the rest of the day Calendar Wednesday business be dispensed with and that it be in order to consider the modified rule for the consideration of the McNary-Haugen bill. Is there objection?

Mr. CHINDBLOM. Reserving the right to object, I would like to ask the gentleman whether this will complete the business of the Merchant Marine and Fisheries Committee or will they have the next Calendar Wednesday?

Mr. TILSON. Yes. They would have another Wednesday if they have business and claim it.

Mr. CRAMTON. Mr. Speaker, if this request is not agreed to and the Committee on the Merchant Marine and Fisheries completes the business it has to present and another committee is called, then the Committee on the Merchant Marine and Fisheries is through.

Mr. TILSON. I understand the Merchant Marine and Fisheries Committee will probably not finish their business before the usual hour for adjournment, unless they curtail it somewhat from what they had originally intended. On the other hand, if it is desired to transact other business, especially the rule referred to, they are willing to curtail somewhat the business already indicated.

Mr. CRAMTON. Mr. Speaker, I think the call of committees on Calendar Wednesday should progress and the Merchant Marine and Fisheries Committee should hold the boards until it is through, and give committees further down on the call some chance to be heard.

Mr. WHITE of Maine. The Committee on the Merchant Marine and Fisheries will hold the fort during the day unless some such arrangement as is suggested is worked out. If it is the desire of the House that the rule on the farm relief bill be adopted to-day, so that general debate upon that bill may begin to-morrow, speaking for myself as chairman of the Merchant Marine and Fisheries Committee, and I think I speak for the other members, I will do everything possible to expedite the consideration of these bills so that you may start to-morrow upon the serious consideration of the farm relief bill, but I would not——

Mr. CRAMTON. May I suggest to the gentleman that the gentleman's statement was to the effect that there were only three bills that the committee has ready for consideration, and there was no suggestion that they would ever have any more. It is also a matter of grave question whether those in charge of the McNary-Haugen bill desire to have the rule considered to-day. May I ask this question of the gentleman from Connecticut [Mr. TILSON], if the gentleman is prepared to answer it: What committee is entitled to the call following the completion of business of the Merchant Marine and Fisheries Committee?

Mr. TILSON. The Military Affairs Committee is next.

Mr. CRAMTON. It is understood that Agriculture and Rivers and Harbors have completed their call?

Mr. TILSON. Rivers and Harbors will be the first committee called to-day, but I understand that committee has no business to call up.

Mr. CRAMTON. And when they are called to-day that disposes of them finally?

Mr. TILSON. Yes.

Mr. CRAMTON. And the Committee on Agriculture has completed its call?

Mr. TILSON. It has had two days.

Mr. CRAMTON. So that in any event the Committee on Military Affairs is in order to follow the Committee on the Merchant Marine and Fisheries?

Mr. TILSON. And the Committee on Military Affairs would dislike to come in for the remainder of the day and call a portion of this day one of the two days belonging to that committee.

Mr. CRAMTON. Under the statement which the gentleman from Connecticut has made, that is not a possibility in any event. My only suggestion was that Military Affairs should be

permitted to have the call a week from to-day, and if that could be the situation I would not object.

Mr. WHITE of Maine. If the gentleman will yield, the Merchant Marine Committee will have an additional bill for consideration next Wednesday.

Mr. CRAMTON. But not for to-day?

Mr. WHITE of Maine. Yes; I stated that we had three bills that I proposed to call up. There is another bill reported from the committee which is in order to call up.

Mr. CRAMTON. I think the gentleman ought to call it up to-day. I object. I think the Military Affairs Committee and other committees on the calendar ought to have a chance to be heard.

I withdraw my objection to the request of the gentleman from Connecticut.

Mr. LAGUARDIA. Reserving the right to object, as I understand the three bills that the gentleman from Maine is to call up to-day are of minor importance. I would like to ask him when he is going to bring out the shipping bill.

Mr. WHITE of Maine. That is on the calendar. I dislike to call up that bill on Calendar Wednesday with the limitation for debate which the Calendar Wednesday rule imposes. I do not want to do it unless I am forced to.

Mr. SNELL. There is a rule granted the Merchant Marine Committee to follow the farm relief.

Mr. WHITE of Maine. That bill merits a greater consideration than we can have on Calendar Wednesday.

Mr. CRAMTON. As I understand the situation, the gentleman has three bills to consider to-day. The merchant marine bill, for which you expect a special rule, and then the committee will be ready to give way?

Mr. WHITE of Maine. Not at all; I have a general bill which will be ready next Wednesday.

Mr. LAGUARDIA. The gentleman means the fish bill—the fish barrel bill?

Mr. QUIN. Mr. Speaker, I would like to ask the gentleman if the Committee on Military Affairs is losing any of its rights by this unanimous consent?

Mr. TILSON. None whatever; the committee can not lose any right. The Committee on Military Affairs will follow the Merchant Marine Committee after the consideration of its bills, or, at any rate, after the two days to which this committee is entitled under the rule.

Mr. QUIN. The Committee on Military Affairs is to have next Wednesday?

Mr. TILSON. Not unless the Committee on the Merchant Marine and Fisheries yields or has finished its bills. My request to-day does not change the situation at all.

Mr. KETCHAM. Mr. Speaker, further reserving the right to object, do I understand that it is the purpose to go no further to-day than considering the rule on farm relief?

Mr. TILSON. That is all. There is a conference report that I hope may be taken up to-day if the committee on call to-day finishes its work in time. This report would take precedence over the rule on the farm relief bill.

Mr. LAGUARDIA. What is that conference report—the independent offices' appropriation bill?

Mr. TILSON. Yes.

Mr. RAMSEYER. Further reserving the right to object, in order that there be no misunderstanding, the rule which the gentleman from Connecticut asks unanimous consent to consider this afternoon is the rule that was reported out this morning, which I intend to submit for printing in a moment or two.

Mr. TILSON. Yes.

The SPEAKER. Is there objection to the request of the gentleman from Connecticut? The Chair hears none.

FARM RELIEF

Mr. RAMSEYER, from the Committee on Rules, reported the following resolution for printing in the RECORD:

House Resolution 176

*Resolved*, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of S. 3555, entitled "An act to establish a Federal farm board to aid in the control and disposition of the surplus of agricultural commodities in interstate and foreign commerce." That after general debate, which shall be confined to the bill and which shall continue not to exceed 12 hours, the time to be equally divided and controlled by those favoring and opposing the bill, the bill shall be read for amendment under the five-minute rule. It shall be in order to consider without the intervention of the point of order as provided in clause 7 of Rule XVI the substitute committee amendment recommended by the Committee on Agriculture now in the bill, and such substitute for the purpose of amendment shall be considered under the five-minute rule as an original bill. At the conclusion of such consideration the committee shall rise and report the bill to the House with the committee substitute, as amended, and any Member may demand a separate vote in the House on any of the amendments adopted in the Committee of the Whole to the committee substitute. The previous question shall be considered as ordered on the bill and committee substitute, including the amendments to the committee substitute thereto to final passage without intervening motion except one motion to recommit.

CONSERVATION OF FISH

The SPEAKER. The Clerk will call the committees.

The Clerk called the list of committees, and when the Committee on the Merchant Marine and Fisheries was reached—

Mr. WHITE of Maine. Mr. Speaker, I call up the bill (S. 3437) to provide for the conservation of fish, and for other purposes.

The SPEAKER. This bill is on the Union Calendar, and the House automatically resolves itself into the Committee of the Whole House on the state of the Union.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union, with Mr. RAMSEYER in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the consideration of the bill which the Clerk will report.

The Clerk read as follows:

A bill (S. 3437) to provide for the conservation of fish, and for other purposes

*Be it enacted, etc.*, That the Department of Commerce be, and it is hereby, authorized and directed to study, investigate, and determine the best means and methods of preventing the destruction of fish by ditches, canals, and other works constructed by the United States, under the Interior Department; and for this purpose such sums of money as may be necessary, not exceeding in the aggregate $25,000, are hereby authorized to be expended out of money in the Treasury not otherwise appropriated.

With the following committee amendments:

Line 6, after the word "fish," insert the word "occasioned"; and after the word "constructed," insert the words "or maintained."

Line 7, after the word "States," strike out the comma and the words "under the Interior Department."

Line 8, strike out the figures "25,000," and insert in lieu thereof the figures "50,000."

Mr. WHITE of Maine. Mr. Chairman and members of the committee, this is a bill which passed the Senate on April 13, and comes before this committee with a unanimous report from the Committee on the Merchant Marine and Fisheries. It authorizes and directs the Department of Commerce to carry on studies and investigations in order to determine the best means and methods of preventing the destruction of fish occasioned by irrigation ditches and other works maintained by the Federal Government. It is in its essence a conservation measure of one of the great natural resources of the United States. The immediate problem to which it is hoped the department will address itself is that raised by the irrigation ditches of the western country. There are, as all Members of the House know, various irrigation projects scattered over the West, the Southwest, and the Northwest, many of them maintained by the States and others maintained by the Federal Government. It has been demonstrated through the latter years that in the operation of these works millions upon millions of small fish, and fish of a substantial size, are drawn down into the irrigation ditches as the water enters the ditches, and when in the fall or at other times the water ceases to be drawn and the ditches dry up great quantities of fish are left there to die. It is quite impossible to estimate with accuracy the extent of these losses. There were figures before the Senate committee and there were figures before our committee which show that on a single farm of 200 acres in the State of Washington, in which State I think some 255,000 acres of land are within national irrigation projects, after the water was withdrawn more than 4,000 fish were left to die, in large part salmon 1 or 2 years of age. If that be a fair basis of computation, it seems clear that in that State alone, spread out over the entire area in these irrigation projects, there must have been lost not far from 5,000,000 fish. The extent to which this goes on in other parts of the United States is only a matter of conjecture. Curiously enough, neither the authorities of the States nor the authorities of the Federal Government have up to this time developed any screen or other device which will permit the free intake of water and exclude the fish.

I sometimes think that the membership of the House and the people of the country have little appreciation of the value of the fisheries of this Nation to the people of the country. Roughly

speaking, there are 120,000 men engaged in the fisheries of the United States.

The annual catch of fish amounts to about 2,750,000,000 pounds. Of this total poundage there are approximately 475,000,000 pounds of fish that find a market in the can. Incident to this major industry there are other industries that come from fish—fish meal, fish oil, fertilizers—a substantial business dependent upon our fish supply. But lavish as nature has been, there are unmistakable indications that the fish resources of the Nation are on the way to extinction unless drastic action is taken by those who have a responsibility in this regard.

Mr. LINTHICUM. Mr. Chairman, will the gentleman yield?

Mr. WHITE of Maine. Yes.

Mr. LINTHICUM. To what extent do fish fertilizer companies exist, and what fish are used in the fertilizer factories?

Mr. WHITE of Maine. I can not give the gentleman at the moment the amount of fish so used, but the value of the products which come from the fish in oils and fertilizers is something like $13,000,000 a year.

Mr. LINTHICUM. The gentleman does not agree that we ought to use fish for fertilizer purposes?

Mr. WHITE of Maine. I think we should not; but there are various portions of the fish—the entrails, the heads, the tails, and the fins, and so forth—which are not edible and which are used for oil and fertilizer, and if the activity is confined to the nonedible portions of the fish I think it is entirely a proper way to use them.

Mr. BLAND. And is it not true that fertilizer is made not only from the nonedible portions of fish, but from fish that are in themselves not edible?

Mr. WHITE of Maine. I think that is true.

Mr. BLAND. In other words, the menhaden is not an edible fish, and a large part of the fertilizer comes from that.

Mr. BYRNS. Mr. Chairman, will the gentleman yield?

Mr. WHITE of Maine. Yes.

Mr. BYRNS. This bill does not purport to make any investigation relative to the use of the fish.

Mr. WHITE of Maine. It does not.

Mr. BYRNS. I am wondering as to the scope of the inquiry. The gentleman has already stated the facts, which show that fish are being destroyed by reason of these irrigation ditches, and we all know as a matter of fact that if an irrigation ditch drains a stream in which there are fish, some of the fish will naturally find their way to the ditch. Why spend money investigating the question of whether the fish are being lost in that way?

Mr. WHITE of Maine. That is not the proposal at all. The proposal is that efforts be made to discover ways and means of preventing this waste which is now going on, and which is sadly depleting the fish resources of the country.

Mr. BYRNS. As a matter of practical common sense it seems to me that the gentleman has already stated what can be done, and that is that by the use of screens, or something of that sort, it could be prevented. Why go into an investigation which involves the expenditure of thousands of dollars upon the part of the Department of Commerce to investigate something that everybody already knows?

Mr. WHITE of Maine. Everybody knows that something ought to be done, but there is no one at this time who knows how to do the thing that we want accomplished. There is not on the market to-day, so the testimony shows, and there is not known to the fish authorities of any State or to the Federal Government, an effective way of preventing the fish getting down through these ditches without stopping the intake of the water, and our committee thinks there is opportunity for study, and that it ought to be made.

Mr. BYRNS. I venture to say that when this investigation has been made, and possibly thousands of dollars have been expended, you will find that they will report that a screen ought to be used. It seems to me that is the only thing that could be used under the circumstances.

Mr. WHITE of Maine. May I suggest that when the Bureau of Fisheries comes before the Congress for the appropriation which we hereby are undertaking to authorize the gentleman will have an opportunity which few of us have to acquaint himself with the actual situation and determine whether the work should be undertaken or not, and what appropriation should be voted.

Mr. BYRNS. But if an investigation is not necessary it seems to me that now is the time to stop this waste of money. That is just what I was trying to elicit from the gentleman. The gentleman knows that when Congress passes an authorization bill there is always a strong demand that an appropriation shall be made to carry it out. What I object to, if the gentleman will pardon me, is this innumerable number of investigations ordered by Congress nearly every day for the purpose of making investigations of subjects which, to say the least, are not necessary and which involve the expenditure of thousands of dollars.

Mr. JOHNSON of Washington. Mr. Chairman, will the gentleman yield?

Mr. WHITE of Maine. Yes.

Mr. JOHNSON of Washington. I would like to say just a word there, if I may. In addition to the inquiry as to the most desirable device to be used in connection with the large ditches, I may say that these ditches are frequently as large as rivers, 30 or 35 feet wide. There is some little inability to adjust the situation as between the Department of the Interior, which has control of reclamation projects, and the Department of Commerce, which has jurisdiction of the fisheries, and by an understanding between the two it was thought that this inquiry could be effectively carried out.

Mr. BYRNS. But that is a simple matter of administration. Is it necessary for Congress to appropriate money to make an investigation in order that two departments may get together and determine on a policy? How much is the appropriation?

Mr. WHITE of Maine. Not to exceed $50,000.

Mr. BYRNS. I submit to the gentleman that that is a sum to be considered.

Mr. FREE. The leading fish expert in the Department of Commerce has a plan that he thinks will take care of this situation. The money is not to be expended in investigations, but in trying out what they think will work effectively.

Mr. JOHNSON of Washington. In addition to that, I may say that the far Western States, and particularly the State of Washington, appropriate money in an effort to meet their obligation to use these streams in some way or other in the large ditches, but the States are confronted by the fact that the Federal Government has no scheme or plan. Many of us have thought that this supervision of the work by the Director of Fisheries would result ultimately in pointing to a sign or direction as to the best way in which the thing can be handled, and I think the matter can be worked out along that line.

Mr. MILLER. Mr. Chairman, will the gentleman yield?

Mr. WHITE of Maine. Yes.

Mr. MILLER. Will the gentleman state the character of the fish that are being destroyed? Are they food fishes?

Mr. WHITE of Maine. Yes. There are millions of salmon that are being destroyed by these ditches to-day. I do not want any Member of the House to minimize the importance of this legislation. There is no man here who knows the history of the fisheries who is insensible to the importance of this matter. Those who have studied the fisheries of the United States to-day, which constitute a source of valuable and cheap food to this country, recognize the degree to which they are threatened with extinction.

Take shad for example. Formerly the shad were exceedingly plentiful along the Atlantic coast, but since 1896 the catch of shad has dropped from 51,000,000 pounds to less than 15,000,000 pounds in 1923. As to sturgeon, a few years ago the annual catch of sturgeon in the United States was approximately 18,000,000 pounds, and in 1923 it had dropped to less than 1,200,000 pounds. Take shellfish and lobsters; take the lobster, for example, along the New England coast. The supply of lobsters has shrunk by two-thirds, and now you do not find in the markets one-third of the poundage that was available 30 years ago.

That is true also, although in a less degree, of the shellfish of Chesapeake Bay. The crop of crabs has shrunken from 50,000,000 pounds in 1915 to 23,000,000 pounds in the year 1920. It has since somewhat increased from this latter figure.

The catch in our Great Lakes decreased 50 per cent in the seven years 1918 to 1925.

Mr. CRAMTON. How did this bill affect those?

Mr. WHITE of Maine. Take salmon. Hardly 30 years ago the Atlantic sea salmon entered 28 streams of the Atlantic seaboard between the New York and Canadian border, and to-day the Atlantic salmon enters but one stream on the Atlantic seaboard.

Mr. MADDEN. Mr. Chairman, will the gentleman yield?

Mr. WHITE of Maine. Yes.

Mr. MADDEN. I am interested in finding out what the expenditure of this money is to do. We do not care whether the catch is 8,000,000 or 50,000,000 pounds, so far as I know. For one, I want to know what this machinery will do to make the condition better.

Mr. WHITE of Maine. This appropriation is deemed necessary in order to study the very question I have mentioned, because, as I have said, there is no State or governmental authority that knows to-day the answer to this question as to how they are to stop on these ditches this waste of fish that is going on.

I have told you about the conditions along the Atlantic coast. They are no different on the Pacific coast. Unless the membership of the House realize the importance of the fisheries of this country and are willing to put forth an effort to find a remedy for the destruction that is going on, there are men sitting here who will not know what certain commercial fish of to-day are in 20 years' time.

Mr. MADDEN. This is the important phase of it: We have been told—I think by the gentleman from Washington [Mr. JOHNSON], or perhaps it was the gentleman from California [Mr. FREE]; I am not sure—that the Fish Commission has a machine that they are going to apply to the preservation of these fish. We would like to have this machine described. He said it is not a case of investigation but a case of preservation. If it is not investigation, what is it?

Mr. WHITE of Maine. I know what the testimony is before our committee and I know the facts as they appeared in the Senate hearings on the subject. I say to you that the purpose of this appropriation is to authorize a study and investigation in the hope that from that will come a remedy for the conditions which now exist.

Mr. MADDEN. Will the gentleman from Maine permit me to ask a question of the gentleman from California [Mr. FREE]?

Mr. WHITE of Maine. Certainly.

Mr. MADDEN. I will ask the gentleman from California where he got the information that led him to say to the House, in face of what the chairman of the committee has just said, that this machine was going to be built and paid for out of the money that is being sought to be appropriated?

Mr. JOHNSON of Washington. I doubt if the gentleman said quite that.

Mr. MADDEN. He did say that.

Mr. JOHNSON of Washington. I think "demonstration" would have been a better word.

Mr. FREE. The Commissioner of Fisheries of the State of Washington was here in conference with Mr. O'Malley and they have in mind a certain plan which they want to demonstrate. The Washington authorities, the Oregon authorities, and the California authorities have done much along this line, and they believe they now have a plan which will work out, and they want to take this money and try out that plan.

Mr. MADDEN. It is a machine, is it?

Mr. FREE. It is a contraption that has to be built; it is a device.

Mr. MADDEN. What is the difference between a contraption or device and a machine?

Mr. FREE. Well, I think a machine is more in the line of something that is mechanical, while these fish-saving devices are largely different from a machine.

Mr. MADDEN. The chairman of the committee says this is for a study.

Mr. FREE. Well, it is.

Mr. MADDEN. But the gentleman says it is to build a machine, and the money is to be used to build a machine.

Mr. FREE. I say it is to permit them to try out what they have in mind, the thing which they think will accomplish the purpose. There are millions of these fish lost every year in all these ditches in the various States, and they think they can take this small amount of money and try out what they have in mind, and the hope is that it will prevent this great loss of fish.

Mr. MADDEN. Then it is a machine?

Mr. FREE. If you want to call it a machine, all right; but, whatever it is, if they can save those fish they will save hundreds of thousands of edible fish for the country.

Mr. MADDEN. Is this for an investigation?

Mr. FREE. It is.

Mr. MADDEN. Or is it to build a machine which will be used as the gentleman has suggested?

Mr. FREE. It is an investigation, and it is a try-out of a device which they think will work.

Mr. MADDEN. Who has the patent on the machine?

Mr. FREE. Nobody.

Mr. SIROVICH. Will the gentleman from Maine yield?

Mr. WHITE of Maine. Yes.

Mr. SIROVICH. Can the gentleman inform the House as to what is contributing to a diminution of fish in our waters?

Mr. WHITE of Maine. The gentleman has asked me a question which involves somewhat of an order, but I think there are certain conditions which are recognized as contributing to the condition which now exists. I suppose the pollution of our streams has had a very important part and the building of manufacturing plants of one sort and another in the upper reaches of our streams, to which these fish have been in the habit of going in the years past for the purpose of breeding. That has closed off to the salt-water fish and to other fish the access to their breeding grounds. I suppose the presence of oil and other matter along the coast line has been a contributing factor. Then there has been carried on too intensive fishing in certain ways. The fishing along the Pacific coast and in Alaska unquestionably has had much to do with the condition in which we find ourselves. And, mark this, I think the complete failure on the part of the American people and of the Congress to appreciate the conditions and to take needful steps for the propagation of these fish has been a contributing factor. I believe myself, and I believe it firmly, that unless the Congress of the United States in the immediate future is ready to embark on a wide-flung program of propagation and conservation of fish you will find many of these fish commercially extinct within a generation. [Applause.]

Mr. LINTHICUM. Will the gentleman yield?

Mr. WHITE of Maine. Yes.

Mr. LINTHICUM. I want to suggest to the gentleman from New York, Doctor SIROVICH, if the gentleman from Maine will allow me to do so, that what has ruined the fishing industry in the Potomac River, both shell fishing and other fishing, is the pollution from the city of Washington, which dumps its sewerage into the Potomac River.

Baltimore has spent some $50,000,000 in taking care of the sewerage of that city so that it will not injure the fish in the Patapsco River and Chesapeake Bay, yet Washington continues to dump its sewerage into the Potomac River. The gentleman from New York, Doctor SIROVICH, suggests that perhaps the poisoned alcohol which you are dumping into the streams has had something to do with it.

Mr. WHITE of Maine. That might account for it in some places, but it does not account for the loss of fish in the waters of Maine. [Laughter.]

Mr. FREE. I would like to answer the gentleman from Maryland. The trouble with fishing in the Potomac is that you have so many fishing nets there that catch all these fish and throw about one-half of them away. That is the real trouble with the fishing in the Potomac.

Mr. LINTHICUM. I think there is a great deal in what the gentleman from California has said.

Mr. WHITE of Maine. Mr. Chairman, I reserve the balance of my time and I would like to ask how much time I have remaining.

The CHAIRMAN. The gentleman from Maine has 35 minutes remaining.

Mr. CRAMTON. Mr. Chairman, I ask for recognition.

The CHAIRMAN. Is the gentleman opposed to the bill?

Mr. CRAMTON. To some extent.

The CHAIRMAN. Is any member of the committee opposed to the bill? [After a pause.] If not, the Chair recognizes the gentleman from Michigan for one hour in opposition to the bill.

Mr. CRAMTON. Mr. Chairman, I do not expect to use one hour.

Mr. MILLER. To what extent is the gentleman opposed to the bill, 30 per cent or 20 per cent?

Mr. CRAMTON. Well, I will state exactly to what extent. The bill directs a bureau of the Government to solve the unsolvable.

If the committee, in the first place, will agree to accept an amendment striking out the words in line 4, on page 1, "and directed," they will have left all that they need. It will leave the authorization but would not then direct the Department of Commerce to determine the best means, when in my judgment there are no best or satisfactory means.

Mr. MADDEN. I would like to suggest that the gentleman couple with his suggestion to cut the amount down to $25,000.

Mr. CRAMTON. That is the other part of my suggestion, that the gentleman accept the Senate provision of $25,000, with the understanding that the words "not exceeding in the aggregate" shall have due consideration by the Committee on Appropriations, so that when the Bureau of Fisheries come in and ask for the money, unless they can show that they really are going to make good use of $25,000, we would not be obliged to recommend the $25,000.

With these amendments I should not oppose the bill. Without them I feel the bill ought not to pass, and let me observe this: The gentleman from Maine presented an eloquent address that was not in order to-day, because to-day's debate has to be confined to the bill, and most of the gentleman's address had nothing to do with the bill before the House. How many lobsters are dying annually in the East does not affect this bill. While the great loss of food fishes may be a serious matter, that is not, comparatively, greatly involved in this bill. The evils that they must correct, in order to conserve the fish referred to in this bill, are two. You must make it easy for the

fish to go up the stream and easy for them to come down the stream.

The irrigation dams are no different from any other dams as to this question. The dams built for water power are as difficult for fish to climb as if they were built to store water for reclamation.

As the letter of the Secretary of the Interior sets forth, only 6 per cent of the irrigation is under Government control, and so only 6 per cent of this problem is a Government question at all so far as irrigation is concerned; but to hear the gentleman from Maine talk one would suppose that the moment this bill passes the Bureau of Fisheries will solve the question of the waste of millions of dollars' worth of fish every year. The fish in coming downstream, so the report from the Secretary of the Interior sets forth, which, I think, is not to be disputed, do not have any great difficulty in passing over the dam, but they do have difficulty if they pass off into the irrigation ditches and canals. When these waters are drained the fish are left there on land and die. This is the great evil.

There is another evil with respect to fish going up the stream. They say that for dams 20 feet in height devices have been perfected—fishways—that work fairly well, that will let the fish climb a 20-foot dam. This is about the limit of height they have been able to negotiate as yet.

Then what are you going to say about the Arrowrock Dam, which is 349 feet in height? Does anybody hold out any idea that the Department of Commerce is going to be able to determine the best means of a fish climbing 349 feet? That is what this bill tells them we direct them to do, to say nothing of Boulder Dam, 500 feet or more in height.

Mr. GIFFORD. Will the gentleman yield there?

Mr. CRAMTON. Yes.

Mr. GIFFORD. Does the gentleman repeat to me that he considers that a fair inference?

Mr. CRAMTON. What is that?

Mr. GIFFORD. Is not that pure ridicule? It is not a fair inference of what this bill is attempting. I think the gentleman ought not to make any such statement seriously.

Mr. CRAMTON. I think it is ridiculous for Congress to direct the Department of Commerce to do something that the very report of the committee gives us reason to believe can not be done.

I do not want to discuss this bill unfairly, but it is ridiculous to have this House think that the passage of this bill is going to save all the fish we have been told are lost on irrigation projects.

First, as to those that seek to come up the stream, there has been a lot of study given to it, and there is nobody yet who has been able to suggest anything that would get a fish over a dam more than 20 feet in height, according to the report I have here, and yet we have these irrigation dams 100 feet, 300 feet, and 349 feet in height.

As to the other angle of it, fish going out into the canals on irrigation work, bear in mind that only 6 per cent of the irrigation is under Federal control. The Secretary of the Interior says:

> It seems to be generally agreed that no device so far developed to keep fish out of canals has proven satisfactory. The fine mesh required to strain out the small fish affords ready lodgment for floating leaves and other débris requiring constant attention to keep the screen clear. Besides this heavy operating expense, the obstruction interposed by the screen itself to the flow of the water involves either expensive loss of head or costly enlargement of intake structure. Electrical devices have been tried out, but no evidence that any of these have proven effective is available.

This is not a question that has never been studied. It is a question that people interested have studied a long time, and where have they gotten? Note the report of the Senate committee on this bill, which report has been adopted by the House committee:

> The bill authorizes the participation of the United States Government in a conservation effort of great importance, namely, the saving of millions of food and game fish. The fisheries departments of the States of Washington and Oregon in cooperation with commercial fishing interests, sportsmen, and angler societies have been endeavoring for many years to perfect a device or devices to prevent the admission of fish to irrigation canals, canal intakes, and diversion dams.

The very thing most stressed by the gentleman from Maine.

> Only partial success has attended their efforts.

Which, of course, is correct.

The statement is made that there has been only a limited success attending the study of the subject. I do not understand what the Bureau of Fisheries would do with $50,000 in this study. Of course, when it comes to actually furnishing the canals with the necessary devices $50,000 would not be a drop, but they must first determine what are the most effective devices. I do not understand from anything yet given me where they could use $50,000. The Senate committee has only reported $25,000, and my own judgment is that very little will be accomplished by the investigation. As far as I am concerned, I would not vote against the bill if it could be held down to a maximum of $25,000 if they can show what use they are going to make of that money.

Mr. Chairman, I ask unanimous consent to extend and revise my remarks in the RECORD to include the letter from the Secretary of the Interior on the bill from which I have quoted.

The CHAIRMAN. Is there objection to the request of the gentleman from Michigan?

There was no objection.

The letter referred to is as follows:

DEPARTMENT OF THE INTERIOR,
*Washington, February 15, 1928.*

HON. ADDISON T. SMITH,
*Chairman Committee on Irrigation and Reclamation,*
*House of Representatives.*

MY DEAR MR. SMITH: I have your letter of January 14 transmitting with request for report a copy of H. R. 8906, "A bill to provide for the protection of food and game fish at diversion dams and canal intakes of irrigation projects, and for other purposes."

This bill authorizes an investigation by the Secretary of the Interior, with a view to perfecting a device or devices for the protection of food and game fish at diversion dams and canal intakes of irrigation projects constructed by and under the supervision of the Bureau of Reclamation, and authorizes the appropriation of such funds as may be necessary for such investigation not to exceed $25,000 in any one fiscal year.

Leaving out of consideration the views of the extremists, who urge that no dam should be permitted across any salmon-frequented stream, there are two principal classes of protective devices the installation of which is urged by the representatives of the fishing industry, as follows: (a) Fish ladders or fishways to permit fish ascending the streams to pass diversion dams or other structures interrupting its flow; and (b) fish screens by means of which the fish descending the streams, both the recently hatched fingerlings and the more mature fish, may be prevented from entering the diversion canals and being carried out onto the land and lost.

For low dams up to some 20 feet in height it appears that satisfactory fishways can be built, based upon knowledge at present available, although the principles of design even in this limited range are by no means definitely fixed, as is illustrated by the recent experience of the Bureau of Reclamation in connection with a diversion dam planned for early construction on one project. Here an elaborate fishway was worked out by the engineers of the bureau along lines approved by the State fishery authorities. Before construction of the dam was begun a change of administration occurred and the new officials required a complete redesign of the fishway to conform to their ideas.

For high dams, such as are required for storage or power development, the only possible way to provide for passing fish upstream appears to be some mechanical device for trapping the fish below the dam and elevating them over it. Several elaborate devices of this kind have been tried out in the West in recent years, but testimony as to their effectiveness is conflicting. It seems to be agreed that the young fish seeking the sea can descend in a stream of water passing over high dams or spillways without injury.

It seems to be generally agreed that no device so far developed to keep fish out of canals has proven satisfactory. The fine mesh required to strain out the small fish affords ready lodgment for floating leaves and other débris, requiring constant attention to keep the screen clear. Besides this heavy operating expense, the obstruction interposed by the screen itself to the flow of the water involves either expensive loss of head or costly enlargement of intake structures. Electrical devices have been tried out but no evidence that any of these have proven effective is available.

There seems to be no doubt that in the case of certain varieties of fish, notably the salmon and the steelhead trout, which ascend the streams at certain seasons to spawn, and whose young must seek the sea to spend the major portion of their lives, serious losses occur on account of ineffective fish ladders at dams, and that large numbers of fish of these varieties and possibly others are annually lost in irrigation ditches.

The Bureau of Reclamation, however, is by no means the only or even the largest interest concerned in the improvement of fishways. Power developments and municipal water-supply projects throughout the West have built in the past and will build in the future many more dams than the Bureau of Reclamation, especially of the higher type, where the most need exists at present for the development of a satisfactory design. The loss of fish in irrigation canals, on the other hand, is a problem concerning both the private irrigation developments and the Bureau of Reclamation projects. Of the total irrigated acreage of the country, that included in Bureau of Reclamation projects constitutes

only 6.5 per cent of the whole, and responsibility for fish losses probably should be rated in a somewhat similar proportion.

The problem of devising ways and means for the preservation of fish life is primarily one for those whose duty it is to deal with the fishing industry and who are accordingly well informed concerning fish and their habits. The engineers of the Bureau of Reclamation and of the Indian Service have been directed to confer with and to assist those interested in evolving a plan to remedy conditions so far as feasible under present conditions, and reports indicate that this has been done.

The bill was submitted to the Director of the Bureau of the Budget, who states that the proposed legislation is in conflict with the financial program of the President.

Very truly yours,

HUBERT WORK.

Mr. WHITE of Maine. Mr. Chairman, I yield five minutes to the gentleman from Washington [Mr. JOHNSON].

Mr. JOHNSON of Washington. Mr. Chairman and gentlemen, the commercial fisheries of the United States are so gigantic and the efforts made so far to conserve commercial fishing so extensive that it would be impossible for me to discuss the subject in five minutes.

As a matter of fact, this bill is an effort to bring about something that might be called a demonstration that will result in the Federal Government indicating and pointing out to the States that I happen to know about on the North Pacific Coast and in the Northwestern States a method by which fish may be kept out of the great ditches and, therefore, out of the minor ditches. It works both ways. If the major ditch carries the fish into the minor ditches, the fish die by the million when the water is shut off. If the recently hatched fish are in the minor ditches they clog the meshes of the screens and die.

This effort began, so far as I know, in my State with the Sportsman's Association, who thought it was criminal that there was no organized effort to carry on substantial experiments of the various types and devices of large screens. I saw the various departments, the Interior Department and the Bureau of Fisheries and the Department of Commerce, and found the principal officials to be intensely interested in the problem and anxious to cooperate.

So far as the suggestions made by my distinguished colleague from Michigan [Mr. CRAMTON], I should like to pay him a compliment for his indefatigable efforts for good, orderly legislation on so many matters.

I feel sure his amendment to strike out the words "and directed" is proper. I agree with that part of his argument. As to the authorization of up to $50,000, let me say that the Senate bill was passed in the Senate on the very day that the committee of the House was considering this bill. The Senate bill carries $25,000 and the House committee passed this bill with $50,000 as the figures.

If the sum is left at $50,000 it will be adjudicated in conference. I do not know the exact amount necessary. I would like to see a sum authorized sufficient to provide a real study and experiment. Both departments are interested, and I have a letter from a bureau of the Interior Department that they are willing to cooperate.

Mr. BYRNS. Will the gentleman yield?

Mr. JOHNSON of Washington. Yes; certainly.

Mr. BYRNS. The gentleman stated to me a few minutes ago that the Budget had been convinced of the necessity of some such measure.

Mr. JOHNSON of Washington. Yes.

Mr. BYRNS. And I noticed the Senate fixed the sum at $25,000, the sum suggested by the gentleman from Michigan. Does the gentleman know what sum the Budget recommended?

Mr. JOHNSON of Washington. Yes. It is true that the Director of the Budget, after attention was called to it and after study of the situation, agreed that $25,000 authorization would not receive opposition from the Budget. That led to the $25,000 authorization in the Senate bill.

Mr. BYRNS. The Budget recommended $25,000, the sum fixed by the Senate?

Mr. JOHNSON of Washington. The gentleman is correct.

Mr. BYRNS. Does not the gentleman really think that that sum would be sufficient for this demonstration which the gentleman says is going to be made?

The CHAIRMAN. The time of the gentleman from Washington has expired.

Mr. CRAMTON. Mr. Chairman, I yield five minutes to the gentleman from Washington.

Mr. JOHNSON of Washington. I suggest to the gentleman from Tennessee, with his long experience, would it not be better for him to do the thinking in respect to the figures rather than the gentleman from Washington, the proponent of the bill?

Mr. BYRNS. The gentleman knows that if the bill is passed authorizing a certain sum it affords a leverage for the full amount authorized, because the argument is always made that that is the amount that Congress had in mind. If $25,000 is what the Senate thinks is sufficient and what the Director of the Budget thinks is sufficient and what the gentleman is not prepared to say is not sufficient, it seems to me that Congress ought not to appropriate more than that sum.

Mr. JOHNSON of Washington. Let me say to the gentleman from Tennessee, a member of the Committee on Appropriations, that I am like the patient about to go under the surgeon's knife. You have got the knife.

Mr. BYRNS. I understand that the gentleman is for the $50,000?

Mr. JOHNSON of Washington. The bill would indicate that.

Mr. CRAMTON. Mr. Chairman, will the gentleman yield?

Mr. JOHNSON of Washington. Yes.

Mr. CRAMTON. As I understand the situation, because of the vagueness of the plans of the Bureau of Fisheries, whatever amount is given, when they come with their estimate before the Committee on Appropriations that bureau will have to come with a definite statement, and the gentleman is agreeable that the committee should go into the situation then and approve such amounts as seem to the committee, subject to the approval of the House, sufficient to carry out the purpose which is intended.

Mr. JOHNSON of Washington. I so understand; and, speaking of the justification that will have to be made, I know that the officers of the Bureau of Fisheries will have to go through meshes much finer than any mesh put into any stream to keep out small fish from irrigation ditches. I pay that compliment to the work of the Committee on Appropriations. In other words, if they make justification to that committee for any amount up to $50,000, it will have to be a full justification.

Mr. BLAND. And is not the effect of the maximum amount of $50,000 that if the Committee on Appropriations upon its investigation later finds that there would be needed more than $25,000 to carry on this work, the committee is then authorized in going beyond the $25,000.

Mr. JOHNSON of Washington. The gentleman is correct.

Mr. BLAND. So that the power is in the Committee on Appropriations to determine to what extent appropriations shall be made within the $50,000.

Mr. JOHNSON of Washington. Quite so; and as it should be, I think.

Mr. SIROVICH. If $50,000 should be granted, as the proponent of this bill has the gentleman any definite idea as to how it would be expended?

Mr. JOHNSON of Washington. Yes. Let me say this: In my opinion this bill as written, as amended by the House Committee on the Merchant Marine and Fisheries, is rather broader than the author of the bill—myself—had in mind. The particular thing we had in mind was these irrigation ditches, so that the Government, even if it controls only 6 per cent of the irrigation ditches, would be the directing mind in the experimentation with electrically controlled revolving or other mechanical devices which will let the leaves and brush be drawn aside and keep out the fishes; but as the scope of the bill has been enlarged, it might allow an investigation into the fish in the Cape Cod Canal, now under Federal control.

Therefore, it seems to me reasonable that if the Senate bill, which was reported as introduced, with $25,000, and the Budget Director at that time thought $25,000 was enough, and the House committee has enlarged the scope of the bill, $50,000 would not be too much. But that is a matter which must be justified by the Bureau of Fisheries when they go before the Committee on Appropriations.

Mr. CRAMTON. Mr. Chairman, will the gentleman yield?

Mr. JOHNSON of Washington. Yes.

Mr. CRAMTON. The problem the Bureau of Fisheries will have to deal with will not be a study of each individual dam or diversion ditch, but it will be to study a certain type, and when they have made a recommendation as to that type, that recommendation will be available for the use of every other dam of that type.

Mr. JOHNSON of Washington. Yes; covering various widths, depths, and heights.

Mr. CRAMTON. So that the scope of the bill being enlarged in that respect does not really add anything to the responsibility of the bureau unless it may be as to the Cape Cod Canal, which I do not think we need consider now.

The CHAIRMAN. The time of the gentleman from Washington has again expired.

Mr. CRAMTON. Mr. Chairman, I yield five minutes to the gentleman from Illinois [Mr. MADDEN].

Mr. MADDEN. Mr. Chairman, I rise simply to call the attention of the House to the importance of having facts upon which to base legislation. I suppose this is more or less of a fishing expedition. Nobody seems to know just quite what it is that they want. They think they know this, that when the matter is submitted to the Committee on Appropriations that committee should be deaf, dumb, and blind and should exercise no discretion in the recommendation to the House for appropriations. As the chairman of that committee, I have taken the liberty of asking my colleague for two or three minutes in which to say that I think it is an unfair way to present a bill to the Committee on Appropriations for consideration.

In the first place, the committee is not organized by the House merely to take a rubber stamp and put down what anybody wants put down. In the second place, if it is organized for that purpose, I think we ought to discharge the existing membership of the committee and put on it to control it some of those men who are willing to be rubber stamps. I am not. If the country did not want the finances conserved it would not have organized the present method of protecting and administering them; and I think it is only fair to the committee to submit legislation that will not create any doubts in the minds of anybody on the committee that it is intended that they should use the discretion through which, if necessary, the rights of the taxpayers will be protected.

Mr. BLAND. Mr. Chairman, will the gentleman yield?

Mr. MADDEN. Certainly.

Mr. BLAND. Just for information. I would like to find out just what part, what language in this bill, the gentleman thinks will take power away from the Committee on Appropriations, because I am sure, so far as one Member is concerned, that that is not desired.

Mr. MADDEN. That is the way the bill reads, or did read. What we want is to have all the discretion that may be necessary to get the best light that can be had upon the subject for which appropriations are asked.

Mr. JOHNSON of Washington. Mr. Chairman, will the gentleman yield?

Mr. MADDEN. Yes.

Mr. JOHNSON of Washington. Does not the gentleman think that the amendment he proposes would secure the safeguards he has in mind?

Mr. MADDEN. Yes; I think the amendment will. But the bill as it came did not do that.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. MADDEN. I thank you very much.

Mr. WHITE of Maine. Do gentlemen on that side desire time?

Mr. DAVIS. I want five minutes.

Mr. WHITE of Maine. I yield to the gentleman from Tennessee five minutes.

The CHAIRMAN. The gentleman from Tennessee is recognized for five minutes.

Mr. DAVIS. Mr. Chairman and gentlemen of the committee, the Committee on the Merchant Marine and Fisheries unanimously reported this bill, believing that it was meritorious. I still feel that way about it. I think there has been entirely too much quibbling over immaterial matters with respect to the bill.

Of course, it is conceded by everybody that we have a situation involving the loss and destruction of a large amount of fish, due to the irrigation projects maintained by the Federal Government. This situation is so serious that many of the States affected are undertaking to remedy it. It is suggested by some of those who know nothing about the actual physical conditions that somebody ought to put screens at the mouths of those ditches and prevent this loss, and that an investigation ought not to be necessary to determine the advisability of that. But the fact of the business is that the State fishery commissions have been studying this problem for several years without having reached a satisfactory solution.

We all agree that some form of screening or some device or apparatus must be placed in the mouths of these irrigation ditches to prevent this unnecessary destruction. But the question is this: Which is the most efficient and most economical means or device to be employed by the Federal Government and by the various States in order to reach that result? Different characters of screens and devices have been proposed and tried, without any definite conclusion having been reached as to what is best. They can not install apparatus that will interfere with the free passage of water. There must be screens of such a fine mesh that they will prevent the escape of fish fry in large numbers, and their consequent destruction when the irrigation ditches are drained dry. Furthermore, there are different situations in different localities, requiring different treatment and different methods. There would not only be involved the question of the construction of these screens and these devices, but of their maintenance, because anybody who has had any experience with things of that kind knows that leaves and débris gather in these screens and require frequent attention; so that everybody knows that we have a problem that should be dealt with, and there being a difference of opinion as to the best methods, and no entirely satisfactory methods having yet been devised, this bill simply proposes——

The CHAIRMAN. The time of the gentleman from Tennessee has expired.

Mr. DAVIS. May I have three minutes more?

Mr. WHITE of Maine. Mr. Chairman, I yield to the gentleman three minutes more.

Mr. DAVIS. This bill simply proposes the authorization of an appropriation and an authority to be vested in the Secretary of Commerce to make a careful investigation and study of this problem and to determine the proper methods that should be employed.

Now, members of the Committee on Appropriations complain that this bill authorizes them to make an appropriation of not exceeding $50,000. We had sufficient confidence in the great Committee on Appropriations to believe that they would exercise that discretion with entire intelligence and patriotism, and of course it could not be known by us or anybody now just what the cost of this investigation might be. The probabilities are that the Bureau of Fisheries will ask for an appropriation considerably less than the authorized amount, and they may not be able to complete the investigation the first year. It may be that they might desire to secure some supplemental appropriation, which could not be done, of course, if they had expended all of the appropriation authorized, and we thought that those contingencies, which can not be fully foreseen, might well be left to the discretion of the Committee on Appropriations.

However, I am not concerned particularly about the amount. It may be entirely true that $25,000 would be all-sufficient. I am willing for the authorization to be that amount. I am opposed to the expenditure of one dollar more than necessary.

Now, as to the criticism of the words "and directed," that is the language in the Senate bill, which we saw no occasion to change in committee. The words, "authorized and directed" are the customary language employed in nearly all bills conferring authority and imposing duties on executive officials. It is immaterial whether the words "and directed" are left in the bill or not.

The CHAIRMAN. The time of the gentleman from Tennessee has again expired.

Mr. WHITE of Maine. Mr. Chairman, how much time have I remaining?

The CHAIRMAN. The gentleman from Maine has 22 minutes remaining.

Mr. WHITE of Maine. Mr. Chairman, I have no further requests for time.

Mr. CRAMTON. Mr. Chairman, I yield three minutes to the gentleman from New York [Mr. BLACK].

Mr. BLACK of New York. Mr. Chairman and gentlemen of the committee, I want to congratulate the gentleman from Washington on having seen a new light. Just think of coming in with a bill providing for the immigration and conservation of fish and calling for a machine that does not provide for their segregation according to national origins; nothing said about the quotas of the fish; nothing provided for the separation of the families of the fish; no inquiry concerning their moral turpitude; no inquiry as to whether or not they may have indulged in companionate marriages; and, above all things, is an appeal for that great nonnordic fish—the herring—and, stranger than that, is an appeal for French sardines. I tell you, sir, you are going to get telegrams of protest from the League of the Sacred Puritannical Codfish. But I can understand the situation. The Republicans expect to have pretty shortly a new President, maybe. At the present time he is in control of the department that will operate this machine. He is a half-and-half candidate, half British, half American, half Republican, half Democratic, and I understand that may have something to do with this bill. I congratulate the gentleman on his liberality.

Mr. Chairman, I yield back the balance of my time.

Mr. CRAMTON. Mr. Chairman, I yield two minutes to the gentleman from Washington [Mr. JOHNSON].

Mr. JOHNSON of Washington. Mr. Chairman and gentlemen, in many previous Congresses in the days of the well-known former chairman of the Ways and Means Committee, Mr. Fordney, when he would take the floor to make a speech on any subject, our colleagues in the cloakroom would offer to bet that he would not go 10 minutes without discussing lumber and

shingles. To-day some one said to me that I would not be able to get through the discussion of this short, one-paragraph bill for fish conservation without bringing in the subject of immigration. I have avoided it; but my delightful colleague from New York [Mr. BLACK] has thrown it in my face, and in reply, as politics have been mentioned, let me recall a story that used to be told by the late lamented former Speaker of this body, Mr. Cannon, that the Pacific coast salmon were like the Democrats; they ran every four years and got canned. [Laughter and applause.]

The CHAIRMAN. The Clerk will read the bill for amendment.

The Clerk read the bill.

The CHAIRMAN. The Clerk will report the first committee amendment.

The Clerk read as follows:

Page 1, line 6, after the word "fish," insert the word "occasioned."

The CHAIRMAN. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The CHAIRMAN. The Clerk will report the second committee amendment.

The Clerk read as follows:

Page 1, line 7, after the word "constructed," insert the words "or maintained."

The CHAIRMAN. The question is on agreeing to the second committee amendment.

The amendment was agreed to.

The CHAIRMAN. The Clerk will report the third committee amendment.

The Clerk read as follows:

Page 1, line 7, after the words "United States," strike out the comma and the words "under the Interior Department."

The CHAIRMAN. The question is on agreeing to the third committee amendment.

The amendment was agreed to.

The CHAIRMAN. The Clerk will report the fourth committee amendment.

The Clerk read as follows:

Page 2, line 1, strike out "$25,000" and insert "$50,000."

Mr. CRAMTON. Mr. Chairman, I understand the committee is not disposed to insist upon this amendment, and I hope the amendment will not be agreed to.

The CHAIRMAN. The question is on agreeing to the fourth committee amendment.

The amendment was rejected.

Mr. LINTHICUM. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Maryland offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. LINTHICUM: Page 1, line 7, after the words "United States," insert "and to further investigate the question as to how many fish fertilizer factories now exist in the United States and as to the quantity of edible fish turned into fertilizer."

Mr. WHITE of Maine. Mr. Chairman, I make a point of order against the amendment.

Mr. LINTHICUM. I will ask the gentleman from Maine to reserve his point of order.

Mr. WHITE of Maine. Mr. Chairman, I will reserve the point of order.

Mr. LINTHICUM. Mr. Chairman, the purpose of this amendment is to ascertain the number of fish-fertilizer factories, and how much, if any, edible fish are turned into fertilizer. Some years ago I introduced a bill by which I endeavored to have Congress declare against the manufacture of fertilizer out of edible fish. The bill was to regulate the interstate transportation of fish or products or compounds when intended to be used for fertilizer or oil or in the manufacture of fertilizer or oil.

It is well known that the menhaden is used for fertilizer and great quantities are caught in the Chesapeake Bay, and great fertilizer factories exist along the Virginia coast and in other sections of the country wherein these fish are manufactured into fertilizer and the fertilizer sold throughout the country.

Now, the testimony at that time was that it was not only the fish which were not proper for consumption that entered into the manufacture of fertilizer but that many edible fish were also included in this fertilizer manufacture.

I do not want to criticize the fertilizer manufacturers to any great extent, but I think while we are endeavoring to conserve the food supply of this country, and while we are endeavoring to protect the fisheries and fish of this country, we should also know how many factories in this country are turning these edible fish into fertilizer and selling it for the fertilization of the farms.

Mr. MACGREGOR. Will the gentleman yield?

Mr. LINTHICUM. Certainly.

Mr. MACGREGOR. I am somewhat familiar with this proposition. Does not the gentleman know that the Bureau of Fisheries keeps very close track of this proposition?

Mr. LINTHICUM. If they are keeping close track of it, they have only been doing it recently, because I know in the testimony before the committee it was shown that many edible fish were found among the hauls of the seins, including the menhaden, which were caught for fertilizer purposes. I am simply asking the department which has the matter in charge to tell us how many of these factories exist and what quantity of edible fish is turned into fertilizer. If there is none, then we shall be better satisfied. If there is a quantity of it, then we shall be better able to legislate in respect to it.

Mr. MACGREGOR. They seem to keep very close track of it so far as the Alaskan fisheries are concerned.

Mr. LINTHICUM. They do not have the menhaden and that type of fish in Alaska, and we do not have fish fertilizer plants there like we do in this section of the country.

Mr. BLAND. Will the gentleman yield?

Mr. LINTHICUM. I had expected to get a rise out of the gentleman and would have been very much disappointed if I had not succeeded. Certainly, I yield.

Mr. BLAND. I am simply going to ask the gentleman, for our information, to tell us at what time and before what committee this evidence was given.

Mr. LINTHICUM. I think this was around 1914, if my recollection is correct, and one of the hearings was before the Committee on the Merchant Marine and Fisheries as to migratory fish, and the other hearing, fish used for fertilizer, was before the Interstate and Foreign Commerce Committee. I think the question with respect to fertilizer was before the Interstate and Foreign Commerce Committee.

Mr. BLAND. Will the gentleman yield further?

Mr. LINTHICUM. Certainly.

Mr. BLAND. In view of the fact the gentleman expected to get a rise out of me, may I say that the plants in my district are not guilty?

Mr. LINTHICUM. I want to say to the gentleman the reason I said I expected to get a rise out of him was because his predecessor in Congress, the late Mr. Jones, was the one who fought the bill from start to finish and finally succeeded in defeating it because the fertilizer factories were mostly in his district and to-day are mostly in the district of the gentleman from Virginia, to whom I am speaking.

Mr. BLAND. Will the gentleman yield further?

Mr. LINTHICUM. Certainly.

Mr. BLAND. I have such confidence in my predecessor that I am compelled to say that if he successfully fought the measure he was absolutely justified in the fight.

Mr. LINTHICUM. Well, the testimony did not seem to bear out that conclusion.

Mr. BLAND. But the Congress seems to have been with my predecessor.

Mr. LINTHICUM. Only the committee.

Mr. BLAND. Then the committee was with my predecessor.

Mr. LINTHICUM. It was choked in the committee.

Mr. BLAND. Then I believe the rest of the members of the committee were right.

Mr. WHITE of Maine. Mr. Chairman, I make the point of order against the amendment that it is not germane to the bill.

Mr. LINTHICUM. I should like to know why the gentleman says it is not germane.

Mr. WHITE of Maine. There is nothing in the bill authorizing the taking of a census of fish or of fertilizer plants or anything else. The bill simply authorizes a study of ways and means for the prevention of the destruction of fish by certain means, and certainly the matter of fish-fertilizer plants is beyond that proposition.

Mr. LINTHICUM. The title of the bill reads "to provide for the conservation of fish, and for other purposes." If an amendment for an investigation as to how many factories there are in this country turning fish into fertilizer and what quantity of edible fish are so turned into fertilizer, is not a proposition having to do with the conservation of fish, I do not know what would be. Here is a gentleman who wants an appropriation of $25,000 to conserve the fishing interests of the country, and here I am making a proposition which he should be in favor of, if he believes as much in the protection of our fisheries as he says he does. The gentleman ought to be in favor of ascertaining what, if anything, is being done in these fertilizer plants

in the way of destroying the fishing interests of the country. I contend when the bill says "to provide for the conservation of fish, and for other purposes," an amendment for the conservation of fish, as proposed, is wholly in accord with the purview of the bill and germane to the subject matter.

Mr. BLAND. Will the Chair permit just one statement?

The CHAIRMAN. The Chair will hear the gentleman.

Mr. BLAND. It will be noted that while the title of the bill does read as the gentleman from Maryland has said, yet the bill itself is limited to the best methods of preventing the destruction of fish. How? By ditches, canals, and other works constructed or maintained by the United States. The limit of this bill is the extent to which those things, constructed or maintained by the United States, do this damage, and the scope of the bill does not go to the general question of pollution or conservation, generally. Of course, if the amendment of the gentleman from Maryland is in order, then any amendment on the subject of pollution or any amendment dealing with conservation of fish would be in order, but the bill limits it to works constructed or maintained by the United States.

Mr. MILLER. Or methods of seining and the use of fish traps.

Mr. BLAND. Yes; all those questions would be germane if the amendment of the gentleman from Maryland is in order.

Mr. LINTHICUM. Would the gentleman suggest that the abolishing of fish traps would not be for the conservation of fish?

Mr. BLAND. That may be true; but my contention is it would not be germane to this bill.

Mr. LINTHICUM. The gentleman contends that the fertilizer plants of his district are not guilty, and yet he is opposed to having that demonstrated by an amendment to this bill and an investigation.

Mr. CRAMTON. Mr. Chairman, I make the point of order the gentleman is not debating the point of order.

The CHAIRMAN. The Chair is ready to rule. In order to get the purpose of a bill one must read beyond the title of the bill. It is clear to the Chair that the object of this bill is to authorize the Department of Commerce "to study, investigate, and determine the best means and methods of preventing the destruction of fish," and so forth. That is all there is to the bill before us. The amendment of the gentleman from Maryland proposes to authorize the same department to investigate how many fish-fertilizer factories now exist in the United States, and so forth. It does not appear to the Chair that the amendment is germane to the bill, and the Chair therefore sustains the point of order.

Mr. CRAMTON. Mr. Chairman, I offer an amendment. In line 4, page 1, strike out the words "and directed."

The CHAIRMAN. The gentleman from Michigan offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. CRAMTON: Page 1, line 4, strike out the words "and directed."

The question was taken; and on a division (demanded by Mr. CRAMTON) there were—ayes 6, noes 3.

Mr. LINTHICUM. Mr. Chairman, I object to the vote on the ground that there is no quorum present.

The CHAIRMAN. The gentleman from Maryland makes the point that there is no quorum present. The Chair will count. [After counting.] One hundred and three Members present, a quorum.

Mr. WHITE of Maine. Mr. Chairman, I move that the Committee do now rise and report the bill to the House with the amendments, with the recommendation that the amendments be agreed to and the bill as amended do pass.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. RAMSEYER, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee, having had under consideration the bill (S. 3437) for the conservation of fish, had directed him to report the same back to the House with sundry amendments, with the recommendation that the amendments be agreed to and that the bill as amended do pass.

Mr. WHITE of Maine. Mr. Speaker, I move the previous question on the bill and all amendments to final passage.

The motion was agreed to.

The SPEAKER. Is a separate vote demanded on any amendment? If not, the Chair will put them in gross.

The amendments were agreed to.

The bill as amended was ordered to be read a third time, was read the third time, and passed.

A motion by Mr. WHITE of Maine to reconsider the vote whereby the bill was passed was laid on the table.

A similar House bill was laid on the table.

## RECOGNITION OF THE OFFICERS AND CREWS OF CERTAIN UNITED STATES STEAMSHIPS AND OF THE BRITISH STEAMSHIP "CAMERONIA"

Mr. WHITE of Maine. Mr. Speaker, I call up the bill (S. 1609) recognizing the heroic conduct, devotion to duty, and skill on the part of the officers and crews of the U. S. S. *Republic*, *American Trader*, *President Roosevelt*, *President Harding*, and the British steamship *Cameronia*, and for other purposes.

The SPEAKER. This bill is on the Union Calendar, and the House automatically resolves itself into the Committee of the Whole House on the State of the Union.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union, with Mr. RAMSEYER in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the consideration of the bill which the Clerk will report.

The Clerk read the bill, as follows:

*Be it enacted, etc.*, That the term "crew" as used in this act shall mean and include any person carried on the ship's register or serving on the ship in any capacity, regardless of rank or rating, at the time of the rescue referred to in this act.

SEC. 2. That the thanks and appreciation of the Congress of the United States be, and they are hereby, tendered to the families of Uno Wirtenan and Fritz Steger who lost their lives, and to the officers and crew of the U. S. S. *President Roosevelt* as constituted on January 24 to 28, 1926, inclusive, for the heroic conduct shown and noble service rendered in the rescue of the officers and crew of the British steamship *Antinoe;* to the officers and crew of the U. S. S. *President Harding* as constituted on October 25, 1925, for the heroic conduct shown and noble service rendered in the rescue of the officers and crew of the Italian steamship *Ignacio Florio;* to the officers and crew of the steamship *American Trader*, of the American Merchant Line, as constituted on October 26, 1925, for the heroic conduct shown and noble service rendered in the rescue of the officers and crew of the Norwegian steamship *Elven;* to the officers and crew of the U. S. S. *Republic* as constituted on October 10, 1925, for the heroic conduct and noble service rendered in the rescue of the officers and crew of the U. S. patrol boat *No. 134;* and to the officers and crew of the British steamship *Cameronia* as constituted on October 11, 1925, for the heroic conduct and noble service rendered in the rescue of the crew of the United States Coast Guard patrol boat *No. 128*.

SEC. 3. That the Secretary of Commerce and the Director of the United States Mint be, and they are hereby, authorized and directed to prepare a suitable die and to strike suitable gold medals commemorating the heroic conduct and noble services rendered in the rescues described in section 2 of this act, and present, in evidence of the esteem of the Nation for valorous conduct on the high seas in the face of great danger as demonstrated in such rescues, one of such medals to the captain of each of said rescuing ships, and to each person certified by the captain of the respective rescuing ships to have shown special courage and to have faced special danger in such rescues.

SEC. 4. That there is hereby authorized to be appropriated, from moneys in the Treasury not otherwise appropriated, the sum of $5,000, or so much thereof as may be necessary to cover the cost of designing producing, and distributing said medals in the manner described in this act.

With the following committee amendments:

First amendment: Strike out section 3 of the Senate bill.

Second amendment: Strike out section 4 of the Senate bill.

Mr. WHITE of Maine. Mr. Chairman, I yield 10 minutes to the gentleman from Massachusetts [Mr. GIFFORD].

Mr. GIFFORD. Mr. Chairman, this is not a controversial bill. It is an act recognizing the heroism of certain officers and crews in time of great danger. I take this opportunity to speak on this bill, that I may attempt to extend our appreciation to other acts of heroism more recently called to our attention.

I may have been dilatory for during the month of March I might have risen and called attention to an act of heroism on the coast which I represent, when the steamer *Robert E. Lee* went aground off Plymouth, Mass., and several lives of Coast Guardsmen were lost, while taking part in rescue work.

It is quite customary to call the attention of Congress to such happenings and later to make official expressions of appreciations. I do hope at the proper time this appreciation may be extended in this instance. I do hope some way may be provided whereby the families of those whose lives were lost may receive some practical token of the feeling of Congress in such cases.

I wish to call attention to a newspaper article that appeared a short time afterwards. If such an article appeared in a leading newspaper in your district I am sure you would give it attention. The article reads "They died unnecessarily." It then proceeds to blame Congress for the death of these three men, because of the claim that the station was undermanned and not properly equipped.

At this time I do not wish to criticize too much the appropriations made by Congress, because during the last 10 years we have constantly provided better and more fully for the Coast Guard and the coast stations over the United States, but we must agree with the writer of this newspaper article that our stations are not provided with necessary power boats and we must take notice of it.

These Coast Guard stations are not properly and fully equipped, but we are informed that for the present year more funds will be available. Three men lost their lives in attempting to reach the steamer with a lifeboat equipped with oars. A station near by with a power boat succeeded and took off the passengers. Several stations took part in this rescue work, and special mention should be made of each. All deserve the thanks of Congress for the acts of heroism at that time. I do wish the RECORD to explain to those who criticize that under the Budget system, the head of a department appearing before the Director of the Budget, lectured on economy several times each year, feels that he must be modest in respect to his requests, and we can not bring these life-saving stations up to full equipment and efficiency as soon as it ought to be done.

Mr. Chairman, I rose to bring to the attention of this House this loss of life and heroic acts of our coast guardsmen during the last month.

Mr. TAYLOR of Colorado. Mr. Chairman, will the gentleman yield?

Mr. GIFFORD. Yes.

Mr. TAYLOR of Colorado. Does the gentleman not think it would be a great incentive to patriotism and heroism, and be an inspiration to the youth of this country, leading to better morale and less desertions, and be of tremendous value practically as well as an investment in patriotism and national pride, if Congress would be a little more liberal in recognizing these acts of heroism?

Mr. GIFFORD. Of course, I must agree with the gentleman's suggestion. I wish to bring to the attention of the House another phase of this recent incident. Vounteers were asked for here. There were a large number of passengers to be saved and the crews not sufficient to help in the rescue. Volunteers were accepted. What are we going to do for the young man, who simply as an ordinary citizen volunteered and suffered an accident that may render him a hopeless invalid for life? If you call upon a branch of the Government, they reply "that he was not in the service and know of no way in which they can assist him." What shall we do for this young man who is as deserving as others properly in the service of the United States? What shall we do for his family in the event that he is found to be totally unable to provide for them in the future? There are these many problems to be taken into consideration in connection with such bills, which simply extend the thanks and appreciation of the Government, but do not even grant an "insignia," or other material reward.

Mr. WHITE of Maine. Mr. Chairman, does the gentleman from Tennessee desire to consume some time?

Mr. DAVIS. I do not care to use any time, but the gentleman from New York [Mr. LINDSAY] would like to have 10 minutes.

Mr. WHITE of Maine. Mr. Chairman, I yield 10 minutes to the gentleman from New York [Mr. LINDSAY].

Mr. LINDSAY. Mr. Chairman, "Greater love than this hath no man, that he lay down his life for his friends," and may I reverently add, "Greater loyalty to duty and service hath no man than he who is lost at sea in brave attempt to save fellow seamen from disaster."

I pause in respect to the memory of those two seamen who left the deck of the steamship *Roosevelt*, undismayed at the mountainous seas, unawed at the howling gale, unafraid of the cold death that hid behind the squalls of snow. I hesitate to apply any descriptive adjective. The landsman must hesitate to describe the courageous picture this evokes in his brain. These two men never reached the floundering vessel, the steamship *Antinoe*. The watery valleys swallowed them up and they were gone. To Heitzman, of New York, and his companion seaman Fritz Steger, who first saw day in the land of the vikings, goes the glory of a brave sailorman's death at sea.

In no less a degree were the entire crew and the officers of the steamship *Roosevelt*, of the United States merchant marine, engaged with death that day. One miscalculation of the force of wind or wave, one error of judgment concerning the power behind her engines, and the *Roosevelt* might easily have collided with the foundering *Antinoe*. The same skill that finally enabled the seamen to man the small boats, under the leadership of the first officer, Mr. Miller, was evidenced by Captain Fried on the bridge, and let us not forget the engineer forces and the "black gang" below decks who kept the *Roosevelt's* heart beating through it all.

The whole world knows the story of the rescue by the steamship *President Roosevelt* of the crew of the British steamer *Antinoe*.

How for four days the *Roosevelt* struggled through wintry seas to rescue the crew of the *Antinoe*. How during that period while heavy snow squalls prevailed the officers and crew of the *President Roosevelt* never lost heart, even losing some of their own crew in their desperate effort at rescue; and how finally at midnight on the fourth day the last man of the crew was rescued and carried to safety on board the *President Roosevelt*.

So long as men go down to sea in ships, so long shall the history of this heroic rescue live in the hearts and minds of men.

Mr. Speaker and my colleagues, I ask formal recognition of the distinguished service of these men, and I know such expression of Congress will truly convey your individual feelings and the wishes of your constituents everywhere.

Incidentally may we not, by inference at least, convey our tribute to the gallant vessels involved. Seagoing men believe in a ship's personality. Surely we are proud of the staunchness of these American-built and American-registered vessels of ours.

No nation may be said to excel in instances of individual personal courage, but it is true that certain nations have always shown exceptional skill and daring at sea. In these days of comparisons of mere mechanical things, we sometimes fail to properly evaluate personal skill and courage. The history of our country from the days of Paul Jones, Jack Barry, Stephen Decatur, Admiral Lawrence, and Porter is rich in examples of a peculiar efficiency of our American sailormen. Indeed, Captain Fried was one with Lawrence in his determination to never give up the ship.

In the days when our flag was known all over the globe, when our clippers and whalers carried the flag to practically every port in the world and on every charted and uncharted ocean lane, then we were a maritime nation.

To-day American ships are maintaining the glorious traditions bequeathed by a race of sailors.

On October 10, 1925, the steamship *Republic*, commanded by Capt. A. B. Randal, rescued the crew of the United States Coast Guard patrol boat off Nantucket. All the world knows the reputation of the waters off Nantucket.

On October 25, 1925, the steamship *President Harding*, commanded by Captain Grenning, rescued the crew of the Italian vessel *Ignacio Florio*, which foundered at sea in a storm then raging.

These two rescues occurred within a brief period. To cap the sequence during the October storms—and this illustrates that these occurrences were not mere "flukes"—on October 26, 1925, at the very same spot where the *Florio* went down the day before, the steamship *American Trader*, commanded by Capt. Hubbard C. Fish, rescued the crew of the Norwegian freighter *Eleven*.

This was a period of terrible storm. The crew of the United States patrol boat were skilled men; the crew of the Italian were skilled men; and the Norwegian was manned by men of a seagoing race. Yet the elements overwhelmed these ships. The vessels were lost. Except for the fortunate proximity of the three American vessels the crews mentioned were doomed. In seas that threatened, amid waves and wind that wrecked the other vessels, our American ships met the test as loyally as their crews. These men not only saved their ships but they rescued, under conditions that can not be described, the men whose ships had gone under. This was a gallant deed.

There have been other valorous rescues at sea. Small ships, big ships, it matters not. Italian, Norwegian, British, or Japanese, our merchant ships extend the hand of the brotherhood of the sea. In time of stress no measure of creed or color is drawn on land or sea.

On October 11, 1925, the officers and crew of the British steamship *Cameronia* rendered heroic service.

I ask your expression of approval of this attempt by Congress to accord some measure of recognition to these men in all ranks, from deck to fireroom, from captain to coal passer.

Let us praise God to-day for raising American seamen of the type of Captain Fried, Chief Officer Miller, and the brave crew of the *President Roosevelt*.

They have made an imperishable record that so long as men go down to the sea in ships shall forever be emblazoned in the annals of time. [Applause.]

Mr. WHITE of Maine. Mr. Chairman, I yield 10 minutes to the gentleman from New York [Mr. DEMPSEY].

Mr. DEMPSEY. Mr. Chairman, I ask unanimous consent to proceed out of order and to revise and extend my remarks in the RECORD.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. DEMPSEY. Mr. Chairman and members of the committee, the correspondence between our Secretary of State and the Canadian minister made public the 17th instant regarding a proposed deepening, at the joint expense of the two countries, of the St. Lawrence River for a Canadian ship canal to the sea can not fail to be of the greatest interest to the whole country, involving as it does many startling proposals, including one as to our commerce on the Great Lakes. The real significance of the letters can be learned only by a most thorough study. I have examined them with the utmost care and have thought that I might be able to spare my fellow members the time and effort necessary to master the contents by stating briefly the contentions advanced and the positions taken in them. I will attempt to do this impartially.

HISTORICAL BACKGROUND OF AGITATION FOR IMPROVEMENT OF THE ST. LAWRENCE RIVER

The improvement of the St. Lawrence River, partly at the expense of the United States, has been agitated for a third of a century. During all of this time the effort to improve this foreign waterway at the expense of this country has delayed and embarrassed the consideration and adoption of an American deeper waterway connecting the Great Lakes with the sea and the unification of American waterways; but until this time it has not otherwise exerted a harmful influence on our other waterways. The publication of the correspondence between Secretary Kellogg and the Canadian minister, Mr. Massey, shows that the injurious influence of the agitation for this improvement is now spreading so as to endanger our commerce on the Great Lakes.

INJURIOUS EFFECT OF ST. LAWRENCE AGITATION IN DELAYING GREAT IMPROVEMENTS NOW MUCH NEEDED ON THE GREAT LAKES

The Great Lakes carry by far our most important commerce—greatest in volume and at the lowest transportation cost. The Government long ago adopted a project to give the Great Lakes' channels a depth of 21 feet, but for several years and until last season, owing to a variety of causes, the principal one being, possibly, a low-water cycle or period, we had but 18½ feet. This meant that the Great Lakes freighters were unable to load to full capacity, which entailed large losses and great damage, the loss in freight receipts alone being $3,000,000 a year; and the damage to shippers, through delay and inability to ship at all, being probably ten times as great. To remedy this condition Congress provided by the river and harbor act which became a law January 21, 1927, for a survey of the Great Lakes, with a view to providing deeper channels. A special commission made this survey and reported that the channels should be deepened to 24 feet. The matter then came before the Board of Engineers for Rivers and Harbors for consideration, and a full hearing was had, only one question being debated—whether the channels should be made 22 or 24 feet. It is understood that the board reported about two weeks ago in favor of the 24-foot depth. Since then, until the correspondence with Canada was made public, this report has been in the hands of the Chief of Engineers.

On publication of this correspondence the chief immediately returned the report to the board for its further consideration and the board, with no decision, adjourned to May 1, in face of the fact that the Committee on Rivers and Harbors has been waiting for this report ever since Congress convened, expecting to include the project in the bill, which it is soon to report, and to have this great and most important undertaking of deepening these channels in the interest of our most important commerce started at the earliest date possible.

No criticism is, of course, made of the engineers for their action. We have only the highest admiration for them, as experts and as men. They, of course, did only what they were requested to do. What we are discussing is the result of this correspondence and of the prolonged agitation for the deepening of the St. Lawrence.

Why should there by further delay in face of the enormous losses sustained each season through the fact that the channels of the Great Lakes are too shallow?

The answer is that the project is being held up to await the outcome of the negotiations with Canada regarding the St. Lawrence.

HOW THE DEEPENING OF THE GREAT LAKES IS INVOLVED BY CANADA IN THE NEGOTIATIONS AS TO THE IMPROVEMENT OF THE CANADIAN ST. LAWRENCE

The Canadian minister proposes that the entire Great Lakes system and the St. Lawrence be treated, as to improvements, as a unit, and that the United States, as its part of the work, should dredge the St. Claire and Detroit Rivers to a depth of 27 feet, reconstruct the locks at Sault Ste. Marie, Mich., with the locks 30 feet, improve the St. Lawrence for the 141 miles of its length as the international boundary line on the Canadian as well as the American side, and for power on both the Canadian and the American sides, and deepen the lake channels to 27 feet.

Canada claims that she has already done the following work:

Dredged the St. Lawrence ship channel;

Constructed the St. Lawrence and Welland Canals; and

Constructed the locks at Sault Ste. Marie, Ontario.

And Canada proposes to do the following work:

Construct the Welland ship canal; and

Construct the wholly Canadian section of the St. Lawrence shipway to a depth of 27 feet for navigation, and to develop power.

Our Secretary of State has accepted most of the suggestions made by Canada, including that of treating these improvements as a unit. What will the effect be if this course is adopted? The agitation for the improvement of the St. Lawrence has gone on, not alone with nothing done but with no agreement, even, to do anything, for a third of a century. There is now no greater prospect of action or even of an agreement than there has been in this long period. So, if we wait for the United States and Canada to agree upon deepening the channels of the Great Lakes, we will no doubt wait indefinitely, or for a third of a century more.

And all the time that we wait the wheat growers of the West, the food consumers of the East, the great iron and steel business of the country, and all who use iron or steel products, and every family in the Northwest which uses a ton of coal, will pay a higher transportation cost on the Great Lakes, because its channels are too shallow to enable the Great Lakes freighters to load to capacity. The losses from the delay everywhere will be enormous, and it is unnecessary, and therefore, of course, inexcusable.

CANADA WILL SUFFER NO LOSS FROM DELAYING DEEPENING OF THE GREAT LAKES CHANNELS AND CAN AFFORD TO WAIT—THE UNITED STATES ALONE WILL SUFFER ENORMOUS LOSSES FROM THE DELAY

First. The United States moves the greatest commerce in the world's history on the Great Lakes, and at the lowest transportation cost, while Canada's Great Lakes commerce is comparatively insignificant.

In 1926 the United States commerce on the Great Lakes amounted to 92,546,996 tons, while that of Canada was only 7,130,102 tons. So Canada has no great interest at stake and can wait very complacently for the deepening of the Great Lakes' channels, but each season's delay means a wholly unnecessary and enormous loss to the United States.

Second. Canada has an oversupply of transportation facilities, while the United States is short of such agencies.

Canada has been so far overdeveloped in railway facilities that the Government was obliged some years ago to take over substantially all of its railway systems, except the Canadian Pacific. It also is completing a combined rail-and-water route, by way of the Hudson Bay, for the export of grain from the western Provinces, and it uses, besides, the Pacific Ocean and the Panama Canal for exporting grain from Vancouver and Prince Rupert.

On the other hand, the facilities in the United States for the transportation of freight are hardly equal to present demands, when the country is prosperous and additional facilities must be provided to meet the constant increase in population and the consequent growth in the volume of freight to be transported.

Canada realizes that the increased water transportation afforded by the deepening of the St. Lawrence will add to the competition of its Government-operated railways, increasing the losses of these railroads, which must be met by taxation.

REASONS ADVANCED BY CANADA FOR DELAY IN AGREEING TO THE IMPROVEMENT OF THE ST. LAWRENCE

First. Canada is in no condition at present to undertake the expenditure involved.

In view of these facts and of the very heavy financial burdens imposed by the war, by the railway obligations arising out of the war, and by the necessity, since the war ended, of finding the large sums required for needed public works throughout the Dominion, it

is considered that it would not be sound policy to assume heavy public obligations for the St. Lawrence project.

Canadian minister's letter of January 31:

Second. Canada will not agree to the improvement until—

a number of financial and economic difficulties have been solved, and until the joint engineering boards of the two countries have agreed on the engineering features of the international section of the river.

While the National Advisory Committee regards the project as feasible from an engineering standpoint, and notes the findings of the International Joint Commission in 1921 as to its economic practicability, it considers that the question of its advisability at the present time depends upon the successful solution of a number of financial and economic difficulties, and upon further consideration of certain of the engineering features as to which the two sections of the joint board of engineers are not as yet agreed.

* * * * * * *

The situation presented by the differences of opinion brought out in the report of the Joint Board of Engineers as to the best method of development in the international section of the St. Lawrence has also received consideration by the national advisory committee. The committee considers it greatly in the public interest that a further attempt should be made to reconcile these varying views. Conclusive assurance is necessary as to control of the fluctuations of flow from Lake Ontario, so essential to the interests of the purely national sections of the river and the port of Montreal, and as to the situation of those Canadian communities on the St. Lawrence, which under certain of the present plans might be obliged to live under levees or to rebuild in part.

Same letter.

Third. Canada indicates that she will not agree to the improvement of the St. Lawrence unless and until the United States has repealed the customs duties it now imposes on Canadian farm and fish products.

In this connection, it may be said that Canadian agriculture is more directly affected by the restrictions on the importation of Canadian farm products which have been imposed by the United States in recent years, with the object, it is understood, of assisting agriculture in those Western States which would share so largely in the benefits of the proposed St. Lawrence waterway. This situation, and the effects upon the maritime sections of Canada of United States duties on the products of the fisheries, are among the factors which have contributed to bringing it about that public opinion in Canada has not so clearly crystallized in favor of the waterway project as appears to be the case in the United States.

Same letter.

It is not believed that the most ardent advocate of the St. Lawrence would be willing to pay the price to secure Canada's agreement to this project which it is thus indicated she will demand.

Fourth. Canada has constitutional questions involved which must be submitted to and determined by her courts before she could proceed with this improvement.

The relations between navigation and power involves certain constitutional difficulties, of which, in accordance with the wishes of the governments of Ontario and Quebec, the Government of Canada proposes to seek a solution by reference to the courts.

Same letter.

Fifth. The Dominion of Canada must consult with, and it is assumed secure the assent of, the Provinces of Ontario and Quebec before making an agreement.

It was further indicated in my previous note that, with the constitutional question in process of solution, His Majesty's Government in Canada would be in position upon learning whether the Government of the United States considered that the procedure suggested by the national advisory committee formed an acceptable basis of negotiation, to consult with the Provinces of Ontario and Quebec upon the aspects of the problem, with which they may be concerned.

Same letter.

THE CANADIAN PROPOSAL AS TO THE PROPORTIONS IN WHICH THE TWO COUNTRIES SHALL CONTRIBUTE TO THE IMPROVEMENT IS UNFAIR

First. Canada demands that the United States shall make all of the boundary line improvements.

Canada proposes that the United States shall—

| | |
|---|---|
| Improve the St. Lawrence for its length as a boundary line (the Canadian and American channels), 141 miles, for power (not alone American but Canadian power) as well as navigation, at a cost of | $274,247,000 |
| Dredge the upper lake channels (Canadian and American) to a depth of 27 feet, at a cost of | 65,100,000 |
| | 339,347,000 |
| And that the United States shall be credited with past improvements in the Great Lakes for | 43,836,000 |
| Total for the United States | 383,183,000 |

In other words, the United States does all of the work of improvement on the upper Lakes and on the boundary-line part of the St. Lawrence on both the Canadian and the American sides—even developing Canada's water power for her on that part of the St. Lawrence.

Now, what does Canada do?

She completes the Welland Canal, which, as a matter of fact, is nearly finished, and she improves the Canadian part of the St. Lawrence for a distance of 42 miles.

Canada credits herself as follows:

| | |
|---|---|
| St. Lawrence Ship Canal (already constructed) | $30,000,000 |
| St. Lawrence and Welland Canals (constructed probably 30 years ago, and the old Welland soon to be abandoned) | 50,000,000 |
| Locks at Sault Ste. Marie, Ontario | 5,560,000 |

And Canada proposes to do the following:

| | |
|---|---|
| Complete the new Welland Ship Canal | 115,600,000 |
| Improve the wholly Canadian section of the St. Lawrence shipway for navigation and power (which belongs to Canada) | 199,670,000 |
| | 315,270,000 |
| Total for Canada | 400,830,000 |

This proposal looks fair on its face as to the comparative contributions of the two countries. Let us see, however, whether the matter will bear investigation.

(a) The credits claimed and allowed for past work are not fair.

First of all, Canada credits herself with $85,560,000 for past work, and credits the United States with only $43,836,000; in other words, she claims about twice as much in the way of credit as she allows us. The credits she allows us are for the dredging we did in the St. Claire and Detroit Rivers and for constructing the locks at Sault Ste. Marie. All of this work is in use to-day and necessary for the tremendous commerce carried on the Great Lakes, and all of the work has been in continuous use ever since it was completed. So the allowance made us is fair and just and should be made.

On the other hand, Canada claims $60,000,000 of credit for construction work on the St. Lawrence and Welland Canals, done, the greater part of it, probably 30 years ago. We never had any considerable use of these canals or channels, and they undoubtedly have paid for themselves many years ago. The old Welland Canal is about to be abandoned and a new canal is being completed to take its place. There is not the slightest justification for our contributing any part of this $80,000,000.

As to the new work proposed to be done by Canada the Welland Ship Canal is to cost $115,000,000, and it will be of nothing like the value to us which a canal on the American side would be, and the American canal would not cost anything like as much; the improvement on the Canadian section of the St. Lawrence is only 42 miles long, as against the 141 miles on the international boundary sector to be improved by us, yet Canada credits herself with $199,670,000 for this work. Why? Because she proposes to charge us with the cost of developing her own power on this Canadian part of the river.

If we are to pay for a canal connecting Lakes Erie and Ontario let us have an American canal which will serve the American Niagara frontier with its million of population and its 20,000,000 tons of freight, because we would own it, it would be infinitely more useful, and it would cost a good deal less.

Buffalo and the whole Niagara frontier are sidetracked by the Welland Canal. It is of absolutely no value to the frontier for shipments from the east with the frontier as their destination, for shipments from the frontier east, or for shipments east or west where there is partial unloading and reloading on the frontier.

And we should not pay Canada for developing her own water power. Let us see what she claims in the way of credits for this development of her own power.

Canada says that the improvement of the St. Lawrence by us for 141 miles and the development of 597,600 horsepower will cost $182,157,000, and that the development of an additional 1,602,000 will cost $92,090,000.

One million six hundred and two thousand horsepower is, roughly, twice and a half 597,600 horsepower. If it costs $92,090,000 to develop 1,602,000 horsepower it will cost $37,000,000 to develop 597,000 horsepower. Subtracting this from $182,157,000 we have as the cost of improving 141 miles of the international section of the St. Lawrence $145,157,000, or practically a million dollars a mile.

At the same rate the 42 miles of the Canadian St. Lawrence improved by Canada for navigation purposes only would cost but $42,000,000.

So, eliminating the $80,000,000 claimed for the old St. Lawrence and old Welland Canals, on the ground that we had practically no use of them, that the old Welland soon will be abandoned, and that these improvements must have long ago paid for themselves; eliminating the new Welland, because if we are to pay for a canal connecting Lakes Erie and Ontario, one on our own side can be constructed at less cost and be of infinitely greater use: and eliminating $157,670,000, the cost of developing Canadian power on the Canadian part of the river, we have only $47,560,000 left with which Canada should properly be credited, instead of $400,000,000. In other words, Canada claims ten times the credits to which she is entitled.

GREAT CONTRAST BETWEEN THE PRESENT ESTIMATE AND ONE MADE IN 1927

The cost of the St. Lawrence improvement as estimated by the correspondence between the two Governments just made public amounts to $784,177,000.

A report was made by the chairman of the United States-St. Lawrence Commission to the President December 27, 1926, from which we quote:

Thus the total investment in the St. Lawrence by the joint Governments on the above basis of procedure would be from $123,000,000 to $198,000,000, depending upon the details of the plan. The latter sum, previously pointed out, would be reduced to an effective net of $148,000,000 from immediate power income and still further reduced by the returns from future power development. (P. 5, S. Doc. 183–69–2.)

FAR THE GREATER PART OF THE POWER OF THE ST. LAWRENCE TO BE DEVELOPED IS IN CANADA, AND THE CORRESPONDENCE PROVES THAT CANADA WILL PERMIT NO PART OF ITS POWER TO BE EXPORTED TO THE UNITED STATES

From a million and a half to two million horsepower can be developed in the international section of the river, to one-half of which the United States is entitled and Canada is the owner of the other half. In the Canadian part of the river there will be developed about four and a half millions horsepower. So Canada will have about 5,000,000 horsepower and the United States from three-quarters of a million to a million horsepower.

The Canadian minister says as to water power:

Public opinion in Canada is opposed to the export of hydroelectric power and is insistent that such power as may be rendered available on the St. Lawrence, whether from the wholly Canadian section or from the Canadian half of the international section, shall be utilized within the Dominion to stimulate Canadian industry and develop the national resources. With this view the National Advisory Committee expresses itself as in complete accord. The committee further indicates that, in view of the relatively limited capacity of the Canadian market to absorb the vast blocks of power contemplated by the St. Lawrence proposals, it follows that it is most important in any arrangement which may be considered that the development of power on the Canadian side should not exceed the capacity of the Canadian market to absorb it.

Same letter.

Our Secretary of State evidently construes this language, in connection with the proposal that the United States develop both Canadian and American power on the international section, and at the same time, as being a requirement of Canada that we shall not develop our half of the water power until Canada wants her half developed.

Therefore if, as you suggest as to this section, the United States is willing to build not only the waterway but the power, it would seem that the United States ought to be permitted to develop its power and use its half, the other half to be used by Canada or not, as it should desire.

Letter of our Secretary of State.

CONCLUSION AND SUMMARY

We do not believe that Canada will herself be ready for a long time, if ever, to negotiate a treaty for the joint improvement by the Dominion and the United States of the St. Lawrence River for the reasons stated by her in this correspondence, to wit:

First. Canada is overdeveloped in transportation facilities and does not need the greater carrying capacity of a deeper waterway.

Second. The St. Lawrence, when deepened, would take commerce from Canada's Government-operated railways to their loss and at the cost of the Canadian taxpayer.

Third. Canada will not care to assume any cost of deepening the St. Lawrence until her financial situation is changed.

Fourth. Canada will not approve this project until "a number of financial and economic difficulties have been solved."

Fifth. Canada's approval of the project will be withheld until fundamental engineering disputes as to the improvement of the international section of the river have been settled.

Sixth. Canada states that our tariff duties on Canadian farm products and fish "are among the factors which have contributed to bringing it about that public opinion in Canada is not so clearly crystallized in favor of the waterway project as appears to be the case in the United States."

Seventh. In Canada constitutional questions are involved which must be determined by the courts before she could agree to this improvement.

Eighth. The Dominion of Canada must consult with the Provinces of Ontario and Quebec before making an agreement.

Ninth. If Canada reaches the point where she is ready to agree on the improvement the United States could not afford to make the terms which Canada proposes. Surely the United States would not agree to do all the work in the Canadian, as well as the American, channels of the Great Lakes for a distance of a thousand miles, and to construct the works for 141 miles, the length of the international section of the St. Lawrence, improving it not alone for navigation but for power on both the American and the Canadian sides, leaving Canada to improve only 42 miles in the Canadian section of the St. Lawrence and to finish the 25 miles of the Welland Canal which is already substantially completed, and was undertaken and will be finished whether the St. Lawrence is ever deepened or not.

Nor would the United States agree to giving credits for work done and to be done in accordance with the following claims made by Canada, viz, "Canada should be credited with the cost of the old channel in the St. Lawrence and Welland Canals," of which we have had a most limited use, with no agreement, or even understanding, that we should pay for the cost.

Nor would we agree that Canada should charge us for developing its own water power in the Canadian part of the St. Lawrence at a cost of $157,000,000. Nor would the western farmers who advocate the St. Lawrence ever consent to allowing the farm and fish products of Canada, our strongest competitor, to enter our country free of duty.

We, therefore, see no prospect of an agreement between the two countries for the deepening of the St. Lawrence. Realizing this, and that the channels of the Great Lakes should be deepened without delay, the Committee on Rivers and Harbors passed unanimously the 20th of this month a resolution asking the engineers to report as soon as possible upon this project. If the St. Lawrence should ever be improved under joint agreement between the two countries, we would no doubt be credited by Canada with the expenditure involved. If, however, we never receive any credit, the deepening of the Great Lakes will pay for itself many, many times, and will be as profitable an investment as this country can make.

Mr. WHITE of Maine. Mr. Chairman, I yield five minutes to the gentleman from New York [Mr. BLACK].

Mr. BLACK of New York. Mr. Chairman, we seem to be in an era of strange and gripping adventure in air and sea. Out of the night, out of the sea, out of the air, comes glory.

While crime has not withered as civilization seems to flourish, and while degradation persists as society seems to advance, we can console ourselves with the occasional flashes of unmixed sacrificial heroism, which dart from the air and the sea. The meanness of many is neutralized by the magnanimity of the few.

It was instinctive of my colleague, Mr. LINDSAY, of New York, that he should have originated the thoughtful notion of the United States, through Congress, expressing its debt of gratitude to the men comprehended by this bill.

We, in humility, realize that we are only the agency to convey the thanks of an appreciative people to these heroes. The thanks of Congress, the thanks of our country, can never approximate the universal soul satisfaction that these men must always have for their inspired courage in the crisis. For what our thanks are worth, we offer it to them, knowing that they will honor us by acceptance.

Mr. WHITE of Maine. Mr. Chairman, I yield five minutes to the gentleman from New York [Mr. WAINWRIGHT].

Mr. WAINWRIGHT. Mr. Chairman and gentlemen of the committee, I can not refrain from making an observation or two upon this measure. Of course it is manifestly fitting that in such outstanding rescues at sea as those by the gallant seamen of the *President Harding* and the *President Roosevelt* the thanks and appreciation of Congress should be expressed as proposed in this bill. That high honor should be reserved only for very outstanding and unusual cases. But there should be some official machinery to provide for proper recognition of our men of the sea who show great courage and are willing to risk their own lives to rescue a fellow being from a watery grave, not only as a recognition of their heroism but as an incentive to others. I have noticed that in the Senate bill, for which this is a substitute, there were several other cases of gallant rescues at sea provided for. The report upon the Senate bill

contains a memorandum from the vice president of the Merchant Fleet Corporation describing some 18 or 19 cases of gallant rescues at sea which were made during the years from 1924 to 1926 by the crews of United States Shipping Board vessels. All of those cases may not have been of a nature to merit the same recognition as carried in this measure for the crews of the *President Harding* and the *President Roosevelt*. But I believe that there should be some machinery established by which cases of that kind, not only in the Government fleet but in our entire merchant marine, may be properly recognized the facts recorded, and the story of the gallant deed perpetuated.

It may not be out of place for me right here to call your attention, gentlemen of the committee, to a measure which I have pending on the calendar in a somewhat similar field. I refer to the bill relating to those heroic men who volunteered to offer their lives years ago in Habana in the memorable experiments to determine the cause of yellow fever. That bill proposes that the names of those heroes shall be inscribed and perpetuated upon a roll of honor in the War Department. I am suggesting—and I am sorry the suggestion could not be embodied in this bill—that somewhere we should have such a roll of honor on which could be inscribed the names of those who risk their lives and take desperate chances for the rescue of their fellow men at sea. It might be in the Department of Commerce or in the office of the Shipping Board, but some place, somewhere, where every year the names of such heroes could be appropriately recorded upon a seaman's roll of honor.

I regret, Mr. Chairman, that the committee saw fit to strike from the Senate bill the paragraph providing for the award of a gold medal to the boat crews who effected these rescues, for that would be eminently appropriate. However, Mr. Chairman, I hope the Committee on the Merchant Marine and Fisheries will take the suggestion I have made under serious consideration and formulate some scheme by which seamen can be recommended in outstanding cases to the proper department, in order that their heroism may be recognized by the Government.

Mr. BLAND. Mr. Chairman, will the gentleman yield?

Mr. WAINWRIGHT. Certainly.

Mr. BLAND. Such an award would very largely, of course, involve the men in the Coast Guard?

Mr. WAINWRIGHT. Certainly. I would not restrict it to the merchant marine but would have it apply to all "the men who go down to the sea in ships" and incur the risks and hazards and dangers incident to their calling.

I certainly hope, Mr. Chairman and gentlemen of the House, that this bill may become a law, because nothing could be more appropriate than for Congress to express its thanks and appreciation to Capt. George Fried and the crew of the *President Roosevelt* and to Capt. Paul Grening and the crew of the *President Harding*, whose rescues of the crews of vessels in distress filled the whole Nation with pride and will live for all time as very glorious exploits in the annals of the sea. [Applause.]

Mr. WHITE of Maine. Mr. Chairman, I ask that the Clerk report the bill for amendment.

The Clerk read as follows:

*Be it enacted, etc.*, That the term "crew" as used in this act shall mean and include any person carried on the ship's register or serving on the ship in any capacity, regardless of rank or rating, at the time of the rescue referred to in this act.

SEC. 2. That the thanks and appreciation of the Congress of the United States be, and they are hereby, tendered to the families of Uno Wirtenan and Fritz Steger, who lost their lives, and to the officers and crew of the U. S. S. *President Roosevelt* as constituted on January 24 to 28, 1926, inclusive, for the heroic conduct shown and noble service rendered in the rescue of the officers and crew of the British steamship *Antinoe;* to the officers and crew of the U. S. S. *President Harding* as constituted on October 25, 1925, for the heroic conduct shown and noble service rendered in the rescue of the officers and crew of the Italian steamship *Ignacio Florio;* to the officers and crew of the steamship *American Trader*, of the American Merchant Line, as constituted on October 26, 1925, for the heroic conduct shown and noble service rendered in the rescue of the officers and crew of the Norwegian steamship *Elven;* to the officers and crew of the U. S. S. *Republic* as constituted on October 10, 1925, for the heroic conduct and noble service rendered in the rescue of the officers and crew of the United States patrol boat *No. 134;* and to the officers and crew of the British steamship *Cameronia* as constituted on October 11, 1925, for the heroic conduct and noble service rendered in the rescue of the crew of the United States Coast Guard patrol boat *No. 128.*

SEC. 3. That the Secretary of Commerce and the Director of the United States Mint be, and they are hereby, authorized and directed to prepare a suitable die and to strike suitable gold medals commemorating the heroic conduct and noble services rendered in the rescues described in section 2 of this act, and present, in evidence of the esteem of the Nation for valorous conduct on the high seas in the face of great danger as demonstrated in such rescues, one of such medals to the captain of each of said rescuing ships and to each person certified by the captain of the respective rescuing ships to have shown special courage and to have faced special danger in such rescues.

SEC. 4. That there is hereby authorized to be appropriated, from moneys in the Treasury not otherwise appropriated, the sum of $5,000, or so much thereof as may be necessary to cover the cost of designing, producing, and distributing said medals in the manner described in this act.

With a committee amendment, as follows:

Beginning in line 23, page 2, strike out all of sections 3 and 4.

The CHAIRMAN. The question is on agreeing to the committee amendment.

The committee amendment was agreed to.

Mr. WHITE of Maine. Mr. Chairman, I move that the committee do now rise and report the bill to the House with the amendment, with the recommendation that the amendment be agreed to and that the bill as amended do pass.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. RAMSEYER, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee, having under consideration the bill (S. 1609) recognizing the heroic conduct, devotion to duty, and skill on the part of the officers and crews of the U. S. S. *Republic, American Trader, President Roosevelt, President Harding*, and the British steamship *Cameronia*, and for other purposes, had directed him to report the same back to the House with an amendment, with the recommendation that the amendment be agreed to and that the bill as amended do pass.

Mr. WHITE of Maine. Mr. Speaker, I move the previous question on the bill and amendment to final passage.

The SPEAKER. The question is on agreeing to the amendment.

The amendment was agreed to.

The SPEAKER. The question is on the third reading of the bill as amended.

The bill as amended was ordered to be read a third time, was read the third time, and passed.

On motion of Mr. WHITE of Maine, a motion to reconsider the last vote was laid on the table.

## PENSIONS

Mr. ELLIOTT. Mr. Speaker, I submit for printing under the rule a conference report on the bill S. 2900.

## LOCAL STEAMBOAT INSPECTORS, HOQUIAM, WASH.

Mr. WHITE of Maine. Mr. Speaker, I call up the bill (H. R. 457) to create a board of local inspectors, Steamboat Inspection Service, at Hoquiam, Wash. It is on the Union Calendar.

The SPEAKER. The gentleman from Maine calls up House bill 457. The House, for its consideration, automatically resolves itself into Committee of the Whole House on the state of the Union. The gentleman from Iowa, Mr. RAMSEYER, will please take the chair.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 457, with Mr. RAMSEYER in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 457, which the Clerk will report.

The Clerk read as follows:

*Be it enacted, etc.*, That a board of local inspectors, Steamboat Inspection Service, consisting of a local inspector of hulls and a local inspector of boilers, be, and is hereby, created at the port of Hoquiam, Wash. Such inspector of hulls and inspector of boilers shall each be entitled, in addition to his authorized pay and traveling allowances, to his actual and reasonable expenses for transportation of instruments, which shall be certified and sworn to under such instructions as shall be given by the Secretary of Commerce.

The CHAIRMAN. The gentleman from Maine is recognized for one hour.

Mr. WHITE of Maine. Mr. Chairman, this bill authorizes the creation of a board of local inspectors in the Steamboat Inspection Service at Hoquiam, Wash. As the committee understands, there are at the present time in the United States 46 local boards of inspectors, and there are in addition some 11 supervising inspectors. In addition to these there are others at a few large manufacturing plants in the country which furnish boilers, machinery, and so forth, for ships and these bring the aggregate at the present time up to 61 of these units.

All vessels of the United States undergo an annual inspection by the officers constituting this force, and in practice, I

think, vessels average to be inspected perhaps three times a year.

The inspector of boilers, as the name might indicate, examines and passes upon the boilers in the ship, the engines, and the machinery generally. The inspector of hulls has jurisdiction over the construction and condition of the hulls, over the lifeboats, life rafts, and has responsibility with respect to all other life-saving apparatus on board our vessels. It is their duty to see that at all times when a vessel puts to sea it is in a seaworthy condition. It is their duty to make these periodic inspections, to make certain that the laws of the United States looking to the safety of life at sea are complied with, and they have also an obligation to ascertain that foreign vessels leaving our ports, and on which American citizens may be traveling, shall meet the requirements of the certificates of the nation of the ship's registry.

The port of Hoquiam is on the north Pacific coast, and, I believe, now falls within what is known as the Seattle district. It is, however, approximately 140 miles from the port of Seattle. During recent years there has been a tremendous growth, both in the number of vessels clearing from that port and ports in its immediate vicinity and in the tonnage of those vessels. The evidence shows that this particular port is the railroad terminal on Grays Harbor for the Northern Pacific, the Union Pacific, and the Chicago, Milwaukee & St. Paul Railroads. The Standard Oil Co. has a large plant there; the General Petroleum and Shell Oil companies also have large plants there; logging and the manufacture of lumber are important industries, and there has sprung up in recent years a considerable business with respect to fishing and the canning of fish, the canning of vegetables and fruits and other foods which are subject to this method of treatment and preservation. Within a period of five years the tonnage moving out of this particular port and the ports in its immediate vicinity has increased from something like 233,000 tons to approximately 1,000,000 tons annually, and the number of vessels clearing has increased from about 400 to about 800 in the last year.

I think the figures demonstrate that it is now a port of substantial importance, and of more significance that it is a growing port, and that we may reasonably expect in the years immediately ahead of us a continually expanding commerce.

Mr. UNDERWOOD. Will the gentleman yield?

Mr. WHITE of Maine. Yes.

Mr. UNDERWOOD. What additional personnel would be required if this board is created?

Mr. WHITE of Maine. At the present time there are at the Seattle office 2 local inspectors, so called, and 12 assistants. They are obliged, in order to meet the necessities of commerce, to constantly travel this 140 miles back and forth between Seattle and these smaller ports. That travel involves a substantial expense, it seems to me an unnecessary expense, and it involves inconvenience and delay to commercial interests.

Mr. JOHNSON of Washington. Will the gentleman yield?

Mr. WHITE of Maine. Yes.

Mr. JOHNSON of Washington. It would be interesting in that connection to know that the department states that unless these two men are employed at Grays Harbor they will have to appoint two additional men, not now employed, in the Seattle office.

Mr. WHITE of Maine. I was just about to go on and amplify my answer. It is my understanding that the supervising inspector's office hopes to very greatly increase the efficiency of inspection in this whole area by taking two of the assistants now connected with the Seattle office and moving them down to this locality and setting them up as local inspectors. Now, it would not increase the total number of local inspectors and assistant inspectors engaged in this area. What it would do is this: It would involve the setting up of an office at this town or port; it would involve further clerk hire, the employment of a single clerk, is the estimate of the department; it would involve the expenditure of approximately $1,000 for office equipment and supplies, and it would involve the rental of suitable quarters in that locality. The estimate given to me by the department is that it would increase the expense of this inspection district nominally by $6,400, but against that seeming increase there should be credited the saving in the travel expenses of the men who are constantly moving back and forth between Seattle and this area.

It seemed to your committee that a proper service to our ships and economy in the maintenance of this inspection service required us to report favorably upon this bill.

Mr. BLAND. Will the gentleman yield?

Mr. WHITE of Maine. Yes.

Mr. BLAND. I understand this would avoid delay in waiting for men to come from Seattle to this particular place to make inspections of these ships.

Mr. WHITE of Maine. Undoubtedly it obviates delays and it permits a more rapid turn around of the ships in port. Everyone who has any familiarity with shipping knows that while a ship is lying in port the overhead is running on all the while and the cost of operation is disproportionately increased. It is the opinion of the committee that although there is an initial expenditure of about $6,400 for this work that the savings in travel and the savings to our shipping overcome completely this initial expenditure.

Mr. BLAND. Might there not also be involved the question of safety at sea; in other words, more efficient inspection service by having these men there?

Mr. WHITE of Maine. I have no doubt the presence of these men on the ground, ready to go aboard ship whenever a ship docks, will result in much more thorough inspection, and as the gentleman from Virginia suggests, it means greater safety for our ships and for our men upon our ships.

Mr. UNDERWOOD. It would appear from this report that the creation of this local board is warranted, and I was simply interested in knowing how many new jobs we are creating.

Mr. WHITE of Maine. We are creating, I think, but a single clerkship to keep the office running.

The bill so impressed the Merchant Marine and Fisheries Committee that it comes before you with our unanimous approval. [Applause.]

Mr. Chairman, I reserve the balance of my time and yield 10 minutes to the gentleman from Washington [Mr. JOHNSON].

Mr. JOHNSON of Washington. Mr. Chairman and gentlemen, I was much impressed a few moments ago as I listened to the tributes of the gentleman from Massachusetts and others to the heroism of certain American sailors, and as I heard them pay their tributes to particular men for particular acts of heroism in the rescue of ships I fell to thinking of the perils of the sea, and particularly of the north Pacific, where navigation is developing so rapidly and where the Federal Government is endeavoring to keep pace with the development by the establishment of more lighthouses, more aids to navigation, and improvements generally. If time permitted, I would like to describe to you recent rapid development of shipping on the north Pacific in the running of lines back and forth to the Orient, to South America, to Australia, through the Panama Canal to eastern ports and to Europe. Also, it would be a pleasure to picture the development of the home-owned lines of Tacoma, Grays Harbor, and other ports of that lively center of advancing activity and opportunity. Grays Harbor, where this bill proposes to establish local steamship inspection at Hoquiam, has 800 sizable ocean-going ships going out from her docks.

As has been stated by the chairman of the committee, the work of boiler inspection and hull inspection at present is done by officers who travel by rail from Seattle, a distance of 140 miles, to inspect these various ships. The time lost in this travel will more than offset the money to be expended. The expenditure is merely nominal. Two men will be transferred from the Seattle office, where each now receives $2,800 a year in that office. They will be paid at the harbor $3,000. A clerk will be employed at $1,500 a year and quarters will be established at a cost of perhaps $75 a month. These expenses, together with some minor expenses for moving equipment, will cover the cost. These inspectors stationed at Hoquiam will do all required inspection at Grays Harbor, and very likely at Willapa Harbor, 30 miles distant.

Mr. McKEOWN. Will the gentleman yield?

Mr. JOHNSON of Washington. I will be pleased to yield.

Mr. McKEOWN. I want to emphasize what the gentleman has said about the need of additional service on the northwest coast, because the traffic is increasing tremendously and the trade is becoming more important. A boy from my district recently lost his life through an explosion on a boat going to Japan, which was perhaps due in large part to lack of proper inspection.

Mr. JOHNSON of Washington. I think those who study commercial operations on the sea realize that the great theater of ocean activity is quite likely to be in the Pacific as the years go on. Every year it increases, and our people are struggling might and main to keep the American flag afloat on the ocean that washes our western shores and reaches to our Territories of Alaska and Hawaii, and on to our far eastern insular possesions.

This country is so great and is becoming greater so rapidly that no one of us can meditate for an hour and even slightly comprehend its greatness and its potentialities. The next census is expected to show that we have a continental population of somewhere between 123,000,000 and 124,000,000 people. The census of eight years ago showed a population of 105,000,000.

Mr. UNDERWOOD. Will the gentleman yield?

Mr. JOHNSON of Washington. Yes.

Mr. UNDERWOOD. This bill will ultimately result in a saving to the Government?

Mr. JOHNSON of Washington. I think so; yes.

The Congressional Directory has about half a page of matter showing the duties and the importance of the marine inspection service. Of course, the primary duty is with respect to safety of life and property. The chairman of the Committee on the Merchant Marine and Fisheries has stated the number of such offices throughout the United States. The value of the property, dependent on the good work of these inspectors, reaches great figures. The lives of sailors and passengers are dependent, more or less, on proper inspection.

We are providing for boiler and hull inspectors to be at Grays Harbor. They will be responsible for the life-saving equipment on ships. We have passed rather stringent laws as to the life-saving equipment, and these men check up on that law.

There are 800 ships going out of this one harbor in the course of a year, and these men are responsible for the inspection of all boilers and machinery and for the proper licenses of mates and masters. They have to certify the able-bodied seamen that go out on these ships in accordance with the act of 1915. They also have the signing of documents, and are required to conduct investigations as to violations of our laws pertaining to navigation. All told, the duty is a responsible one. So far as I can learn, on the entire Pacific coast, which is a great stretch of coast line, the full length of which is not easily imagined by all, this inspection service has been good. The men up and down the coast have worked regardless of hours and regardless of weather, and sometimes on the north Pacific we have some very severe sea storms. We are proud, too, of our Coast Guard; and I wish that these men could be increased in number and paid better. I do not want to further take the time of the committee, but I feel the bill is necessary and I have been highly pleased that it has been reported from the Committee on the Merchant Marine and Fisheries, which is a busy committee and one which has some very important legislation before it. The bill was reported on its merits and largely on the recommendation of the department handling our commerce.

Mr. BLAND. Will the gentleman yield?

Mr. JOHNSON of Washington. I will be pleased to yield.

Mr. BLAND. As I understand, there are not only examinations and inspections periodically needed, but there are constantly arising cases of unforeseen and unexpected investigations.

Mr. JOHNSON of Washington. Yes; and with regard to what the gentleman said a few moments ago in his question with regard to the delaying of these 4,000, 6,000, and 8,000 ton ships for the arrival of an inspector by train four or five hours away, the expense in that regard is considerable, both in delay of ships and to the Government through lost traveling time.

Mr. BLAND. And that depends on the possibility that an inspector is at Seattle ready to answer the call. If he is away on other business, then there is a still longer delay, is there not?

Mr. JOHNSON of Washington. Yes; except that there are numerous assistants at Seattle, but more are needed. I would like to state that in establishing these two inspectors at Hoquiam there is no intention to hamper or unnecessarily delay or interfere with ordinary navigation, or any navigation. The whole purpose is to assist in helping it. Unfortunately, there seem to some persons in the coastwise trade who are inclined to think that every time the Federal Government provides additional men to carry out the laws that Congress has enacted for safety of navigation that we are undertaking to hamper them.

Mr. UNDERWOOD. Is it not the duty of the Government to provide ample inspection?

Mr. JOHNSON of Washington. It is. I am glad and proud that chief navigation officers of the United States are pushing along as rapidly as the circumstances will permit, so that all aids to navigation on the North Pacific coast may be fully equivalent if not better than those on the west Canadian coast, which has less population than the North Pacific coast, but which country, I assure you, has not neglected its ocean business. In other words, Canada with its lesser population began many years ago ahead of the United States on the northwest coast to foster and encourage and protect ocean travel and ocean business. We are catching up. [Applause.] I urge the passage of the bill.

Mr. WHITE of Maine. Mr. Chairman, I yield five minutes to the gentleman from Tennessee [Mr. DAVIS].

Mr. DAVIS. Mr. Chairman, the gentleman from Maine [Mr. WHITE] and the gentleman from Washington [Mr. JOHNSON] have very fully covered this subject, and there is little that can be added. However, I do want to suggest that, in view of the fact that all ships that are registered under the United States laws are required to undergo inspection for the purpose of protecting life and property at sea, it is undoubtedly the duty of this Government to see that this very properly required inspection shall be made expeditiously.

Whenever a ship, particularly a ship of any size, and with a crew of any size, is compelled to await the time and pleasure of a few inspectors the owners of that ship are compelled to undergo an expense and a loss wholly disproportionate to the cost that would be incurred by the Government in maintaining an inspection force sufficient to speedily make inspections.

Many of our shipping interests have from time to time complained that inspections are not made as promptly as they should be in many instances, and that they have frequently been obliged to undergo delays that not only involve financial loss but interfered with their schedules.

So this bill is simply designed to establish a branch inspection office 140 miles distant from the nearest office in order that there may be present at this port inspectors to make inspection as occasion may require.

When we realize that 800 ships, of which 600 fly the American flag, went in and out of that harbor last year, we realize that it is a matter of importance, not to speak of the fact that the commerce through that port is gaining rapidly.

As has been well explained by the gentleman from Maine [Mr. WHITE], this will involve a very little additional expense, but it will provide a much more expeditious and efficient service not only from the standpoint of the shipping interests but from the standpoint of the public in whose interest and for whose benefit the inspections are required.

Consequently the members of our committee unanimously reported this bill, feeling that it was in the public interest and that there could be no serious objection thereto. [Applause.] Mr. Chairman, I yield back the remainder of my time.

Mr. WHITE of Maine. Mr. Chairman, I yield 10 minutes to the gentleman from Washington [Mr. MILLER].

Mr. MILLER. Mr. Chairman, I ask unanimous consent to proceed partly out of order and partly on the bill.

The SPEAKER. The gentleman from Washington asks unanimous consent to proceed out of order. Is there objection?

There was no objection.

Mr. MILLER. Mr. Chairman and gentlemen, I want to call your attention to the far northwest of our country, and particularly that country visited by so few of you—the Puget Sound country.

There are over three-quarters of a million people living on Puget Sound. Puget Sound is an enormous body of water. There are 1,800 miles of coast line on that sound. It is one of the deepest bodies of water in the world. It is very frequently that you will find 10 fathoms of water within 60 feet from the shore. Puget Sound is a little more than great gashes in the earth. On Puget Sound is located the Puget Sound Navy Yard. The Pacific Coast Navy Torpedo Station, the only one on the Pacific coast, is located there. The navy yard is the latest of all the navy yards in the United States, and the only one at which the smoke of a dredger is never seen in making way for modern ships of our Navy or of any other navy to enter the slips and the drydocks.

The development of commerce in the far Northwest is one of the surprising things of the present generation. The ports of Puget Sound are many, many hundreds of miles closer to the ports of the Orient, due to the converging of the meridians as they approach the pole, than one not familiar with the situation would naturally conclude. There are 10 mouths to feed on the other side of the Pacific where there is 1 to feed on the other side of the Atlantic. Climatic conditions are a great factor in shipping there. It may be surprising to a number of you to know that the ice-bound port of Vladivostok in Siberia, which is ice bound seven months out of the year, is directly west of the north California boundary, yet at all seasons of the year from Puget Sound we can sail 2,000 miles to the north, and all in southeastern Alaska for a distance of 2,000 miles on this side of the Pacific, and such a thing as an ice-bound port is unknown. This is due to the phenomenon of the ocean current, which, for lack of a better term, we call the Japan current. This current brings the warm waters of the Tropics up the west coast of our country clear to southeastern Alaska and then diverts them to the southwest over in the neighborhood of Japan, and south of Asia. There is every inducement for commerce in the great far

Northwest centering in Puget Sound and cities of the coast in that vicinity.

The city of Hoquiam, where this inspector's office is to be located, is another instance of the marvelous growth of commerce in the far Northwest. There are five continental railways which center on Puget Sound, affording the greatest shipping facilities on the Pacific coast in any one neighborhood, and in the last few years we have arrived at an epoch in commercial and marine development of the Northwest where every facility ought to be offered to encourage it and make it even greater than it is. I have been frequently to the city of Hoquiam.

There is a great timber belt around there, with marvelous sawmills, and the various activities of the lumber trade, the products of which go out of that country all over the world, as they leave from the Puget Sound country. I believe that within the next generation probably the trans-Pacific commerce flowing out of Puget Sound will exceed that of the entire Pacific coast, because the natural adaptation to it, the facilities there, together with the climatic conditions, are ideal for everything in the line of maritime development. [Applause.]

The metropolis of the far Northwest and therefore the center of the commercial, financial, and maritime interests is the city of Seattle on Puget Sound. It is now approaching, if not already, a half million people and developing at a rate that is not only startling to us who live there but to our country and to the world. Think of it, gentlemen, a city just beyond its fiftieth year of corporate life a factor in the great world trade! It was a child in swaddling bands at a time when the older cities of the country were boasting of full manhood in the matter of world trade; indeed, when older cities of the Pacific coast were developed to such a degree in their maritime commerce that the thought of this far-off child ever becoming a man, much less a rival, never entered their commercial understanding. A new Ajax has taken the field. The world will be amazed at the future. Could we lift the veil of the years to come we will see the Pacific coast of our country the theater of the world's greatest commercial activity; not alone in maritime commerce, but in the field of industry and economic production.

You who have never seen the far Northwest, especially the Puget Sound country, should see it. It will be one of the journeys you will always remember. We will be glad to see you, glad to welcome you, glad to have you see us in our homes.

I can not speak of Seattle alone. There are others whose growth and development have been and now are equally amazing. I may enumerate Tacoma, Bellingham, Everett, Bremerton, Olympia, the State capital, where the new State buildings are being opened, which are as beautiful if not as grand as those of any State west of the Mississippi; Hoquiam and Aberdeen on the coast; we are a new State, a new country, and like the youth of the land, we are preparing, now prepared to fight the battles of our country in lines of commerce and industry.

Gentlemen, come and see us, you will be glad and we will be glad. You will see a country whose praises are not yet sung in poetry and song and lecture, but one in which you will feel the inspiration of American manhood and womanhood building cities that are the personifications of culture and enterprise. Come and see us and spend a while with us. [Applause.]

Mr. WHITE of Maine. Mr. Chairman, I have no other requests for time, and I ask that the Clerk read the bill for amendment under the five-minute rule.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

*Be it enacted, etc.,* That a board of local inspectors, Steamboat Inspection Service, consisting of a local inspector of hulls and a local inspector of boilers, be, and is hereby, created at the port of Hoquiam, Wash. Such inspector of hulls and inspector of boilers shall each be entitled, in addition to his authorized pay and traveling allowances, to his actual and reasonable expenses for transportation of instruments, which shall be certified and sworn to under such instructions as shall be given by the Secretary of Commerce.

Mr. WHITE of Maine. Mr. Chairman, I move that the committee do now rise and report the bill to the House with the recommendation that it do pass.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. RAMSEYER, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill (H. R. 457) to create a board of local inspectors, Steamboat Inspection Service, at Hoquiam, Wash., and had directed him to report the same back to the House with a recommendation that it do pass.

Mr. WHITE of Maine. Mr. Speaker, I move the previous question on the bill to final passage.

The previous question was ordered.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. WHITE of Maine, a motion to reconsider the vote by which the bill was passed was laid on the table.

### UNIVERSAL DRAFT FOR WAR

Mr. McSWAIN. Mr. Speaker, I ask unanimous consent to extend my own remarks in the RECORD in reference to House Joint Resolution 226, introduced by the distinguished gentleman from New York [Mr. WAINWRIGHT], with reference to a commission to study the subject of equalizing the burdens of war, and in connection therewith my own remarks made last year at the National Conference of Patriotic Women of America regarding the subject of defense.

The SPEAKER. Is there objection?

There was no objection.

Mr. McSWAIN. Mr. Speaker, I am informed that many Members of Congress are receiving letters and telegrams urging the Members to support what is popularly known as the Capper-Johnson bill, providing for a universal draft of man power and material resources in the time of war.

Since I have been a Member of Congress I have given this subject a great deal of study, and all persons interested in the subject will find a very valuable collection of information and references contained in the hearing conducted by me before the Committee on Military Affairs on March 11, 13, and 20, 1924; said hearings being printed in a 250-page volume, which is still available for distribution by the Committee on Military Affairs. In addition, I have on several occasions addressed the House of Representatives upon this subject, and on November 11, 1925, addressed the citizens of Spartanburg, S. C., and the surrounding country on this subject. In March, 1927, by special invitation, I addressed the National Conference for Defense, composed of patriotic women, gathered in the city of Washington, and holding its sessions in the Memorial Continental Hall of the Daughters of the American Revolution. In September, 1924, I addressed the Interparliamentary Union, representing 54 different nations and in session at Geneva, Switzerland. I have read a number of books for the purpose of informing my mind upon the problem of how to take the profits out of war and of how to enact legislation that the courts will sustain as constitutional and at the same time accomplish that much-desired result. I believe that the burdens of war should be more evenly and justly distributed among all the citizens of the United States. I believe that no person, firm, or corporation should be permitted to grow rich out of war profits extorted from the Government or the population, while soldiers and their families are suffering hardships indescribable, and many of them going down to death.

Therefore I have constantly pondered over this subject with these general outstanding considerations ever before my mind: First, the legislation must not make possible the concentration of power in the hands of the President in such manner as to enable him to become an irresponsible tyrant, destroying personal liberty, making wreckage of industry, disorganizing financial institutions, and laying the taskmaster's lash upon the back of the laborer; second, the power to be exercised under the proposed legislation must not be such as to stifle industry and destroy the power to produce the material substances of munitions, clothing, and food, essential to the carrying on of war; third, the exercise of such power must ever be predicated upon a declaration of war by Congress, and no discretion be left to the President to decide that an emergency exists justifying his exercise of the vast power necessary to mobilize industry and man power, and to check the selfish schemes of wicked profiteers.

Therefore, Mr. Speaker, I have favored the appointment of a joint congressional, official, and civilian commission to sit in the recess of Congress, and to study the whole question and to formulate legislation to bring about these much-desired results. I therefore am very happy to support the resolution introduced by my colleague on the Committee on Military Affairs, the Hon. J. MAYHEW WAINWRIGHT, former Assistant Secretary of War, and being known as House Joint Resolution 264. This resolution was referred by the Speaker to the Committee on Rules, and it is my hope that the Committee on Rules may grant an early hearing upon this resolution and may report the same out, with any amendments that it may deem proper, so that the same

may be passed by the Senate and approved by the President at this session of Congress.

If this is done, then the joint commission proposed by this resolution may quietly, and without the distractions of other legislation, consider this profound and complicated problem during the recess and report such a bill by the convening of the next Congress as all patriotic and unselfish Americans may get behind, with any possible perfecting amendments, and place the same on the statute book and let it be considered as a part of the fundamental conscience of the Nation that no Congress in the future in time of war would dare repeal or modify in such a manner as to frustrate the noble aims and intentions of the justice-loving people of this Republic.

I am printing for the information of the House and of the public that may be interested in the subject not only the address delivered by me in this city in March, 1927, but an editorial in the Washington Post of January 17, 1926, certain extracts from legislatures of the original thirteen States enacted during the Revolutionary War in order to restrain the greedy, grasping proclivities of the war profiteers; I am further printing, for the information of students of this subject, references to historical works, biographical sketches, and magazine articles compiled by the Library of Congress, at my request, so that the student may find the sources of information from which to draw the facts of history. It is my belief that once give the Congress and the American people the facts the necessary legislation will be promptly enacted.

In the Washington Post of January 17, 1926, appeared the following editorial comment upon the discussion of this subject by Hon. Bernard M. Baruch:

A BLOW AT WAR

"Taking the profit out of war" is the text of a remarkable article by Bernard M. Baruch in the January number of the Atlantic Monthly. "An effectual means of discouraging war" would also be a suitable text for the article. Mr. Baruch's experience as chairman of the War Industries Board during the war enabled him to gain an insight into the interrelation of ordinary peace-time activities with national necessities during war. From that experience he drew logical conclusions as to the measures which the United States would be forced to adopt in case of another World War.

Bearing in mind that such a war draws upon the entire population and all its activities of production and distribution, Mr. Baruch outlines a plan which would not only "take the profit out of war" but which, by making abnormal profits impossible and by compelling all elements of the population to do their share in the national war task, would impress upon the Nation beforehand the tremendous responsibility of war, and thus effectually discourage any tendency to seek war except in self-defense.

In peace time the fixing of prices by the Government is unwise. In war time, as Mr. Baruch clearly reveals, price fixing is both wise and necessary; and it must be price fixing all along the line in order to protect the man power that serves the industries which maintain the men at the front. The War Industries Board had reached the point of fixing prices when the armistice intervened. That step would have been inevitable if the war had continued. Mr. Baruch says:

"If we were to start, in the event of another war, at the place where we were industrially when the World War ended, the President, acting through an agency similar to the War Industries Board, would have the right to fix prices of all things as of a date previous to the declaration of war, when there was a fair peace-time relationship among the various activities of the Nation. It would be illegal to buy, sell, serve, or rent at any other than these prices. Brakes would be applied to every agency of inflation before the hurtful process started. An intelligent control of the flow of men, money, and materials would be imposed, instead of having the blind panic heretofore ensuing on the first appearance of the frantic demands of war.

"Money would be controlled and directed like any other resource. Taking the profit out of war is an orderly and scientific development of the economics and conduct of modern war, necessary to the effective mobilization of national resources and indispensable to equalizing the burdens of war among the armed and civilian population.

"The application of this plan, besides making the Nation a coherent unit in time of war, would impress upon every class in society a sense of its own responsibility in such event. If it were known that this universal responsibility would be enforced, no class—social, financial, or industrial—could fail to understand that, in case of war, it would have to bear its fair share of the burdens involved, and would have to make sacrifices of profit, convenience, and personal liberty correlatively with those made by the soldiers in the field. To this extent the plan would act as a positive deterrent to any hasty recourse to force in an international controversy."

The scientic study of the problem of adjustment of civilian activities to war-time necessities, and especially the study of the system worked out by the War Industries Board in actual war conditions, has been provided for by Mr. Baruch in his generous provision for a course of lectures in the Page School of International Relations at Johns Hopkins University. Mr. Baruch, with still broader vision, is proceeding to make similar arrangements at leading universities in Great Britain, France, Germany, Italy, and Japan. As a practical effort which appeals to individuals of all nations, Mr. Baruch's plan promises to do more to discourage war than all the leagues and courts that have been set up by governments.

---

ONE PART OF THE PEACE PROGRAM

(By Hon. JOHN J. MCSWAIN, Member of Congress from South Carolina)

The problem of peace, like all questions where the factors are human, is many-sided. There is no single specific to cure the social ill called war. I am offering the following thoughts on one aspect of the case, especially as it relates to the "will to peace":

The Constitution of the United States has been universally appraised as the highest perfection of wisdom yet attained among the fundamental documents of government. Many particular parts have been singled out from time to time for special consideration and commendation. I do not remember ever to have seen any particular discussion of the wisdom and significance of having lodged the power to declare war in the Congress. Among all the older nations of the world the power to declare and commence war had been lodged exclusively with the executive power, so that kings and emperors had made war, from time immemorial, to suit their own interests, ambitions, or whims, and consulted the representatives of the people, if any there were, only after the commencement of war, in order to procure the financial resources wherewith to carry on such war.

But the erection of the American Republic of Republics, the commencement of a great Federal State in this Western Hemisphere, had as a background the fundamental conception of the Declaration of Independence, that "governments rest upon the consent of the governed," and exist to secure the life, liberty, and property of the people. Therefore it was but a logical application of this fundamental premise that the Constitution makers should propose, and that the people in their several State conventions should accept, a constitution that lodged the war-making power in all the representatives of all the States.

THE PEOPLE, THROUGH CONGRESS, DECLARE WAR

The President alone conducts diplomatic relations with other nations, but the President can make treaties only by and with the consent of two-thirds of all the Senators. This was a hitherto-unthought-of limitation upon executive power. It had therefore been conceived as preposterous that the people's representatives should have a veto power in the making of treaties between the royal rulers. But this limitation of power is constantly in the minds of Presidents and their executive advisers in the negotiation of treaties and, doubtless, has ever been a wholesome and restraining influence. Though the President is unrestrained in conducting international affairs, yet he must and does feel constantly the restraining check that his international policies can not be enforced with physical power in war without the approval of both Houses of Congress. But the principle runs still further back.

The President must calculate upon receiving the approval of an overwhelming majority of the individual citizens of the Republic. It is constantly in his thinking that Members of Congress must respect and heed the wishes and feelings of their constituents. The President remembers that Members of the House of Representatives are all elected every two years, and that one-third of all the Senators are elected every two years. Therefore, the President must be so cautious and prudent in handling international situations as to feel sure that the same will be approved by a clear majority of the people. If the President fails to take these fundamental conceptions into consideration, and rushes headlong and unadvised into complications with foreign countries that can be settled only by use of physical force, he may find himself greatly embarrassed by failing to receive the support of the Congress, and be, therefore, compelled to retreat from his diplomatic predicament.

NO AGGRESSIVE WAR BY AMERICA

This particular lodgment of the warmaking power in the hands of the representatives of the people insures our Nation against a policy of aggression. The Constitution makers all knew, from either personal experience or close observation, the horrors and demoralizing and destructive attributes of war. But they were wise men and realized the forces that had been operating upon mankind and among nations since long before the beginning of recorded history. Our forefathers, who laid the foundation of this Government of the people, by the people, and for the people, well knew the ambitions and covetousness that from time to time seize the rulers and ruling classes of nations. Wisely, therefore, did they lodge in the central Federal Government the sole and exclusive power of declaring, conducting, and concluding war.

Many powers of sovereignty were left and some still remain with the several States. But in the interest of the general welfare and common defense, the war-making power was placed with the one government that represents all the people of all the sections. This Constitu-

tion conferred upon the Federal Government not only the power to declare and carry on war but the power to "raise armies," and the power to "support armies." The Constitution likewise conferred on this central government the power to "provide a navy," and to "maintain a navy." There is far-reaching significance in these words, to "support an army" and to "maintain a navy." They imply more than enlisting men and building ships. They imply the power to acquire by the exercise of the supreme and absolute sovereignty that must rest in any nation to take whatever physical resources and materials may, in the judgment of the Federal Government, be necessary for the proper "support" of that army and for the proper "maintenance" of that navy.

NO "VETO" BY THE PEOPLE AFTER WAR IS DECLARED

Some have argued that, while the Constitution says that Congress may "raise armies," it means that it may only open recruiting stations and offer compensation and, by a beating of drums and waving of flags, try to induce men to volunteer to enter the Federal Army. It has been argued that to confine the raising of armies to the volunteer system would be a wise and salutary restraint upon Congress in declaring war, so that the people, by refusing to volunteer could virtually "veto" a declaration of war by Congress. But the Supreme Court of the United States has in several cases solemnly and unequivocally sustained the power of Congress to reach, with supreme and sovereign hand, and "take" by selective-service draft such human instrumentalities, either men or women, as the Congress may in the exercise of its power declare to be essential to the raising of armies in order to provide for the common defense.

By the same reasoning, by the same inescapable logic, it must follow that the power to "support" the armies thus raised is unlimited and unrestrained and may be exercised at the uncontrollable discretion of Congress. It therefore remains only for the Congress, with the approval of the President, to say how these armies, raised to defend the Nation's life, shall be supported.

POWER TO "TAKE" WAR SUPPLIES

Heretofore the usual policy of the Government in the supporting of armies has been the "volunteer system." People have been begged and cajoled into buying bonds essential to finance armies in the field. By the same reasoning it has been argued that to leave the supporting of armies upon this volunteer basis would amount to leaving with the people the "final veto power on war." Congress may declare the war, and may, by a selective-service draft, so formulated as to produce the least dislocation in the industrial and social life of the Nation, take those persons that may be best spared from the homes and the farms and the factories and the professions of the Nation; yet, after the armies have been "raised" and are in the field and are at the front and are facing the foe, they may be totally paralyzed by the failure of the people back home to "volunteer" sufficient funds to continue the fight. Such contemplation sickens the heart of the genuine patriot. The same power that gives Congress the right to "take" the man from his family and from his farm and from his factory gives Congress the right to "take" such of the produce of the farm and such of the product of the factory as may be necessary to "support and maintain" the soldier in camp and in field and in trench.

PRUDENCE AND CAUTION IN DECLARING WAR

As Americans we believe in and insist upon freedom of opinion and freedom of expression of opinion, either by mouth or by the press. There should ever be the amplest discussion in Congress and in the country before war is commenced. All groups of opinion should be tolerantly heard. The President and the Members of Congress should solemnly contemplate all the possible consequences of an entry into war. They should patiently and prayerfully seek to avert war. Only actual defense of our physical integrity or of our national principles and honor, which are more than life itself, should ever provoke us to war. God has been good in gathering some of the choice pioneer spirits from many nations and planting them upon this new continent, free from the traditions and customs of the feudal nations, and in permitting them to develop here a civilization unrivaled in power and in variety in all the annals of time. The President and the Congress should and do contemplate the fact that the nations of the whole world are becoming so interrelated by commerce and communication as to make it practically impossible to localize war. The war from 1914 to 1918 is universally described as the World War, and yet it may be fairly concluded that its vast proportions will be far exceeded by the next clash among the nations. Like a prairie or forest fire, when once the fury of war commences no limits can be set, no bounds prescribed, no time fixed, and no measure set.

WAR, ONCE DECLARED, BINDS EACH AND ALL

But, after all voices have been heard in the Nation, after the President, with full realization of the responsibility, has pronounced the situation such that war alone is the answer, after the Congress, conscious of direct responsibility to the people shall have declared war, then, in my humble opinion, the case is foreclosed, judgment has been rendered, the matter has had its day in court; and henceforth no man dare deny his individual obligation to contribute to the utmost limit of his power, either by direct participation as a soldier, or by direct contribution to the material and financial support of the Army and Navy.

From the very moment that Congress, representing all, declares war it binds every citizen, whatever may be his private and individual judgment of the merits. It becomes the law of the land, and henceforth the only course for every person is to help to fight it through. There must be no "vetoing" of this war-making power in Congress. If adequate volunteers do not rush to the colors, the country may "command" her sons and daughters and "compel" them to go. If adequate resources are not voluntarily contributed, then by the same power, for the same purpose, the Congress can "take" whatever the Army and Navy may need in order that the full force of the military power may be exerted.

JUST COMPENSATION FOR ALL PROPERTY TAKEN

But we are reminded that one part of this very same Constitution, to wit, the fifth amendment, declares that private property shall not be taken for public use without just compensation therefor. When properly understood, the fifth amendment offers no obstacle to the war-making power of our Government.

It does not provide that private property shall never be taken for a public purpose, but merely prescribes that payment shall be made therefor. Such provision is wise and just. It would be manifestly unfair to take one man's factory or one man's railroad or one man's coal mine or one man's farm or one man's steamboat and use the same in carrying on war and make no adequate compensation for the use thereof, while other citizens, under equal obligations to help carry on war, have their factories or their railroads or their coal mines or their farms or their steamboats untouched and unharmed. But the fifth amendment does not say that the property shall be paid for "before" its use, and merely provides that at some time "just" compensation shall be made. Therefore, in the emergency, whatever property is needed may be taken and taken instantly, and thereafter just compensation made, and that compensation must be "just" not only to the owner but also "just" to the public that pays. "Justice" means fairness and reasonableness under the circumstances. Therefore justice requires that no fabulous, fictitious, and inflated war time prices shall be paid for property taken and used. The same principle was applied in making just compensation for "man power" during the recent World War. Congress had prescribed the monthly pay for soldiers to range from $30 a month upward. But after the war good conscience and justice, not legal obligation, declared that such compensation was inadequate and, after much discussion, Congress passed legislation to adjust and pay additional compensation for the services of the soldiers. There was no constitutional obligation to do this.

Congress may draft the soldiers without providing one single cent of compensation, even during the period of service. But would Congress do such an unjust thing? Members of Congress know that they are answerable to the soldiers, and under our system of government the voice of the people is finally supreme. Therefore the provisions of the fifth amendment merely conform to the ideals of republican institutions and demand a just exercise of the war-making power.

EQUALIZE BURDENS OF WAR THROUGH "POWER TO TAX"

But Congress has another power, unrestrained, unlimited, both in war and in peace, and this power may be exercised to insure justice in distribution of the burdens of war. It is the power to levy and collect taxes. It is a fact that many do not realize, that about 40 per cent of the revenue raised and expended by our Government during the period of the recent war was raised by taxation. Many conservative and experienced and well-informed men who had intimate contact with the administration during the war have expressed the opinion that if there had been no inflation of prices, if a peace-time average of prices had been maintained by force of law during the war, the money cost of the war would have been reduced by at least one-half. The average price level of all commodities during the World War was nearly two and a half times the average peace-time price. Bringing these two facts together, we find that if prices had not become so much inflated we could have financed the war merely upon the taxes that were collected and without the issue of a single bond; and if we had done so, we would have been to-day debt free and would not have a mortgage in the form of bonds upon the earning power of the people of this country aggregating more than $20,000,000,000 that will require the labors of two or three generations to discharge.

NO DRAFTING OF LABORERS

There has been much confusion of thought and much loose and ill-considered utterance in connection with the subject of what is commonly described as "universal draft," and "universal mobilization," and "drafting of wealth to make war," and other phrases of like import. Some, with sweeping and irresponsible generalization, have declared that the whole nation, with all her resources, must be instantly militarized, that martial law must prevail everywhere, and that men and women, old and young, even children, with all that they have, must be considered as in one mighty camp, subject to military discipline, to do and to give whatever those in authority may direct. Some have leveled their anathemas at men who labor with their hands and have heretofore received

wages of 8 and 10 and 15 dollars a day for work as civilians, while soldiers were suffering and dying in the trenches at a dollar a day. Others have directed their maledictions at the wholesalers and forestallers and engrossers and speculators and manipulators who cornered the market for essential commodities and demanded and received fabulous prices and profits, became millionaires in a day, and thus capitalized and commercialized the calamity of war and grew rich out of the necessities and sacrifices and sufferings of the Nation.

I feel compelled to say that progress in the direction of legislation, looking to a fairer and more just and more equal distribution of the hardships and inconveniences and sufferings of war, has been delayed by reason of the excessive claims and demands of some of the advocates of such legislation. Personally, I believe it would be unwise and imprudent and impracticable to undertake the conscription and militarization of manual laborers, whether for use upon shipbuilding or housebuilding or road building or factory working or farm working or elsewhere. It is my belief that only the fighting forces and those agencies directly contributary thereto, such as medical, quartermaster, etc., should be taken from the civilian population by selective-service draft. To do otherwise would greatly dislocate, and might paralyze industry, mining, and agriculture.

The military authorities would not and could not know how to distribute the workers among the factories and farms. The psychological factor must not be ignored. Human beings are not machines. They have feelings and thoughts. There are limits beyond which they will not endure. The overwhelming majority of the people must first be convinced that a war is just and worthy of any sacrifice, even death, and then, when it is declared, public opinion, as well as force of law, will compel the acquiescence of any small dissenting minority into conformity with the plans and efforts of the Nation to raise and support and maintain the armies and navies.

### NO MILITARIZATION OF INDUSTRIES

In like manner, enthusiasts and idealists have maintained that all the material property and all the financial resources of the Nation must be instantly poured into a mighty national war hopper, there to be employed as military experts may determine necessary in the conduct of war. Such a proposition is preposterous to practical minds. The men who in peace time have built and operated industries can operate them more efficiently in war than Army officers can. They know how to manage labor in order to get the most satisfactory results. If all property were appropriated and commandeered and dumped into the war machine, of course, there would be no incomes to be taxed, and consequently no source of revenue wherewith to pay that just compensation required by the fifth amendment to the Constitution.

### A SANE PROGRAM OF JUSTICE

Then, what is a fair and reasonable program for the conduct of war so as to bring about a more just and equal distribution of the burdens of war? We believe that the war is the whole Nation's business. It is not the affair merely of those in the Army or the Navy. The soldiers and sailors have no more at stake than the civilians back home.

The war is everybody's business. If the cause of the war is not such as to justify a contribution to the limit of his qualifications and capacities and resources by every citizen, then we ought not to be in the war, and Congress should carefully consider this aspect of the problem before declaring war. But this equalization can not be theoretically and mathematically exact and ideal.

It is a practical world we live in, and war is an abnormal condition and fortunately very occasional and temporary, and should be so conducted as to result in the minimum of dislocation and demoralization of the existing order of things. Therefore, in addition to the exercise of the power of drafting soldiers and sailors by selective service; and in addition to the power to commandeer and take necessary physical property without delay, subject to consequent compensation, there are two outstanding measures that should be taken at the outbreak of another war. We should have our minds made up in advance on these matters and, if possible, the outlines of general legislation should be placed upon the statute books now and we should not wait until the heat and excitement and the tumult of war in order to legislate. The first of these is the stabilization of all prices. This can and must be done by the fiat of law. Only the emergency of war could justify such an artificial and unnatural mandate.

### STOP PROFITEERING BY STABILIZING PRICES

The stabilization of prices as contemplated by those familiar with the details essential to carry out this program of seeking to equalize the burdens and inconveniences of war is not price fixing as ordinarily understood. It does not mean picking out different commodities and prescribing by statute the prices for which the same may be sold. But it does mean taking the prices of all commodities as they are found and ascertained to prevail in a free market at a fixed date, say, 90 days before the declaration of war, and prescribing that the prices so prevailing shall be observed in transactions between citizens and in transactions of citizens with the Government.

This is fair and just. The price of any commodity is a relative matter, economically considered.

The real price is the quantity of commodity or service that must be given for a given commodity or the quantity of service or commodity that may be received for a given commodity. The excuse made during the war for the pyramiding of prices was that the raw material and labor, rent and interest, and other factors going into other commodities had risen and were continuing to rise, and, in order to meet these rises, the prices of manufactured articles must be raised. In turn, labor contended that what it had to buy and the rents it had to pay had gone up, and it must have more wages. The merchants claimed that not only had commodities advanced but store rents advanced, clerk hire advanced, and taxes advanced, so that they must increase prices. These retail prices again, in their turn, affected the wages of the laborers and the prices of raw materials. So this vicious circle swung rapidly around, rising constantly higher and higher, to the terrific peak of more than 250 per cent of normal prices. The stabilization of prices will eliminate such excuses for price boosting, and the result will be equality and fairness to all parties concerned.

### "PAY-AS-YOU-FIGHT" PROGRAM

The next step that practical men, bent upon seeking, so far as possible, the ideal of justice among all citizens in the duty to make and carry on war, is to understand in advance that taxes, heavy taxes, burdensome taxes, will be imposed to meet the current expenses of the war. The slogan should be, as far as possible, to "pay as you fight," so that as the soldier sacrifices time and blood and life in carrying on at the front, the taxpayer back home, conducting his business, living with his family, shall contribute from his substance the material things necessary to satisfy the current demands of the fighting forces.

The issue of bonds to finance the war should be reduced to a minimum, if not entirely eliminated. Undoubtedly, the tremendous inflation of credit and currency and prices during the World War was due in part to the stupendous issue of bonds. These bonds were largely carried by being floated at the banks and the credit and currency of the people were almost doubled.

But some may protest that to stabilize prices would eliminate war profiteering, and to eliminate bond issues would prevent inflation, so that there would be no unusual stimulus to business and, in fact, there might be an apparent stagnation, thus resulting in a diminution of incomes which, in turn, would result in a diminution of income taxes and, if the war should be financed as fought, taxes might be so heavy as to amount in fact to a capital levy. That chain of argument is considered by its makers as reducing the pay-as-you-fight proposition to an ad absurdum. But I refuse to be frightened by the thought of even a capital levy in order to carry on war. At most, it can but mean that a very small percentage of the existing capital reserves of the people shall be taken for the extraordinary and urgent needs of the Government in time of war.

### HUMAN LIFE HIGHER THAN MATERIAL PROPERTY

Does not the man at the front, and all those under arms cooperating with him to make his fight effective, submit to a capital levy to a very real and even terrific degree? The best part of the assets and capital of the young man is his body, his health, his time—yea, his life. In order to defend the Nation, in order to make it secure to every man and woman within its bounds, in order that all may equally enjoy the blessings of this Nation, the strongest and best of our young men are called out to give, in unstinted measure, the riches and vested rights of health and strength and life.

Is it fair, is it just, is it in conformity with that fundamental American conception of equality of rights and equality of obligations, that some of our citizens should be called upon to give their all to defend the Nation's rights and life, and others, at the same time, be not called upon to make a sacrifice of a small proportion of accumulated capital? I recall these words from the inaugural address of President Warren G. Harding, March 4, 1921: "There is something inherently wrong, something out of accord with the ideals of representative democracy, when one portion of our citizenship turns its activities to private gain amid defensive war, while another portion is fighting, sacrificing, or dying for the national defense."

### JUSTICE A FACTOR IN NATIONAL DEFENSE

To make effective such a program tending toward a just and fair distribution of the burdens of war is the greatest step in the scheme of national defense. It will mean that all the resources of the Nation will be directed instantly upon the outbreak of war to the making and gathering of such a combination of human, material, and financial resources as must be well-nigh irresistible. Further, it will mean that, among the men who are fighting and directing; among those sacrificing and suffering, there will not rankle that sense of injustice and of unfairness at the thought that others are not only escaping from the obligations of such a service, but are actually commercializing the Nation's needs, and profiteering upon the Nation's peril. There is an inherent and indefinable consciousness in every human breast of what is just and fair and right. Education may clarify its definition, but can neither create nor destroy its existence.

"PAY AS YOU FIGHT" AND NO PROFITEERING INSURES PRUDENCE

While this program of invoking all the resources of the Nation to cooperate in one combined effort of war when war is inevitable insures military efficiency, yet it is at the same time one of the surest guaranties that our Nation will never embark upon an aggressive and unjust war. We are a peace-loving people. We know that we may best accomplish our mission to build up a great Christian civilization for the blessing of our own people and to serve as a shining example to all others only while peace prevails. But we are vividly conscious of our obligation to the ideals of the Republic. We feel that these ideals can only be achieved under conditions of undisputed national security. Much as we love peace, and will insist to the limits of patience upon its preservation, yet, as a practical people knowing the plain lessons of history and the teachings of bitter experience, we refuse to live in a fool's paradise and to bury our heads in the sands of a false sense of security. But the program here outlined, of no war profits and of heavy war taxes, will prove an efficacious deterrent to the rash and ill-considered agitation of chauvinists and militarists.

It will compel certain great financial interests that control the mighty metropolitan dailies to think carefully and to speak mildly in crucial times. If the capital that controls newspapers knows that it can not profit and may suffer some of the burdens of war, it will be cautious and prudent in editorial utterances. The man on the street who knows that he is unfit by age or physical infirmity to bear a soldier's part in war, will restrain his tongue and no longer agitate for war if he realizes that he must contribute of his substance, even to the point of sacrifice, in order to carry on the war.

RIGHTEOUS WAR OF DEFENSE

With all selfish motives of pride and profit by war eliminated, with the hysteria and delirium of war excitement checked and restrained by the thought of heavy financial burdens, we may feel sure that one motive, and one motive only, may ever impel the good people of this great Republic to take up arms against another nation. That motive will be the defense of either the physical integrity or of the international rights of the Nation. With a war caused by and based upon such a condition with a situation confronting all the people, that means either supine submission to a foreign will or fighting in defense of the Nation's rights and life, there can be no question but that any war declared by Congress will be a just war. Being just, being righteous, being backed by the heart and conscience of the overwhelming majority of the people, the law of selective service for human beings and a law to prevent profiteering by the stabilization of prices and to require the equitable contribution of the sinews of war by those having capital will not be a heartless mandate to compel the sullen obedience of the people to a harsh war program, but will be merely the legal measure of what all the people will cheerfully do to defend the Nation's cause.

A NEW AMERICAN SLOGAN

Therefore, are we not justified in advancing one step further in the crystallization of national ideals into well-remembered phrases that express the heart and soul of Americanism? For more than 125 years American citizens of all sections and of all parties have acknowledged that the essence of American institutions finds a voice in the phrase "Equal rights to all and special privileges to none." To that incomparable expression of the peace-time policies of our Nation, let us now, while the lessons of the late war are still fresh in every mind and heart, write upon the statute books of this Republic laws looking toward the equalization of the obligations and hardships of war, and phrase this other epitome of the American war-time policy thus: "Equal burdens and equal sacrifices for all and special privileges and special profits to none."

During the Revolutionary War all of the State legislatures of the respective States passed emergency price-fixing legislation for the purpose of preventing profiteering in the sale of supplies and commodities both for military purposes and general consumption.

An excellent example of this type of emergency legislation is the act of the State Legislature of Massachusetts in 1777, which is found in the Government publication entitled "Emergency Legislation to December, 1917," compiled under the direction of the Attorney General. The following excerpt from which appears in volume 1 on page 420:

Whereas the avaricious Conduct of many Persons, by daily adding to the now exorbitant Price of every necessary and convenient article of life; and encreasing the Price Of Labour in general, unless a speedy and effectual Stop be put thereto, will be attended with the most fatal and pernicious Consequences, as it not only disheartens and disaffects the soldiers, who have nobly entered into the Service of their Country, for the Support of the best of Causes, and distresses the poorer Part of the Community by obliging them to give unreasonable Prices for those things that are absolutely necessary to their Existence, but will be also very injurious to the State in general; and

Whereas the Committee lately empowered by this State to proceed to Providence in Rhode-Island, and in Behalf of this State, there to meet with Committees from the other New-England States; and among other Things to confer upon Measures necessary to prevent Monopoly and the high Price of Goods, and the Necessaries of Life, and for Regulation of Vendues; have in Conjunction with the said Committees, recommended that Rates and Prices be settled and affixed by an Act of this State, to the Articles herein after enumerated.

In the book entitled "Emergency Legislation to December, 1917," compiled under the direction of the Attorney General, we find, on page 210, the following resolution continuing certain powers theretofore vested in Washington:

*Resolved*, That General Washington be informed that Congress have long since written to the commissioners in France for cloaths complete for eighty thousand men, and have received for answer that they might be expected here by the setting in of winter; in consequence of which, Congress have reason to hope for this necessary arrival in a short time: that Congress have also adopted various other means for importing cloathing, which they have reason to expect will be successful; and, on the 16th day of October ordered a copy of the General's return of articles wanted for the army to be transmitted to the respective assemblies of the eastern and middle states, with a pressing recommendation to them to use their utmost endeavors to collect the same without delay, and send them to the army. But, since the wants of the army are immediate, Congress wish the General may avail himself of the powers vested in him for obtaining these necessary supplies from the disaffected inhabitants, Congress being of opinion that the well disposed people of these states will rather be pleased than dissatisfied with a procedure, by which their enemies shall be compelled to supply those things that are essential to the support and comfort of the army; and more especially as even the disaffected will be paid a reasonable price for what is demanded of them;

*Resolved*, That the powers with which General Washington was invested by a resolution of Congress of the 17 September, and another of the 8th of October last, be continued till the first day of March next, unless sooner revoked. (IX Journals of the Continental Congress (Library of Congress), November 14, 1777, page 905.)

In the book entitled "Emergency Legislation to December, 1917," compiled under the direction of the Attorney General, we find on page 207 the following resolution regarding the bestowal of dictatorial powers upon Washington:

This Congress, having maturely considered the present crisis; and having perfect reliance on the wisdom, vigour, and uprightness of General Washington, do, hereby,

*Resolve*, That General Washington shall be, and he is hereby, vested with full, ample, and complete powers to raise and collect together, in the most speedy and effectual manner, from any or all of these United States, 16 Batallions of infantry, in addition to those already voted by Congress; to appoint officers for the said batallion; to raise, officer, and equipt three thousand light horse; three regiments of artillery, and a corps of engineers, and to establish their pay; to apply to any of the states for such aid of the militia as he shall judge necessary; to form such magazines of provisions, and in such places, as he shall think proper; to displace and appoint all officers under the rank of brigadier general, and to fill all vacancies in every other department in the American armies; to take, wherever he may be, whatever he may want for the use of the army, if the inhabitants will not sell it, allowing a reasonable price for the same; to arrest and confine persons who refuse to take the continental currency, or are otherwise disaffected to the American cause; and return to the states of which they are citizens, their names, and the nature of their offences, together with the witnesses to prove them:

That the foregoing powers be vested in George Washington, for and during the term of six months from the date hereof, unless sooner determined by Congress. (VI Journals of the Continental Congress (Library of Congress), December 7, 1776, page 1045.)

In the book entitled "Emergency Legislation to December, 1917," compiled under the direction of the Attorney General, we find on page 206 the following resolution regarding engrossing which was passed by the Continental Congress:

Congress being informed that some persons in this city (of Philadelphia), governed by principles inimical to the cause of America, and with views of avarice and extortion, have monopolized and engrossed shoes, stockings, and other necessaries for the army, whilst the soldiers of the Continent, fighting for the liberties of their country, are exposed to the injuries of the weather, at this inclement season:

*Resolved*, That it be recommended to the assembly of the state of Pennsylvania, to adopt such immediate measures for remedying this evil, as their wisdom shall suggest to be adequate to the present purpose, and for preventing like pernicious practices in future. (VI Journals of the Continental Congress (Library of Congress), November 26, 1776, page 980.)

FARM RELIEF

Mr. WILLIAMS of Illinois. Mr. Speaker, I present a privileged resolution from the Committee on Rules, which I send to the desk and ask to have read.

The Clerk read as follows :

House Resolution 176

*Resolved*, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of S. 3555, entitled "An act to establish a Federal farm board to aid in the control and disposition of the surplus of agricultural commodities in interstate and foreign commerce." That after general debate, which shall be confined to the bill and which shall continue not to exceed 12 hours, the time to be equally divided and controlled by those favoring and opposing the bill, the bill shall be read for amendment under the five-minute rule. It shall be in order to consider without the intervention of the point of order as provided in clause 7 of Rule XVI the substitute committee amendment recommended by the Committee on Agriculture now in the bill, and such substitute for the purpose of amendment shall be considered under the five-minute rule as an original bill. At the conclusion of such consideration the committee shall rise and report the bill to the House with the committee substitute, as amended, and any Member may demand a separate vote in the House on any of the amendments adopted in the Committee of the Whole to the committee substitute. The previous question shall be considered as ordered on the bill and committee substitute, including the amendments to the committee substitute thereto to final passage without intervening motion except one motion to recommit.

Mr. WILLIAMS of Illinois. Mr. Speaker, this resolution makes in order the consideration of Senate Bill No. 3555, popularly known as the farm relief bill. On April 5, 1928, the Committee on Agriculture of the House reported from that committee H. R. 12687. Subsequently the House Agriculture Committee took up for consideration the bill passed by the Senate and amended it by striking out all the provisions of the bill following the enacting clause and inserting by way of amendment the House bill in the identical language in which it was reported to the House April 5. So while this rule makes in order the Senate bill, the House has before it the bill reported by its own committee.

That a very grave agricultural problem exists in the United States is no longer debatable. It is recognized by every one who has given the subject even the most cursory consideration. It is also universally recognized that a proper consideration and solution of this problem concerns not alone the farmers, but all the people of the United States. While every one concedes the economic condition of American agriculture is not what it should be and agrees that comprehensive and adequate legislation dealing with the problem is desirable, there is and has been a wide divergence of views as to what that legislation should be.

The bill now being considered is the fourth serious attempt by Congress to enact legislation dealing with the "surplus," which is undoubtedly the gravest and most difficult of solution of all the elements that enter into the agricultural problem. No more important subject has been considered by Congress since the close of the World War than those now before us.

The bill before the House to-day is, in many respects, radically different from the bills heretofore reported by the committee. While the essential and underlying principles of former bills have been retained, many far-reaching changes have been made in its provisions. A very earnest effort has been made by the committee to eliminate so far as could be done, without sacrificing essential principles, the various objections against the legislation urged by the President of the United States in his veto message of February 25, 1927, returning the former measure without his approval.

A brief review of the changes made in this bill by the committee, from the provisions of the bill vetoed by the President, shows the very great length the committee has gone to meet the views of the Executive as expressed in the veto message :

First. One of the objections urged by the President to the former bill was that it only applied to a limited number of agricultural products—corn, wheat, cotton, rice, and swine—and did not embrace all agriculture. That objection has been met. The pending bill applies to all agricultural products.

Second. The present bill has a provision prohibiting unreasonable discrimination in making marketing agreements with agencies other than cooperatives. The President in his message very properly criticized the former bill for a failure to carry a provision of that kind. This bill is not subject to that criticism.

Third. The bill last year provided elaborate machinery for the convening and holding of State conventions of producers to obtain the views of such producers as to the commencement and termination of operations with any commodity. The President specifically expressed his disapproval of that provision. It has been eliminated from the present bill.

Fourth. The former bill limited the power of the President to appoint members of the farm board. It provided that the farm organizations of the various land-bank districts should submit to the President a list of nominees selected by them, and that the President was limited to such list in making his appointments to the farm board. The Attorney General in his opinion expressed the view that this scheme was unconstitutional and an unwarrantable restriction on the powers of the President. In the veto message the President expressed his disapproval of this provision of the bill. That objection has been entirely met in the present bill. The President is given the power of making these appointments without any limitations other than that confirmation by the Senate is required as in other cases. It leaves him absolutely free and unhampered in appointing members of the farm board. This change removes from the bill one of the most serious objections raised by the President in his veto message, an objection that many of the supporters of the bill felt was entirely justified.

Fifth. The bill last year required the board to find "that both the advisory counsel and a substantial member of cooperative associations or other organizations representing the producers favor the full cooperation of the board in the stabilization of any commodity," before marketing agreements could be entered into for the commodity. This gave to private and unofficial organizations the power to determine whether or not provisions of the bill should be put into effect. The Attorney General advised the President this provision was unconstitutional and it was one of the objections to the bill on which the veto message was based. This provision is eliminated from the present House bill, although it has been retained, in perhaps a somewhat less objectionable form, in the bill passed by the Senate. If the membership of the House sustains the action of the House committee, and accepts the bill as to that feature, as it has been reported, one of the most serious objections urged against the former bill has been removed.

The equalization fee, one of the features of the bill to which the President expressed disapproval, has been left in the bill. It appears in the bill, however, as an alternative remedy to be invoked by the board only in case the first remedy provided in the bill fails. In fact, two separable remedies are proposed in the bill. The first is loans to cooperative organizations, and to corporations created and controlled by cooperatives. If the loan scheme works as successfully as its advocates claim the board will never be called upon to impose the equalization fee on any commodity. The board will never declare an operating period until it has been demonstrated the surplus of a given commodity can not be adequately dealt with through the loan provisions of the bill. Unlimited opportunity is afforded the board to deal with agricultural surpluses through loans, which those who have opposed former bills have confidently asserted is the best way to deal with the surplus problem. If the plan they advocate fails to do the job when the test is made, it seems they ought not to object to having in the law the alternative remedy millions of farmers believe is the one sure method to deal effectively with this problem.

The rule now being considered provides for 12 hours' general debate, confined to the bill to be divided equally between those favoring and those opposing the bill. Germane amendments will be in order when the bill is considered under the five-minute rule, and a separate vote is provided on any amendment adopted by the committee when the bill is reported back to the House.

The rule is unanimously reported by the Committee on Rules and is in every way satisfactory to the Committee on Agriculture. [Applause.]

Mr. Speaker, I reserve the balance of my time and yield 20 minutes to the gentleman from North Carolina [Mr. POU]. [Applause.]

Mr. POU. Mr. Speaker, those who believe there is a farm problem in America ought to have little difficulty in supporting this bill.

Mr. GREEN. Mr. Speaker, will the gentleman yield?

Mr. POU. Certainly.

Mr. GREEN. I desired to ask a question of the gentleman who preceded the gentleman who now has the floor, but the former gentleman did not have time to yield. I would like to ask the gentleman from North Carolina if he can tell us when we may expect from the Committee on Rules a rule providing for the consideration of the Lehlbach bill? Many Members are interested in it, and I am anxious to know if the Committee on Rules is considering reporting a rule which will give preferential status to this legislation.

Mr. POU. Mr. Speaker, I hardly expected this question in a debate on the rule reporting the McNary-Haugen bill. The gentleman from Florida knows that I belong to the minority on the Committee on Rules. He will, therefore, excuse me if I refer him to the majority members of the Committee on Rules, or to the Republican steering committee.

Mr. GREEN. I thank the gentleman for yielding for the question.

Mr. POU. So far as I am concerned, and I speak only for myself, I shall be glad to do what I can to expedite favorable consideration of the Lehlbach bill, to which the gentleman from Florida has referred.

Mr. Speaker, as I said a moment ago, those who believe there is a great farm problem in America which Congress should attempt to solve, if possible, ought not to have any difficulty in supporting this bill. The report filed by the majority of the Committee on Agriculture contains some very illuminating information. Let me say right now that the demand for action by Congress is not a calamity howl, nor is it the cry of the demagogue. It is the appeal of many who are losing their homes. It is the appeal of a large portion of our agricultural population who are facing disaster. The membership of this House will, I think, do well to study carefully the majority report of the Committee on Agriculture.

The statistics of this report are for the most part official. We find that during the last five years there has been immigration from the farms to the cities of 2,000,000 persons. There has been a decline in farm population from about thirty-one and one-half millions in 1920 to about twenty-nine millions in 1927. From the census reports we learn that the total value of all farm property in 1913 was $45,227,000,000. In 1925 the total value of all farm property in the Nation was $59,154,000,000, but reduced to the terms of 1913 purchasing power, the total value of all farm property in 1925 was only equal to $38,188,000 of 1913 purchasing power. In other words, all farm property in the United States in 1925 had only 84.4 per cent of the purchasing power of all farm property in the United States in 1913.

I quote from the majority report:

> Farm lands in the United States as a whole have an actual exchange value or purchasing power approximately 20 per cent less than the purchasing power of the same land in 1910, according to comparative figures from the United States Bureau of Census for 1910 and 1925.

Likewise—

> the proportion of the total current income of those engaged in agriculture has been much less since 1920 than during the 10 preceding years. From 1909 to 1919, inclusive, agriculture received not less than 20 per cent of the total income of the Nation. Since 1920 agriculture has received only a little more than 10 per cent of the national income. The total income of the people of the United States since 1925 has been around $86,000,000,000. Between 1909 and 1919, agriculture received not less than 20 per cent.

Since 1920, as I have just stated, quoting from the majority report, agriculture received only one-tenth of the entire income of the Nation, while prior to 1920 agriculture received about one-fifth of our national income.

The decline in the economic position of agriculture has been the chief cause of the enormous number of bank failures in the United States since 1920, a series of failures without parallel in any previous period in the history of our country. The number of bank failures in 1924—1,195—was 42.5 per cent larger than the number of failures in 1893, the number of failures during that year being 642.

The number of failures for the period of 1920 to 1925, inclusive, was 2,494, being greater in number than all the bank failures during a period of 26 years prior to 1920; that is to say, that during the six-year period from 1920 to 1925, inclusive, there were more bank failures in the United States than there were during the period of 26 years prior to 1920, and most of the closed banks during the six-year period mentioned were located in agricultural sections. As a result of the decline in farm values, it has been estimated that the value of all capital invested in agriculture declined from $79,000,000,000 at the beginning of 1920 to $58,000,000,000 at the beginning of 1927.

Mr. Speaker, the above figures disclose only in part the unsatisfactory condition of agriculture throughout the Nation. While farm lands have been declining in value, while more than 2,000 banks, situated in the agricultural sections, have failed, while thousands of farms have been sold under mortgage foreclosure, while thousands of farms have been put up and sold in order to pay taxes, many thousands engaged in other lines of industry, in other occupations, have prospered beyond the dream of man. Since the war the national income has enormously increased. The wealth of the Nation, it has been said, has almost doubled since 1910. Millionaires have sprung up over night throughout the Nation like the teeth of Cadmus as a result of get-rich-quick chances afforded by the war.

Before the war London was the financial center of the world. Since the war America is the financial center of the world. But in all this prosperity the American farmer has not participated. It is true that for a very short time he received satisfactory prices, but he was forced to face a condition which he could not overcome. For what he purchased he was compelled to pay war prices. For what he sold, barring two years, he received a return hardly equal in purchasing power of prewar prices. Unless his condition is changed, either by Providence or by helpful legislation, his future is as dark as midnight. He can not forever buy in a protected market and sell in an unprotected market. The McNary-Haugen bill represents the combined effort of those who have it in their hearts sincerely to attempt to better the condition of the American farmer. We are not demagogues, I hope we are not calamity howlers, we are not playing to the galleries. We are trying to assist the American farmer in disposing of his surplus at a fair profit.

Under this bill a Federal farm board, 12 in number, will be appointed by the President, subject to confirmation by the Senate. An appropriation of $400,000,000 is provided, which will be under the control of the Federal farm board in aiding the farmers to dispose of their exportable surplus. It is contemplated that this board will deal with the American farmer through cooperative marketing associations already in existence or hereafter to be formed. I pause here to say that cooperative marketing associations have not heretofore been altogether as successful as the friends of the American farmer hoped. But after this bill is passed the future of cooperative marketing associations will, of course, be brighter. With the Government working in harmony with these associations, with an appropriation of $400,000,000 under the control of the Federal farm board, to be used through the agency of cooperative marketing associations, the prospect for success of these associations will be enormously increased. The cooperative marketing

association is the only practical agency through which the Government can deal with the farmer at this time. Of course, the Government can not deal with the millions of farmers individually. It can only help the farmers of the Nation if they will unite, organize, stand shoulder to shoulder, and work in harmony with each other and with the Government. My belief is, if this bill passes, practically all American farmers will organize in marketing associations.

One of the objections to this legislation in the past has been the danger of increased production. This bill seeks to obviate this danger. Before each crop is planted, it is contemplated that the Federal farm board will make a world survey of supply and demand with respect to cotton, wheat, oats, and other American crops. Let us take the case of the cotton farmers of the Nation. Before the cotton crop is planted the cotton farmer will be informed by the Federal farm board whether it is wise to increase the acreage of his crop or whether it is still wiser to decrease acreage, and this advice of the Federal farm board will be based upon reliable information obtained by experts throughout the world.

In the past the cotton farmer has been like a man feeling his way in the dark. There has been no successful cooperation. The farmers have not worked in harmony in keeping down production, but if this bill passes, hereafter the cotton farmer will be warned in advance by the Federal farm board of the danger of a record-breaking crop. If he heeds the warning of this board, his cooperative marketing association will receive help from the Federal farm board when his crop is put upon the market in the fall. If his association disregards the warning and advice of the Federal farm board with respect to the acreage which ought to be planted, then his cooperative marketing association will get no help from the Federal farm board.

I am going to quote in full section 6 of this bill:

> If the board finds that its advice as to a program of planting and breeding of any agricultural commodity as hereinbefore provided has been substantially disregarded by the producers of the commodity, or that the planting or breeding of any agricultural commodity for any year is substantially greater than a normal increase, as determined by the board, over the average planting or breeding of such commodity for the preceding five years, the board may refuse to make advances for the purchase of such commodity.

But the bill also affords safeguards against a sudden slump in prices. Cooperative marketing associations are permitted to enter into insurance contracts which will prevent a sudden ruinous decline in the price of any commodity. I have not the time to discuss in full the insurance features of this bill. The insurance provision is a most valuable safeguard against those sudden drops in the price of farm products which it seems must always come when the bulk of the cotton crop, for instance, is being put upon the market, usually during the months of October, November, and December.

THE EQUALIZATION FEE

Now, Mr. Speaker, I come to the equalization fee. Much has been said about this fee. It has been the stumbling block in the way of many Members who desired to support this legislation. Many farmers throughout the Nation have been afraid of the equalization fee. They felt that it was dangerous to give to any agency unlimited power to levy a fee upon the agricultural products of the Nation. I think no farmer need have any fear of the equalization fee in this bill.

In the first place, let me say, the bill is drawn so that it will be operative and helpful without the collection of any equalization fee at all. It is entirely possible that it will never be necessary to levy and collect an equalization fee upon any of the agricultural products of the Nation. Let us use cotton as an illustration again. When marketing time comes, a portion of the $400,000,000 revolving fund will be set apart by the Federal Farm Loan Board to be used in aiding the cotton farmer in disposing of his exportable surplus crop. The equalization fee is only resorted to in the event there is loss to the Government in aiding the farmer to market his surplus. If the Government sustains no loss, then there will be no equalization fee collected. Many friends of this legislation, who have devoted years of study to this question, predict that the bill will accomplish the purpose in view without levying the equalization fee, but if there should be loss to the Government in its efforts to help the farmer, an equalization fee only large enough in size to cover the deficit can be collected by the Federal Farm Loan Board. Certainly, no fair-minded person could object to this provision. Nobody wants the Government to hold the bag. It is only expected that the Government will help the farmer just as it has helped the railroads in the past; that it will lend its strong arm by setting apart from the Treasury a fund to be used in aiding the farmer to get a fair price for the product of his toil. I think it should be made plain just here that the equalization fee levied and collected will only be levied and collected on cotton if there should be a loss to the Government in disposing of the surplus cotton crop. It will only be levied upon wheat in case there is loss to the Government in aiding the wheat farmers to dispose of their exportable surplus. I mean by this, as I construe the bill, that an equalization fee collected on any particular crop can only be applied to fill in a deficit to the Government in aiding the farmers to sell the exportable surplus of that particular crop. And when the deficit is covered, the collection of the equalization fee ceases.

The equalization fee can only be levied and collected in the event the $400,000,000 which this bill carries is not sufficient in amount to enable the farmers of America to dispose of their exportable surplus at a profitable price. And the size of the equalization fee is governed by the amount of any deficit which must be covered. No equalization fee can be collected from the cotton farmer to aid in disposing of the wheat crop, and no equalization fee can be collected from the wheat farmer to aid the cotton farmer in disposing of his crop.

HOW WILL THIS BILL AFFECT THOSE WHO DO NOT JOIN COOPERATIVE MARKETING ASSOCIATIONS?

Of course, no farmer can be required by law to join any association, either cooperative marketing associations or any other organization. If the farmer joins a marketing association it must be his voluntary act, but if this bill passes it is believed the farmers of the Nation will find that their interest will be promoted if they join marketing associations already in existence or hereafter to be formed. But the farmer who does not join an association of any kind will, it is believed, nevertheless receive great benefit from the operation of the bill. The great sum of $400,000,000 is appropriated to stabilize prices and to prevent sudden slumps in prices which occur so often during the marketing season without apparent reason. If it is true that the operation of the bill will prevent these violent breaks downward in prices, the farmer who does not belong to a marketing association will receive the same benefit as the farmer who has seen fit to join. It is true, the bill is drawn with the expectation that cooperative associations will be formed throughout the Nation, because it is expected these associations will be the agencies which the Government will use in the effort to stabilize prices. The Federal Farm Loan Board is not required to deal with cooperative marketing associations to the exclusion of all other farm organizations, but the bill is drawn with the expectation and belief that the farmers of the Nation will organize in order to be in a position to negotiate loans upon crops ready for the market at a very low rate of interest.

The difference in the effect of the bill on farmers who organize and those who do not see fit to join any association will be, I submit, that those who do organize will be in a position to receive advances in Government money almost equal to the full market value of the crops produced, while those who do not belong to any organization will not be in a position to receive advances of Government money. If those who do not belong to any organization wish to hold their crops for higher prices they must negotiate loans with private individuals or private corporations, and the interest rate they pay will certainly be higher than the rate paid by those who have joined marketing associations in conformity with the provisions of this bill. Likewise, the amount advanced to members of marketing associations will undoubtedly be larger than the amount of loans any private individual or corporation would be willing to make.

Therefore, while the bill will greatly benefit all the farmers of America, whether they belong to marketing associations or whether they do not belong to any association, the benefit to those who belong to such associations will probably be greater than the benefit resulting to the farmers who decide not to join any association of any kind, because the members of associations which conform to the requirements of the bill will never be forced to sell their crops at ruinously low prices, because of the impossibility of securing loans upon their crops on long time at a low rate of interest. The rate of interest upon such loans will be very low, and the amount of such loans will be as near to the full market price of the crops produced as safety will permit.

In conclusion, Mr. Speaker, permit me to say that I have given considerable study to the condition of agriculture in this Nation. I have given considerable study to the bills which have been introduced and considered for the purpose of helping the farmer. I submit that the bill under consideration is a piece of wise legislation to which few objections can be offered. Under the operation of the bill the Government will lose nothing, while the aid to American agriculture will be of enormous value. After many years the American farmer will feel that at last he has behind him the influence, the power of

the great Nation of which he is proud to be a citizen. At this time he can not feel that he has ever received any aid of value from his Government in marketing his crops. I honestly believe the bill will inject new life blood into American agriculture. The future of the American farmer will be brighter. At this time it is indeed dark. There are many thousands of farmers who have given up hope that the Government would ever come to their assistance. Let us show to the world that the Congress of the United States has in its heart a sincere desire to inject new life into agriculture.

I conclude, Mr. Speaker, by saying that this fight has just begun. There are many thousands who feel that the American farmer is forced to meet economic conditions created by law which are most unjust and unfair. If this bill does not become a law during this Congress, the fight will be resumed in the next Congress. As I have said before, I repeat now, the fight will never end until the American farmer receives a square deal.

There is nothing unfair in this bill. There is no danger to anyone lurking in its provisions. The Federal Treasury will sustain no loss. The provisions of the bill are not difficult to understand. It is a practicable, workable plan to help the farmers of America if they will organize into cooperative marketing associations in order to be in a position to receive Government aid. Certainly they will not refuse to put themselves into a position to be helped. The report of the Committee on Agriculture should be carefully studied by every Member and Senator who has not already done so. It contains much valuable information. It reveals the tragedy to the farmers of a nation when forced to meet unfair, unjust economic conditions. Let us speedily put this bill through. For one, I believe our efforts to help will not be in vain. [Applause.]

Mr. WILLIAMS of Illinois. Mr. Speaker, I yield 10 minutes to the gentleman from Indiana [Mr. PURNELL].

Mr. POU. I will say to my friend that we would like 15 or 20 minutes on this side, as I understand nothing else will be taken up this afternoon.

The SPEAKER. The gentleman from Indiana is recognized for 10 minutes.

Mr. PURNELL. Mr. Speaker, the bill which this resolution, if adopted, will make in order is the result of years of intensive study and extended hearings. In my judgment it stands before you as the best farm-relief proposal yet presented to either branch of Congress.

I shall not now attempt a discussion of the bill itself but shall confine myself to a brief statement in support of the resolution. At a later date I hope to discuss at length the merits of the bill and point out the manner in which it is hoped its provisions will aid America's basic and seriously distressed industry—agriculture.

When the farm relief bill was before the House at the last session of Congress I made the statement that we were entering upon the consideration of the greatest problem any session of any Congress has undertaken to solve since the beginning of the Government. I wish to remind the membership of the House that there is still an agricultural problem and that in some sections it is more acute than ever. The greatest problem before the American people to-day is still the restoration of agriculture to a permanent and remunerative basis.

Although industry and labor are to-day enjoying a marked degree of prosperity, each is beginning to feel the pinch of agricultural depression. Unless something is done soon to lift agriculture to a place of equality with industry and labor, all must be shaken down to a common level, and in the shaking the very foundations of Government itself will be rocked. Abandoned farms, smokeless stacks, and idle, hungry, and discontented people are not the things upon which stable and lasting governments are founded. I sincerely hope that this resolution may be promptly adopted and that we may begin the consideration of this bill, which, in my judgment, will not only strengthen the weakened morale but will bring actual relief to that great army of nearly 30,000,000 of American citizens who live on the farms and supply the Nation with its food. [Applause.]

Mr. ASWELL. Will the gentleman yield?

Mr. PURNELL. Yes.

Mr. ASWELL. Does the gentleman believe that if this bill is passed it will become a law?

Mr. PURNELL. Yes.

Mr. ASWELL. You do?

Mr. PURNELL. I do.

Mr. ASWELL. You speak with authority?

Mr. PURNELL. Oh, no; I do not undertake to speak for the President at all; but I do undertake to say that the President is intensely interested in farm relief; that he recognizes the threat that exists in the country to-day to all industry by reason of the depressed agricultural condition.

Mr. ASWELL. Then you feel certain he will ignore his Attorney General and sign it anyhow?

Mr. PURNELL. I do not think the Attorney General has had an opportunity to pass upon this bill. The gentleman knows very well—of course, I shall not go into the gentleman's motive for asking the question, but——

Mr. ASWELL (interposing). A very sincere motive, I will say to the gentleman.

Mr. PURNELL. I can see that from here. The gentleman knows very well that the President in his veto message set out about 10 outstanding objections.

Mr. ASWELL. And you keep the main one in.

Mr. PURNELL. Nine and a half of those objections have been met in this bill.

Mr. ASWELL. Which half have you kept in?

Mr. PURNELL. The only thing left in the bill, as the gentleman very well knows, is the equalization fee, and the equalization fee is an alternative.

Mr. ASWELL. Camouflage.

Mr. PURNELL. It is only to be used, as the gentleman knows——

Mr. ASWELL (interposing). As a smoke screen.

Mr. PURNELL. When loans to the cooperatives and the other provisions in this bill fail to do the job it is specifically provided——

Mr. GREEN. Will the gentleman yield?

Mr. PURNELL. I do not know anything about the Lehlbach bill.

Mr. GREEN. I am not talking about the Lehlbach bill, but I think the Rules Committee ought to know something about it.

Mr. PURNELL. But it is specifically provided, if the gentleman will permit me to answer my distinguished friend from Louisiana, that when everything else fails this "pinch hitter," the equalization fee, which sits out on the bench, may be called into action in a last effort to save American agriculture from destruction. Therefore I say nine and a half of the objections which the President urged in his veto message have been substantially met in this bill, and I repeat that this is the best bill that has ever been presented by our committee or any other committee. It is the best bill that has ever been presented to either branch of Congress.

Mr. GREEN. Will the gentleman yield now?

Mr. PURNELL. Yes.

Mr. GREEN. I want to get some real information. The gentleman who preceded you brought out the fact that the equalization fee would be applied only in the event it became necessary on account of a deficit in the revolving fund. I would like to know whether a deficit on wheat and other products would apply to citrus fruits, hogs, or something like that.

Mr. PURNELL. The gentleman understands we are discussing only the resolution now.

Mr. GREEN. I understand that.

Mr. PURNELL. And if the rule is adopted we are going to begin to-morrow and have three days of extended and lengthy discussion of the bill. I do not want to be discourteous to the gentleman, but there are other Members who want to speak in behalf of this resolution, and I am quite sure the gentleman will have ample opportunity to ask that question of any of us who may be privileged to speak on the bill itself.

Mr. ASWELL. May I now ask the gentleman a pertinent question?

Mr. PURNELL. Yes.

Mr. ASWELL. Will the gentleman kindly point out for the information of the House the language that gives authority to try out everything else and then finally take up the "pinch hitter"? The gentleman calls it a pinch hitter because it both pinches and hits the farmer. [Laughter and applause].

Mr. PURNELL. Of course, the gentleman understands——

Mr. ASWELL. I am serious about this. Where is the language that gives the board authority to use all other means before adopting the equalization fee?

Mr. PURNELL. I have not even a copy of the bill before me now, but I hope to have half an hour——

Mr. ASWELL. The gentleman knows it gives the board the option to assess the fee without consulting the producers.

Mr. PURNELL. I hope to have at least half an hour under general debate to discuss the bill, and I hope to be able to direct my remarks particularly to the changes in this bill and the manner in which the objections of the President have been met, and if the gentleman will do me the kindness to ask that question again at the proper time I shall do my best to give him the information which, by the way, he already has, since he is a member of the Committee on Agriculture and was present at the drafting of the bill.

Mr. GREEN. I hope the gentleman will also look up the part about the deficit in the stabilization fund. I would like to know, as a matter of information, whether for instance they can tax citrus fruits for a deficit which has been established on wheat.

Mr. RAMSEYER. That is not possible.

Mr. PURNELL. I think the gentleman would rather bring that up under general debate or when we are considering the bill itself under the five-minute rule, since the resolution provides for 12 hours of general debate.

Mr. KINCHELOE. Will the gentleman yield?

Mr. PURNELL. Yes.

Mr. KINCHELOE. I will say for the benefit of the gentleman from Florida with respect to the stabilization fund, that whatever equalization fee is established on any separate commodity will be held separate and inviolate.

Mr. GREEN. Then they could not tax one kind of crop for a deficit on another.

Mr. KINCHELOE. No.

Mr. GREEN. That is what I wanted to know.

Mr. WILLIAMS of Illinois. Mr. Chairman, I yield 10 minutes to the gentleman from Alabama [Mr. BANKHEAD].

Mr. BANKHEAD. Mr. Speaker and gentlemen of the House, as a member of the Committee on Rules, I have asked the privilege of having a few moments to make some very general comments upon the legislative status of the proposed legislation.

As has well been said here by gentlemen who have preceded me in this discussion, we are again immediately confronted by the offering of this bill and the substitute proposals, with probably the most profoundly important economic questions that have been presented to Congress in a great many years. It would be idle upon the part of any speaker upon this floor to have to point out or to summarize or to make any argument about the distressed and unfortunate situation of agriculture, especially in some sections of the American Union, and here is a bill which has for its purpose, as I understand it, an earnest and honest effort upon the part of the Congress of the United States to undertake, if it may be done by legislation, to stabilize and equalize the opportunities which agriculture may enjoy in comparison with and in competition with the other great industries of the Nation.

I do not believe there has ever been before the Congress of the United States any legislation which has engaged more profoundly the earnest and conscientious thought and attention of its membership. I feel sure the Committee on Agriculture, which has been charged with a consideration of this problem for the last six years, has made almost a consecrated effort, if I may properly use that term, to arrive at some safe and sound conclusions to present to the judgment of Congress in an attempt to solve, at least partially, this great question of agricultural relief.

I voted for the McNary-Haugen bill in the House in the last session, although I had very grave doubts as to the wisdom of some of its features. The feature that particularly distressed my judgment and my conclusions then, as it does now, is the matter of the imposition of the equalization fee, and I must say that I regret that a majority of the House committee in reporting this bill have removed from their bill some of the restrictions that were applied in the bill last year against the application of the equalization fee to certain of the basic commodities. I fear there are some Members upon my side of the House, unless that situation is remedied by appropriate amendments, who will feel very grave doubts about the wisdom of voting for the bill.

Under the bill as it is presented by the Committee on Agriculture, the Farm Loan Board alone, without any advice from the producers, without any referendum to the producers of a specific commodity, without any advice or suggestion or vote by the advisory council, the board itself composed of only 12 men, has the right without restriction to determine the application of the equalization fee to any commodity. I understand privately that some effort has been made to iron out these objections and that before the bill is submitted for a final vote we may have some of the restrictions that were placed upon that proposition in the last bill restored.

Another feature of the rule that there has been some question about is whether or not an opportunity will be given for a vote upon the so-called Ketcham-Jones substitute for the pending bill, the debenture plan, that has been very earnestly espoused before the committee, I understand, by one of the greatest of our farm organizations and that I also understand has the support of a considerable number of gentlemen upon the floor.

I do not think I am violating any of the confidences of our Committee on Rules when I say that an effort was made to incorporate in the rule a specific provision that this substitute should be made in order by the rule itself, but the majority of the committee did not see fit to incorporate it in the rule, so that the chance of getting a direct vote upon the Ketcham substitute for the pending bill will have to depend upon the ruling of the Chairman of the Committee of the Whole on whether or not the Ketcham substitute is a germane substitute to the bill which will be presented by the committee.

From the brief study I have been able to give to the two bills from a parliamentary standpoint, I am clearly of the opinion that it is in order as a germane substitute, and I hope the Chairman of the Committee of the Whole will so rule, so that we may get a fair expression on that, because there are many men on the floor who believe that that is basically a sounder bill, and will come nearer in the long run to becoming a law, and getting an opportunity for a test, than the bill presented by the majority of the committee.

Mr. JOHNSON of Texas. Will the gentleman yield?

Mr. BANKHEAD. Yes.

Mr. JOHNSON of Texas. The bill the gentleman refers to is the export debenture bill as a substitute for the equalization fee—in other words the Ketcham-Jones plan?

Mr. BANKHEAD. Yes.

Mr. HASTINGS. Does the gentleman from Alabama say that he thinks that that would be a germane substitute for the McNary-Haugen bill?

Mr. BANKHEAD. I think it would, and if I had the time I could give the reasons for it from a parliamentary standpoint, but that is a question that has got to be passed on later.

Mr. HASTINGS. It was proposed to the Committee on Rules to make it in order, was it not?

Mr. BANKHEAD. A suggestion was made in the Committee on Rules by the minority to secure an opportunity to vote directly on the substitute under the rule.

Mr. HASTINGS. But the rule does not so provide.

Mr. BANKHEAD. It does not, and so the Ketcham-Jones bill will have to take its chances under the parlimentary rules as a substitute for the pending bill.

Now gentlemen, I do not intend to further trespass on your time other than to say that I hope out of the calm deliberation of the House, despite sharp antagonistic views on economical principles involved in the bill, we may secure the approval of the President of the United States to a bill which will give some substantial relief to the agricultural interests of this country.

It is not an imaginary proposition. I live in an almost purely agricultural section of the country, where my constituents are not large planters, but men of ordinary means. They are not owners of vast expanses of land, but land that is operated by themselves and their families in small tracts. I come in daily contact with the farmers in my district, and I know the depressed condition of the farmers of this country, and if Congress can within the limits of safe and approved economic principles of government do something to equalize their condition, their prosperity, and their profit with other branches of industry which have been favored by Congress, God knows the time has come to do it. [Applause.]

The SPEAKER. The question is on agreeing to the resolution.

The question was taken, and the resolution was agreed to.

The previous resolution was laid on the table.

### REFUND OF CERTAIN TAXES ON DISTILLED SPIRITS

Mr. HAWLEY. Mr. Speaker, I call up for consideration the bill H. R. 12733, a privileged bill from the Committee on Ways and Means.

The Clerk read the bill, as follows:

A bill (H. R. 12733) to authorize the refund of certain taxes on distilled spirits

*Be it enacted, etc.,* That in addition to the authority contained in the act entitled "An act to refund taxes paid on distilled spirits in certain cases," approved February 11, 1925, the Commissioner of Internal Revenue may allow the claim of the owner—whether the distiller or his successor or other person—for the refund of taxes paid—whether by such owner or any other person—in excess of $2.20 per proof gallon on any domestic distilled spirits which are now in a tax-paid warehouse operated in connection with and contiguous to an internal-revenue bonded warehouse, if proof satisfactory to the Commissioner of Internal Revenue is furnished of the ownership and identity of the distilled spirits as to which the refund is claimed, and of the amount of tax paid thereon. The Commissioner of Prohibition may direct that any spirits on which a refund of tax is paid under this act shall be removed to and stored in a warehouse designated by him.

Mr. HAWLEY. Mr. Speaker, I ask unanimous consent that the bill be considered in the House as in Committee of the Whole.

The SPEAKER. The gentleman from Oregon asks unanimous consent that the bill be considered in the House as in Committee of the Whole. Is there objection?

Mr. LAGUARDIA. Reserving the right to object, this has come up rather suddenly on us—will there be any debate?

Mr. HAWLEY. If the House desires an explanation, I shall be glad to give it.

Mr. LAGUARDIA. There ought to be debate. I know of one instance when we were stuck here and the bill was called up to refund money on liquor in bond when there were only a few of the beneficiaries of the bill in this country. I think a bill of this kind to refund money or taxes ought to have some discussion on it, and for one I am going to demand information.

The SPEAKER. Is there objection to the request of the gentleman from Oregon?

There was no objection.

Mr. HAWLEY. Mr. Speaker, in the act of February 11, 1925, provision was made for the refunding of the difference between $2.20 per gallon, which is the tax on spirits used for nonbeverage purposes, and whatever was paid by the people who owned the liquors. That refund was limited to the distillers who had the liquors on their premises. It so happens that in the execution of the prohibition law a quantity of this liquor was put in concentration warehouses, and that automatically removed it from the operation of the act of February 11, 1925. A small amount had changed hands. It was intended in the act of February 11, 1925, that the difference between the $2.20 tax for nonbeverage purposes, and what was paid should be refunded after the beverage privilege had been removed, to all those who had this liquor on which they had paid the beverage tax.

Mr. LAGUARDIA. How much of this liquor is supposed to be in concentration warehouses now?

Mr. HAWLEY. Whatever was transferred there I think is still there. I do not have the amount. The total amount of this refund will be $147,000.

Mr. LAGUARDIA. I say right now that 75 per cent of the liquor that is supposed to be in warehouses is not there.

Mr. HAWLEY. The bill provides that the commissioner shall identify the liquor so that whether it is in the concentration warehouse or has been returned to the distiller, the liquor must be positively identified before the refund will be authorized.

Mr. LAGUARDIA. By whom?

Mr. HAWLEY. By the Commissioner of Internal Revenue.

Mr. GARNER of Texas. And is it not a fact that in the hearings before the Committee on Ways and Means we asked for the opinion of the Treasury Department and they appeared before us?

Mr. HAWLEY. Yes.

Mr. GARNER of Texas. And the Commissioner of Prohibition indorsed the measure.

Mr. HAWLEY. Yes; their letters are in the report.

Mr. GARNER of Texas. Also an inquiry was made as to whether it interfered with the President's financial policy.

Mr. HAWLEY. And the Secretary of the Treasury says that it does not.

Mr. LAGUARDIA. It is not the financial policy that we are questioning just now.

Mr. HAWLEY. Mr. Speaker, if there are no further questions I ask for a vote.

The SPEAKER. The Clerk will report the bill for amendment.

The Clerk again read the bill.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. HAWLEY, a motion to reconsider the vote by which the bill was passed was laid on the table.

### PNEUMATIC-TUBE SERVICE, NEW YORK CITY

Mr. ELLIOTT. Mr. Speaker, I ask unanimous consent to take from the Speaker's table and pass H. R. 13171, authorizing the Secretary of the Treasury to accept a franchise from the government of the city of New York to change the routing of the pneumatic-tube service between the customhouse and the present appraisers' stores building, and for other purposes, which I send to the desk.

The SPEAKER. The Clerk will report the bill.

The Clerk read the bill, as follows:

*Be it enacted, etc.*, That the Secretary of the Treasury is hereby authorized, incident to the acquisition of a new appraisers' stores building in the city of New York, under the act of Congress approved March 4, 1927, to accept a franchise from the government of the city of New York to change the routing of the pneumatic-tube service between the customhouse and the present appraisers' stores building to connect with the new appraisers' stores building, and to enter into a contract with said city to abide by the terms, conditions, and requirements of said franchise.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. GARNER of Texas. Mr. Speaker, reserving the right to object, will the gentleman state whether this comes with a unanimous report from his committee?

Mr. ELLIOTT. It is unanimously reported and it is an emergency case, because they are constructing this building and it is necessary to get this new franchise so that they can work this in with the building.

The SPEAKER. Is there objection?

There was no objection.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider the vote by which the bill was passed was laid on the table.

### PAN AMERICAN UNION OFFICE BUILDING

Mr. ELLIOTT. Mr. Speaker, I ask unanimous consent to take from the Speaker's table and pass the bill H. R. 12899, authorizing the erection for the use of the Pan American Union of an office building on the square of land lying between Eighteenth Street, C Street, and Virginia Avenue NW., in the city of Washington, D. C., which I send to the desk.

The SPEAKER. The gentleman from Indiana asks unanimous consent for the present consideration of the bill, which the Clerk will report.

The Clerk read the bill, as follows:

*Be it enacted, etc.*, That there is hereby authorized and permitted to be erected an office building for the use of the Pan American Union on the triangular piece of ground owned by the United States, bounded on the north by C Street NW., on the east by Eighteenth Street NW., and on the south by Virginia avenue NW., the plans for the said building to be subject to the approval of the National Commission of Fine Arts.

SEC. 2. The Director of Public Buildings and Public Parks of the National Capital is hereby authorized and directed to remove at the proper time the temporary Government buildings now on the site described in section 1.

SEC. 3. The building which may be erected under the authority of this act shall be exempt from all taxation so long as it is occupied and used for the purposes herein authorized.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. LAGUARDIA. Mr. Speaker, reserving the right to object, the bill provides for tax exemption on this building, which is proper, and the bill also provides that the building must be used by the Pan American Union. However, it seems to me that we ought to provide that it must be for the sole use of this organization, as otherwise they may rent office space in the building, and surely they are not entitled to exemption from taxes if they have any income from the building. That is the rule that we follow in New York City when we grant tax exemption to buildings for charitable or semipublic use. We provide that there must be no income from the building, and that it must be for the sole use of the purpose for which the tax exemption is granted. I think those words should be inserted in the bill.

Mr. CHINDBLOM. Mr. Speaker, will the gentleman yield?

Mr. ELLIOTT. Yes.

Mr. CHINDBLOM. It seems to me, if the gentleman will permit, that this is a different case from the ordinary one where taxes are exempted from property used for domestic purposes. This property is being used by the Pan American Union, and any proceeds, if there were any from the use of that property, would also be used for the purposes of the Pan American Union. We are housing the Pan American Union as a matter of international courtesy.

Mr. LAGUARDIA. We must also protect property that pays taxes, and surely we should not permit tax-exempt property to enter into competition with an office building next door which is paying taxes. That is the purpose of my proposed amendment. That is the reason why other property owners do not object, as long as the use of the building is limited to that specific purpose.

Mr. CHINDBLOM. The bill indicates that this building shall be used only for the Pan American Union, but if they should get a little revenue out of the use of one of the halls and that revenue goes into the funds of the Pan American Union, to which we contribute by appropriations ourselves, I do not see why that would be objectionable.

Mr. LANHAM. It is not contemplated, of course, that this building will be used for any other purpose than the purposes

of the Pan American Union. It could not be used for any such purpose as the gentleman has suggested. So far as the gentleman's proposed amendment is concerned, I would have no objection to it. What I am wondering about is whether or not it is not contemplated that it is to be used for other purposes than occupation by the Pan American Union, and if it is not so intended to be used it would not seem to be advisable to put in such an amendment. But I have no objection whatever to the amendment.

Mr. ELLIOTT. Inasmuch as this building is to be erected on Government ground and it is provided in the bill that it is to be used for the Pan American Union, we could easily prevent its use for any other purpose.

Mr. LANHAM. The grant is made by act of Congress.

Mr. LAGUARDIA. This is a monumental building. It is the intent of the bill that it shall not be used for any other purpose.

Mr. ELLIOTT. This bill is drafted in accordance with the original bill, which authorized the Pan American Union to build upon that ground.

Mr. LANHAM. I have no objection in the world to such an amendment, and I do not think the chairman would have any objection to it. It is not in contemplation to use it for any other purpose.

Mr. LAGUARDIA. Mr. Speaker, I would suggest that in line 4, after the article "the," we insert the word "sole," so that it will read: "for the sole use of the Pan American Union."

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. LAGUARDIA. Mr. Speaker, is an amendment in order if we consider it in the House?

The SPEAKER. It is. The Chair hears no objection. The Clerk will report the bill for amendment.

The Clerk read as follows:

*Be it enacted, etc.*, That there is hereby authorized and permitted to be erected an office building for the use of the Pan American Union on the triangular piece of ground owned by the United States bounded on the north by C Street NW., on the east by Eighteenth Street NW., and on the south by Virginia Avenue NW., the plans for the said building to be subject to the approval of the National Commission of Fine Arts.

Mr. LAGUARDIA. Mr. Speaker, I offer the following amendment.

The SPEAKER. The Clerk will report the amendment offered by the gentleman from New York.

The Clerk read as follows:

Amendment offered by Mr. LAGUARDIA: Page 1, line 4, after the word "the" where it first occurs, insert the word "sole."

The SPEAKER. The question is on agreeing to the amendment.

The amendment was agreed to.

The SPEAKER. The Clerk will read.

The Clerk resumed and concluded the reading of the bill.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider the last vote was laid on the table.

The SPEAKER. Without objection, the title will be amended.

There was no objection.

### MIKE CUMPSTON

Mr. JOHNSON of Texas rose.

The SPEAKER. Does the gentleman from Texas desire recognition?

Mr. JOHNSON of Texas. Yes. I ask unanimous consent to proceed for five minutes.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. JOHNSON of Texas. Mr. Speaker, Members of Congress have many and varied requests from their constituents, but a few days since a petition reached me from my home county, which was out of the ordinary.

It told of the heroism of a 16-year-old boy, to whom the citizens of Blooming Grove, Tex., thought that a Carnegie hero medal should be awarded.

On Sunday, April 15 last, a boat capsized on a pond near Blooming Grove, and three colored youths, none of whom could swim, were precipitated into the water and in the act of drowning. An older brother of one of the boys, who was standing on the bank, although he could swim, became terror stricken and failed to go to their relief.

Mike Cumpston, a white boy, member of the Boy Scout organization and a student in the high school, plunged into the water without a moment's delay, and finally succeeded, unaided and at the risk of his own life, in saving two of them, and made every effort to save the life of the third.

The drowning boys, in their fright and desperation, fought Cumpston as he was trying to rescue them, and it was with great difficulty that the rescue was effected. He first swam with one to the shore, then returned and rescued the other, but by the time he made the trip for the third boy, it was too late; although he brought the body ashore, life was extinct.

We hear much criticism of what is called the "flaming youth" of to-day, of their devotion to pleasure, of their thoughtlessness and the absence of idealism.

We likewise hear of race prejudice, and the South from whence I come has been criticized on this floor and elsewhere as being unjust and unkind to the colored race.

As against these undeserved criticisms of the youth of the land and the people of the South, I am pleased to bring to your attention the picture of this splendid young American, who risked his own life that those of another race might live.

I wanted the membership of this House to know the name of Mike Cumpston, and to have his heroic deed perpetuated in the records of this historic body.

I have called this act to the attention of the Carnegie Hero Fund Commission, and it is to be hoped that in recognition thereof, a Carnegie hero medal will be awarded, which is so richly deserved. [Applause.]

### FURTHER MESSAGE FROM THE SENATE

A further message from the Senate, by Mr. Craven, its principal clerk, announced that the Senate agrees to the amendment of the House of Representatives to the bill (S. 1368) entitled "An act to extend the benefits of the employees' compensation act of September 7, 1916, to Martha A. Hauch."

The message also announced that the Senate had concurred in the following concurrent resolution:

House Concurrent Resolution 32

*Resolved by the House of Representatives (the Senate concurring)*, That the action of the Speaker of the House of Representatives and the Vice President in signing the joint resolution (H. J. Res. 244) entitled "Joint resolution authorizing the modification of the adopted project for Oakland Harbor, Calif.," be rescinded and that in the enrollment of said joint resolution the word "June" be stricken out and the word "January" be inserted in lieu thereof.

### SENATE ENROLLED BILL SIGNED

The SPEAKER announced his signature to an enrolled bill of the Senate of the following title:

S. 2126. An act to provide for compensation of Ona Harrington for injuries received in an airplane accident.

### ADJOURNMENT

Mr. TILSON. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 4 o'clock and 6 minutes p. m.) the House adjourned until to-morrow, Thursday, April 26, 1928, at 12 o'clock noon.

## COMMITTEE HEARINGS

Mr. TILSON submitted the following tentative list of committee hearings scheduled for Thursday, April 26, 1928, as reported to the floor leader by clerks of the several committees:

### COMMITTEE ON THE JUDICIARY

(10 a. m.)

A bill for the establishment of two narcotic farms for confinement and treatment of persons addicted to the use of habit-forming narcotic drugs who have been convicted of offenses against the United States (H. R. 12781).

### COMMITTEE ON EDUCATION

(10.30 a. m.)

To create a department of education (H. R. 7).

### COMMITTEE ON NAVAL AFFAIRS

(10.30 a. m.)

To consider private bills on the calendar.

### COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE

(10 a. m.)

Granting the consent of Congress to the Alabama State Bridge Corporation, a body corporate under the laws of Alabama, to construct bridges across the Tennessee, Tombigbee, Warrior, Alabama, and Coosa Rivers, at or near certain points within the State of Alabama (H. R. 12902).

(10.45 a. m.)

Providing that Congress encourage the use of American materials in American-made goods (H. Con. Res. 19).

COMMITTEE ON THE MERCHANT MARINE AND FISHERIES

(10.30 a. m.)

A bill to provide for a five-year construction and maintenance program for the United States Bureau of Fisheries (H. R. 13151).

## EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

463. A communication from the President of the United States, transmitting supplemental estimates of appropriation for the War Department for the fiscal years ending June 30, 1928 and 1929, amounting in all to $2,962,388.52; also a draft of proposed legislation affecting existing appropriation of the War Department (H. Doc. No. 245); to the Committee on Appropriations and ordered to be printed.

464. A letter from the Secretary of the Navy, transmitting draft of a proposed bill to authorize the Secretary of the Navy to proceed with the construction of certain public works, and for other purposes; to the Committee on Naval Affairs.

465. A communication from the President of the United States, transmitting supplemental estimate of appropriation for the Department of Agriculture, amounting to $1,889,994, to enable the Secretary of Agriculture to assist the State of Kentucky in reconstructing roads and bridges damaged by the flood of 1927 (H. Doc. No. 246); to the Committee on Appropriations and ordered to be printed.

## REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of Rule XIII,

Mr. RAMSEYER: Committee on Rules. H. Res. 176. A resolution for the consideration of S. 3555, an act to establish a Federal farm board to aid in the control and disposition of the surplus of agricultural commodities in interstate and foreign commerce; without amendment (Rept. No. 1375). Referred to the House Calendar.

Mr. REECE: Committee on Military Affairs. H. R. 12621. A bill to authorize the Secretary of War to lend War Department equipment for use at annual State convention of the American Legion of New York; without amendment (Rept. No. 1376). Referred to the House Calendar.

Mr. ELLIOTT: Committee on Public Buildings and Grounds. H. R. 13171. A bill authorizing the Secretary of the Treasury to accept a franchise from the government of the city of New York to change the routing of the pneumatic-tube service between the customhouse and the present appraisers' stores building, and for other purposes; without amendment (Rept. No. 1380). Referred to the Committee of the Whole House on the state of the Union.

## REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of Rule XIII,

Mr. HILL of Washington: Committee on the Public Lands. S. 3338. An act authorizing the sale of certain lands on Petit Jean Mountain near Morrilton, Ark., for use by the Young Men's Christian Association of Arkansas; without amendment (Rept. No. 1378). Referred to the Committee of the Whole House.

Mr. HILL of Washington: Committee on the Public Lands. S. 3602. An act to quiet title and possession with respect to certain lands in Faulkner County, Ark.; without amendment (Rept. No. 1379). Referred to the Committee of the Whole House.

## CHANGE OF REFERENCE

Under clause 2 of Rule XXII, the Committee on Claims was discharged from the consideration of the bill (H. R. 11221) for the relief of Michael H. Lorden, and the same was referred to the Committee on War Claims.

## PUBLIC BILLS AND RESOLUTIONS

Under clause 3 of Rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. EVANS of Montana: A bill (H. R. 13317) an act to amend an act for the relief of certain tribes of Indians in Montana, Idaho, and Washington; to the Committee on Indian Affairs.

By Mr. HUDSPETH: A bill (H. R. 13318) authorizing the Val Verde County Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Rio Grande at or near Langtry, Tex.; to the Committee on Interstate and Foreign Commerce.

By Mr. BUTLER: A bill (H. R. 13319) to authorize the Secretary of the Navy to proceed with the construction of certain public works, and for other purposes; to the Committee on Naval Affairs.

By Mr. CURRY: A bill (H. R. 13320) to authorize the Secretary of the Navy to proceed with the construction of certain public works, and for other purposes; to the Committee on Naval Affairs.

By Mr. HULL of Tennessee: A bill (H. R. 13321) to repeal certain provisions of the tariff act of 1922; to the Committee on Ways and Means.

By Mr. TAYLOR of Colorado: A bill (H. R. 13322) to establish an additional United States office in the State of Colorado; to the Committee on the Public Lands.

By Mr. BROWNE: A bill (H. R. 13323) to create a special highway fund from the proceeds of the sale of surplus war material, highway equipment, and supplies to the Government of France; to the Committee on Roads.

By Mr. VESTAL: Joint resolution (H. J. Res. 286) to provide for the expenses of participation by the United States in the international conference for the purpose of revising the International Convention for the Protection of Literary and Artistic Works; to the Committee on Foreign Affairs.

## PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BACHARACH: A bill (H. R. 13324) granting an increase of pension to Anna A. Curley; to the Committee on Invalid Pensions.

Also, a bill (H. R. 13325) granting an increase of pension to Caroline A. Dubell; to the Committee on Invalid Pensions.

Also, a bill (H. R. 13326) granting an increase of pension to Rebecca A. Swain; to the Committee on Invalid Pensions.

By Mr. BUCKBEE: A bill (H. R. 13327) granting an increase of pension to Laura B. Clark; to the Committee on Invalid Pensions.

By Mr. DRANE: A bill (H. R. 13328) to provide for a survey of San Carlos Bay, Fla., from Punta Rassa to the Gulf of Mexico; to the Committee on Rivers and Harbors.

Also, a bill (H. R. 13329) granting a pension to Fannie M. Fisher; to the Committee on Pensions.

By Mr. HUDSPETH: A bill (H. R. 13330) granting a pension to Samuel D. Glenn; to the Committee on Pensions.

By Mr. JAMES: A bill (H. R. 13331) to authorize the President to present the distinguished flying cross to Ehrenfried Gunther von Huenefeld, James C. FitzMaurice, and Hermann Koehl; to the Committee on Military Affairs.

By Mr. KELLY: A bill (H. R. 13332) granting an increase of pension to Sarah A. Babb; to the Committee on Invalid Pensions.

By Mr. MAPES: A bill (H. R. 13333) granting a pension to Thomas Kinnane; to the Committee on Pensions.

By Mr. MILLER: A bill (H. R. 13334) for the relief of Frederick D. Swank; to the Committee on Claims.

By Mr. SPEAKS: A bill (H. R. 13335) granting an increase of pension to Sarah A. McFarland; to the Committee on Invalid Pensions.

By Mr. VESTAL: A bill (H. R. 13336) granting a pension to Mary D. Heistand; to the Committee on Invalid Pensions.

## PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

7192. By Mr. ARNOLD: Petition of citizens of Centralia, Ill., urging the passage of the Civil War pension bill; to the Committee on Invalid Pensions.

7193. By Mr. BACON: Petition of sundry residents of Jamaica, N. Y., and vicinity, urging passage of House bill 13143, to adjust salaries of customs employees; to the Committee on Ways and Means.

7194. By Mr. BOYLAN: Resolution adopted by the United Spanish War Veterans, of Oswego, N. Y., favoring Joint Reso-

lution 273, introduced by Congressman BRITTEN, of Illinois, in behalf of the officers and soldiers who participated in the Battle of Balangiga, Samar, P. I.; to the Committee on Military Affairs.

7195. Also, petition of W. H. Bond, president of the National Association United States Customs Inspectors, favoring House bill 13143, increasing the salaries of custom inspectors and employees; to the Committee on Ways and Means.

7196. Also, resolution adopted by the Central Trades and Labor Council of Greater New York and Vicinity, favoring the Dale-Lehlbach retirement bill and the Kelly postal policy bill; to the Committee on the Civil Service.

7197. Also, petition of Allied Printing Trades Council of Greater New York, favoring the Griest postal bill; to the Committee on the Post Office and Post Roads.

7198. Also, petition of Bindery Women's Union No. 34, of the International Brotherhood of Bookbinders of New York, favoring the Griest postal bill; to the Committee on the Post Office and Post Roads.

7199. Also, petition of Paper Cutters, Binding Machine Operators, and Embossers Protective Union No. 119, New York, N. Y., favoring the Griest postal bill; to the Committee on the Post Office and Post Roads.

7200. Also, petition of Mailers' Union No. 6, International Typographical Union, New York, N. Y., favoring the Griest postal bill; to the Committee on the Post Office and Post Roads.

7201. By Mr. CHALMERS: Petition urging an increase in pension for all Civil War veterans and widows of veterans, signed by residents of Toledo, Ohio; to the Committee on Invalid Pensions.

7202. By Mr. COHEN: Petition from a number of constituents of the seventeenth New York district, in favor of House bill 13143, a bill to adjust salaries of customs employees; to the Committee on Ways and Means.

7203. By Mr. CULLEN: Resolution by the Kings County Dental Society, in re House bill 5766; also, resolution by the Paper Cutters, Binding Machine Operators, and Embossers' Protective Union No. 119, in re postal bills; to the Committee on Interstate and Foreign Commerce.

7204. Also, resolutions of the trade-union officers of the Central Union Label Council, indorsing certain bills before the Congress; to the Committee on the Post Office and Post Roads.

7205. By Mr. DRANE: Petition of citizens of Tampa, Fla., against compulsory Sunday observance legislation (H. R. 78); to the Committee on the District of Columbia.

7206. By Mr. GRIEST: Petition of Annie B. McClure, Christiana, Pa., indorsing House bill 11410, introduced by Congressman SPROUL of Kansas, for the purpose of enforcing the eighteenth amendment to the Constitution more efficiently and preventing evasions thereof; to the Committee on the Judiciary.

7207. By Mr. HAWLEY: Petition of residents of Ashland, Oreg., and vicinity, requesting increases in pension for veterans of the Civil War and their dependents; to the Committee on Invalid Pensions.

7208. By Mr. HICKEY: Petition of Kenneth Clark and other residents of South Bend, Ind., urging passage of a bill increasing the pensions of Civil War veterans and widows of veterans; to the Committee on Invalid Pensions.

7209. By Mr. HOWARD of Nebraska: Petition signed by H. R. Steiner, of Neligh, Nebr., and some 40 other citizens of that city, who plead for the passage of legislation favoring more adequate pensions for the relief of veterans of the Civil War and the widows of veterans of the Civil War; to the Committee on Invalid Pensions.

7210. By Mr. KEARNS: Petition of sundry citizens of Loveland, Ohio, urging enactment of legislation for the relief of Civil War soldiers and their dependents; to the Committee on Invalid Pensions.

7211. By Mr. KINDRED: Resolution of the Grasselli Chemical Co., of New York, protesting against the passage of the Wyant bill (H. R. 8127); to the Committee on Expenditures in the Executive Departments.

7212. By Mr. KING: Petition urging that immediate steps be taken to bring to a vote a Civil War pension bill in order that relief may be accorded to needy and suffering veterans and widows, signed by Ida Dorney and 25 other citizens of my district and circulated and sent by Barbara Schinleber, of Hooppole, Ill.; to the Committee on Invalid Pensions.

7213. By Mr. KORELL: Petition of citizens of Portland, Oreg., urging the enactment of legislation for an increase in pensions for Civil War veterans and widows of veterans; to the Committee on Invalid Pensions.

7214. By Mr. KVALE (by request): Petition of Emil G. Johnson, assistant manager for Land o' Lakes Creameries (Inc.), Minneapolis, Minn., protesting against enactment of Senate bill 1752; to the Committee on the Post Offices and Post Roads.

7215. Also, petition of several residents of Carlos, Minn., urging passage of the National Tribune's Civil War pension bill; to the Committee on Invalid Pensions.

7216. By Mr. LINDSAY: Petition of Central Trades and Labor Council of Greater New York and Vicinity, expressing hearty approval of the Lehlbach retirement bill (H. R. 25); to the Committee on the Civil Service.

7217. Also, petition of Central Trades and Labor Council of Greater New York and Vicinity, expressing sympathetic accord with the aims and aspirations of postal employees as presented in House bill 89, known as the Kelly postal policy bill; to the Committee on the Post Office and Post Roads.

7218. Also, petition of National Association of United States Customs Inspectors, Boston, Mass., favoring House bill 13143, providing for increased salaries paid employees of the customs service; to the Committee on Ways and Means.

7219. By Mr. McREYNOLDS: Petition signed by 36 voters of Reliance, Polk County, Tenn., urging that immediate steps be taken to bring to a vote a Civil War pension bill carrying the rates proposed by the National Tribune; to the Committee on Invalid Pensions.

7220. By Mr. MORROW: Petition of citizens of Estancia, N. Mex., indorsing George-Menges bill, vocational education; to the Committee on Education.

7221. By Mr. O'CONNELL: Petition of the National Association United States Customs Inspectors, favoring the passage of the Bacharach bill (H. R. 13143); to the Committee on Ways and Means.

7222. By Mr. FITZPATRICK: Petition signed by citizens of the Bronx, New York City, and the city of Yonkers, N. Y., favoring House bill 13143, to adjust the salaries of customs employees; to the Committee on Ways and Means.

7223. By Mr. O'CONNELL: Petition of the Central Trades and Labor Council of Greater New York, favoring the passage of the Dale-Lehlbach retirement bills (S. 1727 and H. R. 25); to the Committee on the Civil Service.

7224. Also, petition of the Central Trades and Labor Council of Greater New York and Vicinity, favoring the passage of the Kelly bill (H. R. 89); to the Committee on the Post Office and Post Roads.

7225. By Mr. QUAYLE: Petition of Central Trades and Labor Council of Greater New York and Vicinity, favoring the passage of the Lehlbach-Dale retirement bill (S. 1727 and H. R. 25); to the Committee on the Civil Service.

7226. Also, petition of Central Trades and Labor Council of Greater New York and Vicinity, favoring the passage of the Kelly postal policy bill (H. R. 89); to the Committee on the Post Office and Post Roads.

7227. Also, petition of National Association United States Customs Inspectors, of Boston, Mass., favoring the passage of the Bacharach bill (H. R. 13143) for increase in salary for customs service; to the Committee on Ways and Means.

7228. By Mr. SCHNEIDER: Petition of numerous citizens of Lena, Wis., urging that the Civil War pension bill for relief of needy and suffering veterans and widows of veterans be brought to an early vote and enacted; to the Committee on Invalid Pensions.

7229. By Mr. SWING: Petition of residents of Orange, Calif., in behalf of veterans and widows of the Civil War; to the Committee on Invalid Pensions.

7230. Also, petition of residents of San Bernardino, Calif., in behalf of veterans and widows of veterans of the Civil War; to the Committee on Invalid Pensions.

7231. By Mr. THURSTON: Petition of 53 citizens of Afton, Iowa, and vicinity, petitioning the Congress to enact legislation to increase the pension of Civil War veterans and their dependents; to the Committee on Invalid Pensions.

7232. By Mr. VESTAL: Petition relative to pension legislation for Civil War survivors; to the Committee on Invalid Pensions.

7233. By Mr. WASON: Petition of Stillman H. Baker and 31 other residents of Hillsborough, N. H., urging that immediate steps be taken to bring to a vote a Civil War pension bill in order that relief may be accorded to needy and suffering veterans and widows; to the Committee on Invalid Pensions.

7234. By Mr. WYANT: Petition of Fred G. Bowers, 518 Henry Street, North Belle Vernon, Pa., favoring passage of Senate bill 4041 and House bill 5477; to the Committee on World War Veterans' Legislation.

7235. Also, petition of citizens of Donegal, Westmoreland County, Pa., favoring passage of National Tribune's Civil War pension bill; to the Committee on Invalid Pensions.

## SENATE

THURSDAY, *April 26, 1928*

The Chaplain, Rev. ZeBarney T. Phillips, D. D., offered the following prayer:

Almighty God and Heavenly Father, in whose being simplicity and mystery of life do meet together, cleanse our prayers with the sanctity of reason, and ennoble our reasonings with the majesty of prayer. Open our eyes, that we may see with cloudless vision through all the devious ways of self-worn paths the eternal highway of our God. Fill our hearts with such love toward Thee as will enable us through pity's tears to look upon the sorrows of mankind and to yield ourselves to the uplift of Thy children. Confirm in us the belief in the royalty of man and the sovereignty of citizenship, that in all things the matchless glory of this Republic may be revealed. Grant this, O Father, through Jesus Christ our Lord. Amen.

The Chief Clerk proceeded to read the Journal of the proceedings of the legislative day of Friday, April 20, 1928, when, on request of Mr. CURTIS and by unanimous consent, the further reading was dispensed with and the Journal was approved.

### MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Chaffee, one of its clerks, announced that the House had passed the bill (S. 1609) recognizing the heroic conduct, devotion to duty, and skill on the part of the officers and crews of the U. S. S. *Republic*, *American Trader*, *President Roosevelt*, *President Harding*, and the British steamship *Cameronia*, and for other purposes, with an amendment, in which it requested the concurrence of the Senate.

The message also announced that the House had passed the bill (S. 3437) to provide for the conservation of fish, and for other purposes, with amendments, in which it requested the concurrence of the Senate.

The message further announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H. R. 457. An act to create a board of local inspectors, Steamboat Inspection Service, at Hoquiam, Wash.;

H. R. 12733. An act to authorize the refund of certain taxes on distilled spirits;

H. R. 12899. An act authorizing the erection for the sole use of the Pan American Union of an office building on the square of land lying between Eighteenth Street, C Street, and Virginia Avenue NW., in the city of Washington, D. C.; and

H. R. 13171. An act authorizing the Secretary of the Treasury to accept a franchise from the government of the city of New York to change the routing of the pneumatic-tube service between the customhouse and the present appraisers' stores building, and for other purposes.

### CALL OF THE ROLL

Mr. CURTIS. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

| | | | |
|---|---|---|---|
| Ashurst | Fess | Locher | Sheppard |
| Barkley | Fletcher | McKellar | Shortridge |
| Bayard | Frazier | McMaster | Simmons |
| Bingham | George | McNary | Smith |
| Black | Gerry | Mayfield | Smoot |
| Blaine | Gillett | Metcalf | Steck |
| Blease | Glass | Moses | Steiwer |
| Borah | Gould | Neely | Stephens |
| Bratton | Greene | Norbeck | Swanson |
| Brookhart | Hale | Norris | Thomas |
| Broussard | Harris | Nye | Tydings |
| Capper | Harrison | Oddie | Tyson |
| Caraway | Hayden | Overman | Vandenberg |
| Couzens | Heflin | Phipps | Wagner |
| Curtis | Howell | Pittman | Walsh, Mass. |
| Cutting | Johnson | Ransdell | Walsh, Mont. |
| Dale | Jones | Reed, Pa. | Warren |
| Deneen | Kendrick | Robinson, Ark. | Waterman |
| Dill | Keyes | Robinson, Ind. | Wheeler |
| Edge | King | Sackett | |
| Edwards | La Follette | Schall | |

Mr. CURTIS. I was requested to announce that the Senator from West Virginia [Mr. GOFF] and the Senator from Idaho [Mr. GOODING] are detained in committee.

The VICE PRESIDENT. Eighty-two Senators having answered to their names, a quorum is present.

### CONSERVATION OF FISH

The VICE PRESIDENT laid before the Senate the amendments of the House of Representatives to the bill (S. 3437) to provide for the conservation of fish, and for other purposes, which were, on page 1, line 4, to strike out "and directed"; on page 1, line 6, after the word "fish," to insert "occasioned"; on page 1, line 6, after the word "constructed," to insert "or maintained"; and on page 1, line 7, to strike out "under the Interior Department."

Mr. JONES. I move that the Senate concur in the amendments made by the House.

The motion was agreed to.

### RECOGNITION OF HEROIC CONDUCT

The VICE PRESIDENT laid before the Senate the amendment of the House of Representatives to the bill (S. 1609) recognizing the heroic conduct, devotion to duty, and skill on the part of the officers and crews of the U. S. S. *Republic*, *American Trader*, *President Roosevelt*, *President Harding*, and the British steamship *Cameronia*, and for other purposes, which was, on page 2, to strike out lines 22 to 25, inclusive, and on page 3, to strike out lines 1 to 13, inclusive.

Mr. JONES. I move that the Senate disagree to the amendment of the House, ask a conference on the disagreeing votes of the two Houses thereon, and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the Vice President appointed Mr. JONES, Mr. MCNARY, and Mr. FLETCHER conferees on the part of the Senate.

### HOUSE BILLS REFERRED

The following bills were severally read twice by their titles and referred as indicated below:

H. R. 457. An act to create a board of local inspectors, Steamboat Inspection Service, at Hoquiam, Wash.; to the Committee on Commerce.

H. R. 12733. An act to authorize the refund of certain taxes on distilled spirits; to the Committee on Finance.

H. R. 12899. An act authorizing the erection for the sole use of the Pan American Union of an office building on the square of land lying between Eighteenth Street, C Street, and Virginia Avenue NW., in the city of Washington, D. C.; and

H. R. 13171. An act authorizing the Secretary of the Treasury to accept a franchise from the government of the city of New York to change the routing of the pneumatic-tube service between the customhouse and the present appraisers' stores building, and for other purposes; to the Committee on Public Buildings and Grounds.

### ROBERT W. STEWART, WITNESS

Mr. WALSH of Montana. Mr. President, I submit a privileged report from the Committee on Public Lands and Surveys, and ask that it may be read.

The VICE PRESIDENT. The clerk will read the report.

The Chief Clerk read the report (No. 897), as follows:

DISPOSITION OF CERTAIN LIBERTY BONDS ACQUIRED BY THE CONTINENTAL TRADING CO. (LTD.)

Mr. WALSH of Montana, from the Committee on Public Lands and Surveys, submitted the following report (to accompany S. Res. 207):

The Committee on Public Lands and Surveys respectfully reports:

That one Robert W. Stewart, who heretofore, on the 3d day of February, 1928, was, by order of the Senate, arrested by the Sergeant at Arms, he being by this committee charged with contempt in refusing to answer certain questions propounded to him by the committee proceeding under Senate Resolution 101, and who, having been taken from the custody of the said Sergeant at Arms by virtue of a writ of habeas corpus, was, subsequently, by order of the court issuing the same, remanded to such custody, from which order he prosecuted an appeal to the Court of Appeals for the District of Columbia and which appeal is now pending therein, appeared on the 24th day of April, 1928, before your said committee and made answer to the questions theretofore propounded to him and which he refused to answer, and likewise replied to all other pertinent questions propounded to him by your committee.

Wherefore your committee reports that the said witness, Robert W. Stewart, has purged himself of the contempt with which he stands charged before the Senate, and that accordingly its power to proceed further in the premises, as it is advised by counsel, Hon. George W. Wickersham, has ceased. The questions which the witness refused to answer are as follows:

1. "Mr. Stewart, do you know of anyone who received these bonds that the Continental Trading Co. are reported to have dealt in?"

2. "Colonel Stewart, have you discussed any of these bond transactions with Mr. Sinclair, or has Mr. Sinclair discussed any of these bond transactions with you?"

Touching the transaction so inquired of the witness told the committee when it last heard him that the contracts out of which the profits were realized which enabled the Continental Trading Co. (Ltd.) to purchase the bonds referred to in Senate Resolution 101, having been executed on the 17th day of November, 1921, on the 26th day of the same month he was told by H. S. Osler, the president of that com-

pany, that he, the witness, was entitled to share in the profits accruing to the said Continental Trading Co. from the said contracts; that thereupon he executed a trust agreement to one Roy J. Barnett under which he, the said Roy J. Barnett, should hold such profits in trust for the Standard Oil Co. of Indiana and the Sinclair Crude Oil Purchasing Co. as the interest of either might appear, which trust agreement was deposited and kept in the safety deposit box of the said witness; that thereafter from time to time until about June, 1923, packages of bonds were delivered to him by the said H. S. Osler, aggregating something less than $759,500 in amount; that such bonds as they were received by the witness were delivered to the said trustee, who deposited them in a safe in the office of the said witness, to which both he and the trustee had the combination; that the coupons of the said bonds maturing in June, 1922; December, 1922; June, 1923; and December, 1923, were clipped and bonds of the same denomination and in substantially the same amount were delivered by the said witness to the said trustee in exchange for such coupons, which were then deposited to the credit of the account of the said witness; that no coupons were clipped after December, 1923, in order to avoid publicity, secrecy having been enjoined from the beginning by the said witness of the said trustee, who was an employee of the Standard Oil Co. of Indiana, of which the said witness was the managing head; that on Friday or Saturday of last week the witness had for the first time conveyed information to the board of directors of his company of the facts hereinbefore cited. It was decided that the bonds, amounting in the aggregate to $759,500, should be turned over to the Sinclair Crude Oil Purchasing Co., which was done.

At the earlier hearing testimony was given by the said witness indicated by the following questions and answers and proceedings:

"Senator WALSH. Colonel, I suppose you have heard so much of the profits of this company, the Continental Trading Co., as were realized up to 1923 were invested in Government bonds, part of which have been traced to Secretary Fall, former Secretary Fall of the Interior——

"Mr. STEWART (interposing). I do not know whether any have been traced to Secretary Fall, and I do not know anything about the bonds. I never had anything to do with the distribution of any bonds.

"Senator WALSH. What, if anything, do you know about any of the bonds purchased by the Continental Trading Co.?

"Mr. STEWART. I never had anything to do with the Continental Trading Co.'s distribution of any bonds.

"Senator WALSH. That is not an answer to the question, Colonel.

"Mr. STEWART. I think it is.

"Senator WALSH. The question is, What do you know about them, whether you had anything to do with them?

"Mr. STEWART. Well, I didn't know anything about it.

"Senator WALSH. Now, let us get to this transaction by which the Sinclair Crude Oil——

"Mr. STEWART (interposing). I never had anything to do with the distribution by the Continental Trading Co. of any bonds.

"Senator WALSH. Do you know anything about the matter?

"Mr. STEWART. I don't know anything about it.

"Senator WALSH. What is that?

"Mr. STEWART. I don't know anything about it; that is, I don't remember anything about it.

"The CHAIRMAN. Mr. Stewart, do you know of anyone who received these bonds that the Continental Trading Co. is reported to have dealt in?

"Mr. STEWART. Senator NYE, I did not personally receive any of these bonds or make a dollar out of them; I personally did not make a dollar out of this transaction.

"The CHAIRMAN. That was not the question.

"Mr. STEWART. I have said that to you to make way for something else. I am a witness in a case which is now pending between the Government of the United States and some defendants. I have been interrogated in regard to these subjects by the counsel appointed to represent the United States in that case. From their interrogation of me I am of the opinion those are the issues which are going to be tried in that case, and I do not think that the line of interrogation here by this committee is within the jurisdiction of the committee under the laws of the United States. I do not think that the question is entirely pertinent to this inquiry, even."

After giving to the committee the information above summarized, the following proceedings were had and testimony given:

"Senator WALSH. Colonel, I want to call to your attention a question put to you when you were on the stand last, I read from page 190 of the testimony:

"'Senator WALSH. Colonel, I suppose you have heard so much of the profits of this company, the Continental Trading Co., as were realized up to 1923 were invested in Government bonds, part of which have been traced to Secretary Fall, former Secretary Fall, of the Interior——

"'Mr. STEWART (interposing). I do not know whether any have been traced to Secretary Fall, and I do not know anything about the bonds. I never had anything to do with the distribution of any bonds.'

"And at page 192:

"'Senator WALSH. What, if anything, do you know about any of the bonds purchased by the Continental Trading Co.?

"'Mr. STEWART. I never had anything to do with the Continental Trading Co.'s distribution of any bonds.

"'Senator WALSH. That is not an answer to the question, Colonel.

"'Mr. STEWART. I think it is.

"'Senator WALSH. The question is, What do you know about them; whether you had anything to do with them?'

"I think probably the stenographer omitted a word there, and I think the question should be 'What did you know about them, not whether you had anything to do with them'; but we will let that go. 'What do you know about them, whether you had anything to do with them?

"'Mr. STEWART. Well, I didn't know anything about it.

"'Senator WALSH. Now, let us get to this transaction by which the Sinclair Crude Oil——

"'Mr. STEWART (interposing). I never had anything to do with the distribution by the Continental Trading Co. of any bonds.

"'Senator WALSH. Do you know anything about the matter?

"'Mr. STEWART. I don't know anything about it.'

"Do you care to say anything about that testimony, Colonel?

"Mr. STEWART. I do not think so. I want to make it plain. What I meant there, I think, from what you read there, I assumed you were talking about the distribution of bonds to Mr. Fall or to somebody so that these bonds got into Mr. Fall's hands, but I never knew anything about those.

"Senator WALSH. You were referring to bonds which might come into the possession of Mr. Fall?

"Mr. STEWART. I assumed from what you read there that you referred to the bonds coming into the hands of Mr. Fall, and, as a matter of fact, all of the statements there are true.

"Senator WALSH. But, you will observe, Colonel, the question is, 'What, if anything, do you know about any of the bonds purchased by the Continental Trading Co.?'

"Mr. STEWART. I think my answer was I had nothing to do with their distribution.

"Senator WALSH. Your answer is, 'I never had anything to do with the Continental Trading Co.'s distribution of any bonds.'

"Mr. STEWART. I did not.

"Senator WALSH (reading):

"'Senator WALSH. That is not an answer to the question, Colonel.'

"And this is your answer to that question:

"'Mr. STEWART. I think it is.

"'Senator WALSH. The question is, What do you know about them, whether you had anything to do with?'

"And your answer is:

"'Mr. STEWART. Well, I didn't know anything about it.'

"Mr. STEWART. I assumed all the time, Senator WALSH, that you were talking about these Fall bonds. That is as I remember it now.

"Senator WALSH. Colonel, let me call your attention to the question. We start with the question: 'What, if anything, do you know about any of the bonds purchased by the Continental Trading Co.?'

"Mr. STEWART. Well, it may be we are working at cross-purposes and I do not understand you. That was my remembrance of what was in my mind when I was testifying here at that time. I didn't have anything to do with the distribution by the Continental Trading Co. of any of these bonds.

"Senator WALSH. Again I call your attention to the subsequent question, Colonel: 'The question is, What do you know about them, whether you had anything to do with them?' and your answer is: 'Well, I didn't know anything about it.'

"Mr. STEWART. I do not. I do not know anything about the distrbuton of those bonds.

"Senator WALSH. Well, you see, Colonel, you were not asked about the distribution of the bonds; you were asked: 'What do you know about any of the bonds purchased by the Continental Trading Co.?'

"Mr. STEWART. If you are putting that construction upon that, Senator, at this time, I did not understand it at the time, because I thought you were talking about the item of distribution of these bonds by the Continental Trading Co.

"Senator WALSH. You answer it, 'I never had anything to do with the distribution by the Continental Trading Co. of any bonds'; and I called your attention then to the fact that you had not answered the question. I did not ask you about the distribution of the bonds. I asked you what you knew about the bonds, and I said to you, for your information then, that was not the question, Colonel.

"Mr. STEWART. Senator, we will not fence about this matter. Just a moment. Now, I can not swear to-day that I know, of my own knowledge, where these bonds came from. The only thing I know about these bonds is that you have published a list of bonds here, and I have given you a list of bonds which will lead you to where these bonds came from if at one time they belonged to the Continental Trading Co. Mr. Osler did not tell me where these bonds came from.

He did not say these are Continental Trading Co. bonds. I did not know anything about their distribution, and I do not know anything about these bonds. As a matter of fact, Mr. Osler gave me these packages which he delivered to us, and when we opened them we found bonds in them, but of the history of those bonds I know nothing.

"Senator WALSH. He had told you that there would be some part of the profits in the Continental transaction coming to you?

"Mr. STEWART. Absolutely. Now, he had told me that long before there was a barrel of oil delivered upon those contracts, and that is the only time he ever talked to me.

"Senator WALSH. Exactly; in December, 1921.

"Mr. STEWART. Yes. Now, I assumed these were profits out of the Continental Trading Co., and I frankly told you I did not know where they came from. It may be that Osler got these bonds from some other source.

"Senator WALSH. From what other source could he——

"Mr. STEWART (interposing). Bless your heart, I do not know where Mr. Osler got the bonds any more than I know where you would get bonds.

"Senator WALSH. No; but if he gave you $750,000 of bonds, telling you that he was going to give you a part of the profits of the Continental Trading Co., there is no reason why you should not have the right to assume that they came from that source.

"Mr. STEWART. Supposing he gave me money instead of bonds?

"Senator WALSH. Yes.

"Mr. STEWART. Would I know where that money came from?

"Senator WALSH. But he told you that he was going to give you part of the profits of the Continental Trading Co.

"Mr. STEWART. He told me he was going to give me a participation in the profits. I told him I didn't want it. Where these bonds came from, I do not know.

"Senator WALSH. I do not remember whether you told us if you ever had any business transactions with Mr. Osler prior to this time or not, Colonel.

"Mr. STEWART. I do not remember any business transactions with Mr. Osler. I have known Mr. Osler a great many years, know him by reputation, know him personally; know his reputation is that of a great lawyer up in Canada.

"Senator WALSH. Yes; that is my recollection that you told us that before; and while you had known him you had never had any business transactions with him of any kind before?

"Mr. STEWART. I do not think so.

"Senator WALSH. But you did know, of course, that he was, or at least purported to be, the president of the Continental Trading Co.?

"Mr. STEWART. Yes, sir; I knew he was purported to be the president of the Continental Trading Co. at the time of the conference in New York.

"Senator WALSH. And he signed the contracts as such?

"Mr. STEWART. Yes, sir.

"Senator WALSH. And attached the seal of the company as such?

"Mr. STEWART. Well, I do not know whether he attached the seal or not.

"Senator WALSH. You do not know anything about that?

"Mr. STEWART. No. I know he purported to act as president.

"Senator WALSH. And knew that he had told you that there would be some of the profits in that transaction coming to you?

"Mr. STEWART. He told me he would give me a participation in some of those bonds, and I told him I did not want it.

"Senator WALSH. That is all."

Your committee further reports that prior to its call in response to which the witness Stewart appeared on the 24th day of April, 1928, it had secured information quite clearly indicating that a substantial amount of the bonds purchased by the Continental Trading Co., approximating a half million dollars, had passed into the possession of the said witness.

GERALD P. NYE.

Mr. WALSH of Montana. Mr. President, in explanation of the report just read I will state briefly that it recites that the witness, Robert W. Stewart, heretofore directed by the Senate to be arrested by the Sergeant at Arms, and who was arrested, for failure to answer questions propounded to him by the Committee on Public Lands and Surveys, proceeding under the provisions of resolution of the Senate No. 101, appeared on the 24th day of the present month and answered the questions which he theretofore had refused to answer, and answered all other pertinent questions which were asked him by the committee.

Whether or not on his last appearance Colonel Stewart was entirely frank and truthful in respect to the matters with relation to which he was interrogated, he did, as a matter of fact, answer all questions, and thereby, in the opinion of the committee and of its counsel, the Hon. George W. Wickersham, purged himself of the contempt; and thereupon the power of the Senate in the premises ceased.

I think perhaps heretofore I have explained that in a matter of this kind the Senate of the United States has no power to punish for contempt. Its power is coercive merely, and when there is no longer any occasion for coercion, its implied power thereupon ceases.

A witness refusing to testify before the Senate or a committee of the Senate may be imprisoned by the Senate indefinitely until he agrees to testify and does in fact testify. Thereupon, all power over him on the part of the Senate or either House of Congress ceases. But the Congress a good many years ago realized that a witness might subject either House to a great deal of embarrassment and put it to unnecessary trouble by refusing to testify, and then subsequently, when perhaps the situation was entirely different, coming forward and freely testifying. Accordingly, it passed an act making it a crime for any witness to refuse to answer pertinent questions addressed to him by a committee.

Acting under the provisions of that statute the circumstance of Colonel Stewart's refusing to testify was certified to the district attorney for the District of Columbia, and he has been indicted pursuant to that statute. That proceeding under the indictment so taken is not at all affected by his subsequent appearance and his willingness to testify. Of course, it might perhaps be adverted to in mitigation of any punishment that might be meted out to him by the court within the limits prescribed by the statute. If appeal is made in that direction, the circumstances under which he testified will properly be adverted to; and accordingly the committee has included in the report a paragraph to the effect that prior to the time that Colonel Stewart appeared in obedience to its last call the committee had secured information quite clearly indicating that practically the entire amount of bonds which came into his hands, $759,500, had been received theretofore by him.

Attention is also called in the report to testimony given by Colonel Stewart on his first appearance before the committee and testimony given on his later appearance on features of the inquiry which easily lead to the conclusion that there was an irreconcilable discrepancy between the testimony given by Colonel Stewart on his first appearance and his testimony given on the later appearance with respect to matters concerning which he could not possibly be mistaken.

I shall ask, Mr. President, the entry of two orders, the first as follows:

*Resolved*, That the order of the Senate heretofore made on the 3d day of February, 1928, directing the Sergeant at Arms to take into custody one Robert W. Stewart, and bring him before the bar of the Senate, is hereby vacated.

And the second order:

*Ordered*, That the Secretary of the Senate be, and he is hereby, directed to transmit a copy of the report submitted this day by the Committee on Public Lands and Surveys to the United States district attorney for the District of Columbia.

The VICE PRESIDENT. The question is on agreeing to the orders.

Mr. NORRIS. Mr. President, I do not want to take the Senator off the floor; but before those orders are voted on I desire to be heard.

Mr. NYE. Mr. President, since the recent appearance of Robert W. Stewart before the Committee on Public Lands and Surveys I have given considerable thought to what nature of report ought to be made to the Senate, and what nature of resolution ought to be asked of the Senate.

Personally, I am not inclined to agree that Mr. Stewart is any more entitled to have been excused from the contempt proceedings brought against him than Benedict Arnold is entitled to a resolution approved by the Senate excusing him for his treachery in his time; and yet, technically, he has freed himself from the charge which was filed by the Senate against him.

However, with all of these facts in mind, I yesterday jotted down what I thought ought to be the form of a resolution to be adopted by the Senate. Since that time I have been convinced that no one would fairly have a right to expect any Senator other than those who were members of the committee which has heard the testimony of Mr. Stewart to enter into any such resolution. However, in discussing the matter in the Committee on Public Lands and Surveys this morning I am convinced that my resolution not only speaks my own mind with respect to the conclusions which can be drawn at this time, but represents, too, the mind of every member of the Committee on Public Lands and Surveys who has followed these hearings at all. I therefore ask, merely for the information of the Senate, that I may read at this time such resolutions as I had drafted and thought to suggest as the resolutions to be adopted by the Senate.

Resolution

*Resolved*, That the order of the Senate contained in Senate Resolution 132 directing that one Robert W. Stewart be taken into custody and brought before the bar of the Senate by the Sergeant at Arms is hereby vacated, but in so vacating such order the Senate is mindful of the following facts and circumstances:

First. That the said Robert W. Stewart has appeared, not before the bar of the Senate, but before a committee thereof and answered those questions of the committee which he had previously declined to answer.

Second. That in his answer to at least one of those questions the said Robert W. Stewart plainly discloses that he could have given the same answer at the time when he chose to decline to answer without compromising himself as a witness in a certain court action. It will be recalled that he declined to answer on that ground. The question in point was: "Have you discussed any of these bond transactions with Mr. Sinclair, or has Mr. Sinclair discussed any of these bond transactions with you?" He declined to answer on the ground above cited until April 24, when he asked to have the question put to him again, when he said: "I do not remember any conversation I have had with Mr. Sinclair with regard to these bonds or any part of them." In view of the facts here stated, the truthfulness of his answer when finally made is not beyond question.

Third. That the transcript of his testimony before the committee discloses that the said Robert W. Stewart, before and after being given opportunity to attempt to purge himself of the contempt charges, instead of responding to questions asked of him in a full, clear, and complete manner, was evasive and in all probability did not tell all he knew about the purposes and affairs of the Continental Trading Co., information which the committee was ordered to gain if possible under Senate Resolution 101. The said Stewart admits in his testimony that he knew of that contract by which the Continental Trading Co. purchased and sold oil, thus creating the profits made and invested in Liberty loan bonds; admits that he tentatively guaranteed that contract; admits that he knew Mr. Osler as being one of the active heads of the Continental Trading Co.; admits that he personally received from Mr. Osler Liberty loan bonds upon the various occasions of their distribution; admits the total amount of bonds so received by him from Mr. Osler to have aggregated $759,000, which was a total like that known to have been received from the same source by the other three who shared in Continental Trading Co. profits; and yet, in spite of these admissions, denies any further knowledge of the purposes or activities of the said company and, with the information cited in this sentence, the sum and substance of information given by Mr. Stewart to the committee regarding the Continental Trading Co., he says under oath: "I have told you everything I know about it."

Fourth. That the said Stewart did not divulge the information which he now has divulged concerning his receiving a fourth share of the profits of the Continental Trading Co. until the committee had ferreted out that same knowledge without the aid of himself or his absent cohorts, who are spending prolonged vacations in Europe.

Fifth. That the order of arrest is vacated only because it is admitted that eventually the Senate must rule that technically the said Stewart has purged himself, or place itself in the light of persecutors.

*Resolved further*, That in view of the testimony of Robert W. Stewart, which finds him declaring under oath in February "I never had anything to do with the Continental Trading Co.'s distribution of any bonds," along with the proof now in evidence of the same Stewart's personal receipt of such bonds, a copy of the transcript of said testimony is hereby ordered to be submitted by the Secretary of the Senate to the district attorney for the District of Columbia with the request that the said attorney give study to the possibility of institution by him of proceedings in the courts of law against said Robert W. Stewart.

Mr. President, the great bulk of this which I have read has been incorporated in some measure in the report of the committee and in the resolution which has been presented by the Senator from Montana for that committee. I have only to add that that resolution is concurred in unanimously by the Committee on Public Lands and Surveys.

Mr. NORRIS obtained the floor.

Mr. HEFLIN. Mr. President, will the Senator yield to me to call up a bill and to ask unanimous consent for its passage? It is a very important bill, which I want to get to the House. If it leads to debate, I will withdraw it.

Mr. NORRIS. There is a resolution pending before the Senate now; but I have no objection.

Mr. HEFLIN. I will ask the Senator to go ahead with his remarks, and I shall call up the bill later.

Mr. NORRIS. Mr. President, before I discuss the action of the committee I want first to lay before the Senate what I believe to be the legal phase of this dilemma. The Senator from Montana has referred to it briefly and correctly, but I want to preface what I have to say by making a statement to the Senate which I think will clearly show the position now occupied by Mr. Stewart as a matter of law.

A witness refusing to answer a question propounded to him by a committee of the Senate, assuming that the committee has jurisdiction of the subject matter as to which it is making inquiry, and assuming that the question is material and proper, does by the act of refusal commit a crime under the laws of the United States. Punishment for that, however, is not the only punishment that that one act may bring upon him. He can be sent to jail, after proper arrest, and confined in jail until he answers the question. If he is confined in jail or is arrested and comes before the Senate and answers the question, he purges himself of the contempt of the Senate, and the Senate can go no further; but such action has no legal effect upon the prosecution of the same witness for his refusal to answer. His action may be offered in evidence in the trial, without any doubt, to affect the judge in administering punishment. If he shows that he has, prior to the trial and after the question was asked, properly answered the question, the court, of course, would take that into consideration in administering the punishment.

I am speaking of this because this is not the only case where the Senate has been unjustly treated and where its deliberations and its actions have been interfered with in different investigations by witnesses who have refused to answer questions.

The witness refused to answer a question in the investigation of Daugherty. Nothing was ever done about it. The case was carried to the Supreme Court, where the Supreme Court decided in favor of the Senate, but the session of the Congress had ended, some members of the committee were out of the Senate, and the object of the investigation had really lapsed, as far as the Senate was concerned, by the expiration of time.

In the investigation of the primary proceedings in Pennsylvania and in Illinois witnesses refused to answer, but after the election came before the committee and answered. One of them was Mr. Insull, who was in contempt of the Senate, but after the election, and when the importance of his testimony had practically disappeared, he submitted himself to the committee and answered. He ought to have been prosecuted just the same. The same thing happened in the Cunningham case, in Pennsylvania, where the witness refused to answer and in that case never did answer. In the Sinclair case Mr. Sinclair has been tried and found guilty for refusing to answer. His contempt case is on its weary way to the Supreme Court, and the other case is likewise.

What I want to call to the attention of the Senate is that if the Senate is going to let witnesses refuse to answer and then, when the very object of the testimony has disappeared on account of the lapse of time, come in and answer, and the Senate do nothing further, it might as well lie down to begin with; in other words, it is made a laughingstock all the way through and never will get anywhere with any witness who does not want to testify.

For this reason I object to one of these orders. It seems to me that while technically Mr. Stewart has purged himself of the contempt we ought distinctly to let it be known, when we pass the resolution, that we want it understood by the prosecuting officer that the fact that Stewart has purged himself shall not be taken by the prosecuting officer as any reason for ceasing to continue to prosecute him in the other case, where he has committed a crime by a refusal to answer.

Moreover, it seems to me, Mr. President, that instead of the Senate taking action through this committee it ought to have let Mr. Stewart make the first move. He was arrested on the warrant of the Senate. The direction of the warrant was to bring him to the bar of the Senate. He sued out a writ of habeas corpus, which is pending in court now. If the court decided against him, the order of the court would turn him back to the Sergeant at Arms, and the Sergeant at Arms would bring him to the bar of the Senate, where the questions he refused to answer would be propounded.

Why is the Senate going to take the initiative? If Mr. Stewart wanted to purge himself, why did he not dismiss his case? Why has his case continued to be pending? Why has not he said to his lawyers, "I am going to answer those questions; stop these proceedings," and let the court turn him back to the Sergeant at Arms and let him come in here and answer, which would have purged him? In other words, in reality we are dismissing this suit when it ought to have been that we should let Stewart make the move to purge himself.

I doubt very much whether the committee had any authority to hear him at all. I think the matter had passed out of the hands of the committee; it was in the hands of the Senate; the Senate had acted and had issued a warrant for Stewart's arrest; he had been arrested; and the direction of that warrant was to bring him to the bar of the Senate.

Now he comes along, after the time has lapsed, after the Sinclair trial has taken place—and that trial was his reason for not answering the question—and he comes to the committee and says, "Now I am ready to answer; it can not hurt Sinclair any now; I can answer"; and he answers. It seems to me the committee ought to have said, "You answer to the Senate. If you want to continue this trial in the Supreme Court to see whether the Senate has jurisdiction, that is your privilege; but if you want to quit that litigation, you stop it, and let the answer be made to the Senate instead of the committee."

Mr. NYE. Mr. President, will the Senator yield?

Mr. NORRIS. I yield.

Mr. NYE. In order that the record may be clear, I would like to have it noted at this point in the Senator's remarks that when on day before yesterday Mr. Stewart was before the committee and suggested that he would like to answer those questions I did maintain and contend at the time that I did not feel the committee had any right to hear his answers to those questions; that the committee had no right to serve for the Senate as a whole; that Mr. Stewart had been summoned to appear before the bar of the Senate; and that that was where he ought to appear.

Mr. NORRIS. I think that is so. It seems to me it is making a laughingstock of the Senate. We are establishing a precedent that any witness who does not want to testify can fool the Senate along for a year or two when a case is up, and when at his own sweet pleasure he wants to testify he can walk into the committee room and say, "Here I am; I am ready to answer." But I think that is more or less technical. I think the Senate, to preserve its own dignity, ought to do that. Not only to preserve its own dignity, but in order to preserve orderly procedure it should not permit itself to be led around by a witness in this way. That has seemed to be especially true when we consider the evidence and the testimony that Stewart gave.

Mr. BRATTON. Mr. President, will the Senator yield?

Mr. NORRIS. I yield.

Mr. BRATTON. I am very much interested in what the Senator is saying. The witness did appear before the committee and announced his willingness to answer the exact questions which he had declined to answer on a previous occasion. The Senator thinks that he should have come to the bar of the Senate. What more could the Senate itself do——

Mr. NORRIS. Not anything more.

Mr. BRATTON. If he came to the bar of the Senate and said, "I now am willing to answer those questions," what could the Senate do to preserve its dignity and orderly procedure any more than was done by the committee?

Mr. NORRIS. I do not think the Senate has preserved its dignity or orderly procedure as it is. There may be a difference of opinion about that. I do not want to criticize anybody who does not agree with me in that.

Mr. BRATTON. What I would like to get from the Senator from Nebraska is, What different course could the Senate have pursued than the committee pursued; that is, what else could it have done other than to let him answer the questions and completely purge himself and gain his freedom by doing so?

Mr. NORRIS. I have not claimed the Senate could do anything else, but it would have been doing it in an orderly way. Now, when the case comes up what will happen? The attorney for the Senate will appear and say, "We dismiss this case. The Senate is going to surrender, the Senate is wrong, the Senate is dismissing this case. The foundation is gone." If they had gone on in court, assuming that the court would have held that the questions were proper and right, they would have issued an order which would have remanded this man to the custody of the Sergeant at Arms, and the Sergeant at Arms would have brought him before the bar of the Senate. That would have been some humiliation for Stewart, all of which he now escapes. He is given a chromo now, and on the face of the thing it looks as if the Senate were wrong in the entire proceeding, because we are going to dismiss our suit.

I confess that that might not be of so much importance if this were the only case we were ever likely to have and it did not establish a precedent which I believe to be ruinous and injurious. I probably would not mention that part of the proposition if that were not so. But the committee asked Insull some questions. That was after the primary in Illinois and before the election. Insull refused to answer, and the committee intimated that it would have to report the matter to the Senate; but he did not care about that. But, to be fair with Mr. Insull, they called him back the second time and asked the same questions again, and again he refused.

After the election Mr. Insull came before the committee and said, "Now, I will answer"; they let him answer, and they did not do anything. That was the first case, and probably that is what most people would have done. They let him go. Nothing has ever been done about it. He committed a crime when he refused to answer the first time; he committed a crime again when he refused to answer the next time. We might pass over that.

Mr. KING. Mr. President, will the Senator yield for a question?

Mr. NORRIS. I yield.

Mr. KING. With respect to the Insull case and the Schuyler case and the Crowe case, all from Illinois, in behalf of the committee I submitted a final report dealing with those cases, and that report will be brought to the attention of the Senate as soon as the chairman of the committee, the senior Senator from Missouri [Mr. REED], returns to the city.

Mr. NORRIS. Mr. President, prior to the Insull case we had the Daugherty case, in which the Senate never took any action. It ran along so long, a year or two, as I remember it, when the Supreme Court decided it, and it was dropped, there never was anything done, and he never was compelled to answer. In fact, the importance of his answer at that time had disappeared, probably. I am calling the attention of the Senate to the fact that that is going to happen over and over again with any witness who wants to take that course.

Mr. FLETCHER. Mr. President, will the Senator yield?

Mr. NORRIS. I yield.

Mr. FLETCHER. I quite agree with the Senator that the regular procedure would have been to produce Mr. Stewart here before the bar of the Senate, but would it not have been perfectly regular, then, for the Senate to have remanded him to the committee and told him to appear before the committee and answer these questions instead of proceeding as a whole?

Mr. NORRIS. That is a method of proceedure I do not care to discuss. I will say to the Senator, however, that I do not believe that would have been proper.

Mr. FLETCHER. It occurred to me that probably that could have been done.

Mr. NORRIS. It might have been.

Mr. FLETCHER. And that committee might have been justified in assuming, in proceeding in its own way, that that probably would have been done, and that they should proceed. In view of what the Senator says with regard to these two resolutions, I myself think they ought to be considered separately; I do not think we ought to act on both at the same time.

Mr. NORRIS. What I am afraid of is that if we pass this resolution as it has been read from the desk, the prosecuting officer will say, "Well, the Senate has forgiven this thing, and we will dismiss this suit." I think we ought to express ourselves explicitly by an amendment to the resolution, if we are going to pass it—and I suppose we will. I am mentioning these things only incidentally; I am really not trying to controvert the action the committee has taken, but I think we ought to amend the resolution by explicitly stating that under no consideration should the prosecuting officer, in the judgment of the Senate, dismiss that suit without trial. He ought to go to trial with it.

Mr. FLETCHER. I think perhaps the resolution shows that, but certainly the remarks in connection with it clearly indicate that the resolution is not to be construed by the prosecuting officer as an expression of opinion on our part that the case should be affected by it.

Mr. NORRIS. I agree, just so the expression gets to the prosecuting officer. Maybe it will get to him from the debate, and that is one reason why I am debating it.

Mr. FLETCHER. I suggest another reason for sending down the record. It seems to me that the resolution should include the record that is recited in the report, because it not only shows what happened—and that ought to impress the prosecuting attorney—but, in addition, it may raise another question with the prosecuting attorney as to whether there is not a case of perjury involved.

Mr. NORRIS. I think it will. It seems to me, from the testimony given by Stewart himself, and other facts which are undisputed and admitted, that he is guilty of perjury, and has committed it before this committee. I have no hesitancy in saying that.

Mr. BRATTON. Mr. President, will the Senator yield again?

Mr. NORRIS. I yield.

Mr. BRATTON. I am in perfect accord with what the Senator from Nebraska has said in respect to the general policy of delay of prosecutions in cases of this kind, and rendering them ineffective by delay. As I understand the legal situation,

when a witness appears before a committee and declines to answer a relevant question propounded in connection with the subject matter under investigation, he violates a Federal statute, and that act is completed.

Mr. NORRIS. It is a completed act.

Mr. BRATTON. It is a completed act, criminal in nature.

Mr. NORRIS. Yes.

Mr. BRATTON. At the same time, and by the same act, he commits a contempt of the Senate.

Mr. NORRIS. Yes.

Mr. BRATTON. Which is in the nature of a criminal contempt, as distinguished from civil contempt, because it is an act of defiance to the Senate that is intended to bring the Senate into disrepute in the forum of public opinion. That is continuing in nature; it is not completed.

Mr. NORRIS. Yes.

Mr. BRATTON. It is continuing in the sense that he may come before the Senate or before the committee at any time and offer to answer the question propounded, and thereby purge himself of the contempt. I think the weakness in the course we have followed in the past has been our delay in pressing criminal prosecution, because the person guilty of a contumacious act of that kind always has the right to purge himself, and we are powerless to go beyond that. When he comes before the bar of the Senate and offers to comply with the order of the Senate by answering the questions, he is absolved from contempt but not of the violation of the criminal statute.

Mr. NORRIS. I tried to make that plain. I do not think there is any doubt at all about that proposition.

Mr. BRATTON. But what we should do in the future is to act with more haste in bringing about effective prosecution. Let the public generally understand that when they assume such a position they are going to be prosecuted without delay.

Mr. NORRIS. I think we ought to do that. I agree with the Senator.

Mr. BRATTON. I think that is where we have failed in the past.

Mr. NORRIS. Mr. President, I had started to make a general statement of the background of the things which have happened as shown by the investigation of the committee of the oil matter under discussion. Here are Stewart, Blackmer, O'Neil, and Sinclair, representing different corporations, who want to buy some oil. Here is Humphreys who has the oil for sale. They meet in New York and buy about 33,000,000 barrels of oil from Humphreys. Humphreys supposed that he was selling directly to these men. After they had agreed on the contract, how the oil should be delivered over a course of two or three years, how it should be paid for, and the price, Sinclair, Stewart, and the other men said, "Draw this contract in the name of the Continental Trading Co. of Canada."

That was the first time that Humphreys had ever heard of the Continental Trading Co. He thought he was selling to these men with whom he had been associated for two or three days. Humphreys refused to sell to the Continental Trading Co. because it was not a cash deal. The oil was to be delivered and paid for as delivered running over a long period of time. These men thereupon said, "We will guarantee the payment"; and the sale was made to the Continental Trading Co. This man Stewart, this witness representing the Standard Oil Co. of Indiana, as its president, signed the contract as a guarantor. He and Sinclair and Blackmer guaranteed the payment of a contract which involved something over $8,000,000. This same Continental Trading Co. took the same oil and sold it to the same men Stewart, Sinclair, Blackmer, and O'Neil, or to their companies, at a profit of 25 cents a barrel.

There was a profit amounting to several million dollars which, if the contract had all been carried out, would have come to those people who had negotiated the deal. They had the Continental Trading Co. buy the oil at one price and sold it back to them at an advanced price. Their companies got the oil. They either cheated their own stockholders or they were engaged in some other kind of an illegal, disgraceful contract and bargain. The Supreme Court, after reviewing the evidence, so held. It is undisputed that the Continental Trading Co. never had any existence before that date. It never did any business except to carry out the one contract. It dissolved just as soon as it transacted that business. It invested its profits in United States Liberty bonds, and gave those bonds to Sinclair, Stewart, Blackmer, and O'Neil. We know what Sinclair did with his, and we know from the evidence now what Stewart did with his.

Stewart came before the committee to answer these questions which he had refused to answer before, but he never did so until he knew the committee had ferreted out the fact and had the evidence without his testimony that he had the bonds. He had denied under oath that he knew anything about them. He said he had not handled any of those bonds; and yet he guaranteed the contract to this illegal company.

When the committee had summoned the bank officers and his deposit slips, and they produced either the original deposit slips or photographic copies of them, showing in his own handwriting the deposit of coupons from these bonds, then he knew they "had the goods on him," and there was no escape; so he came before the committee and said, "Here I am; I will testify," and he did testify.

Mr. NYE. Mr. President——

The PRESIDING OFFICER (Mr. COUZENS in the chair). Does the Senator from Nebraska yield to the Senator from North Dakota?

Mr. NORRIS. I yield.

Mr. NYE. I am sure the Senator would like to have me correct any error which might apparently be made. It has not been proven that the deposit slips were in the handwriting of Mr. Stewart.

Mr. NORRIS. I am glad to have that correction made. But the deposit slips showed, did they not, that the deposit consisted of coupons from United States Liberty bonds?

Mr. NYE. Of that particular issue?

Mr. NORRIS. Yes; of that particular issue.

Mr. NYE. Yes; with which the Continental Trading Co. was dealing.

Mr. NORRIS. Those were 3½ per cent Liberty bonds of the first issue.

As I said, Mr. Stewart confessed, when he came before the committee the last time, practically what he knew the committee was going to be able to prove without him. He admitted that he had the bonds. He admitted that he got them from Osler, president of the Continental Trading Co. He had denied all knowledge of anything of that kind when he testified before. Any man who will admit what he himself admitted in the different times he has testified, and will take into consideration the admitted facts about the profits on the oil and its sale—anyone who will do what it is conceded he did, must be either a crook or a fool; and everybody knows that Stewart is not a fool.

It seems to me that we are under no obligation to mitigate any of the circumstances which have surrounded this transaction. He has not been fair in his testimony; he has been misleading. Although he is a shrewd lawyer, he has given testimony before the committee where he was cross-examined that shows, I think, almost conclusively—indeed, it does show conclusively—that he is trying to avoid a fair and honest statement of what the facts are. He justifies the fact that he took the bonds from Osler. They were in a package that Osler gave him, and when he opened the package he found the bonds. He took the coupons and had them cashed. Then he provided some sort of arrangement with his secretary, appointing him trustee to hold them in trust, and finally to turn them over to the Standard Oil Co. of Indiana. I wonder what Mr. Rockefeller will say the next time he appears before the committee?

All of those things seem to have been necessary. Would they have been necessary had it been an honest deal? If these men in the beginning were honestly buying oil, why did they need a subterfuge of this kind in order to make a profit of several million dollars? If they were only buying oil of Humphreys which their companies wanted, they would not have needed to organize a fraudulent corporation in Canada. It would not have been necessary for that money to be taken into Canada and then have Osler take it or send it to New York and buy United States Liberty bonds with it, and then to take the bonds back to Canada and then to bring them here to divide among these conspirators. It is a flimsy deal and no one can look at it without reaching the positive conclusion that it is a fraudulent transaction which was engaged in by every one of the men who had a finger in it. There is not an honest spot in it. It is dishonest from beginning to end.

Now we have this man say to the Senate, "I have answered your questions to the committee," and then we have the Senate asked to direct its attorney to dismiss the suit and save Stewart from all the humiliation that is possible, when he ought to have been brought in here by the Sergeant at Arms under arrest and publicly asked the questions and then let him purge himself and pass out. That procedure would have purged him. It would have been some humiliation, all of which he escapes enduring. While he has undoubtedly committed perjury, we have just had an illustration, and not the only one, either, that it is almost an impossibility to convict a man of a crime if he makes a stealing that is big enough. When Sinclair bribes a public official and uses about $300,000 to do it, he can not be convicted under our system of jurisprudence. He is immune from prosecution.

It is true that Stewart did not get that much, and it is a different kind of crime in his case. His crime is perjury, which every prosecuting officer knows is one of the most difficult cases to prosecute that is known in criminal jurisprudence. Even though everybody in the country, including the Supreme Court, knows he is guilty of perjury, I doubt whether it would be possible to convict him before a jury, because there is too much invested in the defense. There are too many possibilities of shrewd, able, technical lawyers to be employed who could get Doheny free and who could get Sinclair free. They will be able to get Stewart free, even if he is prosecuted. So it seems to me that the only prosecution from which I do not believe he can escape is prosecution for the crime which he committed when he refused to answer these questions before the committee, and of which in due time he may be found guilty, and which would subject him to a jail sentence. After all, we ought to be satisfied, perhaps, under the circumstances if felony punishments were confined to poor men and millionaires are permitted to serve in jail, whatever sentence may be adjudged against them.

Mr. GLASS. Mr. President——

Mr. NORRIS. I yield to the Senator from Virginia.

Mr. GLASS. What would be the objection to adding to the second resolution which has been sent to the desk by the Senator from Montana, a provision certifying the report of the committee to the United States district attorney, "with the view to having said district attorney determine whether Robert W. Stewart should not be presented to the grand jury for indictment on the charge of perjury?"

Mr. NORRIS. I think it would be very proper to have those words inserted.

Mr. GLASS. So far as I am concerned, it is my judgment that, while it may be said, in a sense, that Stewart has technically exculpated himself from the charge of perjury, his later testimony shows just exactly in what degree he held the Senate in contempt, because he practically admitted, while yet denying, that he lied to the Senate committee, and that he did it for a purpose—for the purpose of frustrating justice, because testimony that he might have given in response to the questions asked might result in the conviction of his partner in crime, Sinclair.

Mr. NORRIS. I thank the Senator for his suggestion.

Mr. WALSH of Montana. Mr. President——

Mr. NORRIS. I yield to the Senator from Montana.

Mr. WALSH of Montana. I desire to say that I think I am warranted in saying on behalf of the committee that the amendment proposed by the Senator from Virginia will be entirely acceptable.

Mr. NORRIS. I hope that is true, and I do not see how it could be otherwise; but while the Senator from Montana is interrupting me I want to ask him what objection there would be to amending the other order that he submitted here so as to make it perfectly clear that the Senate does not want that case dismissed.

Mr. WALSH of Montana. While the Senator was discussing this matter, and because the question was raised, I wrote out such a supplementary sentence:

This order—

That is, the order vacating the order of arrest—

shall not be construed as any intimation on the part of the Senate that the indictment heretofore returned against the said Robert W. Stewart for refusal to answer questions propounded to him by the Committee on Public Lands and Surveys should be dismissed.

Mr. NORRIS. That is satisfactory. Both of those amendments are satisfactory; and, Mr. President, with them both I shall offer no further objection, even though I believe that the other procedure ought to have been followed. The committee have taken this procedure in good faith, I do not question that. They may be right, and I wrong; but I have a deep feeling that where these men who were trying to deceive the country, who were trying to deceive the Senate, who were engaged in a great conspiracy in which there were profits of millions and part of the money at least was traced to public officials and used for bribery purposes, were escaping from the large punishment that they ought to have had, we ought not to take any steps to relieve any of them of any humiliation that may come to them.

Mr. CUTTING. Mr. President, will the Senator yield?

Mr. NORRIS. Yes.

Mr. CUTTING. May I ask the Senator whether he does not believe that these men are still trying to deceive the Senate?

Mr. NORRIS. Yes; there is not any doubt of it in my mind.

Mr. HEFLIN. Mr. President, before the Senator takes his seat, will he yield to me?

Mr. NORRIS. Yes.

Mr. HEFLIN. Some weeks ago, briefly, Mr. Stewart was in contempt of the Senate. He flatly refused to testify and to tell the truth as he knew it to the Senate. The Senate then ordered him to be imprisoned. He sued out a writ of habeas corpus, and was turned out of jail. In the meantime the Sinclair case was pending. He remains quiet and silent until that case is disposed of and Sinclair is acquitted. In the meantime, I understand, Mr. Stewart has been indicted. After the Sinclair case is disposed of, having put himself in the same category with Sinclair of defying the Senate, he waits until Sinclair is acquitted, and now he comes back before the committee and testifies.

I understand that the Senate is not releasing him now, but the indictment is pending. It seems to me that his coming now and testifying furnishes the testimony necessary for the jury in Washington, and that he can not escape conviction, and he ought to be convicted for this offense.

Mr. NORRIS. Mr. President, the trial on the kind of a crime with which he is charged—the same one as against these other people, Stewart and others—is a very simple trial. The question involved is whether the committee of the Senate before which he was called to testify had jurisdiction of the matter, and whether the questions were proper ones, and whether he refused to answer them. These questions are so plain that I do not believe anyone will doubt but that they were proper. The committee did have jurisdiction, and, of course, it is admitted that he did not answer. In fact, the lower court, in passing on the habeas corpus, dismissed it and ordered him back into the custody of the Sergeant at Arms; and then he took an appeal, which is still pending. The fact, however, that he afterwards answered the questions which at first he refused to answer will undoubtedly be taken into consideration by the court in administering punishment. It is, however, no defense whatever to the crime itself.

Mr. HEFLIN. That is my point, and that this man is bound to be convicted, if the court does its duty, for his performance heretofore; but what degree of punishment they will impose upon him is another question.

Mr. WALSH of Montana. Mr. President, I have indicated that the committee would be altogether regretful if any action taken here should be construed by anyone as an indication that the Senate desired that the proceeding in the Supreme Court of the District of Columbia under the indictment found against Colonel Stewart should be dismissed, or that it should not be prosecuted with vigor. It never occurred to any member of the committee that any such interpretation could be given to the action which it is proposed by the committee should be taken by the Senate; but, lest any such supposition might be indulged by anyone, I propose the amendment which was read a few moments ago to the order directing the vacation of the preceding order directing the arrest of Colonel Stewart. Of course, it is perfectly obvious that if we adopt the resolution transmitting the report to the district attorney of the District of Columbia for his consideration we do so with a view that he shall scan the record to see whether an indictment might not be proper against Mr. Stewart for perjury; and accordingly there is not the slightest objection to the other order tendered by the Senator from Virginia [Mr. GLASS].

The Committee on Public Lands and Surveys may be open to censure such as is implied in the remarks of the Senator from Nebraska for the course they took in this matter. If I understand him aright, when the committee learned that probably some further information could be secured from Colonel Stewart, instead of sending notice to him in the usual form to come on and be interrogated further, the committee should have entirely ignored that information; it should have allowed him to come or not come, just exactly as he saw fit, and abide the result of the proceedings in the courts; and, if it should eventually be determined, as in all probability it would be determined, that he should have answered the questions, have him brought before the bar of the Senate by the Sergeant at Arms and interrogate him before the Senate.

That may be the proper procedure in a case of this character. It is not, however, my view about the matter. The committee was charged by the Senate with the duty of finding out where these bonds had gone, what had become of them; and it occurs to me that it would have been derelict in its duty, it would have been recreant to the charge reposed in it if it had not followed every reasonable clue to unearth the facts in relation to the matter. I violate no confidence in saying that it was common report about the corridors of the Senate here for at least two or three days before Colonel Stewart was recalled

that he would be quite willing to come before the Senate and give it some further information. I should not have felt that I was discharging my duty if I had not immediately taken steps to require Colonel Stewart to appear before the committee and interrogate him further. I should not have felt justified in taking chances upon a lawsuit, which might possibly fail, to compel him to come here. Of course, I do not think it would; I never could see any reason why it should fail; but I have been in the law business long enough to know that you are always taking chances on a lawsuit, and able attorneys made plausible arguments to the court against the proceedings that had been taken.

So I can not feel that the committee is open to any just criticism for the course that it took. It might be justified to subject Colonel Stewart to the humiliation of being brought before the bar of the Senate by the Sergeant at Arms, but no results other than that would have been secured; and, in all reasonable probability, not as much as were secured by the course which was observed.

Mr. President, that is all I care to say about this matter, except that I desire to call attention to an article having the sanction of the Associated Press in the Washington Post of this morning, in which the following occurs:

> The only difference of opinion that arose at first was whether the committee should cause the record to be certified to the district attorney, or whether the district attorney should be left to ascertain the facts for himself.
>
> Senator WALSH took the view that it was not the function of the Senate to make certification to the prosecuting officer, but merely to call the matter to the attention of the Senate. Chairman NYE and others took a contrary view, however, and insisted yesterday that the matter should be officially referred to the district attorney.
>
> After a series of conferences during the afternoon, Senator WALSH said he would not oppose such action by the Senate. Chairman NYE said he expected a unanimous report from the committee at its session, called for this morning, in advance of the convening of the Senate.

That very clearly implies that there was quite a division of opinion upon this matter in the committee of the Senate. I think the chairman of the committee will corroborate what I say, that that statement is without any foundation in fact whatever.

Mr. NYE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from North Dakota?

Mr. WALSH of Montana. I do.

Mr. NYE. I have not had a chance to-day to look at the morning papers. Is there anything in the prints this morning from which the Senator is quoting containing a statement by myself, authorized by myself?

Mr. WALSH of Montana. No; it does not say so; but that is a matter of no great consequence, I am sure. The statement is that—

> Senator WALSH took the view that it was not the function of the Senate to make certification to the prosecuting officer.

Mr. NYE. Mr. President, last evening I was approached from so many angles in a way to indicate that there was a general impression prevailing that there were violent differences existing in the Committee on Public Lands and Surveys as to this report and resolution that was coming to-day that I issued a statement that there was no ground for any such conclusion or any such impression. As I have said, I have not had a chance to observe the papers this morning to see whether that was carried or not; but the Associated Press was given that statement, which ought to have explained the entire matter. In other words, there was no foundation for any such tale as that carried there, which the Senator has just read.

Mr. WALSH of Montana. The plain fact about the matter is, Mr. President, that upon the suggestion being made that some steps ought to be taken about the matter, I myself suggested the order which is now before the Senate directing that the report be sent to the prosecuting officer; and I might add that there was no division of opinion in the committee upon that matter.

Mr. NYE. None whatever.

The PRESIDING OFFICER. The question is on the resolution as amended.

Mr. LA FOLLETTE. Let it be read.

The PRESIDING OFFICER. The Secretary will state the amended resolution.

Mr. WALSH of Montana. Mr. President, the matter takes the form of an order. I asked that the following order be entered; and I now move that it be amended by adding thereto the following:

> This order shall not be construed as any intimation on the part of the Senate that the indictment heretofore returned against the said Robert W. Stewart for refusal to answer questions propounded to him by the Committee on Public Lands and Surveys should be dismissed.

The PRESIDING OFFICER. The question is on agreeing to the order as modified.

Mr. WALSH of Montana. On agreeing to the amendment to the order.

The PRESIDING OFFICER. The Chair understood that the Senator was modifying his own order.

Mr. WALSH of Montana. I tendered the order on behalf of the committee. I have no authority to amend that, it not being my own.

The PRESIDING OFFICER. The question is, then, on the amendment to the resolution.

Mr. LA FOLLETTE. Mr. President, I should like to have it read as it would be in final form if the amendment were adopted.

The PRESIDING OFFICER. The order will be read.

The Chief Clerk read the resolution (S. Res. 207), as follows:

*Resolved*, That the order of the Senate heretofore made on the 3d day of February, 1928, directing the Sergeant at Arms to take into custody one Robert W. Stewart and bring him before the bar of the Senate is hereby vacated.

Mr. WALSH of Montana. Then follows the amendment.

Mr. LA FOLLETTE. Would the Senator mind reading it again?

Mr. WALSH of Montana. It is as follows:

> This order shall not be construed as any intimation on the part of the Senate that the indictment heretofore returned against the said Robert W. Stewart for refusal to answer questions propounded to him by the Committee on Public Lands and Surveys should be dismissed.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Montana.

The amendment was agreed to.

The PRESIDING OFFICER. The question now is on agreeing to the resolution as amended.

Mr. HEFLIN. Mr. President, before the vote is taken, it seems to me that the resolution ought to say, "But the Senate insists upon the prosecution of Mr. Stewart for defying the Senate in refusing to testify." I believe that ought to be set out in this resolution; and I offer this amendment:

> That the Senate insist—
>
> Following the language just adopted—
>
> upon the prosecution of Mr. Stewart for the offense that he committed against the United States.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Alabama.

The amendment was agreed to.

The PRESIDING OFFICER. The question now is upon agreeing to the resolution as amended.

The resolution as amended was agreed to.

The PRESIDING OFFICER. The Secretary will state the second order.

The CHIEF CLERK. The second order reads:

*Ordered*, That the Secretary of the Senate be, and he is hereby, directed to transmit a copy of the report submitted this day by the Committee on Public Lands and Surveys to the United States district attorney for the District of Columbia.

Mr. GLASS. Mr. President, I send to the desk an amendment, which, I understand, the Senator from Montana is willing to accept.

The PRESIDING OFFICER. The amendment will be stated.

The Chief Clerk read as follows:

> with a view to having said district attorney determine whether Robert W. Stewart should not be presented to a grand jury for indictment on the charge of perjury.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Virginia.

The amendment was agreed to.

The PRESIDING OFFICER. The question is on the adoption of the order as amended.

The order as amended was agreed to.

The PRESIDING OFFICER. Petitions and memorials are in order.

## PETITIONS AND MEMORIALS

Mr. CURTIS presented a petition of members of the Ford County (Kans.) Women's Advisory Council of Farm Bureau Work, praying for the passage of the so-called Capper-Ketcham

bill, being the bill (S. 1285) to provide for further development of agricultural-extension work, which was referred to the Committee on Agriculture and Forestry.

Mr. WALSH of Massachusetts presented a petition of sundry citizens of Brookline, Mass., praying for the prompt passage of legislation granting increased pensions to Civil War veterans and their widows, which was referred to the Committee on Pensions.

Mr. KING. There is a bill pending before the Committee on Public Lands and Surveys to cede to the public-land States all of the lands that belong to the United States except mineral lands. There is also a bill pending, I am advised, for the purpose of leasing most of the public domain to the States; that is, placing them under the control of the Forest Service for leasing.

I am in receipt of a memorial signed by 50 or 60 persons protesting against leasing and expressing their views that the lands should be ceded to the States. The memorial is very brief, and I ask that it may be inserted in the RECORD, but not the names, and that the memorial with the signatures be referred to the Committee on Public Lands and Surveys.

There being no objection, the memorial was referred to the Committee on Public Lands and Surveys and ordered to be printed in the RECORD, as follows:

HUNTINGTON, UTAH, *October 30, 1927.*

Hon. WILLIAM H. KING,

*United States Senator, Washington, D. C.*

DEAR SIR: We the undersigned citizens and users of the public domain residing in Emery County, Utah, hereby petition and ask that you use your influence as our United States Senator to keep the public domain in this State the same as it is to-day.

We understand that there is a move on foot to put the public domain under some kind of Federal control, and we feel that this action would be a great burden upon the livestock interests of this country. As you are, perhaps, aware we are having all we can do to keep on our feet under present conditions, and we certainly feel that we should not be further burdened with having to pay for the use of our winter ranges. And as you know the paying for the range is a very small item in comparison with the inconvenience and the uncertainty of Federal controlled ranges.

Hoping that you can do something for us by keeping it as it is or having it ceded to the State by the Government.

We are sincerely yours,

———— ————.

Mr. KING. I present likewise another memorial signed by 50 or 60 citizens of the State of Utah of like import. I move that it be referred to the Committee on Public Lands and Surveys.

The motion was agreed to.

J. E. BARLOW

Mr. ROBINSON of Arkansas presented letters from J. E. Barlow requesting permission to appear before the Foreign Relations Committee with reference to the matter of the alleged illegal seizure of his property in Cuba, which were referred to the Committee on Foreign Relations.

SURCHARGE ON PULLMAN FARES

Mr. ROBINSON of Arkansas. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial published in the New York World on April 18, 1928, relating to the subject of the surcharge on Pullman fares. I commend this editorial to the consideration of the chairman and members of the Committee on Interstate Commerce.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Arkansas?

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

[From the New York World, Wednesday, April 18, 1928]

THE SURCHARGE ON PULLMAN FARES

While Congress is considering the removal of the remaining war-time taxes it might well turn its attention to one tax of war origin whose proceeds do not go into the Federal Treasury. This is the surcharge of 50 per cent on Pullman tickets. It was originally imposed when the Government was in control of the railroads and was intended for the twofold purpose of raising revenue and discouraging civilian travel when a large part of the railway equipment was needed for moving troops.

After the armistice this surcharge was discontinued, but in 1920, when the roads were hard hit by the postwar inflation, the Interstate Commerce Commission restored it. Since then conditions have changed, and the reasons for its retention appear to be no longer valid. An examiner of the commission has recommended its removal, but the commission itself has not been able to agree whether it should be removed or only reduced. Meantime the Senate has twice passed a bill for its repeal, but so far the House has failed to act.

It has been objected that a bill of this character puts rate-making into the hands of Congress. The measure now before Congress, however, prescribes no rates, but leaves that function to the Interstate Commission, where it properly belongs. It merely prescribes a policy which the commission is to follow by stipulating that there shall be no discrimination or double charges for the same service. The Pullman surcharge is in effect a double payment, for which the passenger gets nothing in return. Its proceeds do not go to the Pullman Co., which renders the special service, but to the railway company.

As a second objection to the repeal of the surcharge it is urged that the roads badly need the money. Whether they do or not, a discrimination against one class of traffic is hardly the proper way to get it.

JURISDICTION OF UNITED STATES DISTRICT COURTS

Mr. VANDENBERG presented excerpts from letters relative to the bill (S. 3151) to limit the jurisdiction of the district courts of the United States, which were ordered to lie on the table and to be printed in the RECORD, as follows:

[Excerpt from letter dated April 24, 1928, at Detroit, Mich., addressed to Senator VANDENBERG by Wilson W. Mills, of Campbell, Buckley & Ledyard]

My attention has just been called to the Norris bill (S. 3151), introduced by Senator NORRIS, of Nebraska, and being a bill to limit the jurisdiction of the district courts of the United States.

The effect of this bill is to deprive the Federal courts of jurisdiction in actions arising under the Constitution or laws of the United States and between citizens of different States; in fact, takes away the jurisdiction of the district court in all cases except where the United States is plaintiff.

In my opinion this bill is the most revolutionary and vicious one that has come to my attention in several years.

———

[Excerpt of letter dated April 23, 1928, at Grand Rapids, Mich., to Senator VANDENBERG from Benjamin P. Merrick, president of the Grand Rapids Bar Association]

I have had brought to my attention the fact that the Senate Judiciary Committee has reported out with recommendation of passage a bill that limits the jurisdiction of the district courts of the United States (S. 3151). After conferences with the trustees of the Grand Rapids Bar Association upon this highly revolutionary measure, I have no hesitation in expressing to you the emphatic protest of our bar at its passage.

Assuming, but not conceding, that this bill, if enacted, would be held constitutional on the ground that the Constitution leaves to Congress the establishment, and hence the definition of jurisdiction, of all courts of the United States save the Supreme Court, it can not be said that the measure reflects with much fidelity the spirit of the constitutional definition of the scope of the Federal judicial power. I refer to section 2 of Article III, which provides:

"The judicial power shall extend to all cases, in law and equity, arising under this Constitution, the laws of the United States, and treaties made, or which shall be made, under their authority; * * * to controversies * * * between citizens of different States, * * * and between a State or citizens thereof, and foreign States, citizens, or subjects."

Guided, I take it, by that provision of the Constitution, Congress by the act of September 24, 1789, establishing the judicial courts of the United States, gave to the circuit courts original jurisdiction of civil suits where the matter in dispute exceeded $500, and where an alien was a party or where the suit was between a citizen of the State where the suit was brought and a citizen of another State.

From 1789 to 1928 this jurisdiction, based on diversity of citizenship, so manifestly in harmony with the scheme of the Constitution, has continuously resided in the inferior courts of the United States, and any proposal to sweep it away so revolutionary in character as the pending measure should rest upon more cogent reasons than any to be found in the report (No. 626) of the Senate Judiciary Committee.

If, as appears from that report, the committee sees injustice to small litigants in the "arbitrary distinction as to the amount in controversy," the remedy would seem to be not the sweeping away of long-established jurisdiction but the lowering of the jurisdictional amount below the present figure of $3,000, if Congress is prepared adequately to provide for the increased work of the district courts which would result therefrom. It is doubtful, however, whether the $3,000 limit is to-day more "arbitrary" than was the limitation of $500 in 1789. The principle of basing jurisdiction of courts not the lowest upon a minimum amount in controversy finds frequent expression in the statutes regulating the trial courts of the States.

I believe the bar generally will challenge the committee's assertion to the effect that the nonresident litigant, pitted against a resident, in a State court is no longer at a disadvantage. And I believe they would regard as a very real protection against local prejudice the right of a citizen of Michigan whom litigation may draw into court in any one of 47 other States, there to have recourse to the district court of the United States.

A trace of this local prejudice is discernible in the report of Senator NORRIS upon the bill. I refer to the apparent resentment against the alleged advantages enjoyed by the nonresident litigant under the present judicial system.

Be that as it may, it is fair to remember that every litigant who to-day is a "resident litigant" may to-morrow be a "nonresident litigant" seeking justice in any one of 47 other States, in which event the courts of the United States should not be closed to him after being open 139 years.

The committee report lays much critical stress upon the nonresident's right to remove to the United States district court a cause begun against him in a State court. May I suggest that if this privilege of removal is deemed by Congress to be no longer expedient, the remedy would be to curtail the statutory privilege rather than to destroy the jurisdiction? Even if it were advisable to abolish the right to remove cases, which I deny, it would not follow that a resident plantiff should be deprived of the present right to plant his suit in the Federal court in his State if he can get proper service upon the nonresident defendant.

Finally, the congestion of work in the district courts, advanced as a reason for this radical bill, is undoubtedly principally due to the great number of prosecutions for violation of the prohibition statute. If the district courts are performing increasingly, as they are, the functions of police courts, Congress should hesitate before making the position of district judge irretrievably unattractive to men of the high average caliber which has characterized thus far the men appointed to that office. Yet that is what this bill would do, I fear, if enacted into law. Men of high judicial capacity would well-nigh loathe the position if from it were taken the opportunity to hear and decide civil cases of the large and important group affected by the bill. The district courts are the proving ground for judges destined for seats on the bench of the appellate Federal courts. The importance of keeping the caliber of the Federal judges of the highest no one will deny. Any legislation which tends, as I am convinced this bill does, to render the position of district judge undesirable in the eyes of the leaders of the bar, can not but have a bad ultimate effect upon the quality of the Federal bench.

Mr. FLETCHER. Mr. President, in connection with Senate bill 3151, I present a letter received from Judge Robert W. Bingham, of Kentucky, and ask that it be printed in the RECORD.

The PRESIDING OFFICER. Is there objection?

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE COURIER-JOURNAL, THE LOUISVILLE TIMES,
*April 24, 1928.*

Senator DUNCAN U. FLETCHER,
*Washington, D. C.*

DEAR SENATOR FLETCHER: I have learned that the Senate Judiciary Committee has recently reported favorably Senate bill 3151, taking away from Federal district courts all Federal jurisdiction based on diversity of citizenship or any Federal question.

As you so well know, this Federal jurisdiction has been a part of our law since the act of 1789, the only important change during that period having been the raising of the amount in controversy from $500 to $3,000. I believe this matter is one which gravely concerns the whole country. For example, if it were necessary to foreclose a bond issue of a railway traversing several States, if the Federal jurisdiction were withdrawn, the difficulty of such a proceeding would be almost insuperable, since it would probably involve filing suits, if not in every county through which the railway passed, at least in every State, circuit, or district court through which it passed, and even if this difficulty is not insuperable, at least it would enormously increase the cost of such a proceeding and correspondingly reduce any amount which investors in the property as bondholders might receive. In addition, the comparatively undeveloped parts of the country require capital for their development.

I believe the constructive progress of the country would be seriously impeded if investors were deprived of the opportunity to litigate in the Federal courts.

The East and the Middle West will probably require a comparatively small amount of outside capital for their further development, but there are great areas in our country, particularly in the West and in the South, which will need a large amount of outside capital for years to come, and I am confident that the passage of such an act as the bill referred to would seriously retard the growth and progress of many of the States in this western and southern area.

While I am sure you will give this matter serious consideration, I am taking the liberty of writing to you on the subject, because I am alarmed at the thought of the disastrous result which I believe would result inevitably from the passage of such legislation.

Yours very truly,

R. W. BINGHAM.

Mr. FLETCHER. I also have an opinion as to the scope and effect of Senate bill 3151, written by Mr. Henry M. Ward, of Washington. It is rather long to print in the RECORD, but the conclusions are brief, and I ask that the summary be printed in the RECORD.

The PRESIDING OFFICER. Is there objection?

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

SUMMARY

(1) The bill if enacted could not be set aside by the courts as in violation of the Constitution of the United States.

(2) It would deprive the Federal courts of their most important classes of civil jurisdiction.

(3) It would in effect give to the courts of the respective States (except as noted above at pages 3, 4, and 5) exclusive original jurisdiction of all civil cases arising under the Constitution and laws of the United States and treaties made under their authority and of all suits of a civil nature between citizens of different States, including corporations organized under the laws of different States and between citizens of the United States and foreign States, citizens, or subjects.

(4) It would deprive the district courts of their power to remove such cases from the State courts.

(5) The right to have certain questions decided by the highest courts of the respective States, arising under the Constitution, laws, and treaties, reviewed by the Supreme Court of the United States upon writ of error and the right to petition that court for a writ of certiorari to review certain other similar questions are wholly inadequate for the protection of the rights, privileges, and immunities conferred by the Constitution and the laws and treaties of the United States.

(6) To a substantial extent the officers of the United States in enforcing Federal laws would be subject to be enjoined by, and to suits for damages in, the State courts, and the National Government would be pro tanto without power to enforce the laws of the Nation. In many instances the Federal courts would be without power to protect the grantees and licensees of the United States in the exercise and enjoyment of rights granted by the Federal laws and treaties.

(7) The effect of eliminating the Federal jurisdiction over controversies between citizens of different States would be to jeopardize the billions of dollars of the citizens of this country invested in the securities of interstate railroads and other interstate industries, to raise the rates of interest on borrowed capital, to sweep aside the authority of the decisions of the Supreme Court of the United States and other Federal courts on questions of general law, and thereby to imperil existing investments, industries, and rights entered into and acquired in reliance upon these decisions.

(8) The bill if enacted would inflict incalculable harm upon the citizens of this country and would be clearly in violation of the duty imposed on Congress by the Constitution of the United States.

HENRY M. WARD.

APRIL 20, 1928.

REPORTS OF COMMITTEES

Mr. BINGHAM, from the Committee on the Library, to which was referred the bill (S. 2069) to extend the provisions of section 1814 of the Revised Statutes to the Territories of Hawaii and Alaska, reported it with amendments and submitted a report (No. 898) thereon.

Mr. ASHURST, from the Committee on Indian Affairs, to which was referred the bill (S. 3770) authorizing the Federal Power Commission to issue permits and licenses on Fort Apache and White Mountain Indian Reservations, Ariz., reported it without amendment and submitted a report (No. 899) thereon.

Mr. KENDRICK, from the Committee on Indian Affairs, to which was referred the bill (S. 2330) authorizing reconstruction and improvement of a public road in Wind River Indian Reservation, Wyo., reported it with an amendment and submitted a report (No. 900) thereon.

Mr. KEYES, from the Committee on Public Buildings and Grounds, to which was referred the bill (S. 4035) authorizing conveyance to the city of Hartford, Conn., of title to site and building of the present Federal building in that city, reported it without amendment and submitted a report (No. 901) thereon.

CONFEDERATE VETERANS' REUNION AT LITTLE ROCK, ARK.

Mr. SWANSON. From the Committee on Naval Affairs, I report back favorably, without amendment, the bill (S. 4180) authorizing the attendance of the Marine Band at the Confederate Veterans' Reunion at Little Rock, Ark. I call the attention of the Senator from Arkansas [Mr. ROBINSON] to the report.

Mr. ROBINSON of Arkansas. Mr. President, I desire to make a brief statement and also to ask unanimous consent for the present consideration of the bill.

On May 8 next the annual convention of the National Confederate Veterans will be held in the city of Little Rock, Ark. The President was invited to attend the convention and a request was submitted that the Marine Band be authorized to participate in the concerts there. The President found himself unable to attend the convention, but, as I am informed, he

is in sympathy with the purpose to have the Marine Band at the reunion. It is necessary, however, to pass this bill in order to provide for the expense that is to be incurred.

The number of Confederate veterans who survive is comparatively small. They will come from almost every State in the Union. They are approaching the time when it will be impossible for these old soldiers to assemble in reunions. These events have become in a large degree patriotic celebrations, and it will be an act of good will, heartily appreciated by the people of the entire Southland, if Congress makes arrangements for the Marine Band to attend this reunion.

I realize that this is a somewhat unprecedented course to pursue, but, as the Senate well knows, I have been unable to be in attendance on the sessions of the Senate for some days, and the time is now so short before the convention will meet that I feel constrained to ask for this action at this time.

By unanimous consent, the Senate, as in Committee of the Whole, proceeded to consider the bill, which was read, as follows:

*Be it enacted, etc.*, That the President is authorized to permit the United States Marine Band to attend and give concerts at the Confederate veterans' reunion to be held at Little Rock, Ark., May 8 to 11, 1928.

SEC. 2. For the purpose of defraying the expenses of the band in attending such reunion there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $7,872, or so much thereof as may be necessary.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

ENROLLED BILL PRESENTED

Mr. GREENE, from the Committee on Enrolled Bills, reported that this day that committee presented to the President of the United States the enrolled bill (S. 2126) to provide for compensation for Ona Harrington for injuries received in an airplane accident.

BILLS AND JOINT RESOLUTION INTRODUCED

Bills and a joint resolution were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. CURTIS:

A bill (S. 4225) for the relief of Philip V. Sullivan; to the Committee on Naval Affairs.

By Mr. NORBECK (by request):

A bill (S. 4226) to amend the act entitled "An act to readjust the pay and allowances of the commissioned and enlisted personnel of the Army, Navy, Marine Corps, Coast Guard, Coast and Geodetic Survey, and Public Health Service; to the Committee on Naval Affairs.

By Mr. WALSH of Massachusetts:

A bill (S. 4227) granting an increase of pension to Eva A. Hill; to the Committee on Pensions.

By Mr. McNARY:

A bill (S. 4228) to amend an act entitled "An act for making further and more effectual provisions for the national defense, and for other purposes," approved June 3, 1916, as amended; to the Committee on Military Affairs.

By Mr. BROUSSARD:

A bill (S. 4229) to extend the time for completing the construction of a bridge across the Mississippi River near and above the city of New Orleans, La.; to the Committee on Commerce.

By Mr. McMASTER:

A bill (S. 4230) to continue the allowance of Sioux benefits; and

A bill (S. 4231) to authorize a per capita payment to the Pine Ridge Sioux Indians of South Dakota; to the Committee on Indian Affairs.

By Mr. ROBINSON of Indiana:

A bill (S. 4232) granting an increase of pension to Lavenia A. Hall (with accompanying papers); and

A bill (S. 4233) granting an increase of pension to Anna Dodge (with accompanying papers); to the Committee on Pensions.

By Mr. FLETCHER:

A bill (S. 4234) authorizing the purchase of certain lands by John P. Whiddon; to the Committee on Public Lands and Surveys.

By Mr. MOSES:

A bill (S. 4236) granting an increase of pension to Theresa A. Whipple (with accompanying papers); to the Committee on Pensions.

By Mr. KEYES:

A bill (S. 4237) for the relief of Antoine Laporte, alias Frank Lear; to the Committee on Military Affairs.

By Mr. REED of Pennsylvania:

A bill (S. 4238) for the relief of Robert M. Foster; to the Committee on Claims.

By Mr. CAPPER:

A joint resolution (S. J. Res. 138) to provide for the designation of the route of the National Old Trails Road and the markers thereon; to the Committee on Agriculture and Forestry.

DISTINGUISHED-FLYING CROSS

Mr. BINGHAM. Mr. President, in the Army Air Corps bill which was recently passed by Congress, no provision was made permitting the President to present the distinguished-flying cross to any except members of the armed forces of the United States. Since that bill was passed there have arrived in this country several distinguished aviators, from Italy, from Germany, from France, and from Ireland, and in order that in the future the President may have the power to present the distinguished-flying cross to foreign aviators who make great flights, I introduce a bill to amend that section of the act which provides for the distinguished-flying cross.

The bill (S. 4235) to amend section 12 of the act entitled "An act to provide more effectively for the national defense by increasing the efficiency of the Air Corps of the Army of the United States, and for other purposes," approved July 2, 1926, was read twice by its title and referred to the Committee on Military Affairs.

Mr. BINGHAM. Mr. President, I submit an amendment to the bill (S. 4218) introduced by the Senator from Pennsylvania [Mr. REED] yesterday authorizing the President to present the distinguished-flying cross to the German and Irish aviators who have just arrived on this continent, by including in the bill the French aviators who came first across the South Atlantic, and who were received by the Congress not long ago; and the Italian aviator, Col. Francesco de Pinedo, who came here after flying a distance of 25,000 miles from Rome. I ask that it may be referred to the Committee on Military Affairs and printed.

The amendment submitted by Mr. BINGHAM to the bill (S. 4218) to authorize the President to present the distinguished-flying cross to Ehrenfried Gunther von Huenefeld, James C. FitzMaurice, and Hermann Koehl was referred to the Committee on Military Affairs and ordered to be printed.

WRITS OF ERROR

Mr. FLETCHER submitted an amendment intended to be proposed by him to the bill (H. R. 12441) to amend section 2 of an act entitled "An act in reference to writs of error," approved January 31, 1928, Public, No. 10, Seventieth Congress, which was referred to the Committee on the Judiciary and ordered to be printed.

AMENDMENT TO BOULDER DAM BILL

Mr. ASHURST. Mr. President, I present an amendment to Senate bill 728, the Boulder Dam bill. As the debate proceeds on this bill I shall offer other amendments thereto. I ask that the amendment be read. I am willing to spare the Senate the burden at this time of listening to the reading of this amendment, if I may secure now the appropriate order of the Senate declaring that the introduction of this amendment and the printing of the same in the RECORD shall, for the purposes of Rule XXII of the Senate and of all other rules of the Senate, be deemed to declare that the same has been read. Otherwise I must insist that the same be read.

Mr. CURTIS. The Senator wants to have it printed as an amendment and to lie on the table?

Mr. ASHURST. Yes; but that would not suffice. In order to secure for this amendment its parliamentary status, its place, its dignity, and its right to be considered as an amendment, I must insist that the amendment be read, or that by unanimous consent it be considered by the Senate as read, and unanimous consent further that the fact that the Senate considers these amendments as actually read shall give the amendment the same right and status as required by Senate Rule XXII or any other rule of the Senate.

Mr. CURTIS. I should judge there would be no objection to that.

Mr. JOHNSON. The suggestion is that the amendment be considered as read?

Mr. ASHURST. Yes.

Mr. JOHNSON. I have no objection.

Mr. ASHURST. Then, Mr. President, as to the various amendments I shall introduce to this Boulder Dam bill I shall take the liberty to mark each and all of them as read, and am I now to understand that with the printing of them in the RECORD they shall have the same dignity, parliamentary right, place, and status under Rule XXII and all of the rules of the Senate as if they were read?

Mr. JOHNSON. Yes; provided the Senator calls attention to the fact of their introduction at the time they are introduced.

Mr. ASHURST. I shall do so and print them in the RECORD.

Mr. JOHNSON. Yes.

The PRESIDING OFFICER. Without objection, that order will be entered.

Mr. ASHURST'S amendment to Senate bill 728 was ordered to lie on the table, to be printed, and to be printed in the RECORD, as follows:

On page 2, line 24, after the word "purposes," insert the following: "*Provided*, That no appropriation for construction under the gravity plan shall be made until a compact shall have been entered into between the States of Wyoming, Colorado, Utah, New Mexico, Nevada, California, and Arizona, either to determine the allocation of waters and definite storage elevation and areas or to determine the basic principles that for all times shall govern these matters: *And provided further*, That the passage of this act shall not in any respect whatever prejudice, affect, or militate against the rights of the State of Arizona or the residents or the people thereof, touching any matter, or thing, or property, or property interests relative to the construction of the Colorado River Boulder Dam project."

INVESTIGATION RELATIVE TO EMPLOYMENT AND UNEMPLOYMENT

Mr. LA FOLLETTE submitted a concurrent resolution (S. Con. Res. 16), which was read, as follows:

Whereas many investigations of unemployment have been made during recent years by public and private agencies; and

Whereas many systems for the prevention and relief of unemployment have been established in foreign countries and a few in this country; and

Whereas information regarding the results of these systems of unemployment, prevention, and relief are now available; and

Whereas it is desirable that these investigations and systems be analyzed and appraised and made available to the Congress: Therefore be it

*Resolved by the Senate (the House of Representatives concurring)*, That a joint committee of Congress, to consist of three members of the Committee on Education and Labor of the Senate and three members of the Committee on Labor of the House of Representatives to be elected by the respective committees, is authorized and directed to make an investigation concerning (a) the continuous collection and interpretation of adequate statistics of employment and unemployment; (b) the organization and extension of systems of public employment agencies, Federal and State; (c) the establishment of systems of unemployment insurance or other unemployment reserve funds, Federal, State, or private; (d) the planning of public works with regard to stabilization of employment; and (e) the feasibility of cooperation between Federal, State, and private agencies with reference to (a), (b), (c), and (d). Such committee shall meet and organize as soon as practicable after a majority of the members have been chosen and shall elect a chairman and vice chairman from among its members. For the purposes of this resolution such committee or any subcommittee thereof is authorized to hold hearings and to sit and act at such times and places; to employ such experts and clerical, stenographic, and other assistants; to require by subpœna or otherwise the attendance of such witnesses and the production of such books, papers, and documents; to administer such oaths and to take such testimony and make such expenditures as it deems advisable. The cost of stenographic services to report such hearings shall not be in excess of 25 cents per hundred words. The expenses of such committee shall be paid one-half from the contingent fund of the Senate and one-half from the contingent fund of the House of Representatives upon vouchers approved by the chairman or the vice chairman. Such committee shall make a final report to the Congress as to its findings, together with such recommendations for legislation as it deems advisable, at the beginning of the second regular session of the Seventieth Congress.

Mr. LA FOLLETTE. Mr. President, I have introduced this resolution because I believe that the problem of relief and prevention of unemployment to be one of the most serious economic questions confronting the country to-day. It is a startling fact that there has been practically no consideration of the problem of unemployment and methods of dealing with it by this Government. We have spent hundreds of thousands of dollars—in fact, millions of dollars—in gathering information and statistical data concerning crops, concerning manufactures, concerning output of products, but we have to-day in this country no dependable statistical information concerning the problem of unemployment and the number of unemployed.

This problem presents itself through all the history of this Government. Fifteen times in the last 110 years we have had serious depression, with resultant unemployment. It has come alike under Democratic and Republican administrations. It is not a political problem; it is an economic problem of the most serious import, and it seems to me the time has come when Congress should give consideration to the solution of this question.

Therefore, Mr. President, I have introduced this resolution with the idea that a comprehensive survey, study, and evaluation of the existing information, not only in this country, but in the countries of Europe, where they have recognized this problem and attempted to deal with it, would be of tremendous value to the Congress and should result in constructive legislation.

When we stop to consider that there are 35,000,000 people in this country who are earning their daily bread by the sweat of their brow, when we stop to consider that their incomes total $40,000,000,000, or so it is estimated, we realize that we have a question which affects not only the men and women who labor and their families, but that it also most vitally affects the entire social and economic fabric of the Nation.

For these reasons I shall urge upon the Committee on Education and Labor of the Senate the early consideration and report of this resolution. The hour of 2 o'clock is at hand, and I shall not attempt to discuss this matter further at this time, but I shall discuss it at some later date.

Mr. President, I move that the concurrent resolution be referred to the Committee on Education and Labor.

The motion was agreed to.

COTTON CROP PREDICTIONS

Mr. HEFLIN. Mr. President, there is on the calendar a bill, introduced by me, Senate bill 3845, to prohibit predictions with respect to cotton or grain prices in any report, bulletin, or other publication issued by any department or other establishment in the executive branch of the Government. The bill is not now objected to, and I ask unanimous consent that it be considered and passed. I am going to be called from the Chamber for a little while, and I would like to have this bill passed before 2 o'clock.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. BINGHAM. Let it be stated.

The bill was read by title.

Mr. HEFLIN. The bill has been amended and the provision relating to grain stricken out.

Mr. CURTIS. When this measure was reached on the calendar the other day it was objected to by the Senator from Rhode Island [Mr. METCALF]. Has the Senator talked with that Senator and is he satisfied?

Mr. HEFLIN. I have spoken to him——

Mr. JONES. Mr. President, I think I received some objections to the bill this morning, either by letter or telegram.

Mr. HEFLIN. Let me explain to the Senator. There was objection in the committee because the bill included grain, but upon the suggestion of the Senator from Oregon [Mr. MCNARY], the Senator from Kansas [Mr. CAPPER], the Senator from South Dakota [Mr. NORBECK], and others grain was stricken out of the bill entirely, so it now touches nothing but cotton.

Mr. JONES. I think I shall have to ask that it go over until to-morrow. Then I will take it up with the Senator. I suggest that the Senator withdraw it for to-day and renew his request to-morrow. Is it on the calendar?

Mr. HEFLIN. Yes; and I have sought to bring it up twice before, but Senators wanted to look into it, and they keep on looking into it. Will not the Senator withdraw his objection?

Mr. JONES. I want to look at these telegrams and letters from my constituents. I think I owe that to them. They mentioned this particular bill and I want time to look into it. I have not had time this morning.

Mr. HEFLIN. This touches cotton only, and I can not see why the grain interests would want to keep us from providing a penalty as is provided in this bill.

Mr. JONES. These communications were not from grain interests.

The PRESIDING OFFICER. Objection is made to the present consideration of the bill.

PRODUCTION OF TUNGSTEN

The PRESIDING OFFICER. The Chair lays before the Senate a resolution coming over from the previous day, which will be read.

The resolution (S. Res. 203) submitted by Mr. ODDIE on the 20th instant was read and agreed to, as follows:

*Resolved*, That the United States Tariff Commission be, and it is hereby, requested, under the provisions of section 315 of the tariff law of 1922, to make forthwith an investigation into the costs of production of tungsten in the United States and China, the principal competing country, and to report its findings to the President of the United States.

LANDS FOR ACOMA PUEBLO INDIANS

Mr. CUTTING. Mr. President, I desire at this time to enter a motion that the vote by which House bill 11479, to reserve

certain lands on the public domain in Valencia County, N. Mex., for the use and benefit of the Acoma Pueblo Indians was passed, be reconsidered, and I move that the House be requested to return the bill to the Senate.

Mr. BRATTON. Mr. President, in this connection I want to make a statement. That is a bill which was introduced in the House of Representatives by the Representative from New Mexico. When it reached this body it went to the Committee on Indian Affairs, and on behalf of that committee I made a favorable report on the bill. I favor the bill, but I do not want it to be enacted into law without my colleague's consent, and I am entirely willing that the vote shall be reconsidered in order that he may have ample time to investigate the situation. The vote was taken on day before yesterday.

The PRESIDING OFFICER. The motion to reconsider will be entered. The question is on agreeing to the motion of the junior Senator from New Mexico that the House be requested to return the bill to the Senate.

The motion was agreed to.

### NAVAL APPROPRIATIONS—MARINES IN NICARAGUA

Mr. GLASS. Mr. President, I desire to say in a word that I was unavoidably absent from the city yesterday when a vote was taken on the so-called Nicaraguan amendments to the naval appropriation bill. Had I been present, I should have been recorded as voting against the proposed amendments.

In view of the general newspaper report that the action of the Senate is taken as an approval of the course of the President in dealing with Nicaragua, I desire to state that I would not have voted in the way I have indicated as an indorsement of the course of the President, because I think that in sending troops to Nicaragua the President had no constitutional or statutory warrant. I think he made a very grave mistake, which, had it been made with respect to one of the major nations of the earth, might and very likely would have resulted in dangerous and disastrous consequences.

Therefore my vote in no sense would have been an approval of the course of the Executive, but merely in favor of maintaining the moral obligation of this Nation under its contractual relations, albeit the contract should never have been made. My vote would simply have confirmed the good faith of that contract.

Mr. FLETCHER. Mr. President, in connection with what the Senator from Virginia [Mr. GLASS] just said, I want to add my concurrence and to suggest a further objection to the amendment proposed against which he said he would have voted if he had been present yesterday, to wit, the offense of attempting to place important legislation on an appropriation bill, especially to attempt to define the foreign policy of the United States by an amendment to such a bill, and in view, further, of the fact that the bill was an appropriation bill which would lose its force and would expire and end at the termination of one year. These seem to me to be insuperable objections which might be added to what the Senator from Virginia said.

### MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Chaffee, one of its clerks, announced that the House had disagreed to the amendments of the Senate to the bill (H. R. 10141) granting pensions and increase of pensions to certain soldiers and sailors of the Regular Army and Navy, etc., and certain soldiers and sailors of wars other than the Civil War, and to widows of such soldiers and sailors, requested a conference with the Senate on the disagreeing votes of the two Houses thereon, and that Mr. KNUTSON, Mr. ROBSION of Kentucky, and Mr. HAMMER were appointed managers on the part of the House.

The message also announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 2900) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors.

### PENSIONS AND INCREASE OF PENSIONS

The VICE PRESIDENT laid before the Senate the action of the House of Representatives disagreeing to the amendments of the Senate to the bill (H. R. 10141) granting pensions and increase of pensions to certain soldiers and sailors of the Regular Army and Navy, etc., and certain soldiers and sailors of wars other than the Civil War, and to widows of such soldiers and sailors, and requesting a conference with the Senate on the disagreeing votes of the two Houses thereon.

Mr. NORBECK. I move that the Senate insist on its amendments, agree to the conference asked by the House, and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the Vice President appointed Mr. ROBINSON of Indiana, Mr. NORBECK, and Mr. STECK conferees on the part of the Senate.

### PENSIONS AND INCREASE OF PENSIONS

Mr. NORBECK submitted the following report:

The committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 2900) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors, having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its amendments numbered 7, 15, 18, 21, 24, 36, 41, 53, 58, 64, 65, 67, 68, 71, 74, 80, 81, 82, 94, 99, 106, 117, and 126.

That the Senate recede from its disagreement to the amendments of the House numbered 1, 2, 2½, 3, 4, 5, 6, 8, 9, 10, 11, 12, 13, 14, 17, 19, 20, 22, 23, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 37, 38, 39, 40, 42, 43, 44½, 45, 46, 47, 48, 49, 50, 50½, 51, 52, 54, 55, 56, 57, 59, 60, 61, 62, 63, 66, 69, 70, 72, 73, 75, 76, 77, 78, 79, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 95, 96, 97, 98, 100, 101, 102, 103, 104, 105, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 118, 119, 120, 121, 122, 123, 124, 125, and 127, and agree to the same.

Amendment numbered 16: That the Senate recede from its disagreement to the amendment of the House numbered 16, and agree to the same with an amendment as follows: Restore lines 14 to 17, inclusive, and lines 22 to 24, inclusive, on page 11; and the House agree to the same.

Amendment numbered 44: That the Senate recede from its disagreement to the amendment of the House numbered 44, and agree to the same with an amendment as follows: Restore lines 10 to 13, inclusive, on page 23; and in line 10, after the word "Weaver," insert the word "former"; and the House agree to the same.

Amendment numbered 93: That the Senate recede from its disagreement to the amendment of the House numbered 93, and agree to the same with an amendment as follows: Restore lines 17 to 20, inclusive, on page 45; and in line 20 strike out the numerals "$30" and insert the numerals "$20"; and the House agree to the same.

Amendment numbered 128: That the Senate recede from its disagreement to the amendment of the House numbered 128, and agree to the same with an amendment as follows: On page 156 of the engrossed amendments, in line 20, strike out the numerals "$30" and insert the numerals "$20," and on page 180 of the said engrossed amendments strike out the following language:

"The name of Allie Crabb, widow of Mark M. Crabb, late of Company H, Seventy-eighth Regiment Pennsylvania Volunteer Infantry, and pay her a pension at the rate of $30 per month."

And the House agree to the same.

PETER NORBECK,
LYNN J. FRAZIER,
*Managers on the part of the Senate.*

W. T. FITZGERALD,
RICHARD N. ELLIOTT,
MELL G. UNDERWOOD,
*Managers on the part of the House.*

The report was agreed to.

### PRESIDENTIAL APPROVALS

A message from the President of the United States, by Mr. Latta, one of his secretaries, announced that the President had approved and signed the following acts:

On April 24, 1928:

S. 1771. An act for the relief of Peter S. Kelly; and

S. 2725. An act to extend the provisions of section 2455, United States Revised Statutes, to certain public lands in the State of Oklahoma.

On April 25, 1928:

S. 3640. An act authorizing acceptance from PETER G. GERRY of the gift of the law library of the late Elbridge T. Gerry.

On April 26, 1928:

S. 1736. An act for the relief of Charles Caudwell;

S. 1738. An act for the validation of the acquisition of Canadian properties by the War Department and for the relief of certain disbursing officers for payments made thereon; and

S. 2948. An act to amend section 6, act of March 4, 1923, as amended, so as to better provide for care and treatment of members of the civilian components of the Army who suffer personal injury in line of duty, and for other purposes.

INTERNATIONAL CONFERENCE ON LITERARY AND ARTISTIC PROPERTY
(S. DOC. NO. 89)

The VICE PRESIDENT laid before the Senate the following message from the President of the United States, which was read, and, with the accompanying paper, referred to the Committee on Foreign Relations and ordered to be printed:

*To the Congress of the United States:*

I transmit herewith a report from the Secretary of State recommending a request to Congress for legislation authorizing an appropriation of $1,500 for the expenses of a delegate of the United States to the International Conference on Literary and Artistic Property to open at Rome, Italy, on May 8, 1928.

I am strongly in favor of this, and trust that the appropriation may be promptly granted in view of the short interval of time remaining before the opening meeting.

CALVIN COOLIDGE.

THE WHITE HOUSE, *April 26, 1928.*

BOULDER DAM

The PRESIDING OFFICER (Mr. COUZENS in the chair). The hour of 2 o'clock having arrived, the Chair lays before the Senate the unfinished business, Senate bill 728.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (S. 728) to provide for the construction of works for the protection and development of the lower Colorado River Basin, for the approval of the Colorado River compact, and for other purposes.

Mr. JOHNSON obtained the floor.

Mr. McNARY. Mr. President, will the Senator yield that I may call for a quorum?

Mr. JOHNSON. I yield.

Mr. McNARY. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

| | | | |
|---|---|---|---|
| Ashurst | Edge | La Follette | Sackett |
| Barkley | Edwards | Locher | Schall |
| Bayard | Fess | McKellar | Sheppard |
| Bingham | Fletcher | McMaster | Shortridge |
| Black | Frazier | McNary | Simmons |
| Blaine | George | Mayfield | Smoot |
| Blease | Gerry | Metcalf | Steck |
| Borah | Glass | Moses | Steiwer |
| Bratton | Gould | Neely | Stephens |
| Brookhart | Harris | Norris | Swanson |
| Broussard | Harrison | Nye | Thomas |
| Capper | Hayden | Oddie | Tydings |
| Caraway | Heflin | Overman | Tyson |
| Couzens | Howell | Phipps | Vandenberg |
| Curtis | Johnson | Pittman | Wagner |
| Cutting | Jones | Ransdell | Walsh, Mont. |
| Dale | Kendrick | Reed, Pa. | Warren |
| Deneen | Keyes | Robinson, Ark. | |
| Dill | King | Robinson, Ind. | |

Mr. JONES. I was requested to announce that the Senator from West Virginia [Mr. GOFF], the Senator from Idaho [Mr. GOODING], and the Senator from Montana [Mr. WHEELER] are detained from the Chamber in committee.

The PRESIDING OFFICER (Mr. McNARY in the chair). Seventy-four Senators having answered to their names, a quorum is present. The Senator from California will proceed.

Mr. JOHNSON. Mr. President, in presenting the pending bill it is my purpose, very inadequately and quite briefly, first to tell something of the background or the history of the proposed legislation, and thereafter to take the bill, section by section, so far as I can, and explain the reasons for the various provisions in the measure and the necessity for its passage. In thus presenting the question, I ask the consideration of the Senate that I may not be interrupted during that endeavor; and I say to the Senate, and to each individual Member, that when I shall have concluded with the presentation I shall be very glad, indeed, to endeavor to answer any questions that may be propounded.

Mr. President, the legislation does not fall within the category of twice-told tales. It is an oft-repeated story of what should be the design of a legislative body in response to the necessities and the requirements of a large part of our people. The legislation, sir, had its origin in very small beginnings of a hardy race of pioneers who treked across the continent and founded a new empire in the great southwestern portion of the United States. It had its very small beginnings in their cry for aid to the Congress of the United States, and to-day, sir, it has become, with the lapse of time, one of the most important pieces of legislation pending before the Congress. It is an important piece of legislation, first, because it is the greatest constructive work now pending in the country, the greatest constructive work of our generation; and, secondly, and equally important, because it is the test in the Congress of the United States of whether there are the power and the courage in the Congress, in the face of great private interests and enormous amounts of wealth, to enact legislation which is required by a part of the people of the Nation. Important, sir, in every aspect it is, then; and I speak advisedly when I say that it is the greatest work of its character ever undertaken by legislation, the greatest constructive undertaking that man has ever set himself to.

If there were such a thing as imagination in this body, that imagination would be fired by the endeavor to accomplish a monumental work such as is contemplated by the pending measure. But whether we be wholly practical or whether there be any imagination among us, nevertheless, the work which is sought to be done is of a character incomparable in all the world, and, therefore, is entitled to the interest—not only the interest but the closest consideration and most careful study—of every man who presumes to represent the people upon this floor or in either House of Congress.

The measure deals with the Colorado River in part. The Colorado River is one of the great streams of the world. It is the third largest river in the United States. It has its source way up in the northwestern portion of the State of Wyoming, where, singularly enough, within the radius of 150 miles three great rivers of the United States have their highest source—the Columbia, the Missouri, and the Colorado. The Colorado, meandering down from the northwestern part of Wyoming, traverses seven States of the Union, and after passing a short distance through Mexico flows finally into the Gulf of California.

The Colorado is a peculiar and remarkable river, with characteristics such as are possessed by no other stream, I take it, in all the world. Sir, in its torrential moods it has torn in Mother Earth great chasms, which present a marvelous scenic effect such as can be witnessed in no other locality. In its sluggish times it has deposited its silt along its course in the years and years gone by until, with that deposit of silt in the Imperial Valley and just south of the Imperial Valley, it has built up a territory more fertile than the valley of the Nile, and which is unrivaled in any other place on earth. It has built its chasms throughout the great mountains with its torrential floods. It has built this territory, rich in productivity, with the carrying and deposit of the silt that is a part of that river. In drought and in flood it has equally been the enemy of man. It is in the endeavor to transmute this river, which has been a menace in all of its moods, into an asset nationally that the bill is presented to the Congress.

The purposes of the bill, sir, are many, five, in reality, under general heads. It seeks, first, flood control; next, irrigation and reclamation of arid lands. Thirdly, it seeks to solve an intolerable international situation. Fourthly, it endeavors to provide water for domestic purposes to the coastal cities of southern California. Fifthly and lastly, it endeavors, by the generation of electrical power, to furnish the means for payment of the entire plan and the whole scheme, so that the United States Government shall not be in any way drawn upon ultimately for the expenditure of a single cent for this great undertaking.

At the beginning of what I say to-day, at the end of the argument whenever that shall occur, whether within a week or a day or a month or a year or a lifetime—at the beginning and at the end of the argument upon the pending measure, I want to make plain to those who do me the honor to listen to me that under the provisions of the measure the United States Government will not be required ultimately to pay a single dollar. I iterate and reiterate this, sir, because again and again in newspapers which publish their articles for one reason or another, by individuals who make their assertions for one cause or another, repeatedly it has been asserted that under the measure the taxpayers of the United States will be required to go deep into their pockets in order to afford some benefit to the people in the southwestern portion of our country.

Not so, sir; not so at all. Nothing will be required from the United States Government ultimately. The provisions of the bill emphatically make that plain, as we will see when we reach those provisions. No sum is asked from the United States Government in this plan. Before there can be a shovelful of earth turned or a single dollar expended the United States Government must have in its hands wholly executed contracts which will repay every penny contemplated to be expended under the bill.

Never before in any measure of this magnitude or of this character has such a provision been presented; and I repeat, because of the misrepresentation which has been indulged all over this land, that the taxpayers will be mulcted not of a single penny by the passage of this bill. Taxes will be increased not a farthing. No community, no individual, will be required to pay a single cent toward this project. Every bit of money that may be expended upon it must be paid out of the project itself, and the Government of the United States must be satis-

fied upon that point before it begins any activity of any kind or any character.

Flood control, sir, is the first purpose of the measure. That this is a national purpose none, of course, will gainsay. We have demonstrated that upon the flood control bill of the Mississippi River recently; so that there are none to be heard to-day who will not say that when flood control is necessary for the protection of peoples or of territory within the United States the problem becomes one national in character, that the Nation itself must provide for, and the Nation itself must endeavor to accomplish.

Flood control, sir, is here the first desideratum—flood control in order to protect against threatened dangerous floods parts of Arizona and the Imperial Valley in the State of California; and that you may understand something of what this flood menace is let me describe to you, as it has been described again and again, the peculiar topographical character of the Imperial Valley.

There, sir, is a soil made by the Colorado River. There, sir, is a soil that through the ages has come by the filling up of a part of the Gulf of California. It is below sea level; and the Imperial Valley is like the base of a saucer, while around the rim of the saucer flows the Colorado River. The Colorado River flows upon an eminence above the valley itself, threatening constantly inundation of the valley, and threatening that inundation, sir, not alone because of the periodical turbulence of the Colorado River and its occasional great floods but threatening it because the bottom of the river is being gradually filled with the silt that is carried by the water itself and because the levees, that have served as a temporary protection to the Imperial Valley, have now reached the height where danger finally exists, and they can be erected and constructed to very little greater height.

The silt carried by the Colorado River constitutes one of its menaces. In a single year it carries in quantity an amount equal to the total excavations of the Panama Canal.

In 1905 and 1906 there were disastrous floods in the Imperial Valley; and that they are disastrous and different in kind from the floods which occur in every other part of the United States will be obvious to you when you realize that a flood in the Imperial Valley means that the water goes down below sea level. It has no outlet at all; and only the slow process of evaporation will enable the water that inundates the valley to be dissipated from the land upon which it may flow.

A flood upon the Mississippi may be a catastrophe at which all of us stand aghast. A flood in the Imperial Valley is a very different sort of thing. In the Mississippi Valley there will be disaster and there will be loss and there will be lands for the moment covered with the great rushing torrent. But lands may ultimately be reclaimed. Losses may finally be remedied.

In the Imperial Valley there is no such thing as reclamation; once the water goes down 250 feet below sea level into that valley from the dikes that surround it, no method in which there can be rescue of the valley; and total annihilation results. Floods, therefore, are in the Imperial Valley more to be dreaded, more to be feared, and more disastrous in their consequences than floods in any other place and from any other river.

A quarter of a century ago the Imperial Valley was a mere desert waste. I can recall the time—and I can recall it, too, as if it were but yesterday—when men adventured across those desert wastes, and for their daring found themselves lost in the dreary sands, and oftentimes their lives were forfeited. To-day in the Imperial Valley there are five or six growing, beautiful little cities, 65,000 people, and more than $100,000,000 of wealth; and in the brief period of a quarter of a century those people have builded from this arid desert waste a territory second to none on earth in its fertility and in its productivity.

I hear occasionally the objection made by some of our brethren who are engaged in agricultural pursuits, and some of the gentlemen who come from the South, that they do not desire to see lands brought into productivity under a bill of this kind, because it will cause increased competition in agriculture and will, with additional lands reclaimed and devoted to cotton, reduce possibly the prices of that commodity.

It is not so with the ordinary production in the Imperial Valley. With the production of cotton it has been demonstrated in late years that it can not be so; and that you may understand something of that which is produced from the Imperial Valley let me say to you that last year—in 1927—17,764 carloads of cantaloupes were shipped from that valley that come in competition with no other product in the production of which the constituents of any Senator upon this floor may be engaged. Eight thousand nine hundred carloads of lettuce were shipped in 1927, in December, January, February, and March. Three thousand five hundred carloads of watermelons were shipped in May and June, mostly to the Pacific coast; and the rest of the produce that came from the valley in the main was shipped within the State of California for consumption there.

The Imperial Valley has been described, perhaps accurately, as the greenhouse of the whole United States. What is raised there profitably comes in competition with nothing that is raised in any other part of our country. I want to impress that upon some of the gentlemen who have talked to me about the productivity of the Imperial Valley and new lands coming in under the reclamation provisions of this bill.

What is raised in the Imperial Valley is peculiar to itself, comes into market at a time when it does not conflict with any other produce in this country, and has no competitive advantage or otherwise with the produce that is raised in any other part of our land.

I heard the other day, from one of our brethren from the Southern States, something said about what might happen to cotton in the South if the Imperial Valley were permitted to reclaim other lands, and if Arizona were permitted to reclaim other of her lands. I have here the statistics of the cotton crops of the Imperial Valley in the last few years, and I may state in general terms that constantly and yearly the production of cotton in the Imperial Valley has decreased—decreased in such marked proportions that it is obvious that in a very brief period no longer will cotton be produced in the Imperial Valley at all. The reason for this is the profit that is derived from the other crops; and, because the other crops can be more readily raised and the profits are greater, the acreage devoted to cotton is being gradually reduced.

In 1924 there were 20,000 bales of cotton ginned in the Imperial Valley. In 1926 there were only 6,000 bales ginned; and, during the years, down the scale has gone the number of bales of cotton ginned in the Imperial Valley, and the number of acres used.

On the other side of the line, however, where we are endeavoring to correct an international problem, there lies the danger, in Mexico; and the man who comes from a cotton State and votes against this bill upon the theory that he is aiding his cotton State, on the contrary does a great injustice and wrong to his territory, because in the days that are passing, while nothing is being done to control the Colorado River, cotton is being raised in old Mexico, and will continue to be raised there; and by preventing the adoption of a measure of this sort the competition that the southerner would wish to avoid in the raising of cotton, he invites by inviting the continuance of the production of cotton in Mexico below the line of the Imperial Valley.

In this valley now there are something like 400,000 acres of land cultivated. In Mexico under irrigation and reclamation just below the line are some 200,000 acres of land; and the cultivation in Mexico and the reclamation of lands there are increasing in greater proportion than the cultivation of lands in the United States and in the Imperial Valley.

May I say to you that the danger of flood is so great in the Imperial Valley that loans can not be obtained from the reserve banks or the farm-loan banks situated on the Pacific coast.

I hold in my hand a letter written on the 4th day of November, 1927, by the Federal Land Bank of Berkeley, Calif., in which, very tersely, this answer is made to a request for a loan in the Imperial Valley:

> Answering your favor of October 29, this bank ceased making loans in the Imperial Valley some years ago, and we must stay out of that territory until the flood hazard has been eliminated.
>
> Very truly yours,
>
> THE FEDERAL LAND BANK OF BERKELEY,
> By SIMMS ELY, *Treasurer*.

Thus we have a situation presented where there is such imminent danger of flood that the Government agencies will make no loans there. None deny it.

We have a situation presented where the Federal farm-loan banks will not lend upon land that is the most fertile land, admittedly, in all the United States.

We have a situation presented where a great river is running into the sea in flood, going to waste, and in drought doing its incalculable harm, for the danger that exists to the territory that is situated in the Southwest is twofold in character. The danger is, first, from want of water when there is little in the river and from too much water during times of flood; and that this is a real danger is obvious from the fact that only two years ago in the Imperial Valley the losses amounted to over $5,000,000—over $5,000,000 for want of water alone—and that the danger exists from flood, I think, will not be gainsaid by any, no matter who they are, upon this floor, or any of those, either friend or foe, who know the territory.

Irrigation and reclamation constitute one of the reasons for this measure. Two hundred thousand acres of land in Arizona without a pump lift may be reclaimed and irrigated under this measure. Six hundred thousand acres of land in Arizona, probably, with a pump lift that is not excessive, may be irrigated and reclaimed. Three hundred thousand acres in California without pump lift at all may be reclaimed. One hundred thousand acres with a pump lift of 50 feet may be reclaimed. All desert now; and please keep in mind that where it is sought to place this great dam is in a territory where both sides of the river are owned by the United States, and that the land between the site proposed for the great dam and the boundary of the United States and Mexico is practically composed of lands belonging to the United States of America. All the long distance from the site of the proposed dam—nearly 300 miles—to the Yuma project near the Mexican boundary is composed of lands practically in ownership of the United States.

Keeping that in mind will make plain to you some of the reasons why some of the objections which ultimately may be made to this measure need not be answered at all.

There is an international situation existing to-day in connection with the Colorado River and the Imperial Valley which this bill seeks to solve. That it should be solved the Secretary of State, the Secretary of Commerce, and the Secretary of the Interior are all agreed. That it should be solved every man who is familiar at all with that country and all who understand anything of the distribution of the waters of the Colorado River there will readily admit.

The Colorado River runs between California and Arizona and then, so far as the Imperial Valley is concerned, by its canal water is carried 60 miles through Mexico up into the Imperial Valley again. Mr. President, let me refer to the international situation which, through no fault of the people of the Imperial Valley, has been created there. The Imperial irrigation district is a going, solvent concern, the largest irrigation district in the country and probably the one that does greater work in that line than any other district in the Nation.

The Imperial irrigation district manages, of course, the distribution of water in the Imperial Valley. The ditch of that district, because originally there were few settlers in the Imperial Valley and because it seemed more economical to carry the water in that fashion, runs across into Mexico, and then for a distance of 60 miles traverses Mexican territory, until it comes up again in the Imperial Valley and distributes the water there which is the sustenance of that land. Water is everything to that territory, of course. The territory was barren waste, mere desert, at one time. Some one then discovered—and that within our lifetime—the possibilities with water put upon the land. There is no rainfall, practically, in the Imperial Valley. There are no wells there. The people of that territory are dependent not only for the irrigation of their lands upon the Colorado River and this canal which runs 60 miles through Mexico, but they are dependent, too, for their very drinking water, their domestic water, upon this Colorado River thus running.

Within a very few hours, aye, within a very few moments, in Mexican territory, the entire life of the Imperial Valley could be destroyed, or, if the ditch were cut there, or if a few sticks of dynamite were utilized by those who were hostile to us, not only would the lands be dried and the crops be destroyed, but the people themselves would be required to leave their homes because unable to obtain drinking water.

Thus it is that we have presented an intolerable international situation, an intolerable international situation which seriously affects 65,000 Americans in the Imperial Valley and Imperial County, and upon which depends $100,000,000 worth of property in the Imperial Valley.

I assume, sir, that if we were dealing only with property nearly every man here would rise in his majesty and his might and tell how property should be protected in the Imperial Valley, but there are only 65,000 American citizens—men, women and children—down there, too, and 65,000 American men, women, and children, of course, are of little consequence when we consider the wealth of a great power combination in the United States of America.

However that may be, the Secretary of State, the Secretary of Commerce, the Secretary of the Interior, every individual who has dealt with the subject in any way, or has even touched it at a tangent, agrees that there ought to be relief from that which now prevails in the Imperial Valley and from this condition of the canal that runs through Mexico for 60 miles, upon which so many people are dependent.

So, as a part of the plan of this bill an all-American canal is provided for, too, an all-American canal which will run through American territory, carrying water of an American river to Americans who reside upon American soil, so that they will not be dependent upon what may transpire in a foreign country. This all-American canal is a part of the crystallized plan that represents years and years and years of study and effort, years and years and years of endeavor by engineers and others in the United States to solve the problems of the Colorado River and the problems of the people who are dependent upon the waters of that river.

We come here to-day with no plan of yesterday; we come with no scheme of a month or a year ago; we come here, sir, with no ill-considered project that is presented by those who know little or nothing about the subject matter. We come here with a plan that saw its genesis away back in the eighties, when the Colorado River first began to be traversed and to be studied, and then that took its form and substance during all the period from Roosevelt to the present day, a scheme and a plan and a project that has had the most intensive technical study and the indorsement of the best engineering skill in the United States.

It is a difficult thing to impress this upon Members of Congress. A man comes in to-day, and he reads this bill, or he hears somebody from some place talk concerning it, and he imagines he is able to deal with the subject and to present something which shall be of value to it. It took me years—and I am no more dense or stupid than the average Senator—to understand all the complications and convolutions and all the minutiæ and all the details of the project, a project which represents the crystallized sentiment of four administrations, and of substantially every distinterested engineer who has examined this project during the last quarter of a century. So to-day we come with this unified project, solving so many different problems of the Colorado, and so many different problems of those who are residing in that particular territory. Among the solutions provided is this all-American canal.

There is one thing that the all-American canal does, and I recognize the fact that some opposition to this bill is because of the fact that it does that very thing. The all-American canal will stop the feverish activity which now exists across the American line in Mexico, will halt that feverish activity in irrigating and reclaiming lands there at the expense of lands in the United States of America.

To-day, sir, with the flow of the Colorado River unregulated, there are 600,000 acres of land practically under irrigation and reclamation. I am speaking now of the territory on the other side of Yuma. There are 400,000 in the Imperial Valley and 200,000 in Mexico. The waters of the Colorado River now unregulated are not sufficient for the irrigation and reclamation of even these lands.

Under the old contract that exists with Mexico one-half of the water that goes into the great irrigation canal of Imperial Valley as it flows through Mexico is first to be utilized by Mexican lands, and the remaining portion that flows through this 60 miles of canal and comes up then into the Imperial Valley is to be utilized by the Imperial Valley and the Imperial Valley people. The only way, I think, in which we can protect American lands is by regulating the flow of the Colorado River, and the only way in which we can regulate the flow of the Colorado River appropriately so as to do the job is by a high dam at the Boulder or the Black Canyon.

Keep in mind, please, that every acre that is now being reclaimed and irrigated on the Mexican side because of the existing contract and because the flow of the Colorado is unregulated, means an acre that will be arid, waste, and desert upon the American side. That is what the defeat of this measure means. That is what some people desire who own lands over the Mexican border. That is what some Americans, rich beyond the dreams of avarice, with 850,000 acres of land over across the border, wish. They desire that the situation shall remain as it is, or that there shall be a low dam for flood control alone, so that there may continue to be irrigation and reclamation in Mexico, irrigation and reclamation in Mexico at the expense of the irrigation and reclamation of lands in the United States of America.

The all-American canal solves this problem, and that is the reason why, in the unified scheme and the crystalized plan that has been presented here, the all-American canal is included as an integral part.

The provision for domestic water is an important although a secondary part of this measure, and domestic water can be provided for the coastal cities of southern California in just one way—from the Colorado River, and from great storage at the Boulder or the Black Canyon.

Mr. Roosevelt once said that the use of water for domestic purposes was the highest use to which water could be put, and when cities and peoples ask that they may be given

potable drinking water from a particular stream where the water to-day is wasting into the sea, they have a right to expect a ready response from those who represent them.

You may not realize how great has been the increase of population in southern California. You who come from Baltimore, for instance, you who come from a city like Detroit, let me tell you that the registration in the county of Los Angeles for the primary of those qualified to vote, and in one party in California there is no contest this year, is more than 722,000. Do you realize what that means in population, and do you realize what it means in the rapid increase in population, 722,000 qualified voters in one county in southern California to-day?

I come, sir, from what used to be the metropolis of the Pacific coast. We registered the other day 208,000 qualified voters. In Los Angeles County alone 722,000 are registered to-day for a primary election, in which there is no contest, in one of the major and the dominant parties there.

With that population, it is obvious that the efforts which have been made to provide Los Angeles with water have fallen short of what it was supposed had been accomplished. There is only one place to which Los Angeles can go to get domestic water, just one place, and that is the Colorado River. Los Angeles and the other cities of southern California will have to pay for that privilege, because, already expending millions in investigations, it is estimated that it will cost $150,000,000, with a pump lift of 1,500 feet to surmount intervening mountains to take that water from the Colorado River.

Not only has Los Angeles increased in the proportion I have indicated, but all the other southern California counties have increased in like fashion. The metropolitan water district of southern California is composed not alone of the city of Los Angeles, but of cities in Riverside, Orange, and San Bernardino Counties and other territory. Some twenty-odd municipalities are a part of the metropolitan water district there, which seeks to obtain water from the Colorado River.

The last purpose that there is in this bill is that which makes doubtful its passage. The last purpose in this bill is the generation of electrical power, the generation of electrical power at the dam for the purpose of paying for the project. It is a by-product incident to the other purposes of the bill, and a by-product in order that the whole scheme may be paid for and may be made financially sound.

Mr. TYDINGS. Mr. President, I desire to suggest the absence of a quorum, but I will not do so if the Senator from California would not like to have me do so.

The VICE PRESIDENT. Does the Senator from California yield for that purpose?

Mr. JOHNSON. I thank the Senator. I yield for that purpose.

The VICE PRESIDENT. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

| | | | |
|---|---|---|---|
| Ashurst | Edwards | McKellar | Shortridge |
| Barkley | Fletcher | McMaster | Simmons |
| Bayard | Frazier | McNary | Smith |
| Bingham | George | Mayfield | Smoot |
| Black | Gerry | Moses | Steiwer |
| Blaine | Glass | Neely | Stephens |
| Blease | Gould | Norbeck | Swanson |
| Borah | Harris | Nye | Thomas |
| Bratton | Harrison | Oddie | Tydings |
| Brookhart | Hayden | Overman | Tyson |
| Broussard | Heflin | Phipps | Vandenberg |
| Capper | Howell | Pittman | Wagner |
| Caraway | Johnson | Ransdell | Walsh, Mont. |
| Copeland | Jones | Reed, Pa. | Warren |
| Couzens | Kendrick | Robinson, Ark. | Waterman |
| Curtis | Keyes | Robinson, Ind. | Wheeler |
| Cutting | King | Sackett | |
| Deneen | La Follette | Schall | |
| Dill | Locher | Sheppard | |

Mr. JONES. I was requested to announce that the Senator from Ohio [Mr. FESS], the Senator from West Virginia [Mr. GOFF], and the Senator from Idaho [Mr. GOODING] are detained in committee.

The VICE PRESIDENT. Seventy-three Senators having answered to their names, a quorum is present.

Mr. JOHNSON. Mr. President, the last of the purposes of the bill which is before us is the subordinate one of power. Not only would it be unwisdom on our part to construct a dam of the character of the dam which is provided for by the bill, but it would be an idiotic policy, only to be followed by those who fawn upon public-service corporations and power lobbies generally, that would preclude us from proceeding to generate electricity on a dam under the circumstances under which this particular structure would be built. To say that we should erect a dam in the Colorado River for the purpose of protecting our people from flood, to say that we should erect a dam in the Colorado River to reclaim and to irrigate hundreds of thousands of acres of land, to say that we should erect a dam in the Colorado River for the purpose of solving an intolerable international condition, and then, with the dam and the means at hand for paying for the entire project, to say that we should not utilize that which was there for us to utilize, would be an economic idiocy of which no independent legislator ever could be guilty.

Here at hand, with the dam contemplated by the bill, are the means of paying every dollar that may be expended by the United States in this great project. I did not have, sir, the temerity to ask the Congress for an appropriation of the amount which is asked by the bill without providing for the repayment of that appropriation. I think that had I come to the Congress some years ago, when first we came with this measure, and had asked an appropriation of $125,000,000 and then said it should come forthwith from the Treasury and that there should be no means of reimbursement of the United States, I would have had proponents neither upon this floor nor in any other part of the city of Washington.

It was essential that the means be provided by our measure to meet the appropriation. Those means are provided. We have only taken what is at our hand in the construction of this great dam. We have only taken that which naturally and inevitably results from the great work, in order to pay the United States Government for its outlay and for its expenditure in behalf of its people and its land.

Of course, here lies the rub in the bill. If there were not any power to be generated at Boulder Dam, if there were not any power to be generated to pay for the project, if we were supinely to say that we would give to everybody who desired it, without any cost to them, all of the profit that might be derived from this great enterprise, there would be an enthusiastic accord in some quarters in behalf of the bill, where now we find a shaking of heads and a doubt of the feasibility of the project. It is so easy to say that a project of this sort "is not feasible" and "it ought not to be attempted," and illustrations galore present themselves to those who doubt and those who fear because private enterprise is not reaping the profits of a great public undertaking. So I have seen lately, sir, some ghouls of the press and others telling what a dreadful example is before the Congress in this bill in view of the disaster that occurred in the San Francisquito Canyon, with a dam that was erected by the city of Los Angeles. I have read some articles and heard some people say, "This is an enterprise upon which the Government should not start; it should never engage in this sort of undertaking because of the disaster that occurred in the San Francisquito Canyon to a dam that was erected by a municipality." That argument—that sort of stuff some gentlemen who are ever prating of private initiative have the temerity to indulge in upon this measure.

Here is a dam which will be the highest in the world. Does any one say we can not build it and that those who represent the Reclamation Service are not able to construct it? I deny it. Here is a dam that the United States itself would build in the Colorado River at Boulder or at Black Canyon, a dam 550 feet in height, higher than any other dam on the face of the earth, with a storage capacity back of it greater than any storage capacity ever before so created in a storage capacity of 26,000,000 acre-feet—a 550-foot dam, 26,000,000 acre-feet in storage, a lake 90 miles long—and this is to be built by the United States of America.

The Reclamation Service of the Government is an organization of a quarter of a century's standing. It is provided by congressional act. It specializes in the construction of works for irrigation purposes. It is the largest, most efficient, and most successful organization of its kind in existence. It has built approximately 100 dams, some of them among the highest and largest in the world. Its engineering corps represents a body of capable and experienced men who are expert in every sense of the word. They are hired and paid by the Government of the United States. They are in the Federal service because of demonstrated ability in the line of engineering. They have shown themselves worthy of the confidence of the Government and of the country. They will do the job.

Notably among the higher dams built by the Reclamation Service are the following: The Arrowroot in Idaho, 349 feet in height; the Elephant Butte in New Mexico, 306 feet in height; the Roosevelt in Arizona, 280 feet in height; the Shoshone in Wyoming, 325 feet in height. These are all works of the United States Government, built by the Reclamation Service. The Reclamation Service and the United States Government say that this is a feasible project, and that this dam at the particular locality can be built exactly as we contemplate, and it is the United States Government that will go ahead with the job.

Some of our brethren say, "Oh, the demonstration that the Government can not do it is found in the recent disaster in the San Francisquito Canyon Dam, because, forsooth, that dam

was owned by a municipality, and being owned by a municipality it is evident now that neither municipalities nor States nor the Nation itself can build an enterprise or a structure of this kind."

Power we expect to generate here at this dam—to generate it because we have the market for power. There in that territory we have this market in the requirements of pumping a supply of domestic water that is to be given to the coastal cities of southern California. The water must be pumped 1,500 feet over the mountains, and in order to do that some 300,000 horsepower of electricity must be utilized; and there is only one place where that can be obtained, and that is from the power generated at the Boulder or the Black Canyon, under this bill.

So the market for power is there; and the market for power being there, the people to pay for it being in existence, there is no question on earth—differing from every other measure of this kind that has ever been presented—but that the United States Government will receive every penny and every dollar that it shall expend or for which it shall contract under this bill.

Now, let us turn for a moment, if you please, to the bill itself; and hastily I want to go through its sections, so that we may have some adequate understanding, or that there may be some explanation from me, at least, in the RECORD concerning the provisions of the bill.

In section 1 the purposes of the measure are stated:

> For the purpose of controlling the floods, improving navigation, and regulating the flow of the lower Colorado River, providing for storage and for the delivery of the stored waters thereof for reclamation of public lands and other beneficial uses exclusively within the United States, and for the generation of electrical energy as a means of making the project herein authorized a self-supporting and financially solvent undertaking.

For these purposes the Secretary of the Interior, subject always to the terms of the Colorado River compact—

> is authorized to construct, operate, and maintain a dam and incidental works in the main stream of the Colorado River adequate to create a storage reservoir of a capacity of not less than 20,000,000 acre-feet of water, and a main canal and appurtenant structures located entirely within the United States.

All, you will observe, subject to the Colorado River compact.

Mr. President, let me pause for a moment to speak of the Colorado River compact.

The Colorado River makes, in its peculiar meanderings, two basins, termed the upper and the lower basins. In the upper basin are embraced the States of Wyoming, Colorado, New Mexico, and Utah. In the lower basin are embraced the States of Arizona, Nevada, and California. Some years ago—six, indeed, to be accurate—there were meetings held which finally resulted in the execution of what was termed the Colorado River compact. I will not in detail explain now exactly the provisions of that compact. Suffice it to say that it sought to divide at a place called Lee Ferry, between the upper and the lower basins, or to allocate as between the upper and the lower basins the waters of the Colorado River.

Thereafter the compact was not ratified. It may have been the fault of one State or another. It is immaterial for the moment, in the course of this argument, whether it was the fault of one or another, two, three, four, or five States, as the case may be. It stands to-day unratified; and the compact to-day is ineffective as among the States because of that lack of ratification.

Now, let me point this out to my friends of the upper-basin States: You say to me that you are willing that we should have this bill if all seven States ratify the compact. I assume you say that. I do not say that you do, sirs; but let us assume that you do. That means that one State that does not desire to ratify the compact—and that one State of that sort exists can not be denied at all—that one State, then, refusing to ratify the compact, can forever prevent the realization of the hopes of the people of southwestern United States for the control of the Colorado River. You say to me in effect, when you say that, "We would rather the water of the Colorado would go to waste in the sea than that you should have a measure of protection such as is given by this bill"—a full measure, in my opinion. You would rather it would go to the sea than that there should be any legislation for the protection of 65,000 American people, or any legislation for the purpose of preventing the intolerable conditions that now exist.

Let us see where you go in this attitude.

Western water law is a different thing from the doctrine of riparian rights. In the West, to put it crudely, the law is that the first appropriator in point of time who puts water to a beneficial use has the right to that water. Title to water in the West is obtained by virtue of appropriation to a beneficial use. Where is this water being put to a beneficial use to-day, and where is the only place that it can be put to beneficial use? Mainly in the State of California.

I wish that there were no shadowy border lines, no shadowy lines of demarcation, between the States, so that we would not have our difficulties between States. They are all peoples, and they are all people of the United States and citizens of the United States; and to say that an arbitrary line that may cleave some man's ranch shall leave him, on one side of it, to the mercies of the Colorado, and, on the other side, in a situation where some States must adopt a seven-State compact, or he must be drowned out ultimately, is an injustice that ought not to be tolerated, and that Congress ought not to tolerate.

We write this bill around the compact. We incorporate in it the very amendments that were presented by the upper-basin States. The amendments that are in the bill that refer to the Colorado River compact were written by the men of the upper-basin States, and inserted at their request; and in every conceivable fashion that the upper-basin States can be protected, in every way in which we can make this scheme and the lands that are watered by the Colorado, from the storage and the regulated flow of that river under these works, subject to the Colorado River compact, we have done it in this bill.

What a travesty it is for these people from the upper basin States to say to us, "You must give us a seven-State compact or you never can get relief, and the Colorado River will never be harnessed." Even though we be destroyed, into this bill has been written every single, solitary, conceivable provision that will protect the Colorado River compact and the upper basin States.

The land that will be reclaimed and will utilize the waters of the Colorado belongs to the United States, and so we have impressed upon those waters that will be stored by the United States Government the Colorado River pact—impressed it so that they can only be used in accordance with the Colorado River pact; and everything has been done in this bill that it is possible to do, even to writing in an amendment at the instance of the Senator from Wyoming by which California binds herself for all time never to utilize more than 4,600,000 acre-feet, the maximum that she may utilize in all the years to come. So we have done all that we could in order to protect the other States and in order to protect the Colorado River compact and to write it into the bill.

You will observe in the first section of this bill that the right is given to the Secretary of the Interior to construct, not only the dam and the incidental works creating a storage capacity of at least 20,000,000 acre-feet, and to construct the all-American canal from the Laguna Dam to the Imperial and the Coachella Valleys, but also he is given the power to construct a plant for the development of electric energy.

Let me tell you how these provisions for the construction of a power plant by the Government came to be inserted in this bill.

This bill has been pending so long that I hesitate, sir, to give dates in regard to what may have transpired in respect to it; but I am sure I am well within the fact when I say that some two and a half years ago the Interior Department recommended an amendment in this bill, which was inserted at the request in writing of the Interior Department. The Interior Department requested that there should be written into this bill the option or the right of the Government to construct a plant for the generation of electricity. It was asked by the Secretary of the Interior upon several grounds. I speak now from recollection, but I think I speak with accuracy. It was asked, first, because the topography of the country was such that the privilege to utilize the water at the dam for the generation of power, if granted to one person or interest, could not be accorded to another. That was because of the topography of the country. Next, he said it was essential, in order that the United States Government should be protected in a scheme so large as this, that the Government should have, as it were, the whip hand in dealing with the great power problems.

It was necessary, too, in order that there should not be the possibility of monopoly in the matter of power privileges; and, generally, it was desired so that the Government might be protected. It was a protective measure only. It was not required to be constructed by the Government. It was simply a right, a privilege, or an option which might or might not be exercised in behalf of the Government.

Now, I confess to you very readily, and I would not have anybody misunderstand me in that regard at all, that there are no terrors for me in Government ownership; and no fear

have I of a municipally owned or a Government-owned electrical generating plant. That, however, is apart from this question. This bill does not take the Government into the electrical business. The reason that is given for the opposition of the Power Trust to this bill, sir, is that it takes the Government into the power business. It does not do anything of the sort. It gives the Secretary of the Interior the option, if he deems it necessary to exercise that option, to erect a generating plant; but it is a protective measure alone, and the ultimate determination of whether or not he will do it will rest with the Government of the United States. It strikes me that some of these gentlemen express very little confidence in the words that are uttered by some of those in power to-day when they say that they will not permit, in a bill of this character, even an option by the Government of the United States to erect a power plant or a generating plant at Boulder Dam.

The alternatives are accorded in this bill of leasing the water for power, or, if a plant be created, of leasing units of the plant, or the Government's operating the plant; but the alternatives are alternatives that in the discretion of the Secretary of the Interior and the administration may be exercised or not, as the Secretary and the administration shall deem best for the best interests of the Government.

I make this as plain as I am able to make it because of the repeated statements that have been made concerning this bill and the design of its authors. The provision was inserted in the bill, first, at the direct instance of the Secretary of the Interior of this Government itself; and, in the second place, the provision which is complained of so bitterly by those who are in private business is one of which they have no right to complain, because the provision is one that is optional with the Secretary of the Interior and the United States Government and may or may not be exercised as the Secretary or the Government may elect in the days to come.

That is all there is to the provisions in this bill that have resulted in the printing of those beautiful brochures at a cost of $7,500, paid to a distinguished ex-ambassador of the United States, that have been distributed all over our country by distinguished gentlemen in Washington who have just related the fact. That is all there is to the provision in this bill which, it is asserted, of course, is socialistic in character, taking the Government into business, and the like—no more than that; that and that alone. And when these gentlemen come to oppose this bill and to tell of its iniquities I want to know where they find anything else or what there is in this bill upon which the wildest advocate of profit making out of Government can say there is something done against private enterprise or against private business.

Section 2 of the bill, sir, contains the financial features. These were furnished by the Secretary of the Treasury. I assume, therefore, they will meet with an enthusiastic reception even from the opponents of the measure. They were written into the bill at the suggestion of the Treasury Department.

Section 3 of the bill provides for the appropriation for the proposed project, and on this point let me explain a word.

The appropriation that is authorized is stated in the bill as $125,000,000. That, sir, is, after all, a bookkeeping transaction, for included in the appropriation of $125,000,000 are $21,000,000 interest and the construction of a generating plant by the United States Government.

Eliminate the interest, and eliminate the construction of the power plant, and the amount of the appropriation authorized would then be $72,000,000; that, and that alone. So keep that in mind in considering the amounts that are to be appropriated ultimately from the Treasury.

Section 4 is a provision that was inserted at the instance of the upper basin States; to preclude anything being done until there should be a ratification by six of the Colorado Basin States. It is bad enough to require that of us in a measure of this sort, with the protection this bill throws around the Colorado River compact; but think of it, they require that six States of the Colorado River Basin shall ratify the compact before anything shall be done under this bill. It leaves but one State, then, which may or may not be recalcitrant; but if six States ratify the Colorado River compact with the other provisions of the bill protecting that compact and the upper basin States, we are permitted to proceed.

Subdivision (b) of section 4 is the most rigorous provision that ever was inserted in a measure of this character. I have referred to it and recurred to it once or twice to-day, but permit me to read it so that the few who are here may understand it.

Before any money is appropriated—

Follow me—

Before any money is appropriated or any construction work done or contracted for—

Do Senators follow me? You can neither have an appropriation nor any work done nor any work contracted for—

the Secretary of the Interior shall make provision for revenues, by contract, in accordance with the provisions of this act, adequate, in his judgment, to insure payment of all expenses of operation and maintenance of said works incurred by the United States and the repayment, within 50 years from the date of the completion of the project, of all amounts advanced to the fund under subdivision (b) of section 2, together with interest thereon, made reimbursable under this act.

There never was an act presented to the Congress of the United States of this character before, where there was inserted such a rigorous provision for repayment. Neither appropriation can be made nor work done nor contracted for until the Secretary of the Interior has in his power and under his hands contracts for reimbursement to the Government of every penny that may be put out and every dollar that may be expended.

There is another provision that was added by the committee as an amendment to the bill, that—

If during the period of amortization the Secretary of the Interior shall receive revenues in excess of the amount necessary to meet the periodical payments to the United States as provided in the contract, or contracts, executed under this act, then, immediately after the settlement of such periodical payments, he shall pay to the State of Arizona 18¾ per cent of such excess revenues and to the State of Nevada 18¾ per cent of such excess revenues.

The committee added this amendment because the committee thought that something was being taken in the nature of a resource from Arizona and from Nevada by the construction of the dam in the Colorado River, and that there should be some recompense to those States, or some revenue should be derived by them from that construction. The committee selected the rule which now prevails in the oil leasing law, and in one other act as well, for the percentage that was accorded under that amendment.

Section 5 provides that the contract must be general for storage and delivery of water and the Secretary shall fix charges to meet the revenue requirements, and that contracts for irrigation and domestic uses must be for permanent service. An amendment has been inserted there at the request of the upper basin States, offered, I think, in the committee, by the Senator from Wyoming, which provides that—

*Provided, however,* That said contracts shall not provide for an aggregate annual consumptive use in California of more than 4,600,000 acre-feet of the water allocated to the lower basin by the Colorado River compact mentioned in section 12 and one-half of the unallocated, excess, and/or surplus water: *Provided further,* That no such contracts shall be made until California, by act of its legislature, shall have ratified and approved the foregoing provision for use of water in said State.

That is another rigorous provision, a rigorous provision to which those who represented California were willing to consent in order that legislation might be accorded, but binding California perpetually and forever to a use not to exceed 4,600,000 acre-feet of water.

I repeat and repeat how we have endeavored to protect these upper basin States. We write the bill around the compact, we make every drop of water that comes from the storage and the regulation of the Colorado River under this scheme subject to the compact. We write, then, that California shall use perpetually only a specific amount of water, naming the maximum amount which may be used.

All these things are done in the good-faith endeavor to protect in every possible way the States of the upper basin and those who claim that they want protection under the Colorado River compact. Yet some of them would prefer to let this water continue to flow down to the sea for an indefinite period, to go to waste in the Gulf of California, the land remain in drought to the detriment of people in southern Arizona and southern California, to permit that to be done indefinitely, rather than to permit the measure of protection—and it is a full measure of protection that is accorded them—under this bill.

What more can be done, I do not know. Somebody says that California is taking something from somebody else. California is "paying through the nose" for everything that it does under this bill and for everything that is asked; and the men who live in the Imperial Valley, the women there who have helped to pioneer the way, and who have carved out of that desert a beautiful empire, the children who are in the Imperial Valley, are entitled to some consideration from the Congress of the United States, as well as those individuals who insist that profit shall be made out of a great national undertaking.

I submit, sir, that under the provisions which have been written in this measure at the instance of the Senator from

Wyoming, under the provisions all through this bill by which we take care of the Colorado River compact, remembering that practically all the land there upon the banks of the Colorado River is land that is owned by the United States of America, from the site of the dam practically down to the international boundary; remembering all that, how can it be said that there is any State in the upper basin or any other place that is not amply protected by the provisions of this bill?

In addition to that, yielding to the demands that have been made that profit and revenue should come from this measure, the Committee on Irrigation and Reclamation has accorded them the same percentage of profit that is accorded in the existing laws to-day, and they have done it on a project that is paid for by the United States of America in the first instance and that is paid for by the people of California in the second instance. I do not complain of it, but I do complain when any men here say that the upper-basin States are not protected or that we have taken something that does not belong to us. Here we have done everything that can be done by a people in order to have their protection and to give them what they are entitled to.

Ah, you will see in the days to come what will happen in that river if no protection be accorded those people and the appropriation law of the West be permitted to obtain. Then will be demonstrated the utter futility of the position that is now maintained by some.

I follow along with this bill:

After the repayments to the United States of all money advanced, with interest, charges shall be on such basis and the revenues derived therefrom shall be disposed of as may hereafter be prescribed by the Congress.

During the process of amortization there is 37½ per cent of excess profits to be divided between Arizona and Nevada, and the rest of the money is devoted to amortization. After amortization, then the Congress of the United States shall determine exactly what shall be done. General and uniform regulations, of course, shall be prescribed for awarding contracts.

In subdivision (a) of section 5 there is an amendment that was presented by the committee, which provides for readjustment of rates after the expiration of 15 years and every 10 years thereafter. That legislation is provided for in order that the rates may be kept at a proper level, and in order that the legitimate profits under the preceding amendment may be received by the States of Arizona and Nevada.

The readjustment serves another purpose, too. It serves the purpose of not endeavoring to destroy any enterprise which may be in the power business with which this power might come in conflict. I do not believe for an instant that it will. The rapidity of growth in southern California, the growth that probably may occur in other States as well, will create a power market there that will unquestionably absorb without difficulty in the various periods that extend over the time of construction all of the power that will be generated at the Boulder Dam; but in order that there may be the readjustments properly made at the end of certain periods, the amendment to which I have referred has been inserted.

Subdivision (b) of section 5 is really a part of the Federal water power act.

Subdivision (c) of section 5, on page 9, provides for contracts for the use of water and necessary privileges for the generation and distribution of hydroelectric energy or for the sale and delivery of electrical energy.

Then an amendment was inserted by the committee by which preference to electrical energy was accorded, in the first instance, to States, next to municipalities, then following the line of preferences of the Federal water power act, and the States of Arizona, Nevada, and California are allowed equal opportunity as applicants for power.

Subdivision (d) is a provision for joint transmission. An amendment was inserted to that which will probably remove the objection which has been voiced heretofore to it, but, at any rate, it was a provision under which a like agency contracting for a small amount of power might hook on, as it were, to a larger agency, with a large amount of power, provided a proportionate amount of the cost of construction and the like were paid by the smaller agency, and provided also that within 60 days after the larger agency acquired its privilege, the smaller agency gave notice. The reason for the insertion of that provision originally was, I think, that some of the smaller cities of southern California, feeling that the larger cities might obtain all of the power from the Boulder Dam project, wanted to be able to use the lines as joint transmission lines to the extent indicated by the amendment.

Section 6 defines the uses of the dam, as follows:

First, for river regulation, improvement of navigation, and flood control; second, for irrigation and domestic uses and satisfaction of present perfected rights in pursuance of Article VIII of said Colorado River compact—

That is the compact, and written from the compact—

and third, for power. The title to said dam, reservoir, plant, and incidental works shall forever remain in the United States, and the United States shall, until otherwise provided by Congress, control, manage, and operate the same, except as herein otherwise provided—

And here is the optional provision that the Secretary of the Interior may lease the power or lease the water:

*Provided, however,* That the Secretary of the Interior may, in his discretion, enter into contracts of lease of a unit or units of any Government-built plant, with right to generate electrical energy, or, alternatively, to enter into contracts of lease for the use of water for the generation of electrical energy as herein provided, in either of which events the provisions of section 5 of this act relating to revenue, term, renewals, determination of conflicting applications, and joint use of transmission lines under contracts for the sale of electrical energy, shall apply.

Let me repeat what that is, because that is one of the provisions to which exception has been taken in the past. There is the alternative given to the Secretary of the Interior to lease a unit or units of a Government plant or to lease the use of water for the generation of electrical energy. The two alternatives are given to the Secretary of the Interior, and he may exercise either of those alternatives.

Certain gentlemen, swollen with the power of their wealth and of their great combinations in this country, say that that sets a precedent, and that the United States Government should not be permitted to have any such precedent, a precedent by which, in order to carry out the greatest scheme that there is of this character in all the world, the United States Government is given the right either to lease units of water or units of a Government-constructed plant, merely the right to do either one or the other, and some of these gentlemen who are opposing this bill outside of this Chamber are taking exception to any provision by which the Government may be given any kind of an option to protect itself or its people; and they say that a precedent of that sort shall not be established.

This is one of the matters on which this Government must take its stand and on which the Senate must take its stand. The Senate must determine whether or not it dare give to its own Government the alternatives and the right that would be given to any individual in a private transaction, or whether it will yield to the demand or the threat that may be made by private enterprise or by great wealth in relation to a measure of this sort.

That is one of the things that we should determine on the bill and one of the things that makes it such a peculiarly obnoxious bill in the view of certain individuals.

Section 7 gives to the Secretary the discretion to convey the canal to interested districts when it shall have been fully paid for. Section 7 also gives to those who pay for the canal the right to generate power upon it. This is a matter of little consequence, trivial in character, but the payment for an all-American canal which will be charged against the land which abuts on the all-American canal is going to be a very burdensome and very difficult thing; so the bill wisely provides, just as the reclamation law provides to-day, and just as is being done upon the Salt River project, and every other reclamation project of the United States Government, that those who pay for the canal, who own the lands adjacent to it, may have the right to generate the little amount of power that the fall may give to them; a perfectly legitimate and perfectly just provision.

Section 8 is entirely an upper basin amendment. I would like the attention, for just an instant, of the Senator from New Mexico [Mr. BRATTON]. I want to call his attention to the fact that in paragraph (a) of section 8 again we endeavor to protect the upper-basin States, and this is one of the amendments written by the upper-basin States:

The United States, its permittees, licensees, and contractees, and all users and appropriators of water stored, diverted, carried, and/or distributed by the reservoir, canals, and other works herein authorized, shall observe and be subject to and controlled by said Colorado River compact in the construction, management, and operation of said reservoir, canals, and other works and the storage, diversion, delivery, and use of water for the generation of power, irrigation, and other purposes, anything in this act to the contrary notwithstanding, and all permits, licenses, and contracts shall so provide.

Mr. PHIPPS. Mr. President, will the Senator yield?

Mr. JOHNSON. Certainly.

Mr. PHIPPS. Would the Senator object if I should ask for a quorum?

Mr. JOHNSON. No; I do not wish it at this time.

Mr. PHIPPS. It will only take a few moments and will rest the Senator.

Mr. JOHNSON. No; I am almost through. I would rather the Senator would not do it. I want to express my appreciation, but I would rather the Senator would not do it in this instance.

Mr. PHIPPS. Very well.

Mr. JOHNSON. Mr. President, it will be observed that paragraph (b) of section 8 was written in originally to provide possibly for a three-State compact in the lower basin, something I have not heard much about of late, and I do not know whether there is any possibility ultimately of it coming about.

Paragraph (c) of section 8 is a provision simply that "nothing in this act shall be deemed to waive or change any of the rights or powers reserved or granted to the United States" by the act providing for the admission of Arizona or by the constitution of Arizona. Upon that provision I presume our friends from Arizona will have something to say, and I shall be very glad then to respond. At the present time suffice it to say that, while I do not think the bill in any respect could affect the constitution of Arizona, either as adopted originally or as existing to-day, nor do I think it could affect in any fashion the enabling act, still some of those interested in the bill believe that as a precautionary measure, because there had been a change in the constitution of Arizona, this protective provision should be inserted in the bill. Personally I do not consider it of any very grave consequence.

Section 9 withdraws, very properly, the public lands susceptible of irrigation and reclamation under the works here provided for from entry. That is done for the very purpose of preventing what one newspaper at least, through its hired writers, has been accusing us of. It is done for the purpose of preventing any speculative scheme in real estate, so that there can be no individual, no syndicate, or others who will be able to gobble up land in the vicinity of this territory, land which is held by the United States—to gobble it up at a small fraction of its real worth, and then coin it by virtue of these works. All the land belonging to the United States is withdrawn under this provision from entry, and that is the answer to certain articles which have recently appeared in relation to the measure and the design of the bill.

Section 12, it will be observed, binds the United States with the Colorado River compact. As if that were not enough, in paragraph (c) we find all grants, concessions, and so on, bound with the Colorado River compact. We impress everything that is done under this measure with the Colorado River compact. Nothing that is undertaken, nothing that is designed, no place where it is possible to render any measure of protection, is excepted from the compact. The design has been to protect as best we could that compact which has no value whatsoever, so far as California is concerned, save there be storage in the Colorado River, and storage of the character that is indicated under the measure.

So much, sir, for the provisions of the bill. I have spent more time than I intended to do to-day in presenting the bill. I shall close now in a moment.

Here is a measure that means much to our people. Here is a measure—I do not care what may be said of it—that also means much to the other States which are a part of the Colorado River Basin. Here is a measure, sir, that means the rescue of 65,000 Americans in the Imperial Valley. Here is a measure, sir, that means the solving of an international problem which may involve the ultimate destruction of the most fertile part of the United States to-day, a section with productive capacity unsurpassed in all the Nation.

Here is a measure, sir, that is the greatest of our generation, a measure to authorize a work for which any man might well be proud to assist in enacting the necessary legislation. Here, sir, is our Government constructing the greatest dam ever yet constructed. Here, sir, is our Government providing a reservoir with a storage capacity greater than any that exists in all the world. Here, sir, is our Government doing the job for its people.

To deny this legislation, sir, is to deny justice to the people affected. To deny it, sir, is to deny that which is the right of those who live upon the Colorado River and those who live in the Imperial Valley. To deny it, sir, is to deny the thrill that comes to a man in legislative halls but once or twice in his lifetime, the thrill when he stands as part of a great constructive work, for this is the greatest constructive work in all our generation.

Mr. PITTMAN. Mr. President, I would like to ask the Senator from California, in charge of the bill, whether he will pursue the ordinary practice of considering committee amendments first. If that is going to be the practice, I would like to know if he would object to considering first the two material amendments, which are companion amendments, found on page 6 and page 9. They are two material amendments made by the committee, and I would like to have those discussed first, because I want to discuss them when the time comes.

Mr. JOHNSON. Personally, I have no objection at all. First of all, let me say that my intention is to do exactly as is suggested by the Senator from Nevada—that is, to have the bill read for action upon committee amendments first. However, the amendments preceding that, it strikes me, are very brief and, although I am not clear, I think they will lead to little discussion because of the sources of the amendments.

Mr. PITTMAN. The only reason why I made the suggestion is that I was asked if I would request that those two amendments be considered first and then go back to the others.

Mr. JOHNSON. We might try out the first amendments, and if we find that they are going to take a long time, I would be willing to adopt the Senator's suggestion. I have no objection to it, I am sure. The Senator will observe that the amendments which are presented in the first pages up to that point are all amendments which, I think, were unanimously agreed upon in the committee. I may be in error in that, but that is my recollection. The first amendment to which the Senator refers and upon which he wishes action taken is that on line 5, page 6, is it not?

Mr. PITTMAN. Yes.

Mr. JOHNSON. If the Senator will look at the amendments prior to that he will see that the other amendments are amendments which were adopted with substantial unanimity up to that point. I thought we might run over them and have them agreed to and then take up the amendment on page 6, line 5. May I inquire of the Senator from Arizona [Mr. ASHURST] if that is not accurate?

Mr. ASHURST. Mr. President, I beg the Senator's pardon. I was not listening. I have been listening to the Senator for a couple of hours, but I turned aside for the moment.

Mr. JOHNSON. I was just announcing to the Senator from Nevada that the amendments which precede the first amendment to which he refers on page 6, line 5, are amendments which were adopted with substantial unanimity in the committee and that probably there will be no objection to them.

Mr. ASHURST. I hope the Senator will not ask me to agree to a date for my own execution or to agree to anything regarding the details thereof.

Mr. JOHNSON. Very well. I do not ask the Senator to do anything.

May I suggest to the Senator from Nevada that we undertake to act on the first amendment and then, if there is objection or if there is going to be any extended argument, I shall follow the course he suggests?

Mr. PITTMAN. I was only suggesting it in the hope of getting a unanimous-consent agreement.

Mr. JOHNSON. I will leave it to the Senator from Nevada to get an agreement with the Senator from Arizona.

Mr. PITTMAN. Mr. President, I ask unanimous consent that the committee amendments be first acted upon, and that the first two committee amendments which are to be acted upon shall be the amendments found on page 6, lines 5 to 13, inclusive, and on page 9, lines 12 to 19, inclusive, and that thereafter we shall return to take up the committee amendments in the regular order.

Mr. SHORTRIDGE. Mr. President, may I ask the Senator from Nevada the reason for this request?

Mr. PITTMAN. I am trying to get a unanimous-consent agreement.

Mr. SHORTRIDGE. I understand; but will the Senator have the kindness to state the reason why he asks it?

Mr. PITTMAN. I think we will be more apt to get a unanimous-consent agreement. That is the only reason.

Mr. SHORTRIDGE. I might suggest that he assign some reason for asking it.

Mr. PITTMAN. The reason is because I think there would not be any objection in that form. I suspect there would be objection in another form. That is the only reason.

Mr. JOHNSON. Is it the idea of the Senator from Nevada that the amendments, slight in character, in the first part of the bill, be passed over? For instance, here is one relating to "stored waters." I recall distinctly that that amendment was suggested by the Senator from Arizona. The amendment found in line 13, page 2, is an amendment of the Senator from Arizona and we all agreed upon it. Those are the only two in reality I believe that precede the amendment to which the Senator from Nevada has called attention. No; there is another one about the five-State ratification.

Let us start with the first amendment. If there is going to be great delay over those slight amendments in the beginning, then I shall adopt the Senator's suggestion if he desires.

Mr. PITTMAN. I withdraw my request. I will let the Senator make his own request.

Mr. CURTIS. Mr. President, unless some Senator desires to proceed to-night, I should like to ask for a short executive session.

Mr. ASHURST. Mr. President, the poison should not go into the RECORD without an antidote, so I must ask the Senator's indulgence for a few moments only.

I listened with attention to the able Senator from California. An experience of some years in the Senate has convinced me that whenever a Senator indulges copiously in overemphasis, he is either a weary man, he does not understand his subject, or is too indolent to make himself familiar with the subject. We know that the Senator from California is not an indolent man, but one of the most industrious men that ever served the State. We know that he comprehends thoroughly a subject to which he gives his attention. Therefore, his overemphasis can be explained only upon the hypothesis that he is a weary man.

The Senator said the seven-State compact had not been ratified, and that he proposes in this bill to proceed with the distribution of the waters of seven States by a six-State ratification. He disregards the Federal Constitution and does not give it the cold respect of a passing glance. I shall do no more this evening than summon a witness and read from his testimony, not a witness from Arizona, because he, forsooth, might be construed as a biased witness. I shall read from the testimony of Governor Dern, of Utah, before the House Committee on Irrigation and Reclamation on January 11, 1928.

Mr. KING. Mr. President, will the Senator yield?

Mr. ASHURST. Certainly.

Mr. KING. I understood the Senator to state that the Senator from California intended to proceed with a six-State compact regardless of the fact that the compact calls for seven. My understanding of the bill is that if there shall not be six States to ratify the compact, nevertheless the Government will proceed with five States, and if there should not be five States ratifying the contract, it will proceed with a less number. I did not want the record, if I was right, to stand that the Senator from California intended to have six States ratify the contract as a condition precedent to the prosecution of the work called for by the bill.

Mr. JOHNSON. Mr. President, I do not wish to interrupt the Senator from Arizona unduly, but am I to understand the Senator from Utah to say that the bill provides for a six-State and then a five-State, and then a four-State ratification?

Mr. KING. My understanding of the bill is that if there shall not be a ratification of the contract by seven States, then the prosecution of the work shall nevertheless be carried forward. If there shall not be a ratification by six States, then the prosecution of the work may go on with a less number. My understanding is that it is not limited to a given number of States.

Mr. JOHNSON. The Senator is in error.

Mr. KING. I hope I am.

Mr. JOHNSON. I will show the Senator the bill subsequently.

Mr. ASHURST. Mr. President, I invite the attention of Senators to the following testimony respecting this bill or its companion bill pending before the House of Representatives.

I read from page 220 of the hearings before the House Committee on Irrigation and Reclamation on H. R. 5773, held on January 11, 1928:

Governor DERN. I am not unaware of the ingenious arguments that are put forth to show that by special protective clauses in the bill Arizona is going to be prevented from injuring us. Most of these arguments are not only ingenious but also ingenuous. They all involve the idea that the United States shall descend to the level of coercing a sovereign State to do something that it does not want to do and that it is under no legal obligation to do. I can not conceive that the United States would ever invoke such a power, even if it possessed it. For example, it is pointed out that the bill contains a clause that will prohibit Arizona from running canals, ditches, or transmission lines over public lands in Arizona until she has ratified the compact. Wouldn't that be a fine, high-minded thing for the United States to do? I am not specially interested in Arizona, but I am interested in common decency and in protecting the integrity of the States, and I confess that my blood boils at the suggestion that the United States should shove a contract under Arizona's nose with the mandate to sign on the dotted line or be ruined. * * * Arizona has not offended the United States and has earned no punishment from the United States. She is strictly within her legal rights in failing to ratify the Santa Fe compact.

I hope and pray that she will ratify it, and I believe she will. I have been doing everything I could to get her to do so. I believe the compact is as fair to Arizona as it is to Utah, and Utah has ratified. It seems to me that it would be to Arizona's advantage to ratify. But if she does not think so, certainly we can not force her. And when it comes to the Government of the United States coercing her, as is proposed in this bill, I wonder that there has not arisen in the Halls of Congress a man big enough to expose and denounce this shameless suggestion as it deserves.

Mr. KING. Mr. President, my attention has been called to a print of the bill which I had not seen. I had in my office the print which called for a ratification by California and five other States.

Mr. JOHNSON. Yes; that is all. It calls for a ratification by six States; nothing else.

Mr. KING. In the print now before me the word as it was originally printed was "three." That has been stricken out and "five" inserted.

Mr. JOHNSON. Correct.

Mr. KING. So that it now calls for ratification by six States.

Mr. BRATTON. Mr. President, I understand that it is the purport of paragraph (a) of section 4 as well as paragraph (a) of section 12 that nothing shall be done under the act until the State of California and at least five other States have ratified the compact.

Mr. JOHNSON. Exactly. Yes, sir; much as I regret it, those are the provisions of the bill.

### EXECUTIVE SESSION

Mr. CURTIS. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After three minutes spent in executive session the doors were reopened, and (at 4 o'clock and 28 minutes p. m.) the Senate adjourned until to-morrow, Friday, April 27, 1928, at 12 o'clock meridian.

## CONFIRMATION

*Executive nomination confirmed by the Senate April 26, 1928*

### POSTMASTER

#### MAINE

G. Walter Akers, Kents Hill.

## HOUSE OF REPRESENTATIVES

THURSDAY, *April 26, 1928*

The House met at 12 o'clock noon.

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

Our Father who art in heaven, hallowed be Thy name. Just now may there be an altar in every breast and at each altar a bowed soul breathing the spirit of devotion, confession, and thanksgiving. Here may our thoughts and purposes receive their sustaining power, and thus shall our ministrations be raised to higher efficiency. O God of love, upon our hearts is the memory of him who sailed afar from home and country, forgetting that he was weary and wayworn. His heart was tuned not to the broken noises of earth but to the rhythm of the divine law of brotherhood. We had been bending our ears to hear the coming song of deliverance. But alas! alas! now is brooding the minor strain of the eternal order. O harbinger human and divine! He has outridden the clouds and storms, and his sun which has set at high noon has arisen to the height of endless day. Amid the fates that gape to swallow up our loves, we praise Thee for that love that gathers up the raveled friendships of time and makes whole again the rents of earth. God abide with the afflicted and sorrowing ones. Amen.

The Journal of the proceedings of yesterday was read and approved.

### MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Craven, its principal clerk, announced that the Senate had passed without amendment a bill of the House of the following title:

H. R. 11764. An act conferring jurisdiction upon the Court of Claims of the United States or the district courts of the United States to hear, adjudicate, and enter judgment on the claim of A. Roy Knabenshue against the United States for the use or manufacture of an invention of A. Roy Knabenshue, covered by Letters Patent No. 858875, issued by the Patent Office of the United States under date of July 2, 1907.

The message also announced that the Senate had passed, with amendments, in which the concurrence of the House of Repre-

sentatives was requested, a bill of the House of the following title:

H. R. 12286. An act making appropriations for the Navy Department and the naval service for the fiscal year ending June 30, 1929, and for other purposes.

The message further announced that the Senate had passed bills and a joint resolution of the following titles, in which the concurrence of the House was requested:

S. 433. An act for the relief of Harry C. Bradley;

S. 3693. An act authorizing the city of Council Bluffs, Iowa, and the city of Omaha, Nebr., or either of them, to construct, maintain, and operate a free highway bridge across the Missouri River between Council Bluffs, Iowa, and Omaha, Nebr.; and

S. J. Res. 135. Joint resolution making an emergency appropriation for flood protection on White River, Ark.

The message also announced that the Senate had ordered that the House of Representatives be respectfully requested to return to the Senate a joint resolution and bills of the following titles:

S. J. Res. 129. Joint resolution to provide for eradication of pink bollworm and authorizing an appropriation therefor;

S. 3723. An act to amend and reenact subdivision (a) of section 209 of the transportation act, 1920; and

H. R. 12632. An act to provide for the eradication or control of the European corn borer.

REFERENCE OF A BILL

The SPEAKER. The Chair is informed by the chairman of the Committee on Pensions that it is the opinion of that committee they have no jurisdiction over the H. R. 11474, a bill relating to old-age pensions, which was referred to that committee. Without objection, the Chair will rerefer the bill to the Committee on the Judiciary.

There was no objection.

REREFERENCE OF SENATE JOINT RESOLUTION 89

Mr. GRAHAM. Mr. Speaker, I ask unanimous consent to rerefer Senate Joint Resolution 89. There was a bill introduced in the House on the same subject; that bill was referred to the Committee on Education, and I find that committee has had hearings and made a report. In order to disentangle the situation, I ask unanimous consent that the Committee on the Judiciary may relinquish control over the bill and that it be rereferred to the Committee on Education. I do this without wishing to have a precedent created or that this is to be considered a precedent.

Mr. GARNER of Texas. May I ask the gentleman a question?

Mr. GRAHAM. Certainly.

Mr. GARNER of Texas. The gentleman is doing this at the instance of the committee itself?

Mr. GRAHAM. I had the committee direct that I take this action this morning.

The SPEAKER. The gentleman from Pennsylvania asks unanimous consent that Senate Joint Resolution 89 be rereferred from the Committee on the Judiciary to the Committee on Education. Is there objection?

Mr. CHINDBLOM. Mr. Speaker, may we have the title of the bill read?

The SPEAKER. It is a resolution designating May 1 as child health day. Is there objection?

There was no objection.

DEVELOPMENT OF THE FISHERY RESOURCES OF THE SOUTH ATLANTIC STATES

Mr. EDWARDS. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing a statement made by me before the Committee on the Merchant Marine and Fisheries and to include my bill, which is very short, with reference to the matter.

The SPEAKER. The gentleman from Georgia asks unanimous consent to extend his remarks in the RECORD with reference to a bill introduced by him. Is there objection?

There was no objection.

Mr. EDWARDS. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following statement made by me before the Committee on the Merchant Marine and Fisheries, and my bill with reference to the matter:

The fisheries of the South Atlantic are by no means a small industry, but on the contrary, it is quite large. In this business in 1923 in the States of North Carolina, South Carolina, Georgia, and Florida there were employed over 8,000 fishermen. The investment in boats, gear, and tackle was nearly $6,000,000. The catch or yield was estimated at 302,014,197 pounds of fish and shellfish, valued at nearly $10,000,000. In the wholesale fish trade, canning, and by-products industries there were employed, in addition to the figures given above, 6,997 people, and this end of the industry represented an additional investment of $7,148,784. From this it will be seen that in 1923 there were about 15,000 people engaged in the fish and shellfish industries in the four States I have named, and that in 1923 there was invested about $13,000,000.

The decrease in the fish in the waters I have referred to is alarming because of the very marked degree with which it is taking place. This is true especially in the Georgia coastal waters. To illustrate with an ordinary yet important variety of fish, take the mullet catch in 1902 in the waters of the South, which was approximately 53,000,000 pounds. In 1923 it has decreased to around 37,000,000 pounds. This is one of the staple food fishes of the South. Shad, one of the most choice food fish we have, yielded approximately 12,000,000 pounds in southern waters in 1897 as against only about 3,000,000 pounds in 1923, and this with all that has been done to propagate and increase the shad. Shad were taken several years back from eastern waters and transplanted to Pacific coast waters, and to-day they are shipping shad from the Pacific back to the East in carload lots. The decrease is true of every other variety of fish. It is true in about the same proportion as to shellfish of all kinds.

The fisheries on the South Atlantic have never been fully appreciated, and the Government has not done its full duty by this great industry in the southeastern section of the United States.

My bill (H. R. 6982) provides an appropriation of only $25,000 with which to make investigations, study conditions, and try to increase the supply of these edible fish and shellfish, constituting as they do a large commercial item. I respectfully urge that a specific authorization and direction be made with respect to the waters of the States referred to.

I am submitting a copy of my bill herewith and asking that it be printed in the RECORD.

The bill is as follows:

A bill (H. R. 6982) for the development of the fishery resources of the South Atlantic States

*Be it enacted, etc.*, That the Secretary of Commerce be, and he is hereby, authorized and directed to have investigations made of the fisheries of North Carolina, South Carolina, Georgia, and Florida necessary to the development and maintenance of said fisheries and to make and publish report of the results of such investigations. That such investigations shall include a survey of the shellfish fisheries and the development of program for water farming for oysters and other shellfish, studies of the life histories, migrations, and rate of growth of important food fishes, and such other data essential to the upbuilding of these important industries.

SEC. 2. That for such purpose the sum of $25,000, or so much thereof as may be necessary, is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, to be expended by the Bureau of Fisheries under the direction of the Secretary of Commerce.

PERMISSION TO ADDRESS THE HOUSE

Mr. McCLINTIC. Mr. Speaker, I ask unanimous consent to address the House for eight minutes.

The SPEAKER. The gentleman from Oklahoma asks unanimous consent to address the House for eight minutes. Is there objection?

There was no objection.

Mr. McCLINTIC. Mr. Speaker and Members of the House, a few days ago I called the attention of this House to an article which was published in the Washington Star relating to the abuse of my congressional frank. Before doing that I had the clerk of the Naval Affairs Committee call each member of the committee and notify him that I was going to speak on this subject, and when I spoke on that day I endeavored to find out which member of my committee was the snooper, the one who had stooped so low as to try to hurt his colleague, but no member of my committee arose and answered me on that occasion. Afterwards I went before my committee and asked for an investigation. I called attention to this write-up, but no member of the committee would acknowledge giving this report to the newspapers. However, yesterday, when the subject came up before the committee, I knew that if we had any member of the Naval Affairs Committee who had resorted to questionable procedure in order to bring about this charge or gave out a newspaper report in this connection, he would have to make himself known, and sure enough Mr. A. PIATT ANDREW, of Massachusetts, confronted me with an affidavit that he claimed somebody had sent him from Massachusetts with relation to the abuse of my frank.

Mr. CRAMTON. I feel when the gentleman says "questionable procedure," that is too strong.

Mr. McCLINTIC. So when he presented this affidavit, or so-called affidavit, and stated he did not know where it came from, then it was apparent he did not know whether it came from a white man or a black man; he did not know whether the man was sufficiently educated to know its contents; he did not know whether it had ever been read to him before it was presented to him for his signature, and so I asked to be confronted with the witness.

I want to know who is responsible for a charge of this kind, and I said to Mr. ANDREW and the committee, "If you are not willing to bring this witness here at your own expense, I will pay his railroad fare." It is not often that a Member or a defendant is willing to pay the railroad fare of some one to testify against him. Did Mr. ANDREW rise to the dignity of a Member? Did he say that was fair? No; he did not say that, but he continued with all the perniciousness of a cheap attorney in trying to read that affidavit into the record.

Mr. VINSON of Georgia. Will the gentleman yield?

Mr. McCLINTIC. Yes.

Mr. VINSON of Georgia. Does not the gentleman think that he should also state to the House that the gentleman from Massachusetts stated yesterday——

Mr. McCLINTIC. I am going to get to that.

Mr. VINSON of Georgia. Wait one minute, if the gentleman will permit me. That no one for one moment on the committee had the slightest idea that you had violated any of your franking privileges, and that the gentleman from Massachusetts was making no accusation against the gentleman from Oklahoma at all; that he was merely apprehensive that some one had imposed upon the gentleman from Oklahoma.

Mr. McCLINTIC. I want to say to my colleague on the committee that this is the first time I have ever heard of another member of a committee stooping so low as to try to get something on a person, and then give out a story to the newspapers and deny afterwards the authenticity of the same.

Mr. WOODRUFF. Will the gentleman yield?

It occurs to me, as a member of the Naval Affairs Committee——

Mr. McCLINTIC. My object in making a speech this morning is to exonerate every other member of the Naval Affairs Committee for the reason that they have had nothing to do with it so far as I am concerned, and I want them to know who is the member that wants to be the detective on our committee, the one who wants to dig up something that is little and small and slimy to try to hurt the reputation of the person who is implicated. I want to say further, I have always had the highest regard for this member. He filed the majority report on the naval ship building bill, and I filed a minority report. My report, as I viewed it, was a constructive report. It was for building up the submarine service and to build up an aircraft service. There was nothing in it that related to pacifism or anything along that line. So when this organization asked the privilege of sending out my military program, of course I was willing to let them send out a few thousand—only about half the number that it would take to cover my district.

The SPEAKER. The time of the gentleman from Oklahoma has expired.

Mr. McCLINTIC. In view of the fact the gentlemen have taken up most of my time, Mr. Speaker, I ask unanimous consent to proceed for five additional minutes.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. McCLINTIC. I have said that he was the last man or one of the last men I would ever have thought would allow himself to adopt a policy of trying to snoop on another member of his committee.

Mr. WOODRUFF. Mr. Speaker——

Mr. McCLINTIC. I do not yield further.

Mr. WOODRUFF. Mr. Speaker, I am going to make a point of order against the statements of the gentleman unless he revises these statements, because I want to say that neither Mr. ANDREW nor any other Member of this House should be charged with snooping, and I do not believe he can be so charged under the rules of the House.

Mr. McCLINTIC. The facts are always in evidence, and if Mr. ANDREW had done his duty, like you or any other Member who wants to be fair, he would not have given out that statement when he could have found out that every single, solitary one of these minority reports was sealed in the House Office Building——

Mr. WOODRUFF. Will the gentleman yield just there?

Mr. McCLINTIC (continuing). Before they were turned over to any source; and anybody who has any reasonable amount of sense knows that no organization would go to the trouble of steaming a lot of sealed envelopes for the purpose of sticking in some extraneous matter.

The fly in the ointment seems to be a minority report filed by myself against the naval ship construction bill. This report speaks for itself; no one can claim that it makes any pacific recommendations. It is in line with the thoughts of many of the progressive citizens of the Nation. It takes into consideration past records with respect to types of naval ships, offering a plan for the construction of the more modern kind of warcraft, and in addition suggesting the modernization of all of our battleships so as to make them practically impregnable in any kind of an emergency, having in mind that the costs of such a program would be several hundred million less than that which was sponsored by Mr. ANDREW, the gentleman from Massachusetts, who filed the majority report.

The history of this Nation will show that practically all the new devices relating to war equipment have been conceived in the minds of those outside of the military service. It can likewise be proven that those who are in charge of the military affairs of our Government have been sticklers for precedent and have viewed with suspicion practically every new device offered in the way of an improved implement of warfare. This situation, in my opinion, is the result of a system which allows the affairs of our military departments to be wholly under the control of officers who have passed the prime of life. In other words, if the controlling and governing boards could be made up of officers in the different ranks, thereby giving men who are in the prime of life the opportunity of having a voice in matters that relate to the efficiency of our military departments, it would bring about the kind of result that would make our national defense always capable of taking care of any kind of a situation that would confront the Nation. It is for this reason that I have opposed some of the recommendations made by the Navy in the past, hoping that by focusing the attention of the public upon suggestions which related to newer ideas concerning national defense ultimately better and more efficient conditions would exist in the Navy. Therefore my minority report.

For the reason that all of these sealed envelopes contained my name in the upper right-hand corner those that were not delivered to the address placed on the envelope by the National Council for the Prevention of War were returned to my office in the House Office Building; therefore, for a period of two weeks the undelivered minority reports sent out under my frank came back to my office, and for the reason additional requests were made for them by those interested in this subject, my secretary opened several hundred of the envelopes, taking out of the same the minority reports and remailing them in bulk to those asking for them. In no instance was there any extraneous matter in any returned envelope, and when this charge was made that my franking privilege had been abused, I gathered up every unopened returned envelope that was in the office and took them over to the floor of the House of Representatives, and during the time I was speaking on this subject they were opened by one of the House employees in the presence of the Members of Congress for the purpose of allowing them to see if such returned envelopes contained anything other than the frankable minority report, and the result of this investigation revealed no violation of the franking privilege.

It is not a violation of any law for a Member of Congress to use his franking privilege for the purpose of sending out information published in the CONGRESSIONAL RECORD. Hardly a week goes by without some one giving an order to the Government Printing Office for certain speeches or reports to be printed in pamphlet form, so that they can be mailed out to those interested in the subject at hand. No one claims, or will claim, that the mailing out of these minority reports was a violation of law, yet publications like the Army and Navy Journal and a few other papers which always lend a sympathetic ear to excessive militaristic programs would have the public believe that a great violation of the law had been made in connection with this subject. It is unfortunate that only a few thousand of these reports were sent out to the public. If I could have my way, I should put this report in the hands of every citizen of the Nation, feeling and believing that my recommendations would bring about a more efficient Navy, and at the same time a more satisfactory condition to the taxpayers.

From the information given me this charge comes from the State of Massachusetts, a section of the country where the people always support practically any kind of a recommendation that is made by the Navy Department, and in view of the controversies that have taken place recently with respect to the shipbuilding program it would seem reasonable to conclude that this is the only way that the charge could have arisen. It will be further remembered that all of these envelopes were sealed in the House Office Building before the National Council for the Prevention of War secured possession of the same; therefore, no reasonable person would believe that any organization would go to the trouble of steaming envelopes for the purpose of opening same in order to insert extraneous matter. It is also incredible for the reason all undelivered envelopes returned to my office contained nothing but the minority report.

Mr. Speaker, I have in my hand a morning paper that says the "House clears McCLINTIC." But that is not the

reason I am making this statement. I want the House to know who it is that seeks to destroy an individual's reputation. I know that I have not violated my own frank, and I do not believe anybody else has. For this reason I ask that the fullest investigation be made, not with some written instrument that might be sent through the mail; but to call witnesses and let them stand up and face me in any kind of a procedure that is necessary to get at the proof of this matter.

The gentleman from Massachusetts [Mr. ANDREW] took the opposite side of the one that I represented on the naval bill. But that is no reason why he should seek to hurt my reputation; that is no reason why he should go to all the trouble of trying to give out newspaper reports that would cause me to be aligned with an organization with which I am not in accord.

Mr. LAGUARDIA. Will the gentleman yield?

Mr. McCLINTIC. Yes.

Mr. LAGUARDIA. How many recipients of the gentleman's franked envelopes containing the report, together with foreign matter, have come forward?

Mr. McCLINTIC. It is claimed only one.

Mr. LAGUARDIA. And that was from Massachusetts?

Mr. McCLINTIC. Yes.

Mr. LAGUARDIA. From a man named Weeks?

Mr. McCLINTIC. Yes. I am unofficially advised that this has been worked up by the Intelligence Bureau of the Navy.

The SPEAKER. The time of the gentleman from Oklahoma has expired.

Mr. McCLINTIC. Mr. Speaker, I ask for three minutes more.

Mr. WOODRUFF. I object.

Mr. McCLINTIC. Mr. Speaker, I ask unanimous consent to revise and extend my remarks.

Mr. CRAMTON. Reserving the right to object, I have no objection to the gentleman extending as far as he wishes his own defense, but I think he should not attack anyone else.

Mr. McCLINTIC. I shall adhere to that.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. WOODRUFF. Mr. Speaker, I ask unanimous consent to address the House for two minutes.

Mr. VINSON of Georgia. Mr. Speaker, I ask unanimous consent to address the House. I think at least the facts should be put before the House.

Mr. ASWELL. Mr. Speaker, I think this debate has proceeded far enough, and I shall have to object.

Mr. CLARKE. I demand the regular order. We are delaying the farm relief bill.

Mr. WOODRUFF. Mr. Speaker, I ask unanimous consent to address the House for two minutes.

The SPEAKER. The gentleman from Michigan asks unanimous consent to proceed for two minutes. Is there objection?

There was no objection.

Mr. WOODRUFF. Mr. Speaker, I shall address my remarks particularly to the gentleman from Oklahoma. I want to say that there is no member of the Naval Affairs Committee, including the gentleman from Massachusetts [Mr. ANDREW], who thinks that Mr. McCLINTIC is in any way culpable for anything that may have occurred. [Applause.]

Mr. VINSON of Georgia. Will the gentleman yield?

Mr. WOODRUFF. Yes.

Mr. VINSON of Georgia. Was not the statement made in committee yesterday by Mr. ANDREW at the very outset that Mr. McCLINTIC was not being criticized in the slightest manner for abuse of the franking privilege?

Mr. WOODRUFF. I was out of the city yesterday, and was not present at the meeting of the Committee on Naval Affairs, but I am glad the gentleman from Georgia has inserted that statement in the RECORD at this time.

Mr. McCLINTIC. Mr. Speaker, will the gentleman yield?

Mr. WOODRUFF. Certainly.

Mr. McCLINTIC. The point at issue was to find out and inform this House who was responsible for all of these charges, and the responsibility can not be laid at the door of anyone else, because he is the one who appeared and he is the one who, it seems to me, has performed a very unethical, if not an ungentlemanly, act.

Mr. WOODRUFF. Mr. Speaker, I disagree with the gentleman on that; and honestly, as I hope the gentleman will give me credit for. As I stated a moment ago, I heard the gentleman from Massachusetts [Mr. ANDREW] make the statement in the meeting of the Naval Affairs Committee that he had been called up by a newspaper man who told him this story and who asked him if he had heard it. Mr. ANDREW replied, "Yes; I have heard this." He had nothing to do, so far as I understand, with the putting of this story into circulation; and I for one do not want the membership of this House to place on him the onus of having started anything of this character.

Mr. McCLINTIC. Mr. Speaker, will the gentleman yield for a question?

Mr. WOODRUFF. Yes.

Mr. McCLINTIC. If the newspaper man says he gave them the story, how else could they have gotten it?

Mr. WOODRUFF. I say to the gentleman from Oklahoma that I have more confidence in the gentleman from Massachusetts than I have in some newspaper man, the name of whom I do not know.

The SPEAKER. The time of the gentleman from Michigan has expired.

Mr. VINSON of Georgia. Mr. Speaker, I ask unanimous consent to proceed for three minutes.

The SPEAKER. Is there objection?

Mr. RAMSEYER. Mr. Speaker, reserving the right to object, probably the gentleman from Georgia should have some time in which to answer the talk here, but I serve notice right now that I shall object to any request for further extension of time to discuss the matter that has been before the House for the last few minutes.

The SPEAKER. Is there objection to the request of the gentleman from Georgia?

There was no objection.

Mr. VINSON of Georgia. Mr. Speaker and Members of the House, I feel it my duty to make a statement about this controversy, and at the outset let me say to my colleague, Mr. McCLINTIC, that I regret very much that he felt compelled this morning to make the character of speech that he has just made. Expressing my own opinion about the matter, I think it was at least out of place.

The facts about the matter are these: Some days ago the clerk of the Naval Affairs Committee notified all of the members of that committee that Mr. McCLINTIC was going to make a speech immediately upon the convening of the House, and invited all of us over. Unfortunately I was busy and I did not attend. I came over and found out the nature of the speech the gentleman from Oklahoma had made. The Naval Affairs Committee a few days later had the matter under consideration and felt that some inquiry should be made in regard to it. Yesterday the committee met, with the understanding that they would make an inquiry as to whether or not the franking privilege of the gentleman from Oklahoma had been abused. At both meetings Mr. ANDREW and every member of the committee stated to Mr. McCLINTIC that not a single one of us thought for one moment that he had violated his franking privilege, and as a matter of fact he had not violated his franking privilege; but the thought was raised in the minds of some that probably some one else had violated Mr. McCLINTIC's franking privilege, and that was the object and purpose of the inquiry yesterday.

Mr. RANKIN. Mr. Speaker, will the gentleman yield?

Mr. VINSON of Georgia. Yes.

Mr. RANKIN. Did the gentleman from Massachusetts take the precaution to give that statement the same notoriety through the press as the story received with reference to Mr. McCLINTIC, which went out on a former occasion?

Mr. VINSON of Georgia. I know nothing about that. He made the statement open and above board twice in the committee.

Mr. RANKIN. Does not the gentleman think that a statement in the committee is a poor offset for broadcasting a charge through the newspapers?

Mr. VINSON of Georgia. Not with as many reporters as generally sit in our committee room. Mr. ANDREW wanted particularly to go on record that he did not think for one moment that Mr. McCLINTIC had violated his franking privilege. The way that Mr. ANDREW came into the possession of the information was, as he stated yesterday, in this fashion. A man in Massachusetts sent him one of Mr. McCLINTIC's speeches which had been sent out together with some extraneous matter that was not frankable in the envelope. He had an affidavit substantiating the statement that it was received, and when he stated he had the affidavit, then I rose in the committee and said that the Naval Affairs Committee had no jurisdiction over it, that it was a matter for the Post Office Department to investigate, and I insisted that it be referred to the Post Office Department, which the committee did. Those are the facts, and I do not believe the gentleman from Oklahoma [Mr. McCLINTIC] is justified in reaching the conclusion that he has in respect to the conduct of Mr. ANDREW.

Mr. McCLINTIC. Mr. Speaker, will the gentleman yield?

Mr. VINSON of Georgia. Yes.

Mr. McCLINTIC. What would the gentleman say if he knew Mr. ANDREW was advised to notify me that he had this information and he did not do it?

Mr. VINSON of Georgia. I think the gentleman from Oklahoma, if he wanted to be fair this morning, should have called Mr. ANDREW on the phone and notified him that he was going to make the statement here this morning.

Mr. McCLINTIC. Why did not he act fair with me in the beginning? I now ask unanimous consent that Mr. ANDREW, when he comes on the floor, be allowed 10 minutes in which to reply.

Mr. KNUTSON. Let Mr. ANDREW ask that himself.

Mr. VINSON of Georgia. Mr. ANDREW's conduct, in my judgment, has been above criticism, and he has not stooped to hunt up any evidence against Mr. McCLINTIC or anybody else.

And as a member of the Naval Affairs Committee I do not want that impression to go out about a colleague of mine in the committee and a colleague in the House.

Mr. HASTINGS. Mr. Speaker, will the gentleman yield?

Mr. VINSON of Georgia. Yes.

Mr. HASTINGS. I was going to ask if it was charged that the franking privilege was violated in any other case except in this one case? Has there been any other evidence presented to the committee as to violations except by the party in Massachusetts?

The SPEAKER. The time of the gentleman from Georgia has expired.

Mr. VINSON of Georgia. Mr. Speaker, may I have two minutes more?

The SPEAKER. Is there objection?

There was no objection.

Mr. VINSON of Georgia. Mr. ANDREW stated that here was an affidavit. I stated that the facts justified the Post Office Department in making an inquiry. I did not know what was in the affidavit, and I did not let them read it so far as I could control it.

Mr. HASTINGS. Was there any violation by any other party?

Mr. VINSON of Georgia. Not that I know of.

Mr. McCLINTIC. Several hundreds of these envelopes have been sent back, and there has not been any extraneous matter found in any other envelope. Therefore I asked to be confronted with the witness who made the charge.

Mr. HASTINGS. And there was nothing extraneous found in any other envelope?

Mr. VINSON of Georgia. No; except the one that was sent to Mr. ANDREW.

Mr. HASTINGS. How could it become known except through Mr. ANDREW?

Mr. McCLINTIC. Mr. ANDREW makes no apologies for telling any one about it. If he had dealt honorably with me this controversy would not have arisen.

Mr. VINSON of Georgia. He exonerated Mr. McCLINTIC. Mr. McCLINTIC's franking privilege may have been abused by somebody else, and it was a matter that addressed itself to the Post Office Department, and for that reason the committee sent it there.

I want to say now that Mr. ANDREW's conduct in this matter has been above reproach. He positively stated to Mr. McCLINTIC that he did not hold Mr. McCLINTIC responsible for violating his franking privilege.

The SPEAKER. The time of the gentleman from Georgia has again expired.

EULOGIES ON THE LATE REPRESENTATIVE CRUMPACKER, OF OREGON

Mr. HAWLEY. Mr. Speaker, I ask unanimous consent for the immediate consideration of a resolution, which I send to the Clerk's desk.

The SPEAKER. The Clerk will report it.

The Clerk read as follows:

*Ordered*, That Sunday, May 20, 1928, at 2 o'clock p. m., be set apart for memorial exercises in commemoration of the life, character, and public services of Hon. M. E. CRUMPACKER, late a Representative from the State of Oregon.

The SPEAKER. The question is on agreeing to the resolution.

The resolution was agreed to.

PENSIONS

Mr. ELLIOTT. Mr. Speaker, I call up the conference report on the Senate bill S. 2900, an omnibus pension bill, and ask for its immediate consideration.

The SPEAKER. The gentleman from Indiana calls up a conference report on the bill S. 2900. The Clerk will report it.

Mr. ELLIOTT. Mr. Speaker, I ask unanimous consent that the statement of the managers be read in lieu of the report.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

The SPEAKER. The Clerk will read the statement.

Mr. GARNER of Texas. Mr. Speaker, this is a conference report from what committee?

Mr. ELLIOTT. From the Committee on Pensions. It is the conference report on the omnibus pension bill.

The SPEAKER. The Clerk will read the statement.

The statement was read.

The conference report and accompanying statement are as follows:

CONFERENCE REPORT

The committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 2900) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its amendments numbered 7, 15, 18, 21, 24, 36, 41, 53, 58, 64, 65, 67, 68, 71, 74, 80, 81, 82, 94, 99, 106, 117, and 126.

That the Senate recede from its disagreement to the amendments of the House numbered 1, 2, 2½, 3, 4, 5, 6, 8, 9, 10, 11, 12, 13, 14, 17, 19, 20, 22, 23, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 37, 38, 39, 40, 42, 43, 44½, 45, 46, 47, 48, 49, 50, 50½, 51, 52, 54, 55, 56, 57, 59, 60, 61, 62, 63, 66, 69, 70, 72, 73, 75, 76, 77, 78, 79, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 95, 96, 97, 98, 100, 101, 102, 103, 104, 105, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 118, 119, 120, 121, 122, 123, 124, 125, and 127, and agree to the same.

Amendment numbered 16: That the Senate recede from its disagreement to the amendment of the House numbered 16, and agree to the same with an amendment as follows: Restore lines 14 to 17, inclusive, and lines 22 to 24, inclusive, on page 11, and the House agree to the same.

Amendment numbered 44: That the Senate recede from its disagreement to the amendment of the House numbered 44, and agree to the same with an amendment as follows: Restore lines 10 to 13, inclusive, on page 23, and in line 10, after the word "Weaver," insert the word "former"; and the House agree to the same.

Amendment numbered 93: That the Senate recede from its disagreement to the amendment of the House numbered 93, and agree to the same with an amendment as follows: Restore lines 17 to 20, inclusive, on page 45, and in line 20 strike out the numerals "$30" and insert the numerals "$20"; and the House agree to the same.

Amendment numbered 128: That the Senate recede from its disagreement to the amendment of the House numbered 128, and agree to the same with an amendment as follows: On page 156 of the engrossed amendments, in line 20, strike out the numerals "$30" and insert the numerals "$20," and on page 180 of the said engrossed amendments strike out the following language: "The name of Allie Crabb, widow of Mark M. Crabb, late of Company H, Seventy-eighth Regiment Pennsylvania Volunteer Infantry, and pay her a pension at the rate of $30 per month"; and the House agree to the same.

RICHARD N. ELLIOTT,
MELL G. UNDERWOOD,
*Managers on the part of the House.*

PETER NORBECK,
LYNN J. FRAZIER,
*Managers on the part of the Senate.*

STATEMENT

The managers on the part of the House on Senate bill 2900 state by the way of explanation that 1,028 House bills were included in said bill. The committee of conference carefully examined into the merits of each individual case over which any difference of opinion existed, and mutually agreed to restore all bills of a meritorious character. The Senate bill contained the names of 343 beneficiaries and the House disagreed with the Senate on 58 items and made 87 corrections as amendments. Of the 58 items disagreed to, the Senate asked that 33 of them be restored and the House conferees agreed to restore 32, one of which the rate was reduced from $30 to $20 a month. The Senate agreed on the other 113 House amendments. Of the 1,028 House bills, the Senate took exception to only 25 of them, and agreed to the retention of 24 of the exceptions. In one case the rate was reduced from

$30 to $20 a month, the House receding in one case only. Therefore, the House lost but one bill of the total number included as an amendment to the Senate bill.

W. T. FITZGERALD,
RICHARD N. ELLIOTT,
MELL G. UNDERWOOD,
*Managers on the part of the House.*

The SPEAKER. The question is on agreeing to the conference report.

The conference report was agreed to.

Mr. KNUTSON rose.

The SPEAKER. The gentleman from Minnesota is recognized.

Mr. KNUTSON. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H. R. 10141) granting pensions and increase of pensions to certain soldiers and sailors of the Regular Army and Navy, and so forth, and certain soldiers and sailors of wars other than the Civil War, and to widows of such soldiers and sailors, with Senate amendments, disagree to the Senate amendments, and ask for a conference.

The SPEAKER. The gentleman from Minnesota asks unanimous consent to take from the Speaker's table the bill H. R. 10141, with Senate amendments, disagree to the Senate amendments, and ask for a conference. Is there objection?

There was no objection; and the Speaker appointed as conferees on the part of the House Mr. KNUTSON, Mr. ROBSION of Kentucky, and Mr. HAMMER.

THE AGRICULTURAL SURPLUS CONTROL BILL

Mr. HAUGEN. Mr. Speaker, I move that the House resolve itself into Committee of the Whole House on the state of the Union for the further consideration of the bill (S. 3555) to establish a Federal farm board to aid in the orderly marketing and in the control and disposition of the surplus of agricultural commodities in interstate and foreign commerce.

The SPEAKER. The gentleman from Iowa moves that the House resolve itself into Committee of the Whole House on the state of the Union for the further consideration of the bill S. 3555.

Mr. KINCHELOE. I think it should be agreed in Committee as to how the time should be divided. Can that be done in Committee of the Whole?

The SPEAKER. It can be done in the House.

Mr. HAUGEN. Pending the motion I have made, Mr. Speaker, I ask unanimous consent that the time be divided between the gentleman from Louisiana [Mr. ASWELL] and myself, and according to the suggestion made by the committee, of the time to be controlled by me I wish to yield one hour to the gentleman from Michigan [Mr. KETCHAM] and one-half of my remaining time to the gentleman from Kentucky [Mr. KINCHELOE].

The SPEAKER. The gentleman from Iowa asks unanimous consent that the time of general debate be equally divided between himself and the gentleman from Louisiana [Mr. ASWELL].

Mr. ASWELL. I will yield one hour to the gentleman from Texas [Mr. JONES] and one-half of my remaining time to the gentleman from New Jersey [Mr. FORT].

The SPEAKER. Is there objection?

Mr. HASTINGS. I do not know that I clearly understand the request for the division of this time.

Mr. ASWELL. I can answer that question if the gentleman desires me to do so.

Mr. HASTINGS. I will be glad to have the gentleman answer it.

Mr. ASWELL. Mr. Speaker, I will say to the gentleman that general debate runs for 12 hours; one hour each will be assigned to the gentleman from Michigan [Mr. KETCHAM] and the gentleman from Texas [Mr. JONES]. That leaves 10 hours to be divided equally between the chairman and myself, and I am to yield half of my time to the gentleman from New Jersey [Mr. FORT].

Mr. HASTINGS. I do not think that makes it half and half. That gives five hours to those for the bill and the remainder or seven hours against it.

Mr. KINCHELOE. The purpose of assigning this time to the gentleman from Texas [Mr. JONES] and the gentleman from Michigan [Mr. KETCHAM] is that they are for the debenture plan, and the balance of the time will be divided equally among those for the bill and those against the bill, and that time is to be again subdivided.

Mr. HASTINGS. Is this division of time satisfactory to the Committee on Agriculture?

Mr. KINCHELOE. It is, and I think it is absolutely fair.

Mr. HASTINGS. It occurred to me that there is more than half the time yielded to those against the bill, because those who are for the debenture plan, as I understand it, are against this bill.

Mr. ASWELL. May I state to the gentleman that the Committee on Agriculture makes this request by unanimous consent.

Mr. HASTINGS. I will interpose no further objection.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. HAUGEN. Mr. Speaker, I ask unanimous consent that all Members have the privilege of revising and extending their remarks on this bill for five legislative days after the passage of the bill.

The SPEAKER. The gentleman from Iowa asks unanimous consent that all Members may have the privilege of extending their remarks for five legislative days after the consideration of this bill is completed. Is there objection?

Mr. HASTINGS. Mr. Speaker, does that include the remarks that Members may make on the bill as well as the remarks of those Members who do not speak on the bill?

The SPEAKER. It would only apply to remarks on the bill.

Mr. HASTINGS. Of course; but suppose a Member does not get an opportunity to speak upon the bill; does this request permit such a Member to extend his remarks on the bill?

The SPEAKER. All Members of the House, as the Chair understands it. Is there objection?

Mr. TILSON. Mr. Speaker, it is understood that this general extension means the extension of Members' own remarks, and that if a Member makes a speech on the bill in general debate, or under the five-minute rule, and wishes to extend his own remarks he need ask no further leave. After the bill is completed, if any Member wishes to extend his remarks in the RECORD he can do so for five legislative days.

Mr. HASTINGS. That is what I wanted made clear.

Mr. TILSON. The leave granted does not include any extraneous matters, and in case such extraneous matters are to be included special permission must be granted.

Mr. HASTINGS. That applies to a Member whether he makes a speech during the consideration of the bill or not?

Mr. TILSON. Yes; it applies to all Members.

Mr. ASWELL. As I understand, the rule provides that all debate shall be confined to the bill?

Mr. TILSON. Certainly; that is understood, as it is so stated in the rule.

The SPEAKER. Is there objection?

There was no objection.

The SPEAKER. The question is on agreeing to the motion of the gentleman from Iowa that the House resolve itself into the Committee of the Whole House on the state of the Union.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the consideration of S. 3555, to establish a Federal farm board to aid in the orderly marketing and in the control and disposition of the surplus of agricultural commodities in interstate and foreign commerce, with Mr. MAPES in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the consideration of S. 3555, which the Clerk will report.

The Clerk read the title of the bill.

Mr. HAUGEN. Mr. Chairman, I ask unanimous consent that the first reading of the bill be dispensed with.

The CHAIRMAN. The gentleman from Iowa asks unanimous consent that the first reading of the bill be dispensed with. Is there objection?

There was no objection.

Mr. HAUGEN. Mr. Chairman, ladies, and gentlemen of the committee, the bill under consideration in principle is identical with the principle of the bill reported by the Committee on Agriculture and considered by the Committee of the Whole House at the last session of the Sixty-ninth Congress. Its aim is, as set up in section 1, "the declaration of policy," to preserve advantageous domestic markets, to give the producers the control of the disposition of the surplus, to promote orderly marketing, to prevent surpluses from unduly depressing the price obtained, to prevent excessive manipulation of prices, and to minimize speculation and waste of agricultural commodities.

Briefly speaking, the bill provides for the establishment of and financing a marketing board of 12 members, 1 from each of the 12 land-bank districts, who shall be appointed by the President, by and with the advice and consent of the Senate, and the Secretary of Agriculture, who shall be a member ex officio vested with the general powers to appoint personnel and fix salaries; to keep advised from any available source of crop prices, prospects, supply and demand at home and abroad, with special attention to the existence of or the probability of the

existence of surplus; and shall advise producers through their organization, or otherwise, in the development of suitable programs of planting or breeding, so that burdensome crop surpluses may be avoided or minimized in order that they may secure the maximum benefits under the act.

Section 4 (a) authorizes and directs the board to create an advisory council of seven members, fairly representative of the producers of the commodity, for each commodity which the board from time to time determines may thereafter require stabilization through marketing agreements. Members shall serve without salary, but may be paid per diem not exceeding $20 and necessary traveling expenses for attending meetings of the council and for time devoted to business of the council.

The board may designate a secretary of the council, subject to the approval of the council. The commodity council shall meet at least twice in each year, or upon call of the majority of its members.

SEC. 4 (d). Each commodity advisory council shall have power, by itself or through its officers (1) to confer directly with the board, to call for information from it, or to make oral or written representations to it concerning matters within the jurisdiction of the board and relating to the agricultural commodity, including the amount and method of collection of the equalization fee, and (2) to cooperate with the board in advising the producers, through their organizations or otherwise, in the development of suitable programs of planting or breeding so that burdensome crop surpluses may be avoided or minimized, in order to secure the maximum benefits under the act.

Section 5. Under this section loans are made available to promote orderly marketing, to thus enable the producers to control, regulate, steady the flow of agricultural commodities to meet the demand through cooperative associations or corporations created or controlled by one or more cooperative associations.

Out of the $400,000,000 revolving fund the aggregate amount of loans outstanding and unpaid at any one time shall not exceed $25,000,000 for working capital for the cooperative association or corporation created and controlled by one or more cooperative associations, or for assisting in the acquisition, by purchase, construction, or otherwise, of facilities and equipment, including terminal marketing facilities and equipment, for the preparing, handling, storing, processing, or sale or other disposition of agricultural commodities, or for furnishing funds for use as capital for any agricultural credit corporation eligible to receive discounts under section 202 of the Federal farm loan act, as amended.

Paragraph D, section 2, authorizes loans for the purpose of expenditures in federating, consolidating, merging, or extending the membership of cooperative associations or corporations created and controlled by one or more cooperative associations. Such loans outstanding and unpaid at any one time in the aggregate shall not exceed $2,000,000.

All loans out of the revolving fund under section 5 shall bear interest at the rate of 4 per cent.

All loans are to be made upon approved security.

SEC. 6. If the board finds that its advice as to a program of planting and breeding of any agricultural commodity has been substantially disregarded by the producers of the commodity or that the planting or breeding of any agricultural commodity for any year is substantially greater than a normal increase, as determined by the board, over the average planting or breeding of such commodity, for the preceding five years, the board may refuse to make advances for the purchase of such commodity.

Section 7 provides that the board may investigate the conditions surrounding the marketing of any agricultural commodity and determine:

First. Does a surplus of any such commodity exist or threaten to exist;

Second. Does the existence of threat of such surplus depress or threaten to depress the price of such commodity below the average cost of the actual production of such commodity in continental United States during the preceding five years; and

Third. Are the conditions of durability, preparation, processing, and marketing of such commodity or the products therefrom adaptable to the storage or future disposal of such commodity.

Before declaring or entering its finding upon the foregoing matters the board shall consult with the advisory council for the commodity.

Section 8 provides that the board may assist cooperative associations or corporations in the establishment and provides for the registration of clearing house associations in accordance with such regulations as it may prescribe adapted, in the opinion of the board, to effect the more orderly production, distribution, and marketing of any agricultural commodity.

Section 9 provides that the board upon the finding of certain facts in respect to surpluses, and so forth, may enter into agreements with cooperative associations or corporations created or controlled by such associations for the withholding, purchase, and disposal of agricultural commodities. The advances from the stabilization fund shall be upon such conditions as the board may prescribe, but no such advances shall bear interest. In making such agreements preference is to be given to cooperative associations or corporations created by cooperative associations, but in case no such associations or corporations are capable of carrying out the marketing agreements for the purchase, withholding, and disposal, then the board may enter into agreements with other agencies, but in either case shall not unreasonably discriminate between such other agencies.

Section 9, paragraph (h), specially provides that the powers of the board shall be exercised in such manner and the marketing agreements entered into by the board during any marketing period shall be upon such terms as will, in the judgment of the board, carry out the policy declared by section 1.

Section 10. In order that each producer may bear his ratable share of the cost of marketing his commodity, and contribute his proportionate share required to equalize the price and to receive his share of the profits therefrom—in other words, to equalize the price—the board is authorized to determine the equalization fee to be collected or withheld upon each marketed unit, upon one of the following: The processing, the transportation, or the sale of such unit.

Section 12 authorizes the cooperative association to insure (premium and nonpremium) against price declines in commodities regularly traded in upon an exchange. This insurance is equivalent to what is frequently referred to as hedging. In other words, the nonpremium insurance to be paid out of the stabilization funds, thereby each producer paying his ratable share of the premiums, the premium insurance to be paid for by the cooperative associations.

The board can make a nonpremium insurance agreement, with the costs payable out of the stabilization fund, only in case it finds that such an insurance agreement would substantially benefit all producers.

In other words, its aim is to do exactly as pledged in the platform of the Republican Party—"to establish a balanced relation between agriculture, industry, and labor"; to do as pledged in the Democratic platform of 1924—"to stimulate the cooperative marketing movement and to establish a marketing board in order that the exportable surplus may not establish the price of the whole crop"; to do as suggested in President Coolidge's message to the Congress at the last session of the Sixty-ninth Congress—"to make the open country a more desirable place in which to live."

It is also to make the protective laws effective, make them effective to the farmers as they are generally made effective to organized industry. For instance, the tariff is made effective to organized industry by pooling the whole production, by selling a portion of the product at the American price level, the world price plus the tariff and other expenses incident to the importation of the foreign commodity, and to sell in the world market at the highest net price obtainable, and to equalize the price and pay the producer the equalized price, thus materially advancing the average price to every producer.

For instance, the Adamson Act and our immigration laws are made effective through labor organizations to influence the wage scale, and as the Federal reserve act is made effective through the Federal Reserve Board exercising its power in controlling the volume and flow of currency, thus influencing the rate of interest.

What is proposed to do in this bill is to create and finance a marketing board and to do that which is the all essential, to vest it with power to withhold or collect an equailzation fee in an amount sufficient to equalize the price and the cost of marketing, so that each producer may contribute his ratable share of the cost of marketing and receive his proportionate share of the profits from marketing, so that the producer may have the opportunity to sell, as I have indicated, on the domestic market at the American price level and to sell on the foreign market at the highest net obtainable price and in this way materially advance the average price to each producer; and, as I have said, in this way it will give the farmers the benefit of marketing their own commodities in their own way and in such a way that will give them the benefit of our protective laws. Not protective laws hereby established, but laws that have already been established, to wrest from certain exporters and operators on exchanges the power which they exercise in the manipulation of prices and the doctoring of grades; to thus reestablish the foreign market for agricultural commodities, which was destroyed through the unpardonable practice of manipulation of prices, and the mixing of dirt, screenings, and rubbish with

grain and selling it as grain, as was pointed out in the Federal Trade Commission's and the press reports in connection with the Armour, Rosenbaum, and Silver deal. In other words, to mete out justice to a worthy and deserving class of our people.

The lines of demarcation have been clearly drawn. The issue is squarely before us.

In the hearings, covering 3,622 pages, will be found, on one side of the issue, the names of numerous farmers and legislative representatives of farm groups who appeared before the committee. All, with one exception, were squarely back of the equalization-fee plan. References will be found to petitions signed by thousands, not only farmers but bankers, merchants, laborers, and men and women in practically every activity, in support of the measure before us.

On the other side, on page 156 of the hearings, January 10, 1927, will be found a letter from Mr. Frederick B. Wells, chairman of the Chamber of Commerce of Minneapolis, Minn., speaking in behalf of the grain exchanges of the country, states—

> The grain exchanges are, as you know, unalterably opposed to any form of agricultural relief legislation, embracing an equalization fee and artificial stimulation of price.

On page 548, part 7, hearings before the House Committee on Agriculture, February 21, 1928, Mr. Sydney Anderson, formerly an efficient and honorable Member of the House, and now president of the Millers' National Federation, speaking for the millers, the largest operators on the grain exchanges, in reply to the question of a member of the committee, "Where will the bill hurt the millers? Who will be hurt outside of the farmers?" answered:

> I think that the inevitable result of legislation of this kind is to break down the regular commercial channels, break down the ordinary flow, the regular flow in commercial channels of commodities. What this does is practically to set up a new channel of commerce, does it not? (P. 552.) I think it changes the entire scheme.

I believe, with one exception, I have refrained from even referring to lobbyists, and the conduct of the opposition. In view of the severe criticism made against the legislative representatives of farm groups, and referring to them as paid lobbyists, and as not being representative of the producers, and questioning the producer's rights to representation, it seems time to call attention to the powerful forces maintaining lobbies in opposition to farm relief and other legislation affecting agriculture.

On page 1016, Serial C, part 14, hearings before the House Committee on Agriculture, April 6, 1926, Sixty-ninth Congress, Mr. Quinn, secretary of the National Grain Dealers' Association, in his report to the association stated:

> When the McNary-Haugen bill was introduced a canvass of the House showed enough votes to pass it, with 95 to spare. The National Grain Dealers' Association got busy, grain men gave freely of their time, and we had from 5 to 15 men in Washington all through the danger period. We met in the morning and each man was assigned to see certain Congressmen. In the evening each man reported the results of his interview.
>
> Before the vote was called every Congressman had been thoroughly canvassed and we estimated that we had the bill beaten by a vote of 75. The following day's returns showed that it was beaten by 73.
>
> It may be necessary for your association to call upon all its members, direct and affiliated, for assistance in the fight before Congress.
>
> You will be kept posted, and when President Horner issues the call for your aid you will be expected to respond as you did when the McNary-Haugen bill was snowed under. You are duly bound to fight such legislation from the standpoint of patriotism as well as your own self-interest.

We now have a new organization, the Federated Agricultural Trades of America, recently organized under the laws of the State of Illinois; president, W. F. Jensen; vice president, Everett C. Brown (president of the Chicago Live Stock Exchange); treasurer, Fred G. Horner (former president of the National Grain Dealers' Association); secretary, Harrison F. Jones.

Mr. Jensen, acting as chairman of the meeting called for the purpose of organizing, at Chicago, November 30, 1927, is reported to have stated, after outlining the purpose of organizing:

> The issue now is that of cooperative marketing, not in a small way but on a national scale, and in the big terminal markets for the purpose of establishing producer control of value.
>
> Any person, firm, corporation, or association believing in the purposes of the federation can become a member. The amount of the dues varies with the size of the organization becoming a member, but ranges nominally from $50 to $100 per year for business concerns. Fees for trade associations taking out membership probably would be on a higher basis.

Recently it was stated in a telegram that:

> The federation expects soon to have 50,000 members.

Fifty thousand members soon, at the lowest fee—$50—would mean $2,500,000.

I repeat, "The issue now is that of cooperative marketing not in a small way but on a national scale." Hence not only to destroy cooperative marketing already established but to defeat legislation to promote cooperative marketing on a national scale, as provided in the McNary-Haugen bill.

Secretary of Agriculture Jardine, in his letter of March 22, 1928, to United States Senator GOODING regarding the agricultural trades conference held at the Palmer House in Chicago November 30, 1927, called by W. F. Jensen, states:

> I have a number of reports on this meeting, and I am fairly familiar with its deliberations. * * * Apparently nearly all the speeches delivered at this meeting were distinctly hostile to cooperative marketing.

Professor Potter, head of the animal husbandry department of the Oregon State Agricultural College, who was present at all sessions of the Chicago meeting, in a letter to Senator MCNARY, states:

> * * * war was declared on cooperative farm marketing * * * and were determined to fight it to the last ditch. They were particularly alarmed at the national scope of some of our cooperative organizations. There was much bitterness against the whole cooperative movement. The avowed objective of the organization was to oppose by every means possible, all Federal, State, and county aid to agricultural cooperation. A permanent organization was formed and plans laid for the raising of a large sum of money. This money was to be used—
>
> (1) To oppose all legislation designed to aid the formation of agricultural cooperatives;
>
> (2) To have declared unconstitutional, wherever possible, present cooperative laws; and
>
> (3) To stop propaganda in favor of agricultural cooperation on the part of the United States Department of Agriculture, State agricultural colleges, and county agents.

He further states:

> I was thoroughly convinced that this organization was just as real and just as powerful as all the brains and money of the agricultural trades of America could make it. There is no question that this organization will be represented in Congress and in many of our State legislatures in no insignificant way.
>
> Day by day the evidence piles up to show the necessity of action on the part of agriculture. Absolute loyalty to cooperation and a united front are essential to a successful fight against this enemy of farm marketing.

I take it that Mr. Wells, Mr. Anderson, Secretary Quinn, and Mr. Jensen, all spoke with authority and correctly reflected the attitude of the opposition, especially the operators on our grain exchanges. If so, the question is, are the objections raised well taken?

Will it break down the regular commercial channels? Will it break down the regular flow in commercial channels in commodities, and will it set up new channels of commerce, and will it change the entire scheme?

Nowhere in the bill is it proposed to break down the regular commercial channels or the ordinary flow in commercial channels of agricultural commodities, or to break down any honorable, legitimate transaction, or to break down existing facilities. Its aim is, as previously stated, to give producers of agricultural commodities the control of the disposition of their own commodities; to sell their commodities in a way that will give them the benefit of the protective laws; not laws to be hereby enacted, but already established; to be accomplished by the establishment and financing a marketing board, and by extending loans, and by the board entering into marketing agreements with cooperative associations. In case there is no such cooperative association, or corporation created or controlled by cooperative associations, capable of carrying out any marketing agreement for purchasing, withholding, and disposing of agricultural commodities, then the board may enter into agreement with other agencies.

No, if the operators on our grain exchanges, and exporters will conduct their activities in an honorable and proper manner—and there are many such—there is nothing in the bill to interfere with their operations. But, if certain operators on the exchanges continue their practice of manipulating prices and grades causing violent fluctuations in prices, section 1 of the bill provides that the aim is to prevent undue and excessive fluctuations in the markets, and to minimize speculation and waste in marketing commodities.

If certain exporters continue the practice of mixing dirt, screenings, and rubbish with grain and selling it as such, at

grain prices—as pointed out in the Federal Trade Commission's Report—it is fair to assume, in order to protect the producers and consumers against the fraudulent practice of manipulation of prices, and in order to protect the producers and the foreign consumer against the injustice of mixing dirt, screenings, and rubbish with grain, and selling it as grain, by the exporters, a board, friendly to the producers, believing in a square deal, would naturally determine to carry their own insurance against the fluctuations in prices, and if necessary to have their exportable surplus exported by exporters, conducting their business in an honorable manner, to thus reestablish foreign markets for agricultural commodities, broken down because of the frauds heretofore perpetrated.

The question is, Are they entitled to that protection? Is there anything wrong about it? Are the lawbreakers of more importance than the producers of agricultural commodities? Is the fraudulent practice of greater importance than the producers of agricultural commodities? If not, what unpardonable sin have the producers committed, to be deprived of marketing their commodities in order that they may take advantage of the protective laws already established?

The issue is clear. On one side, as indicated in the hearings, we have the farmers, merchants, bankers, laborers, and thousands of others engaged in other activities and walks of life, especially in the South and the West, urging the passage of the bill.

On the other side, we have the representatives of the grain exchanges and the millers; the newly organized Federated Agricultural Trades of America, with its 50,000 members, with a membership fee of $50 to $100, with headquarters at Chicago and Washington, with the avowed purpose to not only break down cooperative marketing already in existence, but legislation of a national scope—the McNary-Haugen bill.

Evidently the campaign is to be conducted, as conducted by Mr. Quinn, secretary of the National Grain Dealers' Association, and as set out in the report of an investigation made by a select committee of the Senate and House in July, August, and September, 1913, "charges against Members of the House and lobby activities of the National Association of Manufacturers' of the United States and others."

In volume 1 appears an article prepared by Col. Martin M. Mulhall, of Baltimore—tagged No. 10—a regularly employed lobbyist for the National Association of Manufacturers' and National Council for Industrial Defense; to keep in touch with the different committees of the House and Senate; to do general field work and general campaign work in the interest of and against candidates in the various States; to keep track of the bills that come before the House and Senate; to contribute money to help candidates friendly to them; to succeed or to defeat candidates unfriendly to their cause, as were the $3,785,398.37 fund of the National Association of Manufacturers and National Council for Industrial Defense.

According to Colonel Mulhall's statement, page 286, $3,000 was given him by one Mr. Bird, to use in one district in New Jersey, not put into the report. He thought that some $10,000 was given to help effect legislation at Washington. (See page 312.) He helped one to succeed, but he thought that money had bought that election. He had been told by several officials and men who participated in that campaign that the amount was $60,000. That one Member was defeated for renomination and openly financed by the lobby of the association. That he received through Colonel Mulhall and Edward Hines, and another member accepted aid through his campaign manager in the last two campaigns for Congress.

On page 16 is given a large number of Members and Senators that the lobbyists of this association had no difficulty in reaching and influencing.

On page 335, in reply to a question, "You expended more than $200,000 in lobby work?" Mr. Mulhall answered, "I mean lobbying and campaign work."

On page 352, one raised $3,000 from the brewing interests and gave it to ——— to help out in the fight. A Member of Congress was asked to get busy, for he knew what the Member had done for his people at the last session of Congress.

Mr. Mulhall stated that the association conducted a relentless warfare against public officials and others who opposed its legislation. It financed the campaigns of candidates against them and sought to retire them from Congress. Black lists were included. The black list included 13 Members and Senators.

On page 18 it reports that Congressman GILBERT N. HAUGEN, of the fourth Iowa district, was opposed with all the influence at the command of the National Association of Manufacturers in 1908, but was elected by a very small majority.

On page 981, when asked, "What was the purpose of making out that list?" Mr. Mulhall answered, "That was supposed to be a black list of Congressmen they wanted defeated at that time." The black list contained nine names. When asked by what means Mr. Mulhall had of knowing that they collected money to select ———, Mr. Mulhall answered, "I participated in the affair myself and organized a committee to collect funds."

Here we have on one side the grain exchanges, the big millers, the largest operators on our exchanges, the National Association of Grain Dealers, and the Federated Agricultural Trades of America, with headquarters at Chicago, with its two to five million membership fund, which, if used as the three and three-quarter million fund of the National Association of Manufacturers and the National Council of Industrial Defense were used, should provide a liberal fund for the employment of a good-sized lobby and a large army in the field to keep in touch with the different committees in the House and Senate, to keep track of bills that come before the House and Senate, to confer with Members of the House and Senate, to reach and influence Members and Senators, to prepare black lists, to contribute money to help elect candidates friendly to them and to defeat candidates unfriendly, and to carry paid advertisements and pay for the distribution of carloads of literature.

On the other side we have the millions of farmers, merchants, bankers, wage earners, and men and women in all walks of life.

The time is limited. I have a large number of requests for time, and I shall have to refuse to yield. I must make my remarks very brief at that, in order to accommodate others.

I believe all are agreed as to the important place which our basic industry, agriculture, holds in the economic life of the Nation, also all who have given it due consideration also agree that it will require the united and best efforts of all regardless of their political affiliation or personal interests, to overcome the continued economic depression, to encourage, to restore normal and better conditions in agriculture, to thus promote progress, prosperity, and happiness, not only to agriculture but to labor and all activities, in order that we may have the fullest development of every worthy and legitimate enterprise.

I believe recent experience has demonstrated with absolute finality that the stability, growth, and greatness of our Nation, the progress, prosperity, and happiness of our people depends upon our basic industry, agriculture.

The farmer is the producer of new wealth. All wealth springs from mother earth. The farmer, as a class, is the conservative force of our Nation. Every year the farmer, by his labor, affords the opportunity of the combined act of the sun, rain, and soil to bring into existence the very essentials of home life, the food we eat, the clothes we wear.

A word as to existing conditions and its importance.

According to the business men's commission's report, November, 1927, notwithstanding the continued decline of the farm population in recent years of more than 2,000,000 persons per annum, we still have a farm population of approximately 28,000,000 people, which makes up approximately one-fourth of our population, of which approximately six and one-half million are engaged in tilling a like number of farms, producing approximately one-fourth of the world production of wheat, three-fourths of the world production of corn, and two-thirds of the world production of cotton, supplying about one-half of our exports.

Were it not for the large exportable surplus of agricultural commodities, the balance of trade, now in our favor, would be turned into an adverse balance. Balances of trade are generally paid in gold. As a result, our gold reserve would ultimately be exhausted, and, as in other countries, American exchange and currency would go below par and thus deflate not only American currency but further deflate the purchasing power of labor and all commodities.

It goes without saying that a nation or farmer whose expenditures exceed their income may not travel on the highway to prosperity.

According to the Industrial Conference Board's report in 1926, the current value of capital invested in agriculture in 1919–20 was $65,000,000,000, which in amount exceeded the total investment of $44,000,000,000 in manufactures and $20,000,000,000 in railroads. Farm and farm property represents nearly one-fifth of our tangible wealth. In recent years it has contributed about one-sixth of the national income. It supplies material upon which depend industries giving employment to one-half of our industrial workers.

It supplies about one-eighth of the total tonnage of freight carried by our railroad system.

The agricultural industry pays $10,000,000,000 annually for services and goods produced by others.

It pays indirectly at least $2,500,000,000 of the wages of urban employees.

Our Government expenditures in 1924 were reported at $10,252,000,000, approximately 10 per cent of the total income—a per capita cost of government of $91.47 or $400 per family. Indeed, a large drain on the taxpayers' pocketbook. Agriculture pays one-fifth of it.

Is it of any importance to the people in general?

The Industrial Conference Board's report and official reports make it clear as to its importance to commercial and industrial interests.

Is it of importance to labor?

The testimony of Edgar Wallace, representing the American Federation of Labor, and other representatives of labor groups testifying before the committee makes it clear as to its importance to the wage earners. We recall that following the deflation policy, only a few years ago, which resulted in a disparity in prices between agricultural commodities and the products of industry. Here we were with six and one-half million farmers, constituting about 35 per cent of the purchasing power, because of the low prices of their commodities in contrast with the high prices they had to pay for what they had to buy, found themselves without money or credit to purchase the things necessary to operate their farms. Naturally, consumption fell. Production, of course, decreased correspondingly, resulting in separating more than 6,000,000 wage earners from the pay rolls. Naturally, wage earners became intensely interested. Representatives of, I believe, all labor groups appeared before the Committee on Agriculture, pleading with the committee to report out legislation that might restore the purchasing power of the farmer so that they might go back to work.

As stated by Edgar Wallace, representing the American Federation of Labor:

> The farmers are our customers; when they have no money we can not work. We are the farmers' customers * * *. Hence I think it is to the interest of all the workers. * * * I can not see any hope for improvement, except the farmers can buy. Those are the people on whom we depend. Now, Mr. Chairman, I do not see any difference in confiscating a farmer's product by force or forcing upon him confiscatory prices that will have the same effect. * * * What does it profit us if we can get meat for 10 cents a pound if we haven't the 10 cents?

In Serial E, part 9, page 644, of the hearings before the House Committee on Agriculture, February 21, 1928, Mr. Wallace stated:

> I am sorry to say, Mr. Chairman, that what I apprehended a year and a half ago is now a fact—that is, as we are sitting here to-day 40 per cent of the workers of this country are idle because no man has hired them. * * * So we are heading for the dump.

(Page 645)

> No, Mr. Chairman; we feel that relief must be given the farmers in some tangible form. Oh, people say to me, "This equalization fee—unheard of; never has the Government interfered to that extent." No; but organizations of business men have been able to establish an equalization fee for themselves. It is a well-known fact that machinery manufactured in the United States is sold cheaper abroad than it is sold in the United States, not only farm machinery but all kinds of machinery.
>
> * * * * * * *
>
> Now, Mr. Chairman, we are in favor of the McNary-Haugen bill. We believe that in that bill is the only comprehensive plan that will safeguard the interests of the farmers and put them on a paying basis.

(Page 647)

> Mr. WALLACE. You know the condition of the miners. I do not have to explain that to you; 250,000 miners are out of employment. We would not care a thing for that if there were 250,000 other places open to them. But as a matter of fact what is true of the miners is true to-day of the building trades. It is true of the textile trades; it is true of the metal trades. They are the basic industries. It is likewise true of the automobile industry, a new industry; it is true of the radio industry, a brand-new industry.

(Page 648)

> Mr. WALLACE. Of course, you know what Henry Clay said about protection—"It is a local issue." That is true. If I could have my particular industry protected and all the others have free trade, I would be sitting pretty.

(Page 649)

> Mr. KINCHELOE. Has your organization ever talked over this farmers' situation in convention assembled?
>
> Mr. WALLACE. You know what my evidence has been before this committee each time I have appeared here. My organization knows how to put a fellow out if he misrepresents the intent of that organization, and so the very fact that I am here means that my organization feels that it is being properly represented by what I am saying now and what I have said in the past.

It has discussed this farm situation and has arrived at the same conclusion that I have tried to express here.

> Mr. FULMER. Mr. Wallace, do you find that because of the poverty out on the farm that farmers are leaving and coming in competition with your workers in the cities?
>
> Mr. WALLACE. Oh, yes; there is a great deal of that. * * * But the net result has been to drive the people off the farm into the industries. I think the figures last year were that the farming population had decreased by 500,000, and that means more than 500,000 left the farm, because there is a natural increase which is at least as large on the farm as it is anywhere else.

(Page 550)

> Mr. KETCHAM. You have made that, then, just as a general observation that you would be willing to pay an additional cent if required?
>
> Mr. WALLACE. Yes; I believe that. I am convinced that our conditions have risen. I believe that we have the highest standard of living to-day—do not misunderstand me as crying "calamity" as to our standard of living. I believe our standard of living is higher than that of any country in the world; higher than it has been anywhere.

(Page 551)

> Mr. FORT. You feel as I do, do you not, that the consumers of this country would not object to a reasonable increase in the cost of living if it were necessary only to give the farmers fair treatment?
>
> Mr. WALLACE. That has been the burden of my testimony.
>
> * * * * * * *
>
> But, Mr. FORT, there is this exception: There are some people representing the consumers who kick mightily when something is suggested that would bring a cure, and we are not kicking against a cure. We are not objecting to a cure.

(Page 653)

> Mr. SWANK. You are appearing here this morning and indorsing this McNary-Haugen agricultural bill?
>
> Mr. WALLACE. I am indorsing the McNary-Haugen bill because I do not know of anything that has been proposed that will meet the surplus question like it would.

Yes, my friends, all agree, with the depressed conditions in agriculture, factories and mills crumble to pieces, railroads rust from idleness, and labor is out of employment.

The National Industrial Conference report points out the inequality between the income of farmers and others. The board reports the farmer's actual income in 1924 to be $730. Against the $730 he is charged with $630 for food, fuel, and housing supplied by the farm, which leaves him $100 in cash. The report states that the farmer pays outside the farm for food, fuel, and clothing $475, which absorbs not only the $100 cash but leaves him $375 short. He is credited with 2 per cent, or $400, on his investment. If so, he is $25 ahead, but, as all know, many farmers are in debt; if so, he pays on the average at least 6 per cent. If he pays 6 per cent on his entire investment, he is entitled to $1,200, or $800 more, and if the $375 is added to the $800 he finds himself at the end of the year $1,175 in the red.

The report points out the disparity in incomes of the various groups. As before stated, eliminating the interest credited and the items charged against his account, his income is reported to be $730, as compared with—

| | |
|---|---|
| All workers | $1,256 |
| All workers outside of the farm | 1,415 |
| Wage earners in the manufacturing industry | 1,572 |
| Transportation | 2,141 |
| Clerical | 1,678 |
| Ministers | 1,295 |
| Teachers | 1,650 |

The farmer's income is reported to be about 1 to 3 to that of those employed in transportation, and about 1 to 2 of all groups outside of the farms.

Can there be any question in the mind of anyone as to the alleged adverse conditions? If so, I commend a careful study of the Attorney General's last annual report in respect to the number of cases in bankruptcy. We find that for the year closing June 30, 1926, out of the 47,000 cases in bankruptcy, 7,777 are classed as farmers, and last year up to June 5, 1927, out of 43,070 cases, 6,297 were classed as farmers, which does not include the thousands and thousands of mortgage foreclosures or the number in voluntary liquidation outside of the bankruptcy court—an astonishing fact. Bankruptcy among the farmers increased from 1910 to 1924, 1,000 per cent as in contrast with others. Yet we are told that conditions have improved.

The Business Men's Commission on Agriculture for 1927, on page 56, reports that the average return per farm for labor and management, 1920–1925, to be only $613.

Farmers are not the only ones affected by the adverse conditions. If one turns to the Comptroller of the Currency's re-

port relative to bank failures, he will find that in 1920, 49 banks closed their doors and in 1926 the number had increased to 574, an increase of 1,200 per cent in six years, and in 1927 the number had increased to 830, an increase of approximately 1,700 per cent in seven years.

Notwithstanding these deplorable conditions, we frequently learn from the press and other reports that the economic conditions are much improved. We have men traveling over the country spreading the good news that all is well with the farmer—he is getting all that he is entitled to—and that all are traveling on the highway to prosperity. The farmers are told that their trouble is due to a lack of industry, intelligently applied—they are extravagant; they are riding in automobiles—and all that is necessary for the farmer to do is to work harder, more hours, and apply economy, and if the farmer would hitch the old nag to the gocart or ride horseback on the sway-backed mule instead of the auto, and if the good housewife will make clothes for the children out of cheesecloth or empty flour sacks, all will be well, the goal is certain to be reached.

If agriculture is of the importance indicated in reports and if economic conditions in agriculture are as indicated in the Attorney General's report and comptroller's reports, what is there to do about it?

What is the cause of our trouble?

There are, of course, many. Time does not permit the enumeration of all of them.

Many contend that it is due to speculation. No; generally the speculators were closed out on the first interest-due day. Upon investigation it will be found that conditions are as acute in States where no speculation existed as in States where speculation did exist.

Many contend it is due to high taxes. Yes; taxes have doubled and trebled in many instances, but all over this country good roads have been built, schoolhouses have been constructed and maintained at a large increase in cost. So long as we ride in automobiles, good roads are indispensable, and in the opinion, I believe, of a large majority of the American people, our educational institutions are indispensable. Many believe that knowledge is power. Many believe that a Republic like ours must be sustained by the virtue and intelligence of the people. Many believe that education is the greatest security to freedom, and all we have and enjoy of human liberty was acquired by the people; they fought the battles of revolution; they wrote the Declaration of Independence; they made our Constitution, our laws, and they have sustained them in time of peace and in time of war. The Republic—these people—demand and, I am proud to say, have received liberal provision for the general education. But that, of course, is a matter for each community to determine. Each community has jurisdiction over expenses incurred in their respective communities.

Mr. Chairman, how much time have I used?

The CHAIRMAN. The gentleman has used 31 minutes.

Mr. LAGUARDIA. Now, tell us about the bill.

Mr. HAUGEN. I shall be glad to discuss the bill, but the gentleman from Indiana [Mr. PURNELL] will lead in that discussion.

What are the outstanding causes? Those over which the farmers in general have no control. I believe all are agreed that first it is due to the unwarranted sudden deflation policy, which resulted in the continued disparity in prices between agricultural commodities and other commodities; in the low prices the farmer receives for what he sells in contrast to the higher price he pays for what he has to buy to operate his farm. In other words, the purchasing and debt-paying power of agricultural commodities in many cases is less than one-half of its pre-war purchasing and debt-paying power.

It is also due to the large exportable surplus of certain agricultural commodities and the fact, as indicated in the Democratic platform, the price obtained for the surplus establishes the price of the whole production. Thus prices are materially lower, due to the unsettled world conditions and the lower cost of production in foreign countries, which has resulted in an inadequate return to the farmer for his labor expended and capital invested.

Also the farmers because of their large numbers have been unable to pool their whole production and market their commodities in such a way as to receive the full benefit of our protective laws.

It is generally conceded that in the case of the producer of a commodity of which there is a large exportable surplus that in the absence of an organization vested with power to pool its whole production the price obtained for the exportable surplus establishes the price of the whole production.

On the other hand an organization which has a monopoly or which has the power to pool its whole production if protected by a tariff is in position to sell a portion of its production for domestic consumption at the world price plus the tariff and transportation and other charges incidental to the importation of the competitive article without affecting the domestic price, and thus materially advancing the average price of the whole production to the producer; the average price, being the world price—the highest net obtainable price in the world market plus the increase occasioned by the higher price on the part sold for domestic consumption.

Take, for example, wheat, of which there is generally a large exportable surplus. Generally the Liverpool market establishes the world price, which in turn is reflected in the domestic price. As a result, notwithstanding the 42 cents tariff on wheat, the Chicago price much of the time ranges from 15 cents to 30 cents below the Liverpool price. Hence in case of large exportable surplus the domestic producers sell their surplus in competition with the surplus of other nations, much of it produced by underpaid labor and on their fertile land, which in many cases sells for less than one-fourth of the price of the American farm. Therefore no benefit is received from the tariff or the restricted immigration law or other protective laws.

On the other hand, if a 100 per cent pool were effected, as might be accomplished under the proposed bill, the pool would be in position to stabilize the price on wheat for domestic consumption equivalent to the cost of foreign production plus the tariff, transportation, and other expenses incidental to the importation of the foreign production. In other words, considering Winnipeg, Canada, our competitor in wheat, to be the lowest competitive world price available, the pool would be able to establish domestic price for domestic consumption at the Winnipeg price plus the tariff and other cost of delivery to our port of entry. Assuming that the Winnipeg and Minneapolis wheat price be $1, or the world price $1, and the cost of delivering Winnipeg wheat to our port of entry be 8 cents per bushel, and the present rate of tariff 42 cents, the cost of the Canadian wheat here would be $1.50 per bushel, an increase in price of 50 cents per bushel over the Winnipeg, the world price.

Our normal production of wheat is approximately 800,000,000 bushels and our domestic requirements are about 600,000,000 to 700,000,000 bushels. If the whole production were pooled and marketed, and, say, 600,000,000 bushels sold at $1.50, and the 200,000,000 bushels exported and sold in competition with Canadian world-production wheat at the world price, the net profit to the producers would be 50 cents per bushel on the 600,000,000 bushels sold for domestic consumption, or a net profit of $300,000,000. There being no profit or loss on the 200,000,000 bushels exported, the net profit would be $300,000,000. The equalization fee would be 12½ cents and the equalized price $1.37½, or 37½ cents over the price the producers would have received on the 800,000,000 bushels in the absence of a pool.

Of course it can not be accomplished equitably except through the pooling of the whole production and the collection of an equalization fee. Anything short of the 100 per cent pool, and the collection or withholding of the equalization fee, would fail to give the desired results.

For example, assuming the wheat crop to be 800,000,000 bushels, 600,000,000 bushels required for domestic consumption and 200,000,000 bushels exported, and the price in competing countries to be $1, and if 50 per cent of the growers should attempt to pool their 50 per cent of the production and to stabilize the price of their 400,000,000 bushels equal to the 42-cent tariff and other costs of 8 cents to port of entry, nonmembers would, of course, take advantage and sell their 400,000,000 bushels at $1.50, the stabilized price, and walk away with $200,000,000 profit without contributing one cent to stabilize the price.

The pool would have the domestic market for only 200,000,000 bushels of its 400,000,000 bushels, at $1.50 per bushel, the domestic price, and would be compelled to sell 200,000,000 bushels in the world market at $1 per bushel, which would net the pool $100,000,000 to be appropriated over its 400,000,000 bushels, which would make the equalized price only $1.25. Hence in pooling the whole production the profit to the producers would be 37½ cents a bushel, instead of only 25 cents a bushel in the case of the 50 per cent pool.

Many efforts have been made to effect a 100 per cent pool. Many well-meaning men have given their time and money in an honest effort to effect a 100 per cent pool. They have never succeeded in pooling one-half the production much less the whole. All so far have given up in despair.

Because of the large number of producers the pooling of the whole production is beyond the power of the producers, hence in order to pool the whole production that each producer may contribute his ratable share of the cost of marketing, and of

the amount required to equalize the price, and to receive his proportionate share of the profits therefrom, which can be accomplished through the establishment and financing a marketing board, friendly to the producers, vested with power to collect or withhold from each producer his ratable share of the cost of marketing and the amount required to equalize the price, and each producer receive his proportionate share of the profits therefrom. In other words, the equalized price as provided in the bill.

It goes without saying that any law enacted which operates in the interest of one class and is ineffective to another should be made effective all along the line. Clearly, our protective laws, especially our tariff laws, are ineffective to producers of commodities of which there is a large exportable surplus, in the absence of an organization to pool the whole production, and can only be made effective through organization exercising the power of pooling the whole production. Not the fault of the law itself, but due to the large number of producers of certain commodities, as in the case of producers of agricultural commodities, incapable of organizing so as to take advantage of established laws.

Is it asking too much that the law be made operative?

We all take much pride in referring to our grand and glorious Government, with its splendid and magnificent institutions, a land of equal rights and opportunities.

Shall it be said that laws discriminating against one class—the farmer—shall not be corrected? Shall party platform pledges be ignored or repudiated, or shall justice be meted out to a worthy and deserving class of our citizens?

Another remedy has been suggested. To adopt the slogan, "Protection for all or protection for none," which I take it to mean to ignore party-platform pledges, and if prices of agricultural commodities are low and the prices of other commodities are high, because of our tariff system and restricted immigration policy—that is, if the prices of the products of industry are high because of high wage scale and a high rate of duty—the suggestion is the remedy would be to adjust or repeal our immigration and tariff laws; if so, the price would come down. Yes; if the gates are thrown wide open to foreign labor and production prices will, of course, drop. We would then be on the level with other nations. In my opinion, there is no question as to that. Billions of dollars of debts were contracted on inflated basis. In my opinion, debts thus contracted should be liquidated on the same basis. For instance, if a farmer purchased farm implements at the inflated price during the war and gave his note for $1,000 and the price of wheat at that time was $2 per bushel, and if he had wheat and sold it the proceeds of 500 bushels would have paid the bill. Recently the price of wheat has been around $1 per bushel, and at this price it would require 1,000 bushels to pay the debt. If the price is further deflated, say to 50 cents per bushel, it would require 2,000 bushels. Personally, I am opposed to thus increasing the burden of the producer.

I believe in a sound and wise restricted immigration policy, and in a protective tariff system, which will maintain the American high standard of living, just and fair to all concerned, to encourage American industry and benefit American labor, and that would result in the common good to all the people. Rather than to add to the burden of the farmer and to lower the standard of living, in my opinion, every effort should be made to elevate the purchasing power of agricultural commodities to a price level, with products of industry and labor, and thus restore, as promised, equality between agriculture, industry, and labor.

Another remedy to make the tariff effective is the debenture plan—a subsidy, not to extract money out of the Public Treasury after it is paid into the Treasury, but to capture it before it gets into the Treasury. To make the tariff effective all along the line would, of course, strip the Treasury of its funds. Therefore a compromise has been suggested to cut the tariff in two, a plan which many disapprove of. Farmers have objected to a raid on the Treasury and being placed in the position of asking for gratuity. All they ask is that protective laws be made as effective to them as it is to others. That, because of their large numbers they have been unable to organize to pool their whole production and thus take advantage of the protective laws, they request the establishment of a marketing board, to vest it with power to pool the whole production, and that each producer may pay his ratable share of the cost and receive his proportionate share of benefits, which seems just and fair to all concerned. Thereby not only will the Federal Treasury be protected against a raid but the producers would be millions ahead.

A comparison of the two plans is indeed most interesting. I shall include in my remarks a summary indicating the cost to the Government of the debenture plan, its benefits to the producers, and the net gain to the producers after deducting the cost to the Government, and the net gain to the producers, without expense to the Government, under the equalization plan.

*Summary*

| Commodity | Years | Debenture plan | | | Equalization plan net gain after deducting equalization fees | Difference in favor of equalization plan |
|---|---|---|---|---|---|---|
| | | Gain in price of whole production | Cost to Federal Treasury | Net gain after deducting cost to Government | | |
| Wheat | 4 years, 1924–1927 | $705,268,280 | $142,484,630 | $562,783,650 | $960,949,742 | $398,166,092 |
| Corn | do | 802,866,000 | 4,990,500 | 797,875,500 | 1,690,046,033 | 892,170,533 |
| Total | | 1,508,134,280 | 147,475,130 | 1,360,659,150 | 2,650,995,775 | 1,290,336,625 |
| Beef | 3 years, 1924–1926 | 339,435,000 | 1,560,000 | 337,875,000 | 1,088,144,800 | 750,269,800 |
| Butter | do | 284,005,960 | 949,260 | 283,056,700 | 353,397,742 | 70,341,042 |
| Total | | 623,440,960 | 2,509,260 | 620,931,700 | 1,441,542,542 | 820,610,842 |
| Grand total | | 2,131,575,240 | 149,984,390 | 1,981,590,850 | 4,091,642,317 | 2,110,947,467 |

It will be noted that, had the wheat and corn been marketed during the four years 1924–1927 and the beef and butter for the three years 1924–1926 under the debenture plan, the benefits to the producers would have been $2,131,575,240, at a cost to the Government in debentures of $149,984,390, or a net gain under this plan, after deduction of the cost to the Government, would have been $1,981,590,850, whereas the benefits under the equalization plan for the same products and for the same years would have been $4,091,642,317, without cost to the Government. In other words, under the equalization plan the profit to the producers of $4,091,642,317, after deduction of the equalization fees and the profit to the producers under the debenture plan of $2,131,575,240; and if the cost to the Government were deducted, the net profit would be only $1,981,590,850. In other words, the profits under the equalization plan after deducting the equalization fee would have been $4,091,642,317, without one cent cost to the Government, and under the debenture plan the benefit to the producers after deducting the cost to the Government in debentures of $149,984,390, would have been only $1,981,590,850, or $2,110,947,467 less than under the equalization plan.

Many laws have been enacted. I appreciate that all laws enacted are not perfect in all their details but, nevertheless, we are entitled to just laws and an honest administration of such laws. We can not afford to be contented with anything less. Legislation not to deprive an individual or corporation of a single dollar or interest honestly acquired, but legislation always proceeding in an honorable and dignified manner, with a spirit of fairness, and just to all concerned; legislation not in accord with the views of those who have no respect for law and order or property rights, but legislation to promote progress, prosperity, and happiness to all worthy and deserving people in every community, in order that we may have the fullest development of every worthy and legitimate enterprise.

All laws passed may not be perfect in all their details. I believe every one has been helpful to the producer in bringing about the desired results. Be that as it may, the fact that beneficial laws have been enacted is no excuse for anybody to refuse to put his shoulder to the wheel in an honest effort to further improve our economic condition, especially in agriculture.

All take a just and pardonable pride in the life and character of the men and women who have made this country what it is; the men and women who have so generously assisted in making our towns, cities, and villages; building our roads and bridges, constructing our vast system of public schools, building the

temples of worship, building the charitable institutions; many in poverty and reverses, sickness and distress, others in health and wealth, prosperity and happiness, sympathizing with each other's woes, sharing each other's joys, step by step advancing along the lines of accumulation of wealth, culture, and refinement, until we boast of the fact that we rank among the most successful and practical people on earth. Our onward march to true greatness has placed us in the foremost ranks of modern civilization and refinement. All of it under a Government of the people, by the people, and for the people. Truly these wonderful achievements, the morality and industry of our people, are not the achievements of an ignorant and indolent people. To the contrary, they bear upon them the impress of the most enlightened views and policies executed with prudence by an industrious, intelligent, God-fearing, liberty-loving people. True, sunshine and rain and the rich soil has had much to do with it. After all, the energy and industry, intelligently applied by the tillers of the soil, who have cleared the forests, transformed the prairies and wilderness into a bed of roses and productive fields, producing food in sufficient quantities to supply not only 120,000,000 of our beloved people with food, but millions in foreign lands, who have placed our Nation at the head of all agricultural nations, are, in my opinion, justly entitled to consideration and the modest demand that Congress redeem the solemn pledges made in their party platforms; that they be afforded an opportunity to market their production in a way to also give them the benefit of the American price level and protective laws, as afforded to industry and labor, who are able, because of their fewer numbers, to organize and take the benefit of our laws affording protection.

To do for the farmers what was done by the enactment of the Federal reserve system, the railroad act, the Adamson law, the restricted immigration act, and the many acts extending aid, assistance, and relief to numerous other activities. In other words, to afford the farmer the advantages, aid, and opportunities extended to others. In short, a fair and square deal to all; nothing more, nothing less.

We are living in an age of marvelous expansion and we are moving forward at a mighty pace. We are pleased to see the wheels of industry moving and to see that every energy is employed and that prosperity and happiness are in evidence everywhere. All of us feel it our duty, no matter what our political affiliations or what our occupations or personal interests may be, to strive to benefit our country and to protect the weak and relieve the distressed and to give honest and thoughtful consideration to securing the full benefit of our natural resources, the development of mechanical appliances in the promotion of the skill and genius of American workmen. We conceive it to be our duty to see to it that nobody is imposed upon, but that all are given adequate protection against any invasion on the part of unscrupulous people in order that we may have the fullest development of every worthy and legitimate enterprise. It can only be accomplished through laws fair and just to all. Equal rights to all and special privileges to none. Shall it be done?

If so, shall due consideration be given to the important place agriculture holds in the economic life of the Nation, and the continued depression in agriculture and the party platform pledges? Have the producers the right to ask the Republican Party to redeem its national party pledges made a Cleveland?

The Republican Party at its national convention held at Cleveland solemnly declared:

> We recognize that agricultural activities are still struggling with adverse conditions that have brought deep distress. We pledge the party to take whatever steps are necessary to bring back the balanced conditions between agriculture, industry, and labor.

There the farmers have the party's acknowledgement of the adverse conditions that have brought deep despair. In it they have the pledge to bring back a balanced condition between agriculture, industry, and labor.

The Democratic Party at its national convention held at New York pledged itself to—

> Stimulate by every proper Government activity the progress of the cooperative marketing movement and to the establishment of an export marketing corporation or commission in order that the exportable surplus may not establish the price of the whole crop.

Have they the right to ask the Democratic Party to redeem its party platform pledges, to promote the cooperative movement, and the pledge to establish an export marketing corporation or commission in order that the exportable surplus may not establish the price of the whole crop?

President Coolidge, in his message at the opening of the last session of the Sixty-ninth Congress, said in part:

> The important place which agriculture holds in the economic and social life of the Nation can not be overestimated. The National Government is justified in putting forth every effort to make the open country a desirable place to live. No condition meets this requirement which fails to supply a fair return on labor expended and capital invested.

The question to all is, Shall it be done? Or shall it be set aside and new platform pledges made?

The question is, Shall the corrupt practice of manipulation of prices, causing violent fluctuations, the mixing of dirt, screenings, and rubbish with grain and selling it as such at grain prices, thus robbing the millions of consumers and producers, be continued, or shall it be restricted and finally stopped?

Shall the old and the new sources of revenue recently provided for continue to flow into Washington, into congressional districts, be used as indicated by Colonel Mulhall—for the influencing of Congress, to elect Members friendly to their cause, and to defeat others who fail to do their bidding, as the three and three-quarter millions fund of the National Association of Manufacturers and the National Council of Industrial Defense was used for?

Shall it flow into the campaign budget, as alleged in the case of the Teapot Dome scandal, to the everlasting shame and disgrace of the American people?

Shall fraud and corruption be given the stamp of approval? Or shall it be made the subject of another congressional investigation? Shall it be stopped? Shall the damnable practice be stopped now and for evermore? Shall the illegal use of money, coupled up with the Teapot Dome, be made the paramount issue in the coming campaign, or shall party platform pledges be redeemed unconditionally, to the credit of the Seventieth Congress and to the everlasting glory and welfare of the American people?

Under leave to extend my remarks I append hereto certain tables in respect to production, exports, and net profits to producers under the equalization plan and the debenture plan:

STATEMENT OF HON. G. N. HAUGEN

For the information of the committee and the House I desire to append to my remarks certain tables furnished by the Department of Agriculture, indicating the production and net exports of wheat, corn, beef (slaughtered), lard, butter, and tables indicating the world price and domestic price, the tariff, and the net profit to the producers had the proposed bill been in operation for the years 1924, 1925, 1926, and 1927, also tables showing domestic and world production of wheat, corn, cotton, rice, tobacco, lard, beef and veal, butter, and cattle. The net profit to the producers has been calculated on the assumption of the whole crop being marketed, no allowances having been made for seed, food, and carry-over. (For instance, the net profit to the producers of wheat for the crop year 1926–27 has been calculated to be $266,737,446, assuming that the entire crop of 871,691,000 bushels had been marketed. If, say, 100,000,000 bushels are used for seed, food, and carry-over, the equalization fee would be $0.1066 instead of $0.94 and the net profit would be $226,614,139 instead of $266,737,446.)

*Wheat*

[From Department of Agriculture]

| Crop year | Production | Net exports |
|---|---|---|
| | *Bushels* | *Bushels* |
| 1923–24 | 791,797,381 | 128,473,000 |
| 1924–25 | 862,627,000 | 251,915,000 |
| 1925–26 | 832,305,000 | 92,371,000 |
| 1926–27 | 871,691,000 | 205,944,000 |

PRICES.—*No. 1 dark northern at Minneapolis and No. 1 northern at Winnipeg*

| Year | Minneapolis | Winnipeg | Tariff | Freight | Equalization fee | Net profit per bushel | Total profit |
|---|---|---|---|---|---|---|---|
| 1923–24 | $1.24 | $1.00 | $0.42 | $0.03 | $0.034 | $0.171 | $140,148,364 |
| 1924–25 | 1.58 | 1.66 | .42 | .03 | .154 | .376 | 324,347,752 |
| 1925–26 | 1.65 | 1.51 | .42 | .03 | .034 | .276 | 229,716,180 |
| 1926–27 | 1.51 | 1.46 | .42 | .03 | .094 | .306 | 266,737,446 |

If the bill had been in operation during the crop year of 1923–24, the wheat grower would have received the Winnipeg price of $1 plus the tariff of 42 cents and transportation charges of 3 cents, or a total of $1.45, instead of the Minneapolis price of $1.24, a gain of 21 cents per bushel, minus the equalization fee to cover the discount of 21 cents per bushel on the 128,473,000 bushels exported, or $26,979,330, to be distributed over

791,797,381 bushels, or an equalization fee of $0.034, a net profit per bushel of $0.177, and a total profit of $140,148,364.

If the bill had been in operation during the crop year 1924–25, the wheat grower would have received the Winnipeg price of $1.66 plus the tariff of 42 cents and transportation charges of 3 cents, or a total of $2.11, instead of the Minneapolis price of $1.58, a gain of 53 cents per bushel, minus the equalization fee to cover the discount of 53 cents per bushel on the 251,715,000 bushels exported, or $132,514,950, to be distributed over 862,627,000 bushels, or an equalization fee of $0.155, a net profit per bushel of 37.6 cents, and a total profit of $324,347,752.

The wheat crop for the crop year 1925–26 has been estimated at 832,305,000 bushels and the exports to May 1, 70,000,000 bushels. The wheat grower would receive, if the bill were in operation, the Winnipeg price of $1.51 plus the tariff of 42 cents and the transportation charges of approximately 3 cents, or a total of $1.96, instead of the Minneapolis price of $1.65, a gain of 31 cents per bushel, minus the equalization fee to cover the discount of 31 cents per bushel on the 92,371,000 exported, or $28,635,000, to be distributed over 832,305,000 bushels, or an equalization fee of 4 cents, a net profit of $0.276 per bushel, and a total profit of $229,716,180.

The wheat crop for the crop year 1926–27 has been estimated at 871,691,000 bushels and the exports at 205,944,000 bushels. Assuming that the whole crop had been marketed, the wheat grower would receive, if the bill were in operation, the Winnipeg price of $1.46 plus the tariff of 42 cents and transportation charges of approximately 3 cents, or a total of $1.91, instead of the Minneapolis price of $1.51, a gain of 40 cents per bushel, minus the equalization fee to cover the discount of 40 cents per bushel on the 205,944,000 bushels exported, or $82,377,600, to be distributed over 871,691,000 bushels, or an equalization fee of $0.094, a net profit of $0.306 per bushel, and a total profit of $266,737,446.

*Corn*

| | Bushels |
|---|---|
| Production | 3,000,000,000 |
| Exports, 1924 | 23,000,000 |
| Exports, 1925 | 5,000,000 |
| Exports, 1926 | 19,819,000 |
| Exports, July to November, 1927 | 3,179,000 |

*Prices of corn*

[Chicago prices by Department of Labor and Buenos Aires prices by Department of Agriculture]

| Year | Chicago price | Buenos Aires price | Export tax | Tariff | Ocean freight | Total | Equalization fee | Net profit per bushel | Total profit |
|---|---|---|---|---|---|---|---|---|---|
| 1924 | $0.972 | $0.83 | $0.01 | $0.15 | $1.11¼ | $1.10¼ | $0.001 | $0.129 | $387,000,000 |
| 1925 | 1.038 | .94 | .01 | .15 | .11¼ | 1.21¼ | .0003 | .1742 | 522,627,500 |
| 1926 | .759 | .67 | .01 | .15 | .11¼ | .94¼ | .0017 | .1818 | 480,861,000 |
| 1927 | .881 | [1].67 | .01 | .15 | .11¼ | .94¼ | [2] | [2] | [2] |

[1] January–November, 1927. [2] Not yet available.

If the bill had been in force in 1924, the corn grower would have received the Argentine price of 83 cents, plus the tariff of 15 cents, plus the export tax, which was 1.54 cents in February, 1926, 1.03 cents in March, and 0.46 cent in April, or, say, 1 cent, and the ocean freight to Baltimore or New York, say, 11¼ cents, the rate March last, or a total of $1.10¼, instead of the Chicago price of 97.2 cents, a gain of approximately 13 cents per bushel, minus the equalization fee to cover the discount of 13 cents on 23,000,000 bushels to be distributed over a total production of 3,000,000,000, assuming that the total production had been marketed. If so, an equalization fee of $0.001 per bushel, a net gain of $0.129 per bushel, or a total profit of $387,000,000.

If the bill had been in force in 1925, the corn grower would have received the Argentine price of 94 cents, plus the tariff of 15 cents, plus the export tax of 1 cent, and the ocean freight of 11¼ cents, or a total of $1.21¼, instead of the Chicago price of $1.038 (see ratio table furnished by Department of Labor) a gain of 17.45 cents per bushel, minus the equalization fee of 17.45 cents on 5,000,000 bushels to be distributed over a total production of 3,000,000,000, assuming that the total production had been marketed, or an equalization fee of $0.0003 per bushel, a net gain of $0.1742, a total profit of $522,627,500.

If the bill had been in force in 1926, the corn grower would have received the Buenos Aires price of 67 cents, plus the tariff of 15 cents, plus the export tax of 1 cent, and the ocean freight of 11¼ cents, or a total of $0.94¼, instead of the average Chicago price of 75.9 cents, a gain of 18.35 cents per bushel, minus the equalization fee to cover the discount of 18.35 cents on 24,783,000 bushels, to be distributed over a total production of 2,645,000,000 bushels, assuming that the total production had been marketed, or an equalization fee of $0.0017 per bushel, a net gain of $0.1818, or a total profit of $480,861,000.

Inasmuch as the exports of corn for the year 1927 are not yet available, the full data as to the equalization fee and total profit can not be worked out at the present time.

*Beef slaughtered*

*Prices on English beef sides, average top price, London, and on choice western dressed at New York*

[From Department of Agriculture]

| | New York | London | Tariff | Transportation | Equalization fee | Net profit per pound | Total profit |
|---|---|---|---|---|---|---|---|
| 1924 | $0.1840 | $0.1794 | $0.03 | $0.015 | $0.00010 | $0.0400 | $284,658,400 |
| 1925 | .1921 | .1937 | .03 | .015 | .00014 | .0465 | 332,078,400 |
| 1926 | .1760 | .1871 | .03 | .015 | | | |
| Jan.–Nov., 1927 | .2078 | .1720 | .03 | | | | |

If the bill had been in operation in 1924 the producer would have received the London price of $0.1794 plus the tariff of $0.03 and the transportation charges of approximately $0.015, or a total of $0.2244, instead of the New York price of $0.184, a gain of $0.0404, minus the equalization fee, on 19,000,000 pounds, to be distributed over the total production, which would be but a small fraction of a cent, or $0.0001. That is, the producer would have received a profit of approximately $0.04 a pound, or a total profit of approximately $284,658,400.

If the bill had been in operation in 1925 the producer would have received the London price of $0.1937 plus the tariff of 3 cents and the transportation charges of approximately $0.015, or a total of $0.02387, instead of the average New York price of $0.1921, a gain of $0.0466, minus the equalization fee, on 22,000,000 pounds, to be distributed over the total production, which would be but a small fraction of a cent, or $0.00014. That is, the producer would have received a profit of approximately $0.0465 a pound, or a total profit of approximately $332,078,400.

*Lard*

| | 1925 | 1926 |
|---|---|---|
| Production, pounds | 2,211,000,000 | 2,324,000,000 |
| Exports, do | 719,000,000 | 717,000,000 |
| PRICES[1] | | |
| Chicago | $0.168 | $0.15 |
| Liverpool | .183 | .164 |
| Tariff | .01 | .01 |
| Transportation | .005 | .005 |
| Equalization fee | .0097 | .0089 |
| Net profit per pound | .0203 | .029 |
| Total profit | 44,883,300 | 46,712,400 |

[1] From Department of Commerce.

The average Liverpool price for lard in the year 1925 was 18.3 cents per pound, and if the bill had been in effect the producer would have received the Liverpool price of 18.3 cents plus the tariff, which is 1 cent, plus the cost of transportation to the port of entry, say, one-half cent, or a total of 19.8 cents, a gain of 3 cents over the Chicago price of 16.8 cents minus the equalization fee of $21,446,700, to be distributed over the total production, which would be approximately $0.0097 per pound, a net profit per pound of $0.203, or a total profit of $44,883,300.

The average Liverpool price for lard in the year 1926 was 16.4 cents per pound, and if the bill had been in effect the producer would have received the Liverpool price of 16.4 cents plus the tariff, which is 1 cent, plus the cost of transportation to the port of entry, say, one-half cent, or a total of 17.9 cents, a gain of 2.91 cents over the Chicago price of $0.15, minus the equalization fee of $20,793,000, to be distributed over the total of 2,324,000,000 pounds produced, which would be approximately $0.0089 per pound, a net profit per pound of $0.0201, or a total profit of $46,712,400.

CATTLE, 1925

The average Buenos Aires price for steers, medium to good, averaging 1,320 pounds, in the year 1925 was $5.66, or 5.6 cents per pound, and if the bill had been in operation the cattleman would have received the Argentine price plus the tariff of 1½ cents plus the cost of transportation to the port of entry, say, 4 cents, or a total of 11.1 cents, instead of the average Chicago

price of approximately 10 cents, a gain of 1.1 cents less the equalization fee.

CATTLE, 1926

The average Buenos Aires price for steers: Choice in the year 1926 was $5.16, or 5.16 cents per pound, and if the bill had been in operation the cattleman would have received the Argentine price plus the tariff of 2 cents, plus the cost of transportation to the port of entry, say, 4 cents, or a total of 11.16 cents, instead of the average Chicago price of approximately 9.46 cents less the equalization fee.

*Butter, year ended June 30*

POUNDS

| | Production | Exports [1] | Imports [1] | Net imports | Net exports |
|---|---|---|---|---|---|
| 1924 | 2,000,000,000 | 5,425,000 | 29,466,000 | 24,041,000 | |
| 1925 | 2,000,000,000 | 8,384,000 | 7,189,000 | | 1,195,000 |
| 1926 | 2,066,766,000 | 5,180,000 | 6,440,000 | 1,160,000 | |
| 1927 | (1) | 5,046,000 | 10,710,000 | 5,664,000 | |

PRICES

| | New York | London (Danish) | Copenhagen | Tariff | Freight | Minus equalization fee | Net profit per pound | Total profit |
|---|---|---|---|---|---|---|---|---|
| 1924 | $0.426 | ($0.417) | $0.397 | $0.08 | $0.01 | | $0.061 | $122,000,000 |
| 1925 | .453 | (.448) | .425 | .08 | .01 | $0.000037 | .061963 | 123,925,910 |
| 1926 | .443 | .394 | .365 | .12 | .01 | .00016 | .052 | 6,952,072 |

[1] Not available.

If the bill had been in operation in 1924, the butter producer would have received the Copenhagen price of $0.397 plus the tariff of 8 cents and transportation charges of approximately 1 cent, or a total of $0.487, instead of the New York price of $0.426, a gain of $0.061 per pound, or a total profit of $122,000,000. Imports were in excess of exports for the year 1924, hence no equalization fee. All that would have been necessary to insure the advance would have been to regulate the importations as provided in the bill.

If the bill had been in operation in 1925, the butter producer would have received the Copenhagen price of $0.425 plus the tariff of 8 cents and transportation of 1 cent, or a total of $0.515, instead of the New York price of $0.453, a gain of $0.062 minus the equalization fee on 1,195,000 pounds to be distributed over the total production of 2,000,000,000 pounds, which would be less than four-thousandths of 1 cent per pound. That is, the producer would have received a profit of $0.062 a pound on 2,000,000,000 pounds, or $124,000,000, less $0.062 on the 1,195,000 pounds exported—$74,090—or a net profit of $123,925,910.

If the bill had been in operation in March, 1926, the butter producer would have received the Copenhagen price of $0.365 plus the tariff of 12 cents and transportation charges of approximately 1 cent, or a total of $0.495, instead of the New York price of $0.443, a gain of 5.2 cents per pound minus the equalization fee on 298,317 pounds to be distributed over the total production of 133,992,000, which would be approximately $0.0001 a pound. That is, the producer would have received a profit of $0.052 a pound on 133,992,000 pounds, or $6,367,584, minus $0.052 on the 298,317 pounds exported—$815,512—or a net profit of $12,022,432.

*Profits under the debenture plan*

| Year | Production (bushels) | Exports (bushels) | Gain of 21 cents per bushel on whole production | Cost to Government, 21 cents on exports | Net gain |
|---|---|---|---|---|---|
| 1923–24 | 791,797,381 | 128,413,000 | $166,277,450 | $26,979,330 | $139,298,120 |
| 1924–25 | 862,627,000 | 251,915,000 | 181,151,670 | 52,902,150 | 128,249,520 |
| 1925–26 | 832,305,000 | 92,371,000 | 174,784,050 | 19,397,910 | 155,386,140 |
| 1926–27 | 871,691,000 | 205,744,000 | 183,055,110 | 43,206,240 | 139,848,870 |
| Total | | | 705,268,280 | 142,484,630 | 562,783,650 |

Assuming that the tariff is made effective, and the price brought up to the level of the tariff wall, if the McNary-Haugen bill had been in operation and the whole crop marketed during the crop year of 1923–24, the wheat grower would have received the Winnipeg price of $1 plus the tariff of 42 cents and transportation charges of 3 cents, or a total of $1.45, instead of the Minneapolis price of $1.24, a gain of 21 cents per bushel, minus the equalization fee to cover the lower price of 21 cents per bushel on the 128,473,000 bushels exported, or $26,979,330, to be distributed over 791,797,381 bushels, or an equalization fee of $0.034, a net profit per bushel of $0.177, and a total profit of $140,148,364.

Under the debenture plan, if in operation for the same period and assuming that the price of the whole production is advanced equal to the 21 cents debenture, then the producer would have received a gain in price on the whole production of only $166,277,450, at a cost to the Government of 21 cents per bushel in debenture, or a total of $26,979,330 on the quantity exported, or a net gain in the operation, minus the cost to the Government, of only $139,298,120.

If the McNary-Haugen bill had been in operation and the whole crop marketed during the crop year 1924–25, the wheat grower would have received the Winnipeg price of $1.66, plus the tariff of 42 cents and transportation charges of 3 cents, or a total of $2.11, instead of the Minneapolis price of $1.58, a gain of 53 cents per bushel, minus the equalization fee to cover the lower price of 53 cents per bushel on the 251,715,000 bushels exported, or $132,514,950, to be distributed over 862,627,000 bushels, or an equalization fee of $0.155, a net profit per bushel of 37.6 cents, and a total profit of $324,347,752.

Under the debenture plan, if in operation for the same period and assuming that the price of the whole production is advanced equal to the 21 cents debenture, then the producer would have received a gain in price on the whole production of only $181,151,670, at a cost to the Government of 21 cents per bushel in debenture, or a total of $52,902,150 on the quantity exported, or a net gain in the operation minus the cost to the Government of only $128,249,520.

The wheat crop for the crop year 1925–26 has been estimated at 832,305,000 bushels and the exports to May 1, 70,000,000 bushels. The wheat grower would receive, if the McNary-Haugen bill were in operation, the Winnipeg price of $1.51 plus the tariff of 42 cents and the transportation charges of approximately 3 cents, or a total of $1.96, instead of the Minneapolis price of $1.65, a gain of 31 cents per bushel, minus the equalization fee to cover the lower price of 31 cents per bushel on the 92,371,000 exported, or $28,635,000, to be distributed over 832,305,000 bushels, or an equalization fee of 4 cents, a net profit of $0.276 per bushel, and a total profit of $229,716,180.

Under the debenture plan, if in operation for the same period and assuming that the price of the whole production is advanced equal to the 21 cents debenture, then the producers would have received a gain in price on the whole production of only $174,784,050, at a cost to the Government of 21 cents per bushel in debenture, or a total of $19,397,910 on the quantity exported, or a net gain in the operation minus the cost to the Government of only $155,386,140.

The wheat crop for the crop year 1926–27 has been estimated at 871,691,000 bushels, and the exports at 205,944,000 bushels. Assuming that the whole crop had been marketed, the wheat grower would receive, if the McNary-Haugen bill were in operation, the Winnipeg price of $1.46 plus the tariff of 42 cents and transportation charges of approximately 3 cents, or a total of $1.91, instead of the Minneapolis price of $1.51, a gain of 40 cents per bushel, minus the equalization fee to cover the lower price of 40 cents per bushel on the 205,944,000 bushels exported, or $82,377,600, to be distributed over 871,691,000 bushels, or an equalization fee of $0.094, a net profit of $0.306 per bushel, and a total profit of $266,737,446.

Under the debenture plan, if in operation for the same period and assuming that the price of the whole production is advanced equal to the 21 cents debenture, then the producers would have received a gain in price on the whole production of only $183,055,110, at a cost to the Government of 21 cents per bushel in debenture, or a total of $43,206,240 on the quantity exported, or a net gain in the operation minus the cost to the Government of only $139,848,870.

For the four years' operation under the equalization plan the wheat growers would have received, after deduction of the equalization fee, a net gain of $960,949,742, without expense to the Government. Under the debenture plan, for the same four years, the wheat growers would have received a net gain of $705,268,280, at a cost to the Government or the Federal Treasury of $142,484,630, or a net gain after deducting the debentures of only $562,783,650, in contrast with the $960,949,742 under the equalization plan.

[1] January-November, 1927.

*Profits under the debenture plan*

| Year | Production | Exports | Gain of 7½ cents bushel on whole production | Cost to Government of $0.075 on exports | Gain |
|---|---|---|---|---|---|
| | *Bushels* | *Bushels* | | | |
| 1924 | 2,309,414,000 | 23,000,000 | $173,206,050 | $1,725,000 | $171,481,050 |
| 1925 | 2,916,961,000 | 5,000,000 | 218,172,075 | 375,000 | 218,397,075 |
| 1926 | 2,692,217,000 | 19,819,000 | 201,916,275 | 1,486,425 | 200,429,850 |
| 1927 | 2,786,288,000 | 18,721,000 | 208,971,600 | 1,404,075 | 207,567,525 |
| Total | | | 802,866,000 | 4,990,500 | 797,875,500 |

If the McNary-Haugen bill had been in force in 1924, the corn grower would have received the Argentine price of 83 cents plus the tariff of 15 cents plus the export tax, which was 1.54 cents in February, 1926, 1.03 cents in March, and 0.46 cent in April, or, say, 1 cent, and the ocean freight to Baltimore or New York, say, 11¼ cents, the rate March last, or a total of $1.10¼, instead of the Chicago price of 97.2 cents, a gain of approximately 13 cents per bushel, minus the equalization fee to cover the lower price of 13 cents on 23,000,000 bushels to be distributed over a total production of 3,000,000,000, assuming that the total production had been marketed. If so, an equalization fee of $0.001 per bushel, a net gain of $0.129 per bushel, or a total profit of $387,000,000.

Under the debenture plan, if in operation for the same period and assuming that the price of the whole production is advanced equal to the $0.075 debenture, then the producer would have received a gain in price on the whole production of only $173,206,050, at a cost to the Government of 7½ cents per bushel in debenture, or a total of $1,725,000 on the quantity exported, or a net gain in the operation minus the cost to the Government of only $171,481,050.

If the McNary-Haugen bill had been in force in 1925, the corn grower would have received the Argentine price of 94 cents plus the tariff of 15 cents plus the export tax of 1 cent and the ocean freight of 11¼ cents, or a total of $1.21¼, instead of the Chicago price of $1.038 (see ratio table furnished by Department of Labor), a gain of 17.45 cents per bushel, minus the equalization fee of 17.45 cents on 5,000,000 bushels to be distributed over a total production of 3,000,000,000, assuming that the total production had been marketed, or an equalization fee of $0.0003 per bushel, a net gain of $0.1742, a total profit of $522,627,500.

Under the debenture plan, if in operation for the same period and assuming that the price of the whole production is advanced equal to the $0.075 debenture, then the producer would have received a gain in price on the whole production of only $218,772,075, at a cost to the Government of $0.075 per bushel in debenture, or a total of $375,000, on the quantity exported, or a net gain in the operation minus the cost to the Government of only $218,397,075.

If the McNary-Haugen bill had been in force in 1926, the corn grower would have received the Buenos Aires price of 67 cents plus the tariff of 15 cents plus the export tax of 1 cent and the ocean freight of 11¼ cents, or a total of $0.94¼, instead of the average Chicago price of 75.9 cents, a gain of 18.35 cents per bushel minus the equalization fee to cover the lower price of 18.35 cents on 24,783,000 bushels, to be distributed over a total production of 2,645,000,000 bushels, assuming that the total production had been marketed, or an equalization fee of $0.0017 per bushel, a net gain of $0.1818, or a total profit of $480,861,000.

Under the debenture plan, if in operation for the same period and assuming that the price of the whole production is advanced equal to the $0.075 debenture, then the producer would have received a gain in price on the whole production of only $201,916,275, at a cost to the Government of $0.075 per bushel in debenture, or a total of $1,486,425 on the quantity exported, or a net gain in the operation, minus the cost to the Government of only $200,429,850.

If the McNary-Haugen bill had been in force in 1927, the corn grower would have received the Argentina price of $0.67, plus the tariff of 15 cents, plus the export tax of 1 cent, and the ocean freight of, say, $0.1125, or a total of $0.9425, instead of the Chicago price of $0.881, a gain of $0.1115 per bushel, minus the equalization fee to cover the lower price of $0.1115 per bushel on 18,721,000 bushels, to be distributed over the total production of 2,786,228,000 bushels, assuming that the total production had been marketed, or an equalization fee of $0.00076 per bushel, a net gain of $0.11074 per bushel, or a total gain of $308,551,533.

Under the debenture plan if in operation for the same period and assuming that the price of the whole production is advanced equal to the $0.075 debenture, then the producer would have received a gain in price on the whole production of only $208,971,600, at a cost to the Government of $0.075 per bushel in debenture, or a total of $1,404,075, on the quantity exported, or a net gain in the operation, minus the cost to the Government of only $207,567,525.

For the four years 1924–1927 operation in corn, under the equalization plan the producers would have received, after deduction of the equalization fee, a net gain of $1,699,046,033, without expense to the Government. Under the debenture plan, for the same four years, the corn producers would have received a net gain of $802,866,000, at a cost to the Government and the Federal Treasury of $4,990,500, or a net gain after deducting the debentures of only $797,875,500, in contrast to the $1,699,046,033 under the equalization plan. In other words, less than one-half as much.

If the McNary-Haugen bill had been in operation in 1924, the producer would have received the London price of $0.1794 plus the tariff of $0.03 and the transportation charges of approximately $0.015, or a total of $0.2244, instead of the New York price of $0.184, a gain of $0.0404, minus the equalization fee, on 19,000,000 pounds, to be distributed over the total production, which would be but a small fraction of a cent, or $0.0001. That is, the producer would have received a profit of approximately $0.04 a pound, or a total profit of approximately $284,658,400.

Under the debenture plan, if in operation for the same period and assuming that the price of the whole production is advanced equal to the 1½-cent debenture, then the producer would have received a gain in price on the whole production of only $105,975,000, at a cost to the Government of 1½ cents per pound, or a total of $600,000 on the quantity exported, or a net gain of only $105,375,000 on the operation.

If the McNary-Haugen bill had been in operation in 1925, the producer would have received the London price of $0.1937 plus the tariff of 3 cents and the transportation charges of approximately $0.015, or a total of $0.02387, instead of the average New York price of $0.1921, a gain of $0.0466, minus the equalization fee, on 22,000,000 pounds, to be distributed over the total production, which would be but a small fraction of a cent, or $0.00014. That is, the producer would have received a profit of approximately $0.0465 a pound, or a total profit of approximately $332,078,400.

Under the debenture plan, if in operation for the same period and assuming that the price of the whole production is advanced

equal to the 1½-cent debenture, then the producer would have received a gain in price on the whole production of only $107,190,000, at a cost to the Government of 1½ cents per pound, or a total of $585,000 on the quantity exported, or a net gain in the operation, minus the cost to the Government, of only $106,605,000.

If the McNary-Haugen bill had been in operation in 1926, the producer would have received the London price of $0.1871 plus the tariff of 3 cents and transportation charges of approximately $0.015, or a total of $0.2321, instead of the average New York price of $0.1760, a gain of $0.0561, minus the equalization fee on 5,000,000 pounds, to be distributed over the total production, which would be but a small fraction of a cent, or $0.00003. That is, the producer would have received a profit of approximately $0.056 per pound, or a total of $471,408,000.

Under the debenture plan, if in operation for the same period and assuming that the price of the whole production is advanced equal to the 1½-cent debenture, then the producer would have received a gain in price on the whole production of only $126,270,000, at a cost to the Government of 1½ cents per pound, or a total of $375,000 on the quantity exported, or a net gain in the operation, minus the cost to the Government, of only $125,895,000.

*Profits under the equalization plan*

PRICES

| | New York | London (Danish) | Copenhagen | Tariff | Freight | Minus equalization fee | Net profit per pound | Total profit |
|---|---|---|---|---|---|---|---|---|
| 1924 | $0.426 | ($0.417) | $0.397 | $0.08 | $0.01 | | $0.061 | $122,000,000 |
| 1925 | .453 | (.448) | .425 | .08 | .01 | $0.000037 | .061963 | 123,925,910 |
| 1926 | .443 | .394 | .365 | .12 | .01 | .00016 | .052 | 107,471,832 |
| 1927 | .47 | .392 | .366 | | | | | |
| Total for 3 years | | | | | | | | 353,397,742 |

For the three years 1924 to 1926, inclusive, operation in beef, under the equalization plan the producers would have received, after deduction of the equalization fee, a net gain of $1,088,144,800, without cost to the Government. Under the debenture plan for the same three years the producers would have received a net gain of $339,435,000, at a cost to the Government of $1,560,000, or a net gain, after deducting the debentures, of only $337,875,000, in contrast to the $1,088,144,800 under the equalization plan. In other words, under the debenture plan the producers would have received less than one-third as much as under the equalization plan.

*Butter, year ended June 30*

POUNDS

| | Production | Exports [1] | Imports [1] | Net imports | Net exports |
|---|---|---|---|---|---|
| 1924 | 2,000,000,000 | 5,425,000 | 29,466,000 | 24,041,000 | |
| 1925 | 2,000,000,000 | 8,384,000 | 7,189,000 | | 1,195,000 |
| 1926 | 2,066,766,000 | 5,180,000 | 6,440,000 | 1,160,000 | |
| 1927 | (1) | 5,046,000 | 10,710,000 | 5,664,000 | |

[1] Not available.

Assuming that a debentured rate on butter were in force under the debenture plan equal to one-half the tariff the net gain or profits under the debenture plan would be as follows:

| Year | Production | Exports | Gain of one-half of tariff on whole production | Cost to Government in debentures on exports | Net gain |
|---|---|---|---|---|---|
| | *Pounds* | *Pounds* | | | |
| 1924 | 2,000,000,000 | 5,425,000 | $80,000,000 | $217,000 | $79,783,000 |
| 1925 | 2,000,000,000 | 8,384,000 | 80,000,000 | 415,460 | 79,584,540 |
| 1926 | 2,066,766,000 | 5,280,000 | 124,005,960 | 316,800 | 123,389,160 |
| 1927 | (1) | 5,046,000 | | | |
| Total for 3 years | | | 284,005,960 | 949,260 | 282,756,700 |

[1] Not available.

If the McNary-Haugen bill had been in operation in 1924, the butter producer would have received the Copenhagen price of $0.397 plus the tariff of 8 cents and transportation charges of approximately 1 cent, or a total of $0.487, instead of the New York price of $0.426, a gain of $0.061 per pound, or a total profit of $122,000,000. Imports were in excess of exports for the year 1924, hence no equalization fee. All that would have been necessary to insure the advance would have been to regulate the importations as provided in the bill.

Under the debenture plan, if in operation for the same period and assuming that the price of the whole production is advanced equal to the debenture, and assuming the debenture rate to be one-half of the tariff, then the producer would have received a gain in price on the whole production of only $80,000,000, at a cost to the Government of 4 cents per pound or a total of $217,000 on the quantity exported, or a net gain in the operation minus the cost to the Government of $79,783,000.

If the McNary-Haugen bill had been in operation in 1925, the butter producer would have received the Copenhagen price of $0.425 plus the tariff of 8 cents and transportation of 1 cent, or a total of $0.515, instead of the New York price of $0.453, a gain of $0.062 minus the equalization fee on 1,195,000 pounds to be distributed over the total production of 2,000,000,000 pounds, which would be less than four-thousandths of 1 cent per pound. That is, the producer would have received a profit of $0.062 a pound on 2,000,000,000 pounds, or $124,000,000, less $0.062 on the 1,195,000 pounds exported—$74,090—or a net profit of $123,925,910.

Under the debenture plan, if in operation for the same period and assuming that the price of the whole production is advanced equal to the debenture, and assuming the debenture rate to be one-half of the tariff, then the producer would have received a gain in price on the whole production of only $80,000,000, at a cost to the Government of 4 cents per pound, or a total of $415,460 on the quantity exported, or a net gain in the operation minus the cost to the Government of only $79,584,540.

If the McNary-Haugen bill had been in operation in 1926, the butter producer would have received the Copenhagen price of $0.365 plus the tariff of 12 cents and transportation charges of approximately 1 cent, or a total of $0.495, instead of the New York price of $0.443, a gain of $0.052 per pound, or a total profit of $107,471,832. Imports were in excess of exports for the year, hence no equalization fee.

If the McNary-Haugen bill had been in operation in March, 1926, the butter producer would have received the Copenhagen price of $0.365 plus the tariff of 12 cents and transportation charges of approximately 1 cent, or a total of $0.495, instead of the New York price of $0.443, a gain of 5.2 cents per pound minus the equalization fee on 298,317 pounds to be distributed over the total production of 133,992,000, which would be approximately $0.0001 a pound. That is, the producer would have received a profit of $0.052 a pound on 133,992,000 pounds, or $6,367,584, minus $0.052 on the 298,317 pounds exported—$815,512—or a net profit of $12,022,432.

Under the debenture plan, if in operation for the same period, and assuming that the price of the whole production is advanced equal to the debenture, and assuming the debenture rate to be one-half of the tariff, then the producer would have received a gain in price on the whole production of only $124,005,960, at a cost to the Government of 6 cents per pound, or a total of $316,800 on the quantity exported, or a net gain in the operation minus the cost to the Government of $123,389,160.

For the three years 1924 to 1926, inclusive, operation in butter under the equalization plan the producers would have received after deduction of the equalization fee a net gain of $353,397,742, without cost to the Government. Under the debenture plan for the same three years the producers would have received a net gain of $284,005,960, at a cost to the Government of $949,260, or a net gain after deducting the debentures of only $282,756,700, in contrast to the $353,397,742 under the equalization plan. In other words, under the equalization plan the producers would have received $70,641,042 more than under the debenture plan.

*Summary*

| Commodity | Years | Debenture plan | | | Equalization plan, net gain after deducting equalization fees | Difference in favor of equalization plan |
|---|---|---|---|---|---|---|
| | | Gain in price of whole production | Cost to Federal Treasury | Net gain after deducting cost to Government | | |
| Wheat | 4 years, 1924–1927 | $705,268,280 | $142,484,630 | $562,783,650 | $960,949,742 | $398,166,092 |
| Corn | do | 802,866,000 | 4,990,500 | 797,875,500 | 1,690,046,033 | 892,170,533 |
| Total | | 1,508,134,280 | 147,475,130 | 1,360,659,150 | 2,650,995,775 | 1,290,336,625 |
| Beef | 3 years, 1924–1926 | 339,435,000 | 1,560,000 | 337,875,000 | 1,088,144,800 | 750,269,800 |
| Butter | do | 284,005,960 | 949,260 | 283,056,700 | 353,397,742 | 70,341,042 |
| Total | | 623,440,960 | 2,509,260 | 620,931,700 | 1,441,542,542 | 820,610,842 |
| Grand total | | 2,131,575,240 | 149,984,390 | 1,981,590,850 | 4,091,642,317 | 2,110,947,467 |

In summing up, it will be noted that the benefits to the producers of wheat and corn, for the four years 1924 to 1927, and beef and butter for the three years 1924 to 1926, under the debenture plan, would have been $2,131,575,240 at a cost to the Government in debentures of $149,984,390, and the net gain under this plan after deducting the cost to the Government would have been $1,981,590,850; whereas, the benefits under the equalization plan for the same products and for the same years would have been $4,091,642,317, without cost to the Government, or $2,110,947,467 more than under the debenture plan.

Gentlemen, I have taken more time than I intended to, and I thank you. [Applause.]

Mr. ASWELL. Mr. Chairman, I yield myself 30 minutes.

Mr. Chairman and gentlemen of the committee, the gentleman from Iowa, our chairman [Mr. HAUGEN], has lucidly explained the operations of this bill and it is now no doubt well understood. We had one witness before the Committee on Agriculture who explained the equalization fee operations to the entire satisfaction of himself. He said that he was especially well fitted to explain the operations of this equalization fee because he had studied the subject of agriculture profoundly—that he had been studying it while confined in an institution for the feeble-minded situated in the district of the gentleman from Illinois [Mr. ADKINS]. [Laughter.] He explained further that he was finally let out of the institution for feeble-minded when it was discovered that he had more sense than anybody outside in the district. Then he came down here to explain the equalization fee to the Committee on Agriculture. [Laughter.] Now, you gentlemen take that jestingly, but his statement will be found in volume 8, page 622, of the printed hearings.

Mr. CRISP. Will the gentleman yield?

Mr. ASWELL. I yield.

Mr. CRISP. Mr. Chairman, this is a very important matter, and I make the point that no quorum is present, because I think the gentleman is entitled to a hearing.

The CHAIRMAN. The gentleman from Georgia makes the point of no quorum. The Chair will count. [After counting.] One hundred and two Members present, a quorum.

Mr. ASWELL. Mr. Chairman, it was stated yesterday that a prominent gentleman was for this bill because he had come to admit that there is a farm problem. I think that every intelligent man and woman in America has discovered that there is a farm problem, whether he lives in the city or the country. I believe there is, and that is why I can not be for this Haugen bill.

I am deeply interested in seeing that this Congress at this session enact constructive farm legislation. I have been deeply concerned all the time, and I am now. It appears to me after spending four years almost continuously in the discussion and study of agricultural questions, legislatively, that it is a vain and childish thing for this Congress to enact this bill when everyone knows that it can not become law, and that we shall go back to the people of our districts and say, "We again did our best, but we failed to accomplish any result." That seems to me in the face of the facts that we know to be true to be a vain and childish thing. The farmers can not be fooled permanently by the majority in this Congress.

I want to state briefly a few facts without trying to make a speech. It is no secret that this Haugen bill was written, amended, and driven through the Committee on Agriculture by an organized well-financed lobby, with headquarters at the Lee House in Washington. That is no secret. Everybody in the committee knows it is true.

The committee did not have a good chance. The Committee on Agriculture individually and collectively are interested in farm legislation, but they did not have a chance—the lobby would not let them. The lobby controls a majority of my committee, and we had to get permission to amend this Haugen bill, written by the lobby.

As you know, the chairman has a little room, and next to our committee room there is a living room. The lobby had its headquarters in the living room, with only a wall between us during the three weeks we were in executive session. So, really, the committee did not have a fair chance.

The Haugen bill does not represent the intelligence or judgment of the Committee on Agriculture. It does not represent the American farmer, because that lobby was composed of farm organization agents representing about 10 per cent of the farmers, and in the case of cotton the record shows that they represented 6.8 last year and this year they represent 3.6 of the cotton farmers of the country. Therefore this bill does not represent the intelligence or the judgment of the Committee on Agriculture. Nor does it represent the American farmer. It does not represent the intelligence of the Members of this Congress.

This is the most wicked of all the Haugen bills that have come before Congress, and I can show you why in a word. Monstrous, bureaucratic, and autocratic power is given this board never before proposed in any legislation. This political board of 12 men representing the 12 Federal land bank districts with the Secretary of Agriculture can have on that board but 3 cotton men.

This board has the autocratic, the monstrous power to declare an operating period and assess an equalization fee without limit on any commodity, without consulting the producers of that commodity. It has more power than that. It may declare an operating period on cotton, we will say, for example, and collect an equalization fee of $10 a bale, or $150,000,000, on cotton and then turn right around and use the revolving fund appropriated by the Congress for the other products. If you doubt that, read the bill. Yet we have cotton men who would support a monstrosity like that!

Mr. GREEN. Mr. Chairman, will the gentleman yield?

Mr. ASWELL. I can not yield until I finish my statement. In the last Congress on page 4081 of the RECORD of February 17, you will find that it was undertaken in this Chamber to limit the equalization fee on cotton first to $5 and up, and finally the gentleman from Georgia [Mr. WRIGHT] offered an amendment to restrict the amount to $25 a bale, and the Haugen supporters passed through the tellers and voted it down by a vote of 42 to 80. Still that latitude is in this bill. So, gentlemen, this bill proposes the worst kind of tyranny—taxation without representation, and, worse still, a production tax on the producers of any commodity without consulting one of them. Nothing like it has ever before been proposed to the American people or to the American Congress.

This lobby is not trying to get any legislation. They are trying to get a veto. Why, of course they are. They came before the committee until we have 10 printed volumes of hearings, and almost without exception they said, "Give me an equalization fee or give me nothing," which, interpreted, means, "Give me the equalization fee and no legislation, for I want a political issue." One of them said repeatedly, "I would rather have this bill with the fee in it vetoed than any other legislation enacted into law." Why? For two reasons. First, that organized lobby that called itself the Corn Belt lobby wants a veto in order, they have made him believe, to give Frank Lowden an issue on which to run for the Republican nomination for the Presidency, but they have dumped or scooped him now. They used him as long as they needed him, and now they are trying to get a veto to get an issue for CHARLIE DAWES. Why? Because he represents the international bankers of America, and they are back of him to cancel the war debts.

The members of our committee are honorable gentlemen, of course, and I love them, every one. We started out in these hearings on the 15th of January. We did not start until that time because the lobby did not get here until then, and our chairman could not call the committee until the lobby got here. At first several members of the committee said, "We want legislation," and they were sincere. Follow me. I am going to be exact, and every member of the committee present will know that I am telling the exact sacred truth. They said, "We can not afford to go back without any legislation; we think it is better to get a bill that will become a law; we are going to vote against the equalization fee." It was so stated by an outstanding Republican of the committee, and they got to talking all around about it, and five Republican members made the assertion. Oh, they got bold about it. They said it out loud around the lobby and in the committee room, and if anybody doubts, then I advise them to get the first printed volume of the hearings. They are all in there, all five of them. But one day that got out, and the lobby said, "Here we are ensconced comfortably in the good hotels of Washington for the winter, and if these five boys get active and bring a bill out that will become a law, why, we are ruined." [Laughter.]

Mr. SCHAFER. Mr. Chairman, will the gentleman yield?

Mr. ASWELL. No; not now.

Mr. SCHAFER. On what page of the hearings is that?

Mr. ASWELL. The whole volume. Read the whole first volume. What happened? They said, "If these five Republican members of the committee get out of the reservation we will lose our issue for Lowden or DAWES," and so suddenly the next morning there burst into the committee room before the committee was called to order the grand cyclops of the lobby from Indiana, and he talked out loud so that everybody could hear him. He picked out the strongest one of the five and he said, calling him my name, that if he did not get back into the lobby reservation "we will go out to his district and hang his hide on a fence rail."

Mr. CLARKE. And there were three members of the committee who heard that statement.

Mr. ASWELL. I am telling the truth; and that shows that I am. The one man he named did not get frightened, but the other four—ah, they showed a performance of a quartet of purebreds. They raised their heads aloft and bowed their necks and dashed across a 10-acre lot, cleared a 10-railed stake-and-rider fence, and landed back in the lobby reservation before sunrise. [Laughter.] And they said, "This is all a mistake; we have never been out." [Laughter.] And these four gentlemen stroked their manly breasts and said, "Give me an equalization fee or give me death." [Laughter and applause.]

I am told that the lobby has instructed these gentlemen, whom they own, to stand up here to-day and to-morrow and the next day and boldly declare their independence of a lobby, and denounce anybody who says that they have anything to do with a lobby. And you will hear it before this debate is over from the four that I have been talking about. I have no criticism to make of them. They just got frightened; they got panicky. Then before this eventful day when these four gentlemen saw their political hides hanging on a fence rail—before that happened they agreed to give the National Grange a hearing on the debenture plan. If they had not we would never have had the hearing. The National Grange came down, their representatives, dignified, able, and gave us an extraordinarily fine hearing. But they made a terrible mistake. They came down here wearing civilian clothes, and they did not have any clubs or sawed-off shotguns on display, and as we had been accustomed to that, the Grange did not make much of an impression. They did not have much effect. We had already been stampeded, and the Grange did not get very far, because they had behaved in such a modest way that our committee did not know what they meant, as we had been trained differently. [Laughter.]

Now they come to me, my friends, on this side and the other, and they say, "Vote for the Haugen bill, and let us put Coolidge in a hole." Now, you fellows put him in a hole last year, and he dynamited you and the hole both. [Laughter and applause.] Then they come back to me, my leaders, if you will, and say, "Let us get political advantage and lay it on his doorstep." Why, he kicked the darn thing across the continent last year, and this time he will send it into the Pacific Ocean. [Laughter.] I am a party man 102 per cent strong, but I can not and I will not play politics with the life blood of the American farmer.

If there is one thing that could draft him, it would be the ready response of the American people to another veto of this monstrosity. I have no authority to say whether he will or not, but everybody who is high up as his advisor says he will. I am not in that class. It is amazing that I have some of my dear friends on this side and some of you who are on that side who are voting for this bill with a fee in it and praying by day and by night that Coolidge will veto the bill and save you from your folly, because nothing would be more disastrous to you who are in Congress than for this bill with the production tax actually to become operative. It would destroy every man who had voted for it.

Of course, they say, "We will vote for it and pray that the Coolidge veto may save us." Gentlemen, I want to reiterate in passing that for four long years we have been fooling the farmers successfully—that is, Congress has. You have been saying, "Give us the equalization fee or give us nothing," and millions of farmers have believed in you. But my judgment is that the American farmer is beginning to think on his own account, and the time has passed when the Congress can give the farmer any more bunk and get away with it successfully. It is clearly in the hands of this Congress now to adopt a bill without the fee that can become a law and that will be effective, will be constructive, and will rebuild agriculture. [Applause.] I shall see to it that you will have a chance to vote for such a bill.

Mr. Chairman, I reserve the balance of my time.

The CHAIRMAN. The gentleman from Louisiana consumed 21 minutes.

### MESSAGE FROM THE PRESIDENT

The committee informally rose; and the Speaker having resumed the chair, a message in writing from the President of the United States was presented to the House of Representatives, by Mr. Latta, one of his secretaries, who also announced that on the following dates the President approved and signed bills of the House of the following titles:

On April 24, 1928:

H. R. 10038. An act for the relief of Wilford W. Caldwell.

On April 25, 1928:

H. R. 8744. An act to accept the cession by the State of Colorado of exclusive jurisdiction over the lands embraced within the Mesa Verde National Park, and for other purposes;

H. R. 8835. An act to amend section 98 of the Judicial Code, as amended, to provide for terms of court at Bryson City, N. C.;

H. R. 9368. An act to authorize the Secretary of War to exchange with the Pennsylvania Railroad Co. certain tracts of land situate in the city of Philadelphia, and State of Pennsylvania; and

H. R. 11020. An act validating certain applications for and entries of public lands.

### FURTHER MESSAGE FROM THE SENATE

A further message from the Senate, by Mr. Craven, its principal clerk, announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the House of Representatives to the bill (S. 2900) entitled "An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors."

The message also announced that the Senate agrees to the amendments of the House of Representatives to the bill (S. 3437) entitled "An act to provide for the conservation of fish, and for other purposes."

The message further announced that the Senate had ordered that the House of Representatives be respectfully requested to return to the Senate the bill (H. R. 11479) to reserve certain lands on the public domain in Valencia County, N. Mex., for the use and benefit of the Acoma Pueblo Indians.

The committee resumed its session.

### THE AGRICULTURAL SURPLUS CONTROL BILL

Mr. KINCHELOE. Mr. Chairman, I yield 15 minutes to the gentleman from Oklahoma [Mr. SWANK].

The CHAIRMAN. The gentleman from Oklahoma is recognized for 15 minutes.

Mr. SWANK. Mr. Chairman and gentlemen of the committee, for the past few years many bills have been presented here for the purpose of relieving agricultural conditions in this country. Many of these bills have been considered by the Committee on Agriculture, of which I have the honor to be a member. This is one of the most important committees for it deals with the most important legislation. All that we eat and all that we wear are produced on the farm. Many of the conveniences of life we can live without, but we can not live without the products of the farm produced by the men, women, and children who till the soil and yet do not receive a price sufficient to enable them to live like other people. When agriculture is depressed there is no general prosperity and can be none regardless of what some may say. We all recognize conditions when we see them and we know that never in the history of this country have we seen agriculture and farming conditions so depressed as in the past eight years. When we legislate for agriculture we benefit all lines of business and everything that

can be done should be done for this the greatest of all industries.

Mr. Chairman, many times have I called the attention of this House to these conditions, familiar to every Member of Congress from an agricultural section, and asked that something be done. In the last Congress I appealed to the House, as did other Members, for the passage of a farm bill that would assist our farmers and that measure passed both branches of Congress but was vetoed by the President. I have considered with the other members of the Agricultural Committee the different bills that have been before us. I am again before the Members of this House, my colleagues, urging that we pass this bill and give the farmers of our common country the same opportunity that is given other industries, and many of them that need no protection or assistance. Our farmers are asking for no special legislation or favors not given others, but do ask for equal opportunity and equality in legislation. I know there are persons who call bills for farm relief special legislation, but they never refer to the special favors granted to other business under the guise of the law.

Gentlemen of the committee, if the farmers of the United States were organized like the big business interests, they would have no trouble in having a quick ear turned to their appeal. They are becoming better organized and I hope the day may soon come when they will stand a solid phalanx, united in a common cause for their mutual welfare and for the good of the entire country. I believe in organization, for results can be achieved that persons acting individually can not accomplish. To be heard they must be organized. They can well profit by the experience of others. Our farmers through their accredited representatives have been appealing to Congress and the administration to save their business and accord them the same privilege given others. It is time that something was done for them. They have waited patiently for the past eight years but in vain. Some say that the farmers must work out their own salvation, but, Mr. Chairman, the American Steel Trust does not work out its own salvation, while it pockets millions of dollars in profits each year that have never been earned. How does that great industry thrive to so great an extent? I answer by special legislation known as the Fordney-McCumber tariff law, the most unjust and iniquitous tariff law ever written on our statute books. While it enriches the Steel Trust it bankrupts the farmers. Will some one tell me why the farmers are not entitled to the same protection given that gigantic enterprise? No, one speaks in this Hall at this time for that powerful organization but when a tariff law is written it sure is on the job. What many of us have been urging for the past seven years is that while all this is being done for the great and powerful, that something be done for the basic of all industries and the leading business in our country. This tariff law gives the steel industry the power, and it is used to the fullest extent, to set its own prices. It is now time to have a bill enacted into law that will prevent the complete bankruptcy of the farmers. They have worked just as hard as ever during the past eight years, have been economical as they always are, and yet, Mr. Chairman, we see mortgages being foreclosed faster than at any equal period of time in the history of the country. When a condition like that prevails there is something wrong. The prices of what he buys are higher and he is not able to compete with organized industry under the protection of the law. When a man and his good wife work like slaves all their lives, rear a good family of children, live economically, are useful and honorable, and then in the evening of their lives do not even have the necessities, and have not been permitted to educate their children like others who have profited from their labors, let me tell you that something is wrong. While that is true, Mr. Chairman, why is it that nothing has been done during these eight years to prevent such a condition? Ah, some say that you can not legislate prosperity for agriculture, but while we can not control the weather and the seasons, we can place it on a level with other business and that is all that we are asking. When that is done, then will we see agriculture enjoy some of that prosperity that we read so much about, but of which we see little except by the industries that are great and powerful.

Mr. Chairman, the Republican Party has had complete control of both Houses of Congress since March 4, 1919, and complete control of all branches of our Government, the House, Senate, President, and Cabinet since March 4, 1921. This administration could have remedied the present deplorable condition of agriculture long ago had it so desired. That time is in the past and this is election year, therefore may not the farmers of the country expect something to help their business before this session of Congress adjourns? I thought you would do something before the last adjournment. Many of us on both sides of the House worked our best for the enactment of a bill for the relief of agriculture but the President continued to say that the farmer must work out his own salvation; that his future was in his own hands. We are here again asking that something be done for them. For the past seven years you have had control and tell me why you have not done something. The people know where the fault is and the responsibility rests where it should. During the past seven years the President and the Republican leaders could have enacted legislation for the farmers any day you desired. Why have you not done so? Why do you continue to enact special legislation for the great favored interests of this country and let the farmers get along the best way they can? They have just as much intelligence as other business men and can manage their business just as well if you will but grant them equal privilege and opportunity. Why do you not remove the unjust inequalities between the farmers and the recipients of special legislation? The Republican leaders have seen the handwriting on the wall, I hope, and perhaps this bill will be passed. The Republican leaders seem to think that their great majorities of 1920 and 1924 indorsed their policy in passing legislation for the big interests of the country and those that need no assistance. The farmers know what they want and they also know why they have not received any consideration from the political party in power in the past seven years. How much longer will you let their demand for a square deal go unheeded? How much longer will you want them to work and slave, under unequal laws and enrich those who "toil not neither do they spin" but make millions each year from the farmers by unjust laws?

The farmers know that they are compelled to meet unfair competition in the markets of the world. They know that when they sell their products made by their sweat and toil, that the prices are fixed for them and that they have to take the price offered. They also know that the same is true when they buy the necessaries of life and the things with which they make their crops. The farmers are the only business men in the land compelled to do business in this way and produce their products at a loss. No other business could continue in that way and the farmers can not keep it up much longer. The manufacturer buys the products of the farm at his own price and when the farmers buy them back the prices are fixed and he must pay what is asked. How long would the manufacturers continue in business by such methods? When the manufacturer wants something done to help his business he tells this administration what to do and it is done. Whatever degree of prosperity there is in this country at any time, the farmers are the chief contributors and should be equal recipients.

Will some one tell me why our farmers are not entitled to the same consideration at the hands of this or any other administration that is given to other business? No people work harder and toil longer. I have heard it said by those who are always ready to help big business, that the farmers are too extravagant, that they have a Ford or a radio. Why should they not have these conveniences the same as others? They need them just as much and are just as much entitled to them. But one thing is sure, they have not had many of them during this administration, for they have been busy paying taxes and interest and contributing to the business interests who profit at their expense by the tariff laws. Give them a chance to make something. They should receive a price for their products that will pay them a reasonable and fair profit after they deduct all their expenses, the labor of themselves and family, taxes, food, and clothing, and everything that enters their items of expense. They are just as much entitled to take a holiday occasionally as any other citizen. They should receive sufficient prices that will enable them by economical management to lay aside something to care for them and their dependents when they are old and unable to work.

You told the farmers in 1920 that you would raise the price of their products and then in the Sixty-seventh Congress you proceeded to pass the emergency tariff law on agricultural products. What was the result? Wheat and other products soon went down. The farmers know that a tariff will not affect the price of any article where a large amount is exported instead of being imported. You saw that you could not fool them any longer, and then you enacted the Fordney-McCumber Tariff Law under the plea that such a law would help them by increasing the price of everything they had to buy. You can not fool them again by such talk, and you realize that the time has at last arrived when something substantial must be done. I repeat, when are you going to do something for them? We can pass this bill, and it can be enacted into law in a few days.

In your platform of 1920, concerning farming conditions you said this:

> The farmer is the backbone of the Nation. National greatness and economic independence demand a population distributed between indus-

try and the farm and sharing on equal terms the prosperity which is wholly dependent upon the efforts of both. Neither can prosper at the expense of the other without inviting joint disaster. The crux of the present agricultural condition lies in prices, labor, and credit.

The Republican Party believes that this condition can be improved by practical and adequate farm representation in the appointment of officials and commissions, * * * the scientific study of agricultural prices, and farm-production costs at home and abroad, with a view to reducing the frequency of abnormal fluctuations; * * * the encouragement of our export trade.

In the Republican platform of 1924 you made the farmers this promise:

We recognize that agricultural activities are still struggling with adverse conditions that have brought deep distress. We pledge the party to take whatever steps are necessary to bring back a balanced condition between agriculture, industry, and labor. We affirm that under the Republican administration the problems of the farmer have received more serious consideration than ever before, both by definite Executive action and by congressional action, not only in the field of general legislation but also in the enactment of laws to meet emergency legislation.

The restoration of general prosperity and of the purchasing power of our people through tariff protection has resulted in an increased domestic consumption of food products, and the prices of many agricultural commodities are above the world-price level by reason of direct tariff protection.

During these seven years that you have had complete control of the Government in all its branches and departments you have done nothing to keep these promises. Many of my Republican colleagues, who think more of keeping platform pledges than in staying with the administration, have worked and voted for legislation for the relief of agricultural conditions, but, Mr. Chairman, your party and your administration have not kept their pledges. I believe that political platforms should be honestly adhered to and not merely made to "get in on." Let me ask you, even at this late date, to do something on those two sacred platform promises. Do not refuse the farmers this Congress, and then in your convention next June promise them something again in another platform.

Mr. Chairman, I like to see all honest and legitimate business prosper and enjoy good times, and I want conditions such that our farmers will share in any prosperity, for no people are more entitled to this than they. We read in the press every day of the wonderful prosperity enjoyed by some of our big business concerns. We have the Federal reserve system to stabilize credits, the tariff law for special business favored by this administration, and the Interstate Commerce Commission for the railroads to see that these roads make a fair profit, and that commission sees that they make that profit.

The Interstate Commerce Commission reports the net revenue from railroad operations for the past seven years as follows:

| | Net revenue |
|---|---|
| 1921 | $969,346,226 |
| 1922 | 1,162,779,249 |
| 1923 | 1,412,962,592 |
| 1924 | 1,304,206,157 |
| 1925 | 1,470,037,742 |
| 1926 | 1,614,247,269 |
| 1927 | 1,579,904,326 |

These figures show that the railroads are making more money than ever before, and they should have a reasonable return on their invested capital and on their labor. Agriculture should have the same returns on the capital and labor put into that industry. That commission helps the railroads, not the farmers, but why not have a commission to help the farmers?

In computing expenses of operation in any field of industry it is necessary to figure production costs. Below are figures showing an estimate of what it cost our farmers to produce the leading crops.

In the Crops and Markets Report for June, 1927, are the following figures on production costs of corn and wheat:

*Net cost per bushel*

| | 1924 | 1925 | 1926 |
|---|---|---|---|
| CORN | | | |
| North Atlantic States | $1.02 | $0.87 | $0.91 |
| South Atlantic States | .97 | .96 | .84 |
| East North Central States | .75 | .56 | .61 |
| West North Central States | .70 | .59 | .68 |
| South Central States | .88 | .99 | .74 |
| Western States | .88 | .83 | .93 |
| United States | .82 | .69 | .70 |
| WHEAT | | | |
| North Atlantic States | 1.42 | 1.32 | 1.28 |
| South Atlantic States | 1.60 | 1.50 | 1.21 |
| East North Central States | 1.15 | 1.29 | 1.02 |

*Net cost per bushel*—Continued

| | 1924 | 1925 | 1926 |
|---|---|---|---|
| WHEAT—continued | | | |
| West North Central States | $0.97 | $1.23 | $1.16 |
| South Central States | 1.18 | 1.49 | .98 |
| Western States | 1.20 | 1.19 | 1.20 |
| United States | 1.22 | 1.32 | 1.12 |

On cotton production costs the department says that reports were received from 1,070 cotton farmers and that the greater number were from those whose yields were above the average for the whole country. The division of crop estimates says that the average yield of lint cotton for 1926 was about 182 pounds per acre and that the average cost was 15 cents to 16 cents per pound. These reports further show that farmers who reported yields of from 101 to 140 pounds per acre had a cost of 20 cents per pound, and that on the various yields that the cost ranged from 9 cents per pound to 47 cents per pound. I was reared in a cotton country and am familiar with the production and marketing of cotton, and believe the production costs much greater than the estimate by the Department of Agriculture.

The December, 1927, Crops and Markets estimates the average farm price of corn in the United States in 1926 at 64 cents per bushel, and for 1927, 72 cents per bushel; the farm price of all wheat at $1.19 per bushel in 1926 and $1.11 per bushel in 1927; the average farm price of cotton at 10.9 per pound in 1926 and 19.6 per pound in 1927. We from the Cotton Belt know that much cotton was sold lower than these prices during these two years.

The managing director of the American Cotton Association says:

With the average low yield of lint cotton per acre and the high cost of labor and supplies in recent years, the average farmer does not produce cotton at a lower cost than 20 cents per pound on a very low standard of living.

That farmers continue to work hard will be seen in the table below, showing the production of cotton, corn, and wheat for the past nine years:

| | Production | Value |
|---|---|---|
| Cotton (bales): | | |
| 1927 | 12,780,000 | $1,253,599,000 |
| 1926 | 17,755,070 | 1,016,346,000 |
| 1925 | 16,103,679 | 1,465,434,000 |
| 1924 | 13,628,000 | 1,540,884,000 |
| 1923 | 10,081,000 | 1,563,347,000 |
| 1922 | 9,964,000 | 1,151,846,000 |
| 1921 | 8,340,000 | 674,877,000 |
| 1920 | 13,439,603 | 933,658,000 |
| 1919 | 11,420,763 | 2,034,658,000 |
| Wheat (bushels): | | |
| 1927 | 871,691,000 | 974,694,000 |
| 1926 | 832,305,000 | 997,589,000 |
| 1925 | 669,365,000 | 947,993,000 |
| 1924 | 862,627,000 | 1,120,787,000 |
| 1923 | 782,000,000 | 725,501,000 |
| 1922 | 856,211,000 | 864,139,000 |
| 1921 | 794,893,000 | 737,068,000 |
| 1920 | 833,027,000 | 1,197,263,000 |
| 1919 | 968,279,000 | 2,080,686,000 |
| Corn (bushels): | | |
| 1927 | 2,786,288,000 | 2,014,725,000 |
| 1926 | 2,645,031,000 | 1,703,430,000 |
| 1925 | 2,900,581,000 | 1,956,326,000 |
| 1924 | 2,312,745,000 | 2,270,564,000 |
| 1923 | 3,029,000,000 | 2,222,013,000 |
| 1922 | 2,890,712,000 | 1,900,287,000 |
| 1921 | 3,081,251,000 | 1,305,624,000 |
| 1920 | 3,230,532,000 | 2,168,768,000 |
| 1919 | 2,816,318,000 | 3,768,516,000 |

The reports show that while the cotton production of 1924 was over 4,000,000 bales less than in 1926, the value of the cotton crop in 1924 exceeded the 1926 crop by more than $500,000,000.

These figures show that while the wheat crop for 1924 and 1926 was about the same, the 1924 crop was worth $123,000,000 more than the 1926 crop.

The 1926 corn crop was 330,000,000 bushels more than the 1924 crop, but the value of the 1924 crop was $567,000,000 more than the 1926 crop.

Some of those who are opposed to agricultural legislation say this variance in the relation of prices to production is caused by a surplus. That is what we want legislation to assist in handling. The farmers can not control their surplus like the manufacturers can, for these concerns are protected by laws. The farmers should have a reasonable profit for their work and invested capital above their cost of production.

Some people want the farmers to continue to believe that their condition can be remedied by increasing the tariff on the products of the farm. You can help the Steel Trust and the big manufacturers by the tariff as you have done, but you know that you can not help the cotton, wheat, and corn farmers by a tariff. You tried that in the Sixty-seventh Congress by the emergency tariff. You can help the farmer by reducing the tariff on what he is compelled to buy, yet a few days ago you, on the Republican side of the House, voted against a resolution from the Senate asking for a reduction of the tariff for the benefit of our farmers.

Since the enactment of the Fordney-McCumber tariff law our exports of agricultural products have been reduced from $3,466,619,819 in 1920 to $2,130,000,000 in 1925, $1,892,000,000 in 1926, and $1,884,687,000 in 1927. In 1920 the total exports of the United States amounted to the enormous sum of $8,100,000,000, which was reduced to $4,500,000,000 in 1925, $4,808,465,000 in 1926, and $4,866,160,000 in 1927. That is what your high protective tariff law has done for agriculture in this country. We know that our export trade can not be increased in this manner.

During the past three years our exports and imports of cotton, corn, and wheat with the value are shown in the following table from the Department of Commerce:

| | Quantity | Value |
|---|---|---|
| **EXPORTS** | | |
| Cotton (bales): | | |
| 1927 | 11,559,738 | $866,924,000 |
| 1926 | 7,991,316 | 917,719,940 |
| 1925 | 8,204,941 | 1,060,980,197 |
| Corn (bushels): | | |
| 1927 | 17,563,000 | 14,399,000 |
| 1926 | 23,137,389 | 21,371,248 |
| 1925 | 8,460,120 | 10,629,339 |
| Wheat (bushels): | | |
| 1927 | 156,250,000 | 227,744,000 |
| 1926 | 63,188,602 | 97,664,211 |
| 1925 | 195,490,207 | 306,605,563 |
| **IMPORTS** | | |
| Cotton (bales): | | |
| 1927 | 381,926 | 37,206,000 |
| 1926 | 323,000 | 50,209,847 |
| 1925 | 310,000 | 50,640,343 |
| Corn (bushels): | | |
| 1927 | 1,098,000 | 919,000 |
| 1926 | 635,231 | 710,056 |
| 1925 | 4,617,319 | 4,149,901 |
| Wheat (bushels): | | |
| 1927 | 13,235,000 | 18,091,000 |
| 1926 | 15,506,600 | 21,513,104 |
| 1925 | 6,169,193 | 8,580,269 |

From these figures by the Department of Commerce it will be seen that our imports of cotton, corn, and wheat are so small that a tariff, however high, does not affect the price and is of no benefit to the producers of these products. But we find from the Census of Manufactures for 1925, prepared by the Department of Commerce, that the cost of materials in all industries by manufacturing establishments for that year was $35,935,647,704; the value of these products fixed by these manufacturers was, at factory prices, $62,713,713,730, leaving the value added by the manufacturers at the enormous sum of $26,778,066,026. This is what your Fordney-McCumber tariff law has profited the manufacturers of the country. Why can not you do something for the farmers as well?

I here insert a table placed in the CONGRESSIONAL RECORD May 31, 1924, by Hon. JAMES G. STRONG, a stalwart Republican Member of Congress from the State of Kansas, showing what the farmers paid for farm machinery in 1914 and what he was compelled to pay in 1924 under the present tariff law:

*Comparison of the 1914 buying and selling prices, and 10 years later, 1924, buying and selling prices from the Kansas farmers' standpoint*

| Implements | 1914 | 1924 |
|---|---|---|
| Hand corn sheller | $8.00 | $17.50 |
| Walking cultivator | 18.00 | 38.00 |
| Riding cultivator | 25.00 | 62.00 |
| One-row lister | 36.00 | 89.50 |
| Sulky plow | 40.00 | 75.00 |
| 3-section harrow | 18.00 | 41.00 |
| Corn planter | 50.00 | 83.50 |
| Mowing machine | 45.00 | 95.00 |
| Self-dump hay rake | 28.00 | 55.00 |
| Wagon box | 16.00 | 36.00 |
| Farm wagon | 85.00 | 150.00 |
| Grain drill | 85.00 | 165.00 |
| 2-row stalk cutter | 45.00 | 110.00 |
| Grain binder | 150.00 | 225.00 |
| 2-row corn disk | 38.00 | 95.00 |
| Walking plow, 14-inch | 14.00 | 28.00 |
| Harness, per set | 40.00 | 75.00 |

Chairman HAUGEN, of the Committee on Agriculture, in his report on the present Haugen bill said:

As a result of high costs and impaired income of the farmer, the total farm indebtedness in the United States, which was estimated at $4,320,000,000 in 1910, has grown to $12,250,000,000 in 1920, and stands at approximately that figure to-day.

The total value of all farm property in 1913 was $45,227,000,000; in 1920, $79,607,000,000; and in 1925, $59,154,000,000.

The number of bank failures in 1924 (915) was 42.5 per cent larger than the number of failures in 1893 (642). The number of failures for the period 1920–1925, inclusive (2,494), was greater than the number of failures during a period of 26 years up to 1920 (2,424).

A report from the Treasury Department shows that the number of bank failures during the year ended June 30, 1927, was State and private banks 689, and national banks 142.

This shows some more of the prosperity you hear so much about under this administration.

Mr. Chairman, I supported the Haugen agricultural relief bill in the Sixty-eighth and Sixty-ninth Congresses, and voted in the committee to report this bill to the House for its consideration in the hope that it will pass and become a law, for I firmly believe it will be of great benefit to our agricultural interests and the country in general. This bill differs to some extent from the bill that the President vetoed the past Congress, but the principle involved is the same. We can not get all that we think should be in every bill before Congress but, in my judgment, this bill will do what its sponsors think it will do for our farming interests. After we try it out, if amendments are needed subsequent Congresses will attend to that. No great legislation has been enacted but what many amendments were later added.

Under the terms of this bill a Federal farm board is created which shall consist of the Secretary of Agriculture and 12 members, 1 from each of the 12 Federal land-bank districts, who shall be appointed by the President, by and with the consent of the Senate. The regular term of the members of the board shall be six years, and each shall receive a salary of $10,000 per year with necessary traveling expenses while away from the principal office of the board on business required by this act, and no member of the board can actively engage in any other business. The bill provides that the board shall meet at the call of the chairman, or of the Secretary of Agriculture, or of a majority of its members, shall make an annual report to Congress, and may appoint and fix the salaries of a secretary, such experts, and other employees as may be necessary. The bill provides that the board shall advise producers in the development of suitable programs of planting, that burdensome crop surpluses may be avoided.

This bill applies to all agricultural commodities which, in the judgment of the board, can be handled. The board is authorized and directed to create an advisory council for each agricultural commodity which it determines requires stabilization, and each advisory council consists of seven members fairly representative of the producers of such commodity. Members of each advisory council shall be selected annually by the board from lists submitted by cooperative associations or other organizations representative of the producers of the commodity. Members of the advisory council shall serve without salary, but may be paid not to exceed $20 per day for attending meetings of the council and for time devoted to other business authorized by the board, and necessary traveling expenses.

Each commodity advisory council shall have power to confer with the board, to call for information from it, and to make representations to it relating to the agricultural commodity, including the amount and method of collection of the equalization fee, and to cooperate with the board in advising producers in suitable planting programs.

The board is authorized to make loans from the revolving fund to any cooperative association or corporation created and controlled by one or more cooperative associations for the purpose of assisting such cooperative association or corporation in controlling a crop surplus that is in excess of the requirements for orderly marketing or in excess of the domestic requirements for such commodity. The board may make loans to such cooperative associations to assist in acquiring by purchase or otherwise, facilities and equipment for preparing, handling, storing, processing, or sale or other disposition of agricultural commodities, or for extending the membership of such cooperative associations. These loans shall bear interest at 4 per cent per annum, and the aggregate amount of the loan shall not exceed $400,000,000. Such cooperative associations are required to set aside a reasonable per cent of their profits for a reserve fund, which may be transformed into fixed capital, and any balance shall be distributed among the cooperative association stockholders.

If the board finds that its advice as to a planting program has been substantially disregarded by the producers of the commodity, or that the planting of such commodity for any year is substantially greater than a normal increase over the average planting of such commodity for the preceding five years, then the board may refuse to make loans for the purchase of such commodity.

The board is authorized to assist cooperative associations in the establishment of clearing houses to effect more orderly distribution and marketing of agricultural products and may establish terminal market associations adapted to maintain public markets in distribution centers.

This bill provides that the board shall investigate the supply and marketing situation of any agricultural commodity upon the request of the advisory council or upon the request of leading cooperative associations or organizations of producers of such commodity, or upon its own motion. If the board finds, after such investigation, that there is or may be a surplus of such commodity produced in the United States in excess of the requirements for orderly marketing, or in excess of domestic requirements, that the commodity is such that it is adapted to marketing under the provisions of this bill, and that the loan features of the bill will not be effective to control such surplus, then the board shall arrange for marketing agreements with cooperative associations to handle such commodity. These marketing agreements shall provide for withholding the commodity or any part thereof delivered to the cooperative association by its members, or for the purchase by the cooperative association of such commodity delivered to such association by nonmembers. If the board finds that no cooperative association or corporation created by one or more such associations is capable of carrying out the agreement for the purchase, withholding, and disposal of such commodity, then the board may make agreements with other agencies. By this bill the board can not enter into marketing agreements for handling any agricultural commodity financed by the equalization fee unless the loan features are ineffective for that purpose. The equalization fee on any commodity is determined by the board, to be collected for the purpose of paying the losses, costs, and charges, if any are required under the estimates by the board, on the commodity, and shall be paid upon the transportation, processing, or sale of such commodity.

Processing of grain means milling for market, and "sale" means sale or other disposition in the United States for milling or other processing for market, for resale, or delivery by a common carrier. Processing of cotton means spinning, milling, or manufacturing, other than ginning, and "sale" means a sale or other disposition in the United States for spinning, milling, or any manufacturing other than ginning, or for delivery outside the United States, and transportation means the acceptance by a common carrier for delivery to any person for spinning, milling, or any manufacturing other than ginning, or for delivery outside the United States. Processing of livestock means slaughter for market by a purchaser of livestock, and "sale" means a sale or other disposition in the United States of livestock for slaughter for market. Transportation in the case of grain and livestock means the acceptance by a common carrier for delivery. In the case of other agricultural commodities the board shall specify the place and manner of collecting the equalization fee. The bill provides that "sale" does not include a transfer of a commodity to a cooperative association for the purpose of sale or other disposition.

The bill establishes a stabilization fund for each agricultural commodity where marketing agreements are made, and there is deposited to this fund advances from the revolving fund, profits from marketing agreements, repayment of advances for the commodity, and the equalization fees collected on such commodity.

The bill authorizes the board to enter into insurance agreements for the insurance of cooperative associations against price decline, in order that such cooperative association may make payments to its members of the market value at the time of delivery. These insurance contracts can apply only to a commodity regularly traded in upon an exchange in sufficient volume to establish a recognized basic price. These insurance contracts can apply to wheat and cotton. The bill provides:

Any such agreement for insurance against price decline shall provide for the insurance of the cooperative association for any 12 months' period commencing with the delivery season for the commodity against loss to such association or its members, due to decline in the average market price, for the commodity during the time of sale by the association from the average market price for the commodity during the time of delivery to the association.

If the board finds that the insurance agreements of any commodity will stabilize the market in the interest of the producers of such commodity, whether or not they are members of a cooperative association, then the board may enter into nonpremium insurance agreements with cooperative associations dealing in the commodity. The bill provides for premium and nonpremium contracts and the latter are paid from the stabilization funds.

Mr. Chairman, in my judgment the insurance provisions of the bill are among the best in the measure and will do more to strengthen the cooperatives and assist our farmers in better organization than anything that we have ever seen.

I am sure that a board of strong, conscientious men, experienced in the production, marketing, and handling of farm products will make a great success of this bill; and that it will be of greater benefit to the farmers of our country than any measure ever enacted. The farmers of this country want this bill enacted into law. The farmers are entitled to the assistance of its provisions. The bill is not just as I would have it, but we can not all have our own way all the time. Some opponents of the bill say that it is unworkable; and, it will not work unless it is enacted into law. I appeal to you, my colleagues, and urge you to pass this bill by an overwhelming majority, and I appeal to the President of this great Republic to approve the bill and place the American farmer upon the same plane as our other citizens. I hope to soon see the bill become a law. [Applause.]

Mr. FORT. Mr. Chairman, I yield 20 minutes to the gentleman from New York [Mr. CLARKE]. [Applause.]

Mr. CLARKE. Mr. Chairman, the story goes that an old colored lady with a dutiful son was given her first trip in her son's car. The usual accident occurred, and when Mandy came to in the hospital her doctor, thinking to console her and make her forget her pain, kept repeating to her that she had a wonderful case for damages. Finally Mandy, rolling her soulful eyes to the doctor, said, "Doctor, it ain't damages I need, it's repairs." [Laughter.]

That is the situation, as I conceive it, of agriculture. To reach into the Federal Treasury for $400,000,000 of the taxpayers' money as a starter may seem an infinitely easy proposition to politicians, especially with their quack remedies; but it is of far graver import to those of us conscientiously concerned about establishing dangerous legislative precedents and knowing that already, through appropriations of the Federal Government, as well as the appropriations of the various States, hundreds of millions of dollars are being raised and through individual subscriptions other great sums are being added to assist agriculture that should be guaranteed equality under the law—the least agriculture is entitled to as it is the most it should demand.

Aside from these important aids representing these millions and millions for help to agriculture, agriculture must work out its own salvation through great cooperative, commodity organizations, federated nationally.

I claim the establishment of class legislation by setting the dangerous precedent of a $400,000,000 dole to agriculture does not reach the disease nor promise the permanent cure agriculture is entitled to; it is a temporary expedient, not based on a correct diagnosis of her many ills.

Having spent many of my years in the West, I have a sincere sympathy with the people as well as a keen appreciation of the wicked inflation that ensued during the World War, and the still more wicked, short-sighted deflation policy that followed after the war.

The prosperity that developed from 1910 to 1920 caused farm values to rapidly increase, especially in the Middle West, with the World War over, an adequate return upon such values could not be maintained and a deflation followed this boom that caused great hardships and was unnecessarily severe.

In 1900, according to the census figures, $36.35 was the average value per acre for farm land in this section; in 1910 it was $82.58, while in 1920 values had increased to $199.28 per acre. If the price of wheat and corn could have been maintained, these values would have been easily justified, but, as the world readjusted itself and a state of normalcy approached, the overexpansion of farm lands with boom prices for same, came to an end, there could be but one answer. Forty million acres of pasture land had been plowed up and put into crops; 5,000,000 acres of forest land was cleared, that was not needed, once world-wide competition was reestablished and the law of supply and demand again in action. These lands that could not economically compete, necessarily, fell back into their original and rightful class, a multitude of little State banks ran their highly speculative, tragic course to inevitable failures, even our Federal land banks and the joint-stock land banks found themselves in a very serious situation. All through the United States has been reflected in many lines the result, and the price

of war was paid in hardship, denial, losses running into many, many millions.

To-day the scene changes in many ways; fair times are there; automobiles abound in the Middle West; but a state of mind has been created, agitation has disturbed business and interfered with the normal activities of many on our farms, but the politician is in the saddle with farm legislation, and I say, God help any legislation for the farmers that is built upon the shifting sands of political expediency.

In the industrial evolution of business in these United States, every other industry, save agriculture, has, through cooperation and through federated effort, worked out a progressive, get-together policy of inestimable benefit to the different branches of the particular industry through cooperating trade associations, manufacturing and credit organizations, and other ingenious devices.

Almost every other line of industry has done away with the tragedies that followed in the wake of trade wars with the accompanying ruin and destruction of industries, as well as the serious economic loss resulting therefrom, to the employees, as well as the communities.

Most of our leading industries have evolved, through these associations, systems to orderly market and better protect their industries, by safer credits, to do away with unfair trade practices, minimize losses, and multiply gains to the cooperative industries.

Agriculture, on the other hand, by reason of its far-flung ramifications, has found itself too largely individualistic, it has failed to be on the march with industry, and group action, through the cooperation of the producers of the different farm commodities, has proven most difficult. Agriculture, therefore, has found itself on a basis of inequality with other industries; for when you add to its inherent weaknesses the hazard of growing crops, where the producer gambles with wind and rain, with cold and heat, with bugs that fly and worms that crawl, it follows, as the day the night, the forced march of the boys and girls of our farms from the farms to the city and industrial centers and a resulting decrease of farm acreage in the United States alone from 1920 to 1925 of approximately 11,000,000 acres.

The efforts of the farmers producing particular commodities to organize in cooperatives, large and small, has witnessed many tragedies through lack of proper leadership, the exploitation of adventurers, and the failure of Utopian dreamers with inexperienced navigators bound upon strange seas; but here and there some cool, level-headed, far-seeing farmers' organization, with some cooperative, has demonstrated amidst the ruins that ultimately with equality under the law the salvation of agriculture lies in cooperation; and yet in spite of the demonstrated proofs that cooperation is the final answer, the McNary-Haugen bill, boosted by some cooperatives for political reasons will first render anæmic and finally destroy the cooperatives themselves; for, when the producers of farm commodities are placed under the equalization fee, the real, pressing reason for cooperatives ceases to exist, for the farm product has the equalization fee forced upon it and all producers, whether in cooperatives or not, get the questionable benefits.

There is not a member of the Agriculture Committee that has given any time to the study of its problems but who is profoundly convinced that legislation that will give equality to agriculture and put it on an even keel with the industries of the United States as a permanent policy, is the need of the hour, but when politics get running rampant on economic problems the final answer of such an unholy alliance can not but end in failure.

Thirty million people—farm population—directly concerned, with another ten million in the communities dependent upon the farmers, is the primary appeal; but running through the texture of our Government, through every artery of commerce, through every effort of industry, lies the basic fact that upon a profitable agriculture all other problems hinge; yes, I will go further and say that with a prosperous agriculture lies a vigorous, healthy, prosperous United States; for accompanying a prosperous agriculture goes its handmaidens—well-supported, well-attended rural schools—to form the mental training ground of the children coming along, and with a well-kept, well-maintained school goes the corollary of a highly efficient, well-organized country church to set up moral standards and carry forward, on the basis of these fundamentals, a country rendering enlarged service to its own people and pointing the way in world leadership.

With this preliminary statement, the question naturally propounds itself, Why am I against the McNary-Haugen plan for farm relief?

Reason 1. I think it economically unsound as a permanent agricultural program.

Reason 2. I believe it unworkable in practice, for it would set up an endless group of Government agents, snoops, and schemers, with neither knowledge nor appreciation of our technical agricultural problems, who would annoy and harrass our producers, whose rules and regulations would become unbearable, whose salaries would ultimately eat us up in taxes. God save us from a repetition of the inquisitions and inequities that followed the first few years of the income tax law; and a greater all-around nuisance would spring forth if the McNary-Haugen bill ever became a law, with its multitude placing the equalization fee on farm products.

Reason 3. The tendencies under the McNary-Haugen bill will be to increase the surplus of agricultural products, which is the very crux of the farm problem.

Reason 4. The bill will increase the cost of living for the home folks, and through the dumping of surplus stocks in the world markets would cheapen the cost of living to those not in the United States.

Reason 5. The equalization fee is not a sound remedy for the farmers' ills, yet it would be imposed and forced upon every farmer the producer of a particular farm commodity when the emergency was declared, and such compulsion is utterly foreign to our theory of government and repugnant to the principles of our Constitution itself, as so well stated in President Coolidge's veto of the previous McNary-Haugen bill and the opinion of the Attorney General of the United States that formed the legal basis for the President's veto; and that same old equalization fee, dressed up in clever language, is ninety-nine one-hundredths of this bill—the other changes make up the other one-hundredth.

Many helpful steps have been taken toward giving to agriculture equality:

First. Weather and crop reporting has been developed, especially since the radio came into existence, into very helpful information for the farmer in planning, planting, and harvesting, as well as marketing his products.

Second. Credits have become easier to obtain and cheaper; I sometimes think, too cheap and too easy.

Third. The Federal farm loan system has its 12 farm land banks, enabling farmers to borrow money on their land with the interest rate not greater than that of big business.

Fourth. The intermediate credit system, whereby the farmer obtains credit of from six months to three years at fair rates.

Fifth. The tariff, where agriculture has the assistance of duties on almost every commodity it produces, although in many instances the tariff was not fixed high enough, and no tariff, or a mighty small one, is placed on what the farmers consume.

Sixth. Trust law exemptions enable the cooperative to be exempted from the penalties of the Sherman Antitrust Act. In 1914 the Clayton Act became a law, with its famous section 6, which entitles farmers to preferential treatment.

The Capper-Volstead Act, that permits farmers to combine, with or without capital stock, without becoming amenable to the Sherman Antitrust Act, and many other useful aids have been developed toward assisting the farmer.

No man has more sincerely believed, nor does more sincerely believe, in cooperation than I. From the time the Dairymen's League was organized in my district I have been a member. I have loyally sought to work with and for the league in extending this cooperative movement to all the milk producers in the New York milk shed, and to-day it is recognized as one of the outstanding, successful cooperatives. I believed when I joined this cooperative, as I believe now, that, given equality under the law, we must, through our cooperatives, work out our own salvation. Yet a director of our Dairymen's League comes down here and before our Agricultural Committee gives testimony in support of the McNary-Haugen bill. To show his consistency I quote you from the record of the hearings on February 21. The first question I asked the director was—

I understand that originally you were opposed to the first McNary-Haugen bill, including dairy products; is that right?

Answer. The association went on record at that time as being opposed to that.

Second question. But you really have made efforts or tried to evolve a plan for making certain that dairy products would not be included in this bill; is not that true?

Answer. I think that is the case, Mr. CLARKE; yes.

Mr. JONES. In other words, you want to "try it out on the dog."

Third question. You come as the representative of your association, which thinks it is necessary, in order to bring prosperity to the other branches of agriculture, to levy an equalization fee, and you are very much in favor of them doing that. But you do not think it will be necessary to put any fee on dairy products, and therefore your association is willing to get the benefit of the equalization fee paid by the farmers to raise the other products?

Answer. That is the only place there needs to be an equalization fee.

Question 4. I would not blame you, then, for being for this bill if it does not cost your organization a cent. You never would pay an equalization fee, but the other fellow who happens to raise cotton, tobacco, corn, and wheat will have to pay it and therefore hold up his end, and the result is yours is held up and costs you nothing.

Question 5. I understand the position of the dairy business is that the dairy business was so thoroughly organized that it is able to take care of itself. But their support of this bill is based on their desire to see other branches of agriculture made profitable so they will not quit raising wheat, corn, hogs, and other products, and go into the dairy business in competition with your industry?

Answer. Right.

This bill is fundamentally a compulsory pooling proposition. If the bill should become a law, every producer of a particular farm commodity in an emergency finds his liberty gone as an American citizen and a board set up to arbitrarily levy an equalization fee upon his product, to tell him where, when, and how his product is to be marketed—forced through Government action and not through a voluntary choice. And who is going to run this greatest of blind pools? Politicians, in the last analysis, not men of great political experience and mature judgment, but the average class of political appointees with responsibility resting lightly upon their shoulders. God help our farmers when such a condition obtains! It is so basically wrong, economically unsound, and so fundamentally un-American.

Let us take wheat for example, and what will actually happen to it according to my idea. In 1923 the Canadian wheat crop was twice the average size and of an excellent quality; the yield was approximately 475,000,000 bushels. Canada consumes about 8,000,000 bushels, and there is no recognized authority but what will tell you that in 1923 the Canadian wheat crop absolutely dominated the world wheat price. Yet this crop actually had a greater effect upon the market before it was harvested than it did after. Let us put it down as absolutely sound in economics that every product competing in world markets, produced in different countries, will become a factor in determining the price, and no McNary-Haugen bill or any other bill evolved in an atmosphere of political expediency or promoted by paid farm agitators will ultimately determine world prices.

While the child, "Mary McHaugen"—McNary-Haugen bill—has been given a name, there has arisen grave doubts as to her parentage. I have had investigators searching the CONGRESSIONAL RECORD, as well as the Congressional Library, with experts on heraldry and genealogy aiding, assisting, and abetting, but still the mystery grows—who were Mary's parents? I have reached the conclusion that the father is a Politikuss, whose descendants all through the enchanting story of the ages entwined themselves in all the problems of the people for grafting and plundering the easy-going, slow-thinking, unsuspecting farm people, allowing them to hoodwink, bedevil, and fool the farmers until the burdens became too great, when revolt and revolution follow. We will find, if we go back far enough, that the final common ancestor is a guy named Politics. [Laughter.] All through our farm organizations, seeking to help the farmers, are the kin and clan of this guy Politics. During the World War he supported and sustained himself on us when civilization was at stake and the question whether right or might should rule the world was the issue. All through the great departments of Government are Politics' kith and kin; all through the honest efforts of the well-intentioned Congress toward agriculture are Politics' children fastening themselves upon any organization that might prove helpful to the profiteering plunderbund; and all through the great cooperative movement that promised so much for the farmers are progeny of this fellow, Politikuss. It is difficult to get any alleged statesmen to admit parentage of Mary McHaugen.

Governor Lowden, a fine outstanding, upstanding man, has been preaching good farm doctrine and the spirit of cooperation for years, he has made valuable contributions to the cause, and, until the blood of Politikuss became ascendent in his veins, he did not know Mary and her little lamb, the equalization fee, but the relatives in the Middle West, through their research found and finally got the governor to admit, when cornered, that Mary, with her pet lamb, the equalization fee, was of his family tree, and offered as evidence testimonials of a man holding a high office, with a funny pipe, strange mannerisms, but with the blood of Politikuss coursing through his veins. [Laughter.]

The aborigines and their descendants are supposed to be impervious to the bite of the bug Politikuss, but out in Kansas, where my father served with John Brown, one with the noble Indian blood coursing through his veins was bitten by this Politikuss bug and he now recognizes in Mary McHaugen family traits. Back in New York State we find a wonderful breaking out of this disease in a long, slick animal with a catlike tread, yellow with black stripes around the body, and the champion pill shooter of the "old-age body," whose articles on health confront every reader of every paper in the State of New York, has suffered from the affliction of Politikuss, although he has advised everyone else how to keep well; he claims Mary McHaugen as of his family tree, and one of the champion "good fellows" in the most famous old-age investigation club in the world, who was given the "back scene" treatment, is now breaking down under the malignant germ Politikuss until Chief Tammany can not suppress a smile as he watches the strange antics of his children. Strange to say, mysterious sounds have been emitting from the capitol in Albany and the well-known snarl of the jungle tiger is being gradually changed to the gentle bleating of the lamb and the moo-moo of the mooly cow, so strange are the mysterious workings of this mysterious germ Politikuss. [Laughter and applause.]

Seriously, my friends, the tragedy of American agriculture and its need for an outstanding permanent policy above the petty ambitions of politics is our crying need, yet in all our great farm organizations, laboriously built up, runs this wicked germ. Out from the Middle West come a multitude of representatives of farm organizations claiming and demanding the equalization fee of the McNary-Haugen bill or nothing.

Deriding and disregarding the President's former veto, they demand his signature upon the dotted line as they have demanded the servility of the great Agricultural Committee, as well as the obeisance to and the worship of this strange god Politikuss, and we farmers all along the line have contributed millions for their support, and the farmers have experienced through the wizardry of prodigal promisers that demonstrated economic laws could be disregarded and agriculture as a class wished into the millennium at the expense of the general taxpayer. Friends, it can not be done.

The lessons of history tell us so; the experiences of mankind, with its travail and labor, point to this inevitable thing. We are the trustees, representing the shareholders in the United States of America. Do not let us be blinded by the plea of paid propagandists; let us stand up like men and disregard the political threats of paid propagandists, but let us build for agriculture as men, far removed from politics, where it does not belong, and build upon the lessons of history, build on the certain foundations of experience, build within the law and the Constitution, that say to agriculture exactly what it says to all the other great industries, "Equality is yours under the law."

Every member of the great Agricultural Committee, whether for or against this bill, agrees that some permanent policy of farm relief is necessary. The differences begin probably on the disease, therefore the prescriptions differ; pink pills will not cure brown diseases, or vice versa. I do not doubt that the Federal Government itself in its encouragement of reclamation and irrigation projects has greatly added to our agricultural problems, and the policy of bringing new land under cultivation when there is a surplus of agricultural products is at least questionable.

The large corporations plan years ahead and base their production upon estimates of possible consumer demands over certain definite periods, taking the factors of increase in population, study of home and foreign markets, conditions, economic and financial in survey, world-wide in extent.

We come to the problem of orderly production and how far the Government can go in assisting in the coordination of that production. There is no plan that enters into the individual farmer's consideration except producing the most at the least cost and selling it for the highest price. We do find the Agricultural Department as well as the Commerce Department of our Federal Government sending out their skilled experts in search of markets the world over for our surplus.

Take poultry as an outstanding example of lack of plans. You read one day of a breeder who with modern incubator produces 20,000 baby chicks and the next day a Missouri breeder doubles the production with 40,000 chicks, then along comes California with another breeder hatching 85,000 chicks a day; the hit-or-miss policy, with no thought or study of what other breeders are doing, so you see it is a balanced production that is a factor, whether it be in chicks or wheat or any other agricultural product. The cure lies not in increased production but in changing and balancing it to probable demands, and the answer then lies for a permanent, progressive farm policy in a Federal farm board, set up increasing and augmenting the service rendered by our Agricultural Department and Department of Commerce in presenting the facts to great farm commodity cooperative organizations, based upon a single commodity and federated nationally.

We have had the Government, with all the powers conferred by a war-time emergency, running our railroads, with decreasing efficiency and at enormous cost to the taxpayers of the

United States. We have seen the Government venturing in other business lines, with red tape abounding, with inefficiency running rampant, with the champion buck passers of the world rendering an incalculable amount of harm to the Government and the business it was in. Would not you think from the tragedy of these outstanding examples within the memory of all of us of the tragic fizzles of the Government in business we would seriously stop and consider, and yet in spite of all these costly interventions "there cometh forth like a thief in the night" the McNary-Haugen bill to eat up our substance with a multitude of pap suckers, political puppets, equalization-fee enforcers to ultimately destroy our cooperatives and render incalculable damage to agriculture itself. [Applause.]

Mr. ASWELL. Mr. Chairman, I yield 15 minutes to the gentleman from Georgia [Mr. CRISP].

Mr. CRISP. Mr. Chairman and my colleagues, I am not going to attempt to make a speech. I know the die is cast and I know this House is going to pass the McNary-Haugen bill, and I never like to go up against a stone wall. I have simply asked this time for the purpose of expressing briefly my position relative to this legislation. I feel that every Member of the House would like to see some remedial, constructive legislation passed to aid depressed agriculture, but we differ as to the methods, and I have no criticism to make of any of my colleagues who differ from me, and I accord to each absolute sincerity of purpose.

In the last Congress I sponsored a bill in this House for farm relief legislation, which I thought then, and which I think now, is sound economically, constructive, and would be of vast assistance to agriculture, but the committee did not see fit to act favorably upon it, and when I offered it as an amendment to the McNary-Haugen bill on the floor of the House, by a small vote it was defeated.

In the present Congress I have introduced the same bill, which is H. R. 65. I appeared before the Committee on Agriculture and urged that they take it as a basis to work out an agricultural bill that would meet with the President's approval. I frankly stated the bill was not perfect, that it could be improved probably with amendments, and that I would welcome any amendment that benefited the bill; but, again, the committee, as was clearly within its province, saw fit to disregard the bill and has reported out the same bill that was vetoed by the President in the last Congress. Oh, there are some few changes, but in substance it is practically the same bill.

This bill comes before us and we might as well vote right now, for the 12 hours' debate is not going to change a single vote. The membership of this House knows now how they are going to vote. Gentleman, I can not and will not vote for the bill with the equalization fee in it. I will not support it for the reason, first, I believe it is unconstitutional. I do not believe that Congress has the power to delegate to a board the power to levy an indefinite tax on farm products.

I am just as jealous of the prerogative of the legislative branch as any member in the committee, and I think we have a perfect right to pass legislation whether it meets with Executive approval or not, but I am also practical and I want farm legislation.

The President vetoed the McNary-Haugen bill in the last session of Congress on several grounds, one of them being that the equalization fee was unconstitutional, and in a message he included in it the opinion of the Attorney General of the United States saying that the equalization fee was unconstitutional.

The President to-day has the same Attorney General, and if this bill is submitted to the same Attorney General the President will accept his opinion as to the legal proposition; if he did not, he would promptly remove him as Attorney General. To my mind, there can be no question as to what the President will do if the bill reaches him with the equalization fee in it. I am not authorized to speak for him; I am not of his political faith; but I do know the President to be a man of courage and conviction, and I know he has sworn to support and uphold the Constitution, and if he believes the bill to be unconstitutional—and he has so informed Congress in a message—he can do nothing but veto it. [Applause.]

Now, some gentlemen say the constitutionality of the act is for the court to pass on. I agree to it. If I had any doubt as to the constitutionality of a bill and felt that it would reach the court, I would be willing for it to go to the court. But, gentlemen, this McNary-Haugen bill will never get to the court. The President will veto it and you will have no farm legislation. You have been holding out the word of promise to the farmers' ears and breaking it to their hopes.

Mr. SCHAFER. Will the gentleman yield?

Mr. CRISP. No; I can not yield. I want to be courteous, but I must finish my statement. Now, gentlemen, I want legislation. I was in hopes that this Congress would work out some piece of legislation that would meet with Executive approval and be given a trial. We must all admit that any form of farm legislation is experimental. There can be no question about that. The Government has aided the railroads, has aided business, has aided many of our institutions, and the Government has furnished the money for doing it.

Now, in my judgment, in this crisis when you experiment as to farm legislation the Government should furnish the money to do it, and not make it possible to tax the farmers for the experiment. I do not believe it just nor right to do so, and for these two reasons I can not and will not vote for the bill with the equalization fee in it.

It will be moved to amend the bill by eliminating the equalization fee. If that succeeds and the equalization fee is eliminated, I will vote for the bill. With the equalization fee out, with the revolving fund the bill is very much in principle like H. R. 65, which I introduced.

Now, that is about all that I wish to say. With the equalization fee in I will vote against the bill, and with it out I will vote for it. There is one bill pending before Congress now on the calendar that means real farm relief, and that is the Muscle Shoals bill. [Applause.]

One of the essentials for the farmer is cheap fertilizer. The House bill on the Muscle Shoals means cheaper fertilizer, and I appeal to the members of the Committee on Rules to give us a rule so we can consider that bill. [Applause.] If you do not approve the bill, let the rule be reported out and give the House a chance to consider the bill. If that bill is passed, that is certain to be of relief to the farmers and will be real farm relief.

Mr. GIFFORD. Will the gentleman yield?

Mr. CRISP. Yes; I yield.

Mr. GIFFORD. I want to ask the gentleman one question. The gentleman has stated that the 12 hours' general debate would probably amount to nothing because the bill will be vetoed. Will the gentleman explain if he cares to, and if not, will somebody else explain the effects of the provisions of this bill—for instance, one of our farmers raises a hog, kills it, keeps some of it for his own use, and sells the remainder. What instrumentality of the Government is going to weigh it, collect the fee for making the sale, and will not that instrumentality compare with the internal revenue in the first years of the income tax, only be much worse?

Mr. CRISP. I will let some proponent of the bill answer the gentleman's question. That is another reason why I am against the bill. I might say further that if any surplus part of the hog that he does not use is put into commerce if he does not pay a tax on it, he can be indicted in the United States court for a criminal offense.

Mr. GREEN. Mr. Chairman, will the gentleman yield?

Mr. CRISP. Yes.

Mr. GREEN. Relative to the equalization fee, is the gentleman advised whether or not this $400,000,000 fee could be used to cover up a deficit on one crop, and leave nothing to cover up a deficit on cotton, say? Perhaps it will be all expended on wheat, and, if so, would cotton then have to bear the cotton equalization fee?

Mr. CRISP. My understanding, under the provisions of this bill, is that the administration is left entirely to the board. The board has complete discretion in the matter. The board if it sees fit to do so can use the entire $400,000,000 as a revolving fund to loan to grain, wheat, cotton, or any one of those commodities that it sees fit to do so. If I understand it the board could use all of it for grain, and then declare an operating period as to cotton, and levy the equalization fee on cotton to care for cotton, and allocate nothing to cotton out of the revolving fund, provided the board saw fit to do it; but I am frank to say that I do not believe any board appointed by the President and confirmed by the Senate would do that unjust and inequitable thing.

Mr. GREEN. How many members of this board are from the so-called cotton States?

Mr. CRISP. There is one from each of the 12 Federal land districts, which would mean three from the cotton States.

Mr. WILLIAMS of Illinois. Mr. Chairman, I yield 20 minutes to the gentleman from Illinois [Mr. ADKINS].

Mr. ADKINS. Mr. Chairman and gentlemen of the committee, my old friend Doctor ASWELL made a good deal of fun because of the simple-minded fellow that he said appeared before the committee in behalf of the Haugen bill, who, he said, was raised over in my district. A very distinguished Member of Congress on the gentleman's side of the House appeared before the committee and denounced the Haugen bill in very strong language and used some of the same percentages that the gentleman from Louisiana did, in which he stated that not over 10 per cent of the farmers of the country were

for this bill. This same "simple-minded" fellow to whom the doctor referred was out in the gallery and said, "Sir, that is the per cent of the people that is usually right." So he did not find that the simple-minded fellow was there to have any fun poked at him because he did not have a grasp of the situation when a proposition of this kind was started, in respect to the small number of people who take interest enough in such questions to study them and find out how to start a proposition of this kind.

In listening to the debates and taking into consideration the real opposition to this bill, it makes me think of 25 years ago when out in Illinois we started to correct a local situation which grew up in the grain trade, when the farmers first started local cooperative institutions. We did not have any cooperative law at that time. The same influence that tried to block the development of local cooperation is the same influence that is against this surplus-control proposition. We had to organize under the corporation laws. We had to do our cooperating through a gentleman's agreement. We tried repeatedly to get laws passed in order that we might organize on a cooperative basis, and I remember also that we had the same proposition to contend with, the same equalization fee, except that we called it by the impolite name of a penalty clause. When we started these farm organizations our opponents, who were firmly intrenched in the business and had been for years, we were aware would come out with unfair competition and try to put our "infant industry" out of business. We used to refer, you remember, to the manufacturing plants of the country as "infant industries," and they were supported, remember, by a fee, which the dear public paid. We knew that if we did not provide some means to meet the unfair competition that we would not function very long as farm-marketing organizations.

The Grange in its feeble efforts away back in 1867 and 1870 did not employ that, and they went out of business. We had the benefit of the failure of all of those fellows, and I remember when we organized our local 25 years ago, which is functioning to-day as a successful business institution, I said, "Boys, here is what will happen: These people will pay more for this grain than we can afford to do and they will put us out of business. We have to estimate about how much grain we will handle here in a year and then see how much per bushel it would take to pay overhead and keep the business running in the event we have that unfair competition and they take all of our trade away from us." We did not call it an equalization fee. We called it a "penalty clause." We said, "John Jones, if you sell over to the other fellow, you got to come over here and pay a half a cent a bushel into our institution to keep it running." I remember this same old bunk that we hear now about unfairness and autocracy. I remember the first State meeting that we had. I said, "If you do not do that you will all go out of business." I remember when we tried it one year I had to hire an extra man on the farm, and I went around all winter and helped them put the penalty clause into their by-laws. Do you know the fight was made on that by the same insidious influence that is the most powerful in the land to-day, that is opposing this legislation? Carloads of grain stood on the sidetracks in Chicago that we could not get people to sell. Why? Because of the "penalty clause." They said that it was unfair competition and that if we would take that out of our by-laws we could join their organization and everything would be fine. We said no; that if the American farmer could not put his grain on the market without the O. K. of some organization—whenever our country comes to that we better sell out the National Capitol for a grain trust headquarters there and pull down the flag. We said that we would go along functioning with our penalty clause, and we did. We went along for 10 or 12 years, and they found that they could not pay more than the grain was worth and put us out of business, because we kept our own institution alive. For 10 years we have not had occasion to use the "penalty clause" or the "equalization fee," and they recognize us as grain merchants. They found that the world was not going to come to an end, that the millennium was not at hand if we were permitted to go along with them, and for 10 years such a thing as the penalty clause has not been thought of. What do we seek to do?

Invade a little broader field at the terminal, if you please, we say; and everybody seems to have been agreed upon the fact that the solution of the farm problem is what? Control the surplus on all commodities of which we have an exportable surplus, and upon all such commodities it has long since been recognized that the world price is generally the domestic price.

Now we say we will, through the operation of this board, take the surplus off the market and handle that in such a way that it will do two things: First, the farmers say, "We propose to do this to get the world price plus the tariff." That is No. 1. Then they say, "The most vital thing we want to do is to stabilize the market from the violent ups and downs." And there is where the fly is in the ointment. If it were not for the power of the speculator that dominates your stock exchange, that dominates your cotton exchange, that dominates your grain exchange, there would not be anybody here opposing this equalization fee. There would not be this unseen, insidious influence in your great centers of population, that will put some of you boys out of business if you vote for this bill. That influence would not be here.

Now, what is the situation? The cotton men have demonstrated, the tobacco men have demonstrated, the grain men have demonstrated that existing business institutions will put you out of business through unfair competition if you go out and attempt it unless you can charge the losses to the entire production. If it is an infant industry, you have about as much show under a cooperative scheme to enter the terminals and handle the surplus as some of your great manufacturing enterprises would have had in competing with foreign countries if they had not had the equalization "fee," or tariff to protect them until they got on their feet. You know that is the argument on the tariff that we have been handing out to the boys for years; and if you can not put an equalization fee where you can charge the cost back to the commodity until your agency gets on its feet, as the local cooperatives did when they started, you will never have a cooperative that can survive the mighty, severe, well-financed, and well-managed institutions that function, long enough to be a factor in controlling the surplus. It will not survive the first few years of its life without the "fee."

That is where the trouble comes in. The real opposition to this bill is not the fear of the tax on the farmer. The real opposition to this bill is not the fear that by getting a decent price for his commodity the farmer will overproduce. It is the fear that the speculative market will be automatically done away with through the operation of this proposed scheme. Do not let anybody "kid" about the real opposition to this proposed law.

They say this bill is unsound and uneconomic. Why, the same proposition that is to be set forth by this board is being used by the best business men in America and in the world to-day. One man appeared before our committee, a man that is a member of a firm which is one of the largest cotton operators in the world, a business man, straightforward, came before our committee—not a shifting lobbying attorney, dodging the issue, but a straightforward business man—he went on and stated, as I remember, that they had to buy all grades and kinds of cotton from the farmer that were offered. Then it was necessary to have the hedging privilege, and then it was necessary to bring in the speculative world to protect his investment; that that was necessary before the banks would loan the amount of money necessary to carry this amount of stuff. Then he went on to say that the members of the cotton exchange in New York did not own the facilities sufficient to handle the business.

I questioned the gentleman myself in a dialogue in which he set out this fact, that a separate corporation over in New Jersey put in compresses and up-to-date storage facilities, and the exchange members did what? Just what this board to be provided for will do for your surplus cotton and your surplus grain. They made arrangements for compressing and storing this cotton with this company, pay them for this service until they get ready to feed it on the market.

He said:

> We gave them a monopoly on that. The best business men in the country do not think that is unsound. They hold it in the warehouse, subject to their order, and when they think there is a proper market price to warrant their selling out to the exporter or to the spinner, they give them the order to ship it out.

Mr. BURTNESS. Mr. Chairman, will the gentleman yield there?

Mr. ADKINS. I beg the gentleman's pardon. My time is too limited. If I get more time, I will try to answer any question I can.

Mr. BURTNESS. I would like to have the gentleman discuss what effect this bill will have on the hedging in grain.

Mr. ADKINS. That is a feature I want to develop if I can.

Mr. BURTNESS. I hope the gentleman will. It is very important.

Mr. ADKINS. Yes. That is a feature I want to bring out. I said to Mr. Clayton words to this effect—and I will substantiate it by the record if anybody wants to verify it—I said, "Mr. Clayton, you take the stock buyer, for instance, who goes out to buy stock from the farmer; he buys prime beef, and

he buys the canner, and he buys the bull, and he buys the cow, and the veal, and he ships it to market. There is no speculation in that raw commodity. It is necessary," I said, "to speculate in handling your raw cotton." He said, "Yes; but we do not speculate on the raw-beef commodity because of the fact that we take the commodity to the central market and sell it to the man who wants prime beef or veal or canner. The speculation comes on the finished product. Holding it until the trade or consuming public demands it." I said, "Let me make a general statement to you, Mr. Clayton":

I am very much interested in your statement there that the dealer, if he dealt in cotton, had to buy all these different grades of cotton. Now, you take the livestock buyer, I think we all understand what the object of this bill is and what the objection of the producer is, as it is handled now—hedging or speculating seems to be necessary—you take the livestock dealer and he must necessarily, when he goes to the producer, buy all the different grades of livestock—prime, medium, canners, bulls, cows, and all that stuff. He then takes it to the market and he merchandises it at the different grades of beef cattle demanded, for instance, to the beef processors that want those different grades. There is no speculative market on the raw commodity in that from the fact, I think you will agree with me, that it is fed on every day, taken up every day. Now, the speculating comes in with the processor who is holding the commodity until the consumptive demand requires it. Now, your cotton, as I understand it, most of it comes onto the market faster than the miller wants it and the necessities of the trade demand. Now, the thought came to me here why would it not eliminate the speculating in the raw-cotton commodity the same as it would eliminate the speculating in the raw-beef commodity if the farmer, through his own agency, for instance, a cooperative agency, held this cotton and did the same thing that must necessarily be done with the perishable raw commodity—held this until the mills demanded it, and then fed that in at that rate. There would be no necessity of a speculative market for the raw commodity of cotton then any more than there would be of unprocessed beef commodity, would there?

Mr. CLAYTON. No, sir; you are right.

Mr. ADKINS. Then the solution of this problem, after all, lies with the farmer himself, to get his co-op to function in such a manner that he can hold his commodity and feed it onto the market as livestock must be necessarily fed on, then the speculation in the raw commodity would be eliminated, would it not?

Mr. CLAYTON. Yes, sir; that is correct, Mr. ADKINS. That is what they have been working toward for many years, and some progress has been made in the last five years.

If any of you doubt that, get the record where I cross-examined him. In other words, he admitted that if you hold the commodity and feed it on as the trade demands it there would be no need of speculation in the raw commodity. That is just why your great speculative interests are against this bill with its equalization. That is why your exchanges filed their protest against the Haugen bill.

Take Mr. Anderson, if you please, who was another authority representing the millers of the country. He came before our committee, and, as a sharp and shrewd lawyer generally is, he was hard to get an admission out of, but by taking him around "Robin Hood's barn" I practically got him to admit the same thing. I said to Mr. Anderson, "If this is in the interest of the farmer, where will the miller be hurt? If it makes for high wheat, you will sell high flour, and if it makes for low wheat, you will sell low flour," and finally, when he came down to the point of answering my question as to why he, as the representative of the millers, was objecting, he had to say because of the fact that they were afraid it would destroy the existing marketing agencies, in other words, do away with speculation.

Now, you say this speculation is necessary. It is, in the way we handle it now, but that is the thing which has aggravated the farmers in the Middle West for 20 years. We all appreciate the necessity of exchanges; we all appreciate the fact that the legitimate speculator has a place in the field, but the thing that irritates the farmer and scares the consuming public is the violent up-and-down of the market.

I am going to call one specific case to your attention, and you could go and get dozens of them, because it is all so well known to you. During the last presidential campaign, if you will remember, the price of wheat began to advance. There was a real shortage in wheat and a real economic reason for its advancing. Well, the result of it was what? It did advance, and I remember being in the campaign and had to defend that charge. Our political opponents accused us of being in league with Wall Street and that we were artificially boosting the price of wheat for political effect on the country.

The result of it was that a good many farmers sold their wheat, believing it was a political byplay, but unfortunately for those fellows, after the election was over, wheat continued to go up. It should have stopped at about $1.75 a bushel, but the bulls went on a "rampage," got the public in, who are always "bulls," and what did they do? They carried the price of wheat to $2 a bushel, and what happened? Why, the consuming public got scared and got to making a fuss. All of your legislation in the past had not stabilized the markets, and that is one of the things that this proposition hopes to do. They appealed to the Federal Government and what happened? I am going to read you what a man said about it, a man I think is as good authority and a man who has been as successful a trader as any man in America. And against this legislation.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. WILLIAMS of Illinois. Mr. Chairman, I yield the gentleman 10 additional minutes.

Mr. ADKINS. I am going to read you the words of Jim Patten. He goes on and states that wheat dropped from $2 to $1.50 per bushel. The speculative world had carried it up, and then the candlestick maker, the watchmaker, the clerk, and the cashier in the bank who did not make enough to buy a carload of grain got in and carried a little margin on grain, and they carried it up until the public got uneasy and got to "fussing" about it. Then what did they do? They knocked it down to $1.50 a bushel, and then the farmer began to holler. You know, it all depends on whose ox is gored. It is a little like the lawyer who owned a farm adjoining another farmer. The farmer went in one morning and said to the attorney, "My bull got over into your pasture and gored your ox," and he said, "Am I liable?" The lawyer looked up the law and said, "He can not make you pay for that." The farmer said, "I am very glad of that because you know it is your ox that was gored." Then the lawyer said, "You say it was my ox that was gored?" The farmer said, "Yes." The lawyer said, "Well, wait a minute; here is another section of the law which makes you liable." So you see it all depends on whose ox is gored, and that is the way with this violent up and down of the market. When it is going up the consuming public is uneasy, wondering what the next price of bread is going to be, and when it goes down the farmer thinks he is hurt. Now, what did Jim Patten say happened, and let us take his word for it. He said:

Finally Secretary Jardine of the Department of Agriculture asked officials of the grain exchanges to come and see him. He told them that sharp fluctuations in the price of grain were detrimental to the country. He confessed he did not know how to remedy the situation, but said that was something for the men in the trade to figure out. What was being complained of at the time of the conference was the drop in the price of wheat. You never hear any complaint from the farmers when the price is going up, and you never hear any from the consumers when the price is going down. It just depends on whose ox is gored.

Now, get this—

As the result of that conference with Secretary Jardine the grain exchanges worked out a plan for a new clearing-house system; control was to be taken of the volume of transactions; irresponsible traders were to be kept out of the market; and finally and most important, an agreement was reached for the establishment of business conduct committees at each grain exchange. These committees were to make it their business to see that there was no manipulation of the market and try to prevent widespread participation of the general public in the trading where that was likely to work to the detriment of the market.

They recognized what the trouble was. They recognized that the condition had got so desperate, when the consuming public got uneasy, that you must throw your amateur speculator out, and that is the thing the farmer has been complaining of.

He does not think he should work all year and then have his products used like a lot of boys would use some dice in shooting craps. He said:

All we want is an opportunity to do what you did for the infant industries, such as the Steel Corporation and your great shoe-manufacturing establishments and other industries. When they were infant industries you provided an equalization fee in the form of a tariff in order to enable them to function until they could get on their feet and do the job.

They know well enough that in the competition they have to meet they must provide a means to charge against the entire production of a commodity the losses they have to meet in disposing of their surplus or existing agencies will put them out of business.

The tobacco men and the cotton men came before our committee, and why do they say that they want the equalization fee or nothing? They say that they would not ask their men to come in here and attempt to compete unless they could charge the cost to the entire production. That is why they do not want this bill without the equalization fee.

This is why the great insidious power that has more power in this country than any other influence in the world is opposed to this legislation.

Take the stock market and the recent violent up and down, and what happened in my own town. My own daily paper states that in one day during that flurry in the violent up and down of General Motors 8,000 people in a town of 58,000 inhabitants traded through one office speculating in stocks besides others who traded through other sources. Stretched out in all the towns of the country there was one of the greatest schemes for the flow of money, taking it away from clerks, taking it away from men with small salaries, and in their desperation causing them to default, reaching into their employer's till, if you please, and taking out money, demoralizing the moral and business integrity of the young men and women, besides making unhappiness for the farmers of the country because of the fact they use their commodities for this purpose.

They are not so afraid you are going to raise the price to the cost to the producer plus the tariff; the thing they are afraid of is that you will encourage this infant industry that we Republicans, if you please, have talked so fervently for during the last 30 years. They are afraid by giving them the authority to use their own funds to put this young infant activity on its feet it will do the thing they are afraid it will do—do away with this violent up and down of the markets.

Mind you, it will not interfere with the legitimate speculator, but the amateur—this bunch of lambs that the bulls shear when they go on the rampage, invite in, and then on a sudden drop of the market they have to liquidate. It is one of the greatest money-making schemes in the country. The Louisiana Lottery of 40 years ago never had anything on the New York Stock Exchange or other speculative markets. You remember when they used to be sending their money down to the Louisiana Lottery, debauching the young people and people of small means with the hope of getting rich quick. We stopped that lottery.

We do not want to interfere with our markets functioning. We do not want to put them out of business. We want to see if another more economical agency, more to the advantage of the producer and consumer, more to the advantage of the business morale of the rising generation, can not be built up. They know if there is no chance of a violent up and down to make several dollars out of a small investment the amateur speculator will not go in, and he is the fellow they get the big income from.

It is unfortunate, gentlemen, that men bring in the names of candidates for the Presidency of the United States. It is unfortunate that men put in so much time bullyragging the representatives of the farm organizations.

I remember that I was the one fellow who went to Springfield to get the first cooperative law, and I remember hearing the opponents of cooperation saying, "My God, it is rebating. You are providing a scheme here that a stock company can change to a cooperative society by 75 per cent of the vote of its stockholders—unconstitutional." Then they referred to me as the big boss that they were all taking orders from. We worked out days ahead of time the kind of cooperative law we needed, and we went down there and we said, "Boys, if you want to help us we can operate under this law, and our attorney says it is constitutional." They almost shed crocodile tears over the Constitution; but the law is on the statute books yet, we are functioning under it all right, and nobody ever took it to the Supreme Court. So that all this talk about the constitutionality and the bosses, and all that sort of thing, sounds very familiar to me. It makes me think I am getting to be an old man. It makes me feel like reminiscing and going back to 25 years ago, when we were trying to get legislation of this kind on the statute books.

When I was first a candidate for Congress here you had been advocating farm-relief legislation, and you all recognized the farm problem, and they wanted to commit me to the McNary-Haugen bill. I said, "I do not know what the situation is in Washington." Brother CRISP well said that whatever is started here is an experiment; and I told them, "I am going to Washington and see what the situation is, and I want to say to you that I am going to use what influence I have got for the piece of legislation that stands the best show to pass Congress."

I introduced a debenture bill as one of the schemes. I found that every speculator in the country was for it, as it would not interfere with their business.

I could see very clearly that the exporters and importers would divide most of the debenture between themselves and very little of it would be reflected back to the farmer unless he got a provision in authorizing the Secretary of the Treasury to stop issuing debentures when most of the debenture was not reflected back in the price of grain to the farmer. I found no sentiment for it. Many Members of Congress said, "You do not think we would stand for a subsidy for agriculture?" Most of the farm organizations were opposed to it for that reason. For another reason, it would have no influence in stabilizing the market and doing away with the evils outlined above; and after looking the field over and getting a line on the sentiment of Members of Congress and the farmers, I made up my mind that this was the form of legislation that public sentiment was back of. Then to my surprise, after it began to look like the Haugen bill would pass, one very distinguished Member of Congress said, "Report out the debenture bill, if you can, and be a leader at once instead of a follower." I told him that I very much preferred being a live follower than a dead leader, and if the farmers had as much sense as I thought they had, if I started a movement to divide the sentiment in Congress on farm legislation, and which would result in the defeat of such legislation, they would retire me from Congress, and then somebody would be sent in my place that would work for a program that had a chance to pass Congress and give the farmers an opportunity to try out a scheme they wanted. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. KINCHELOE. Mr. Chairman, I yield five minutes to myself to make a short statement. Gentlemen of the committee, I do not intend to discuss this bill until to-morrow, but I want to place some amendments in the RECORD for the information of the House which I shall offer to the bill, and I want especially the attention of friends of the bill, as I am speaking as a friend of the bill.

The bill that passed Congress last year provided that the board should be appointed by the President solely on the recommendation of the farm organization. The Attorney General in rendering his opinion held that that was unconstitutional, because it was undertaking to delegate the powers of the President, and I think he was right. My first amendment is to give the farm organization the right to submit to the President three names from each Federal land-bank district in the United States for appointment, simply for the President's consideration—nothing compulsory about the appointments. I imagine that the President would welcome that. So in that way we get around the constitutional inhibition.

Another amendment that I shall offer—and that is the one I am mostly interested in and one that should be adopted if you want the bill to go through smoothly. I provide in this amendment that the board in Washington shall not have the right or power to declare an operating period on any commodity or terminate that period unless the advisory council for such commodity concurs in the finding or findings which the board is required to make prior to the commencement or termination of the market period.

Who will know more about when the operating period ought to be declared on a commodity, who will know more about the amount or the extent of the surplus, than the seven men chosen and appointed on the recommendation of the farmers who raised the commodity? Who is the mouthpiece, if you please, between the farmers—the raisers of the product—and the board that sits here in Washington except the commodity council?

Mr. BURTNESS. Will the gentleman yield?

Mr. KINCHELOE. I will.

Mr. BURTNESS. Does the gentleman intend that the advisory council shall be appointed at an earlier point than would be provided by the bill?

Mr. KINCHELOE. No; I think by the time the bill gets into operation it will be plenty of time.

Mr. BURTNESS. The bill as now drawn does not contemplate the appointment of the council in any one commodity until such time as the board expects to function?

Mr. KINCHELOE. I think the gentleman is wrong. That may need an amendment. I do not want the board to function until the advisory council says so.

Now, the other amendment is that no individual shall be eligible for appointment to the advisory council for any commodity unless he resides in the region in which the commodity is principally grown and is a producer of the commodity or is interested in and truly representative of agriculture.

These amendments ought to go into the bill.

Mr. KETCHAM. Will the gentleman yield?

Mr. KINCHELOE. I yield.

Mr. KETCHAM. Under the gentleman's amendment, who would appoint the advisory council?

Mr. KINCHELOE. The advisory council is appointed by the board on the recommendation of the farm organization.

Mr. KETCHAM. In case the board puts on the equalization fee action could not be taken until so advised by the advisory council?

Mr. KINCHELOE. Yes.

Mr. KETCHAM. I also understand the gentleman to state that when the fee has been put on by the board and in accordance with this action, it can not be removed?

Mr. KINCHELOE. It can not be terminated without their consent.

The CHAIRMAN. The gentleman from Kentucky has consumed five minutes.

Mr. KINCHELOE. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD by inserting the proposed amendments.

The CHAIRMAN. Is there objection?

Mr. FORT. Mr. Chairman, reserving the right to object, were these proposed amendments prepared by the gentleman himself or by the lobby?

Mr. KINCHELOE. These amendments are on the gentleman's own initiative and no lobbyist is having any control over the gentleman from Kentucky in this respect. I am trying to get a farmer's bill.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. KINCHELOE will offer the following amendment, viz, on page 32, after line 3, insert the following:

"(b) Recommendations for the guidance of the President in appointing the original and each succeeding member of the board from any Federal land-bank district may be made by bona fide farm organizations and cooperative associations in such district as herein provided. Within 30 days after the approval of this act and thereafter not later than 30 days after the occurrence of a vacancy in the office of the member of the board from such district, the Secretary of Agriculture shall (1) fix the date and place of a convention of representatives of bona fide farm organizations and cooperative associations to be held in such district, (2) designate and notify the farm organizations and cooperative associations in such district eligible to participate in such convention, and (3) prescribe rules and regulations for the procedure at the convention, including the basis of representation of such farm organizations and cooperative associations. Such convention shall meet upon the date and at the place so fixed and agree upon and recommend to the President a list of not more than three individuals from such district for appointment to the board."

On page 32, line 4, strike out "(b)" and insert "(c)."

On page 32, line 15, strike out "(c)" and insert "(d)."

On page 32, line 19, strike out "(d)" and insert "(e)."

On page 32, line 22, strike out "(e)" and insert "(f)."

On page 33, line 3, strike out "(f)" and insert "(g)."

Mr. KINCHELOE will offer the following amendment, viz: On page 35, line 11, after the period, insert the following: "No individual shall be eligible for appointment to the advisory council for any commodity unless he resides in a region in which the commodity is principally grown and is a producer of the commodity, or is interested in and truly representative of agriculture."

Mr. KINCHELOE will offer the following amendment, viz: On page 36, after line 21, insert the following:

"(e) No marketing period under section 9 in respect of any agricultural commodity shall be commenced or terminated unless the advisory council for such commodity concurs in the respective finding or findings which the board is required to make prior to the commencement or termination of the marketing period. No equalization fee shall be collected unless the estimates upon which the determination of the amount of the equalization fee is based are concurred in by the advisory council for the commodity."

Mr. KINCHELOE. Mr. Chairman, I yield 15 minutes to the gentleman from Mississippi [Mr. WHITTINGTON].

INSURANCE AGAINST SEASONAL PRICE DECLINE

Mr. WHITTINGTON. Mr. Chairman and members of the committee, it has just been said that the farmer should work out his own salvation. This is the stock reply of those who are enjoying the benefits of national legislation when the farmer asks that the aid given to others be extended to him. When the manufacturer pleads for a tariff, does Congress reply by commanding industry to work out its own salvation? When labor asks for laws to protect the laborer and to promote the interests of those who toil, does Congress reply by leaving the workers of the country to work out their own salvation? When the banking interests of the country have knocked at the doors of Congress asking for legislation to protect banking, has Congress dismissed the appeal of capital by enjoining banking to work out its own salvation? When the great transportation systems of the country were on the verge of alleged bankruptcy, and when the railroads pleaded for aid in the restoration and rehabilitation of transportation, when they asked for loans and pleaded for boards to supervise, did Congress ignore the appeal of the railroads by enjoining transportation to work out its own salvation?

Agriculture is asking for no special favors. The Government has provided machinery for the aid of industry, labor, banking, and transportation. The farmer asks for a square deal. He pleads that he be given the help and machinery that will enable him to work out his own salvation. He has not refused to work, but he asks an adequate return for his daily toil. He asks that the Government provide the same yardstick in dealing with agriculture that has been given to the other interests of the Nation.

I appreciate fully the import of the argument of my distinguished colleague from Georgia [Mr. CRISP] as to the constitutionality of the equalization fee. The pending bill, however, differs materially from the McNary-Haugen bill passed by the Sixty-ninth Congress. There are far-reaching changes which make the present measure very different from that which passed in the Sixty-ninth Congress. The present bill provides larger possibilities and unlimited opportunities for the board created under it to deal with the problem of agricultural surplus through loans. The Curtis-Crisp bill and the Tincher-Fess bill of the Sixty-ninth Congress substantially urged that loans and credits would fully meet the situation. The present bill proposes two distinct remedies. First, it adopts the loan features of the bill just mentioned; secondly, it provides that in case of the failure of the first remedy then the equalization fee may be invoked. If the present administration believes that the agricultural problem can really be solved by the loan features of the legislation approved by the Secretary of Agriculture and the administration, and at the same time either believes that the equalization fee is unconstitutional or opposes the operation of the equalization fee, then I submit that the administration has the opportunity to test its own program in aid of agriculture without in anywise invoking the marketing agreements of the equalization fee. Moreover, I maintain that if the loan features now and heretofore espoused by the administration will solve the problem, then under the pending legislation it will not be necessary to invoke the equalization fee. There will be no occasion to test its constitutionality.

The present bill provides that if any part of it is declared unconstitutional the remainder of the legislation shall be effective. If the equalization fee is unconstitutional, and if the principles of surplus control otherwise embodied in the bill, and which the administration favors, are adequate, the bill should be passed, so that the remedy can be applied.

But I arose, especially, to call attention to the insurance feature of the McNary-Haugen bill and to emphasize its importance in promoting orderly marketing and in controlling the surplus of staple agricultural commodities that are capable of being warehoused and that are regularly traded in upon an exchange in sufficient volume to establish a recognized basic price.

It is generally conceded that the statements of Mr. O. F. Bledsoe, jr., and Mr. A. H. Stone, both of Mississippi, before the House Committee on Agriculture, were the most helpful, the most practical, and the most constructive discussions of the agricultural problem that were submitted to the committee during its hearings, beginning January 20, 1928. Both of these gentlemen are practical cotton planters and are familiar with the marketing of cotton. Mr. Bledsoe is a successful cotton planter and the first and only president of the Staple Cotton Cooperative Association, of Greenwood, Miss., of which I am a member, while Mr. Stone, vice president of this association, is an extensive and successful cotton planter and one of the ablest economists and publicists in the South.

Organized in 1920, the Staple Cotton Cooperative Association has already marketed more than $141,000,000 worth of cotton. It is conceded to be the most successful and best managed of all cotton cooperative associations. Mr. Stone and Mr. Bledsoe made distinct contributions toward the solution of the agricultural question. Mr. Bledsoe devoted his remarks very largely to the explanation and advocacy of the insurance plan, of which he is the author. Mr. Stone dwelt upon the importance of the Government financing cooperative associations and upon the unquestioned benefit of a large revolving fund to be advanced by the Government to promote orderly and cooperative marketing. All who are interested in agricultural legislation will read with profit the statements of these two practical business men and successful cotton growers, who are widely experienced in cotton marketing. These statements are to be found on pages 73 and 138 of the hearings, beginning January 20, 1928.

ORDERLY MARKETING AND CONTROL OF THE SURPLUS

It is admitted that the aim of all agricultural legislation is the promotion of cooperative marketing and provision for the control of the surplus. Orderly marketing is the purpose of cooperative organizations. The control of the surplus is essential to the success of cooperative marketing. Beneficial legislation must embody the best principles that have come from experience in agricultural marketing. The insurance plan of the McNary-Haugen bill—and I understand that this feature is also substantially embraced in the debenture agricultural bill—is one of the most beneficial features proposed in connection with any agricultural legislation. It is based upon careful study and investigation and it is sound.

I refer again to the statements of Mr. Stone and Mr. Bledsoe. These gentlemen are practical and successful business men. They are not theorists; they are not propagandists. They are interested in the broader aspects of the agricultural problem. They are concerned about a solution that will promote the interests of the Nation, a solution that is at once fair to both producer and consumer. The discussion of Mr. Stone is particularly illuminating. He not only maintains that an ample revolving fund for properly financing the surplus of agricultural products is sound, that the Government is the only agency that can provide adequately such a revolving fund, but he gives the experience of the Staple Cotton Cooperative Association as a practical demonstration that the plan is workable, and that as a result of the operation the board can provide for stabilizing prices in cases of surplus.

He shows that the Staple Cotton Cooperative Association by means of its ability to secure adequate credits and as a result of advances to its members stabilized the price of the surplus of the staple-cotton crop of 1925 in the Yazoo Delta. The Staple Cotton Cooperative Association is under the management of unusually sagacious cotton men. There was no demand for low-grade staple cotton, and there was a large surplus. The price was far below the cost of production. The Staple Cotton Cooperative Association announced that it would advance to the growers substantially the market price as a loan. Immediately the price was not only stabilized but by withdrawing the cotton from the market the price was advanced.

In other words, Mr. Stone demonstrated that the board in the pending legislation by using the revolving fund to be advanced may through cooperative associations actually stabilize the market, so that the grower would at least receive the price of efficient production.

The association saved the cotton growers in the district that I have the honor to represent in the handling of that crop some $3,000,000, without any loss to the consumers of the country.

I call attention to this further statement, and I invite the particular attention of those who represent the consuming districts of the country. I should like very much for you to read the hearings on the propositions I am discussing. I direct your attention to the fact that when the Staple Cotton Cooperative Association, in my home city, was organized there was opposition to it in the textile centers of the country. We were placed on the blacklist until Mr. Stone went to New England and conferred with the manufacturers; and when they understood the purpose of cooperative marketing was to stabilize the price, that the grower might get a reasonable price for his product, and at the same time the consumer might not be imposed upon, and that the waste and extravagance and the speculation and the gambling that occurred on the road from the producer to the consumer might be eliminated, the textile industry of the United States and the foreign textile industry became, and are now and have been, the friends of the Staple Cotton Cooperative Association.

Mr. SHALLENBERGER. Mr. Chairman, will the gentleman yield there for a question?

Mr. WHITTINGTON. Yes; gladly.

Mr. SHALLENBERGER. I want to ask you if these gentlemen you referred to, Mr. Stone and Mr. Bledsoe, object to the equalization fee?

Mr. WHITTINGTON. I understand they both regard the equalization fee as economically sound.

Mr. Stone also demonstrated, from his contacts with the textile people of the country, that the cotton manufacturers, when they understood the fundamental principles underlying proper cooperative marketing, instead of opposing cooperative marketing and the stabilization of prices, really favored both propositions. His discussion of the economics of the handling of the surplus shows conclusively that when the consumer fully understands the aim and purpose of the legislation to encourage cooperative marketing, he will favor rather than oppose the program of the proposed legislation. The aim is not to increase the costs to the consumer, but to eliminate waste and speculation on the road from the producer to the consumer.

I may say in this connection that all observations that I make relative to staple cotton are really more applicable to short cotton, for the reason that only short cotton is quoted on the exchanges of the country. There is no exchange price for staple cotton as such.

INSURANCE

The insurance agreement really provides the cooperative marketing associations with a hedge against loss caused by decline in the average seasonal market price. It has an advantage over the ordinary market hedge. If the average market price during the sales season is higher than the average market price during the delivery season, the members of the cooperative association will receive the benefit of the advance. The insurance applies to agricultural commodities that can be warehoused or stored and held without deterioration and with safety over a period of time. The insurance can only be obtained upon an agricultural commodity that is regularly traded in on an exchange in sufficient volume to establish a recognized basic price for that commodity. In addition the exchange must have accurate price records covering a sufficient length of time to enable the board to calculate the risks of insurance on a sound basis. Over a period of years the market price for such a basic commodity will average higher during the period from the end of one harvest to the beginning of another harvest. This is necessarily true. Otherwise agencies which purchase and store commodities for later resale could not remain in business. Cotton is such a basic agricultural commodity. Wheat is another such commodity. Careful investigations have been made over a period of years. The committee had elaborate hearings on the insurance feature. It is generally conceded to be sound business, because it is based on good insurance principles and because there is an insurable risk.

Statistics for a period of 20 years show that, with the exception of certain years that are capable of reasonable explanation, the average price of cotton during the period that farmers usually sell their cotton, namely, from September 1 to December 31, is lower than the average price for the 12 months beginning September 1 and ending August 31. It would be to the benefit of the cotton farmers if a plan of insurance against price decline during any one crop year could be put into effect. It would promote orderly marketing and it would assist in the control of the surplus. The farmer belongs to the debtor class, and he usually sells his cotton and other products during the harvesting season. The result is that there is a dumping of too much cotton on the market. The mills buy as their requirements dictate. The farmer thus sells to the speculator. The speculator knows that the average seasonal price must be in excess of the average price that obtains during the period of delivery. The price is generally depressed when the farmer sells, and the result is that the farmer does not get a fair price. One of the great difficulties with the cooperatives is that their members need the value of the product at the time it is delivered to the association to liquidate their debts. The association now advances, in the case of cotton, something like 65 per cent of the market value. If the association is hedged or assured against decline, the producer may be advanced his market value less the cost of the storage, interest, and insurance, and the cooperative would thus be promoted while the farmer was insured.

Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD by inserting certain statistics covering the average price of cotton and wheat and some calculations in connection therewith prepared by Mr. Bledsoe as part of my remarks.

The CHAIRMAN. The gentleman from Mississippi asks unanimous consent to extend his remarks in the manner indicated. Is there objection?

There was no objection.

Mr. WHITTINGTON. The five years in which there were exceptions were due to unusual conditions, most of which are not likely to occur again. The examinations of the daily price records of the New Orleans Cotton Exchange for the period mentioned were made by Ernst & Ernst, public accountants. I embody herewith the result of these examinations:

First. A letter from Messrs. Ernst & Ernst to Mr. O. F. Bledsoe, jr., dated September 1, 1926, covering examinations of the New Orleans Cotton Exchange, and giving the average prices of middling spot cotton for the delivery and for the annual seasons for the 20 years, which show the average price during the farmer's delivery season from September 1 to December 31 to be 17.55 cents per pound, while the average price during the entire season from September 1 to August 31 is 18.03 cents per pound, or the average price for the year is 0.58 cent, or a little over one-half a cent per pound, more than the average price during the harvesting, or farmer's selling period, as follows:

27 CEDAR STREET, *September 1, 1926.*

Mr. O. F. BLEDSOE, Jr.,
*President Staple Cotton Cooperative Association,*
*Greenwood, Miss.*

DEAR SIR: We hereby certify that we have examined the daily price records of the New Orleans Cotton Exchange from September 1, 1905, to August 31, 1925, and find that the average prices reported for middling spot cotton for the periods from September 1 to December 31 and from September 1 to August 31 were as follows:

| Sept. 1 to Dec. 31— | Average price | Sept. 1 to Aug. 31— | Average price |
|---|---|---|---|
| | *Cents* | | *Cents* |
| 1905 | 10.86 | 1905-6 | 10.92 |
| 1906 | 10.22 | 1906-7 | 11.22 |
| 1907 | 11.48 | 1907-8 | 11.14 |
| 1908 | 8.93 | 1908-9 | 10.03 |
| 1909 | 13.79 | 1909-10 | 14.51 |
| 1910 | 14.26 | 1910-11 | 14.39 |
| 1911 | 9.85 | 1911-12 | 10.87 |
| 1912 | 11.99 | 1912-13 | 12.26 |
| 1913 | 13.29 | 1913-14 | 13.23 |
| 1914 | 7.29 | 1914-15 | 8.29 |
| 1915 | 11.45 | 1915-16 | 12.15 |
| 1916 | 17.56 | 1916-17 | 19.78 |
| 1917 | 26.47 | 1917-18 | 29.40 |
| 1918 | 30.88 | 1918-19 | 30.01 |
| 1919 | 36.15 | 1919-20 | 38.38 |
| 1920 | 20.21 | 1920-21 | 14.75 |
| 1921 | 18.21 | 1921-22 | 18.71 |
| 1922 | 23.34 | 1922-23 | 26.15 |
| 1923 | 31.39 | 1923-24 | 30.51 |
| 1924 | 23.45 | 1924-25 | 23.89 |
| 20-year average | 17.55 | 20-year average | 18.03 |

Attention is directed to the fact that in the year 1914 the exchange was closed during August and September. Therefore price of 7.29 cents above actually covers three months. The prices of 13.23 cents for the year 1913–14 and 8.29 cents for the year 1914–15 actually cover only 11 months of each year.

ERNST & ERNST.

Second. The summary of the New Orleans spot prices of cotton, as follows:

*New Orleans Exchange spot middling cotton*

| Year | January | February | March | April | May | June |
|---|---|---|---|---|---|---|
| | *Cents* | *Cents* | *Cents* | *Cents* | *Cents* | *Cents* |
| 1906 | 11.55 | 10.67 | 10.84 | 11.27 | 11.31 | 10.99 |
| 1907 | 10.44 | 10.48 | 10.82 | 10.79 | 11.88 | 12.81 |
| 1908 | 11.83 | 11.59 | 10.91 | 10.19 | 10.91 | 11.57 |

[1] Money panic. [2] World War. [3] Armistice signed. [4] Crop estimate.

Mr. Bledsoe is a man of broad experience and has given many years of thought and study to the marketing of cotton. The New Orleans Cotton Exchange is probably the most stable exchange in the world. Under the insurance plan which Mr. Bledsoe proposes, which is embodied in this bill and which I now advocate, the cotton cooperative associations would be guaranteed that their weighted average daily spot price during the delivery period, which is from September 1 to December 31, would not be less than their average selling price for the year; that is, from September 1 to August 31.

The examinations of the daily-price records of the New Orleans Cotton Exchange for a period of 20 years—beginning September 1, 1905, to August 31, 1925—show that with the exception of 5 years the average price during the harvesting season was lower than the average price for the 12 months.

Mr. LAGUARDIA. Mr. Chairman, will the gentleman yield?

Mr. WHITTINGTON. Yes.

Mr. LAGUARDIA. That is because they have absolute control over the tickers.

Mr. WHITTINGTON. That is because the average annual seasonal price is what the consumers of the country pay for our cotton. The growers do not have an opportunity to sell cotton to the consumers during the marketing period. We must sell largely to speculators who sell at higher prices throughout the year to the consumers, so that the speculator and not the producer gets the benefit of the increase in price.

Mr. Bledsoe has prepared a statement giving profit and loss of seasonal cotton-price insurance from 1905 to 1919, and from 1921 to 1924, inclusive, which shows that the growers would have received, under the plan proposed, an increased amount

for the annual period over the four months' delivery period in the sum of $1,011,325,750. The production during these years was 228,528,000 bales; and if the board had underwritten insurance against decline in the annual price at a premium of $1 per bale, the premiums would have amounted to $228,528,000, while the losses would have been $120,783,450, leaving a profit of $107,744,550, to the board. The statement which was prepared by Mr. Bledsoe on January 26, 1927, is as follows:

*Profit and loss statement of seasonal cotton price insurance from 1905 to 1919 and 1921 to 1924, inclusive*

| Fiscal year | Bales produced | Value per pound, Sept. 1, to Dec. 31 | Value per pound, Sept. 1, to Aug. 31 | Increased amount received by growers, yearly period over 4 months | Losses due to decrease in value, yearly period over 4 months |
|---|---|---|---|---|---|
| | | *Cents* | *Cents* | | |
| 1905–06 | 10,575,000 | 10.86 | 10.92 | $3,172,500 | |

Prices: Average spot middling prices of the New Orleans Cotton Exchange, New Orleans, La., certified to by Messrs. Ernst & Ernst, certified public accountants.

STAPLE COTTON COOPERATIVE ASSOCIATION,
O. F. BLEDSOE, *President.*

In other words, the above computation proves that the average annual price is in excess of the delivery price and that as an insurable risk the Government can with safety guarantee and insure that the annual price will be in excess of the delivery price.

I call attention to the fact that while the theoretical average delivery price during the 20-year period, as shown by the above statistics, is 17.55 cents, the actual delivery price based upon the association's deliveries shows a gain of 0.11 cent per pound of the actual delivery average over the theoretical delivery average. Hence it is that section 12 of the Haugen bill provides that the measure of any decline shall be the difference between the average market price weighted for the days and volume of delivery and the average market price weighted for the days and volume of sales, for the actual delivery average of the Staple Cotton Cooperative Association was weighted for the days and volume of delivery. The foregoing statistics show that the average daily spot price of middling cotton on the New Orleans Cotton Exchange for the period September 1, 1905, to September 1, 1925, is higher for the selling season—that is, from September 1 to August 31—than for the delivery season—that is, September 1 to December 31—except for the season 1907–8, the year of the money panic, when there was a loss of 34 points, or $1.70 a bale; 1913–14, when the World War broke out and there was a loss of 6 points, or $0.30 per bale, during which year the exchanges were closed and no cotton was marketed for several months; 1918–19, the year of the armistice, when there was a loss of 87 points, or $4.35 a bale; 1920–21, the year of the great deflation, when there was a loss of 546 points, or $27.30 per bale, and inasmuch as it resulted from war, such a condition is not likely to occur again and might be omitted in the calculation; 1923–24, the year in which there was an overestimate of demand and an underestimate of supply, there was a loss of 88 points, or $4.40 a bale. Excluding the season 1920–21, deflation, the average annual loss for the 19 years included in the calculation is 56.6 cents per bale. The weighted price of the association, which shows the reduction of 11 points, would reduce the average loss to 46.3 cents per bale.

If cooperative associations, instead of selling futures, instead of hedging, with these reliable statistics, can procure insurance against seasonal decline without loss to the Government, it will promote cooperative marketing as nothing else can.

The aggregate of the loss cost for the 4 years out of the 20, exclusive of the year 1920–21 (deflation) amounted to $10.75 per bale. As an insurance proposition I think it would be manifestly unfair to include in this loss cost the whole loss due to deflation, as without deflation it is doubtful if there would have been any loss at all, but assuming for the sake of argument that the loss for the year 1920–21 would have been the average of the other entire 4 years of loss, or $2.68 per bale, we get a total loss cost for the entire 5 years out of the 20 of $13.43 per bale or $0.67 per bale per annum. If we add 33⅓ per cent for expenses, there would be a rate of $0.895 per bale. The Government could afford, according to these reliable statistics, to insure cotton against seasonal decline for a period of one year for $1 per bale.

It has been suggested that if the insurance feature is sound the cooperatives could secure the insurance from Lloyds or from other insurance companies. The answer is that neither Lloyds nor any insurance company in the United States insures against any sort of price decline. No insurance can be obtained for this purpose under the laws of New York, New Jersey, Mississippi, or under the laws of any other State in the Union, so far as I know, nor under the laws of the District of Columbia. It is outside of the province of insurance. In a way it invades the realm of banking. The matter of interest and carrying charges must be kept in mind. There is no private agency that can supply the insurance needed to stabilize a basic agricultural commodity. But the Government was organized to do what individuals can not do, what corporations are not authorized to do. The Government financed the railroads during the World War, and it has provided capital for banking under the Federal reserve system. It ought to do for agriculture what it has done for transportation and banking.

The committee considered very carefully the statistics which I have embodied herein, as well as other statistics, and they will be found in Mr. Bledsoe's statement in the hearings. Moreover, the hearings show that Mr. Bledsoe submitted these statistics to some of the leading insurance authorities in the country. Page 108 of the hearings shows that Edwin G. Seibles, manager of the Cotton Fire & Marine Underwriters, of New York City, one of the most prominent insurance men in the United States, believes that the proposition is sound. I quote from the hearings (p. 109), where Mr. Seibles says:

> This appears to me to be a sufficiently definite proposition to calculate a fair rate for the risk involved, and the statistics and records seem to me to be in better shape than a great many propositions which underwriters are willing to undertake.

He also says:

> I think the proposition is not only sound in itself but it has a particular attraction from an underwriting standpoint at the present moment.

He calls attention to the fact that the trend of prices is found in wheat as well as cotton, for he says:

> It will be interesting to know that the uniform trend of prices is found in wheat as well as cotton. This result, of course, is in strict conformity with the logic of the situation.

WHEAT

I have quoted the statistics compiled by competent public accountants covering cotton, but it is believed that similar statistics covering other agricultural commodities capable of being warehoused would show the same trend in prices. Mr. Bledsoe embodied in his statement on page 90 statistics on wheat from the Red Book of Howard, Bertels & Co., and I quote these statistics as follows:

*Summary of quotations—No. 2 red wheat, Chicago Board of Trade, August 1, 1905, to July 31, 1925*

| 1924 | 144.03 | 1924–25 | 170.78 | | 26.25 |
| 20-year average | 130.81 | | 137.51 | 2.466 | 9.132 |

These statistics show a loss in wheat in 1920 and there were losses in three other years. In 1910 the loss was 3.61 per bushel, in 1912 there was 0.36 of a cent per bushel, and in 1917 2.63. There was an average loss for the 19 years included in the calculations of 0.34, or a little over one-third of a cent per bushel. The loss on cotton, as I have already stated, was a little over one-half of a cent per pound for the same period. The surplus control bill provides that the board may insure the cooperatives against seasonal decline in price. The board will be taking the position that the cotton and wheat trade of the world are right to the extent that they will at least secure the price they paid for the cotton and wheat with carrying charges.

BENEFITS

I use cotton as typical. The benefits are apparent. They include:

First. Loans can safely be made to cooperative associations so that the members can receive the spot price of their cotton, less carrying charges, such as interest, storage, and insurance.

Second. The association will be insured against losses in connection with the ordinary marketing of the cotton of the members.

Third. The operating expenses of the cooperatives will be reduced, for the members will be paid approximately the full market price at the time of delivery.

Fourth. There will be no tendency to increase production, inasmuch as under the insurance feature the producer is not guaranteed an artificial price, but is only guaranteed against a seasonal decline, based absolutely upon the law of supply and demand.

SOUND

The insurance feature is sound. It involves no subsidy. It does not involve any loss to the Government. It would only apply to commodities that are warehoused and are traded in on exchanges. It will enable the cotton grower to receive the average world annual price for his product over a series of years. In other words, it would give the cooperative cotton marketing associations insurance facilities based on and parallel with world prices as determined by the view of the traders in the exchanges of the world. It would eliminate speculation and manipulation. The same thing applies substantially to wheat.

PRESIDENT'S VETO

But it is said that the President vetoed the McNary-Haugen bill as passed by the Sixty-ninth Congress, which had the insurance feature in it. I call attention, however, to the fact that the President did not say that the insurance feature was illegal or unconstitutional. He criticized the language of the insurance feature rather than the substance of the plan. The bill in the Sixty-ninth Congress should have really been more clear and explicit as to the matter of insurance. The former insurance provision was too abbreviated. It failed to express clearly enough the exact insurance agreement which Congress intended the board to enter into with the cooperative associations.

The insurance provision in the present bill has been clarified and has been set forth in sufficient detail to make sure that the specific objections raised by the President in his veto message are not applicable. The present bill does not provide insurance against a price decline. It is a question of average seasonal price. The cooperative association would not be insured against the results of its own sales. It will still profit by exercising wisely its initiative under the provisions of the bill. If the cooperatives sold unwisely so that they failed to get the average market price for the commodity they would to that extent be without protection under the insurance agreement.

The President was evidently misadvised as to the intention of the insurance feature in the Sixty-ninth Congress. Hearings were then had before the Commerce Committee of the Senate on the insurance feature, and these hearings disclosed that the intention was to provide insurance against seasonal decline in the average price. The President's illustration was not sound for the reason that he took a single specific delivery and a single selling price, whereas only the average, and in the present bill, only the average weighted price for the season is insured.

Moreover, insurance is but another word for hedging. All hedging is in reality insurance. The President failed to discriminate between insurance against price decline and insurance against an average seasonal decline in price. The hearings disclosed that the average seasonal or annual price over a series of years is in excess of the average delivery or harvest price. It is this average seasonal price that is involved in insurance. It is not a matter of price decline. The grower is not insured against his own carelessness or negligence in selling. The board can only deal with the cooperative. Moreover, it is the average weighted price that is insured under the present bill, rather than the average price during the season. The board is to this extent further protected. The proposition is sound. The consumers do not buy during the harvest season to the extent of their requirements. By insurance and hedging the cooperatives and thus the growers are protected against a decline in the annual seasonal weighted price. I repeat that if the cooperative under the terms of the insurance plan does not sell to the best advantage throughout the annual period the grower will not be fully protected under the insurance plan. In other words, neither the grower nor the cooperative, under the insurance plan, is protected against the incompetence or carelessness in the market-

ing of the product. The legislation is not paternal. The sagacity and the ability of the cooperative to sell properly is encouraged, rather than eliminated, by the insurance feature. Moreover, the insurance feature is based on sound underwriting investigations. The two outstanding bills before the House Committee on Agriculture were the Haugen bill and the debenture bill. I call attention to the fact that the principle of the insurance plan is embodied in H. R. 12893, known as the debenture plan. While the principle is found in the debenture bill I do not think that the provisions are as adequate or comprehensive as are the provisions in the Haugen bill. In fact, they are entirely too limited and restricted. The principle is recognized, but the operation is not properly provided for.

NONPREMIUM INSURANCE

Section 12 of the Haugen bill covers the insurance plan. Nonpremium insurance is referred to in section 10 in connection with the equalization fee. The bill provides for premium and nonpremium insurance. The board established by the bill is authorized to enter into insurance agreements with cooperative associations upon such terms and conditions as it may prescribe. The broadest powers are given to the board. It has ample authority to investigate fully before entering into the insurance agreements. Every provision is made to protect the Government and to protect the insurance fund. The kind of commodity that may be insured is defined. The meaning of price decline is defined. The board and the Government are hedged about with every protection possible. All admit that there is an insurable proposition in certain basic commodities. Some have suggested that the insurance features would be promoted by corporations organized by cooperative associations. The answer has been anticipated. These corporations can not be organized under the law of any State. Only the board can supply the money and prescribe the conditions for the insurance so vital to cooperative marketing. The insurance period is limited to 12 months, beginning with the delivery season and concluding with the beginning of the succeeding delivery season. The cooperative association must pay the premium fixed by the board. The powers of the board to fix the premiums are unlimited. The premiums may be changed as conditions may warrant.

Nonpremium insurance may be entered into only by the board during an operating period and only during a marketing period as provided by section 9 of the bill only when an equalization fee is levied against the commodity, and then only whenever, in the judgment of the board, the use of the insurance agreement in any commodity will stabilize the market substantially in the interest of the producers of the commodity, whether they are members of the cooperative association or not. If the board believes that the insurance agreement will stabilize the market, then the board has the discretion of entering into an agreement for nonpremium insurance, but it can never make nonpremium insurance agreements unless the board is convinced that it will be for the benefit of all the growers of the commodity, whether in or out of the association. If the insurance will be for the benefit of all the growers, then the burden of the insurance premium ought not to fall on only those growers who are members of the cooperative. Thus the bill rightly and justly provides for nonpremium insurance when the premium shall be paid out of the stabilization fund; that is, the fund accumulated by the equalization fee. In the case of cotton there will probably be no occasion for levying an equalization fee, so that if the insurance agreements result in stabilization of the cotton market all growers will receive the benefit and all growers should share in paying the premiums.

The board is authorized to secure the most thorough statistics and to make the most searching investigations before entering into the insurance agreements. It may prescribe all the terms and conditions. It may levy a premium sufficient, as disclosed by statistics, to guarantee that over a period of years there will be no loss. There may be a loss otherwise from the revolving fund under the surplus control act, but I respectfully submit that the statistics show that there will not be any loss to the board or to the Government because of the insurance feature in the legislation. The insurance is based on the average price of the basic commodity on a designated market or exchange. It is believed that the cooperative associations handling a staple agricultural commodity will be able to extend its membership to such an extent that they will be able to make advances to their members reflecting the current value of the commodity and will thus be enabled to handle in orderly fashion the surplus of the entire commodity, rendering thereby service to members as well as to nonmembers. If the market is stabilized it is right and just that the entire commodity should pay the premium on the insurance that makes possible such stabilization.

The insurance feature is in reality the outstanding contribution of the proposed legislation to the solution of the agricultural question. It is conceded among all business men that insurance is an indispensable fundamental of modern credit. [Applause.]

I do not advocate the pending legislation as a complete remedy for all the plights of agriculture. I do maintain that it will promote the farming industry. There is no panacea for all the ills of the farmer. Ours is a great country, with a broad domain. The troubles of the farmer in one part of the country frequently do not occur in another section. However, there are difficulties, uncertainties, and handicaps that are applicable to all.

Again, agriculture of itself and by itself can not solve the problem. The farmer is entitled to the sympathetic interest of all classes. No magic wand will make the improvident prosperous, and no legislative enactment will make the inefficient successful. Agriculture is entitled to the help of trade, industry, finance, commerce, and the Government. It is one of the major problems of the American people.

The pending bill does not put the Government in business. It provides for the Government to enable the fundamental industry of the Nation to function.

The farmer is entitled to other legislation. State legislatures can help. The great contribution of State legislation will not result, however, in limiting acreage but in reducing taxes on farm lands. Statistics tell us that taxes on farm property in 1926 were approximately 250 per cent of what they were in 1914, whereas the increase in the price of farm products was 130 per cent of the 1914 figure. An analysis in Wisconsin disclosed that taxes absorbed 30.6 per cent of the net farm income as compared with 29.2 per cent of the steam railroads, 22.1 per cent for miscellaneous corporations, 19.6 per cent for mercantile occupations, and 15.7 per cent for manufacturing capital.

State legislatures can not control weather and pest conditions, which have more to do with production over a series of years than acreage. National legislation must supplement State legislation, and the spread between the producer and the consumer must be lessened. It is estimated that in 1927 the consumers paid $29,000,000,000 for what the farmers produced, while the farmers only got about $9,000,000,000.

The passage of the McNary-Haugen bill will extend to agriculture many of the benefits now enjoyed by industry and commerce. [Applause.]

The CHAIRMAN. The time of the gentleman from Mississippi has expired.

Mr. KETCHAM. Mr. Chairman, the gentleman from Kentucky [Mr. KINCHELOE] was called from the Chamber and he asked me to say, at the conclusion of the remarks of the gentleman from Mississippi, that he would yield 10 minutes to the gentleman from North Carolina [Mr. DOUGHTON].

The CHAIRMAN. The gentleman from North Carolina is recognized for 10 minutes. [Applause.]

Mr. DOUGHTON. Mr. Speaker and members of the committee. There has existed in this country for some time, a condition known as the agricultural problem. It is generally admitted that this problem is of a very grave nature and one with which it is the duty of Congress to deal. Anyone who can not realize that there is a serious farm problem must be blind, and anyone who would deny relief must have a heart of stone. Even President Coolidge, Secretary of Agriculture, Mr. Jardine, and Secretary of Commerce, Mr. Hoover, admit this to be a fact. But the difference in the viewpoint of the three just mentioned and those in Congress who represent the interest of the farmer is so great that any satisfactory solution of the question of agriculture appears hopeless at this session of Congress. There is a wide gulf between the President and his advisors and the farm leaders which it seems impossible to span.

Regardless of the cause, everyone knows that on March 4, 1919, when a Republican Congress succeeded a Democratic Congress, agriculture was in a most prosperous condition and the farmer's dollar was on a parity with those engaged in other employments and businesses. The farmer was at that time paying off his debts, acquiring additional land, buying improved farm machinery, educating his children, and with head erect he was moving forward in a prosperous and satisfactory way.

In 1920, after the Republican Party had been in control of the legislative branch of the Government for a year or more, the Republicans took charge of the executive department of the Government also, and what are known as the "best minds" came into full control of both legislative and executive depart-

ments, and signs and symptoms of agricultural trouble began to appear. The prices of farm products suffered a very serious decline, and the agricultural horizon was filled with storm elements.

The Republican Congress said that more and higher tariff was the one thing needful, and proceeded to enact what was known as the emergency tariff laws. However, the price of farm commodities continued to fall, and the general condition of the farmer continued its downward movement.

Then came tariff revision by the Republican Congress—known as the Fordney-McCumber tariff law—and guaranteed by those in control of the Government to be a panacea for all the ills and ailments of agriculture, labor, and every other occupation or industry incident to our business life. But like all quack remedies, so far as the farmer was concerned, the condition of the patient gradually grew worse, until to-day it is most pathetic and desperate.

From 1919–20 to 1925–26 there was a decrease in the capital investment in agriculture of $20,000,000,000, or 25 per cent, and this decrease in agriculture has not stopped but is still going on. According to the United States Department of Agriculture, on July 1, 1927, the close of the fiscal year, there was a further decrease in agriculture during that year of $1,457,000,000.

The mortgage, personal, and collateral debt of the American farmer has increased during the last few years from approximately four and a half billion dollars to twelve and a half billion dollars, or approximately 300 per cent, and this increase in indebtedness is still going on. Farm taxes in the entire country have increased about 300 per cent, and now on an average it requires about 33½ per cent of the income of the farmers of the Nation to pay taxes, against 11 per cent prior to the war.

From 1920–21 to 1925–26 investments in corporate enterprises in this country increased from $99,000,000,000 to $134,000,000,000, or an increase of 35 per cent. Of this large increased capital there was an average earning during the past few years of between 12 and 13 per cent. The return on the farmer's gradually decreasing capital for the same period was 3½ per cent. The foregoing statements are based on Government figures.

This grevious situation of the farmer was caused by price ratios. By price ratios I mean the price the farmer obtains for the commodities he produces and sells as compared with the price of products of industry which the farmer must purchase. These price ratios have been most disadvantageous to the farmer and the average disadvantage for the past seven years has been practically 20 per cent, the farmer's economic plane being upon an average 20 per cent below other groups.

The gross annual income from our farms is about $12,000,000,000; 20 per cent of $12,000,000,000 is $2,400,000,000, and it is thus seen that because of this disadvantage of 20 per cent the farmer has contributed through losses he has sustained about $2,400,000,000 annually during the last seven years to business and industry. This amount is more than the farmer's net income has been during this period, and with equal price ratios would have been retained by the farmer instead of having been contributed forcibly by unfair price ratios to other groups.

There have been 2,944 bank failures in the last six years of Republican administration against 746 during the eight years of the Democratic administration, and most of these were in the agricultural sections of the country. The 17,333 commercial failures for the first nine months of 1927 represent an increase of $100,000,000 in liabilities during the same period of the year before. It can be truthfully said that at least 4,000,000 men are to-day idle in the United States, which shows conclusively that the serious condition from which the farmer has been suffering in recent years is being reflected in other industries. The foreclosure of farm mortgages and the people who are losing their homes on account of the serious condition surrounding agriculture is appalling.

As agriculture is our basic industry, the very foundation stone upon which rests our national progress and prosperity and upon which our civilization is built, if something is not speedily done to remedy this horrible and serious situation it does not take a prophet to see that we are headed for national disaster. The farmer is and has been for the past six years languishing on a bed of misery and walking barefooted over a road of thorns.

During the past seven years we have seen the farmer pass from a condition of prosperity and robust financial health to one of weakness and despondency—from a condition of economic independency to one of dire poverty—almost vassalage. We have seen a decline in the value of his real and personal property of $32,000,000,000, more than the entire value of all the railroads in the United States.

Since 1920 more than 2,000,000 of our farm population have left the farm each year and millions of acres of farm land have been deserted. In many instances the farmer is unable even to pay his taxes or to borrow the money to do so, and the result is his lands are sold under the hammer for taxes. No wonder he is despondent, discouraged, and often comes to a premature grave. It is not surprising that the young, intelligent boys and girls who have been raised on the farm will not remain there, but are flocking to the cities and towns by the millions. This is a dark picture, but it does not halfway describe the real situation.

In view of the real—not imaginery—situation of the farmer, and what is to be the inevitable result touching all other industries, it is most disheartening to know by the record they have made that those in control of the executive department of the Government, claiming as they do the right to outline and recommend legislative policies, have nothing but fruitless generalities to offer. Considering the position which they occupy, the three worst enemies of agriculture to-day in the United States are President Coolidge, Secretary Jardine, and Secretary Hoover. These three, and the worst of these is Hoover, as he is admittedly the adviser of the President touching all agricultural matters.

With 4,000,000 men out of employment in this country, with many of the manufacturing establishments closed or running on part time and paying no dividends, with the farmer in the ditch and in bankruptcy, with the bootleggers in clover and in prosperity, the G. O. P. will go before the country in the coming election proclaiming itself the producer and guarantor of prosperity, and will commend itself as a good and faithful servant touching law enforcement.

I shall support the pending legislation for farm relief, because the majority of the Committee on Agriculture of the House, having conducted extensive hearings and given long, painstaking study to the subject, have reported this bill; because practically all the farm organizations in the country are for it; because I believe it will be helpful in bringing relief in the present dire situation; and because I realize of necessity something must be done, not only to save agriculture, but to save the country.

The State I have the honor, in part, to represent is not only a great agricultural State, but also a great manufacturing State, the greatest in the South and one of the greatest in the Union. The business acumen of our manufacturers and bankers, the courage and industry of our people, our fine climate, magnificent highways, abundant water power, and splendid educational institutions all testify to our growth and greatness. However, the present unparalleled agricultural depression is most ominous and hangs as a dark cloud not only over North Carolina but over the entire country.

If the proposed law does not work, and does not bring the relief that is anticipated and needed, we will have shown a willingness to do all that is possible along the lines suggested by those most deeply interested. The psychological effect of this legislation is bound to be helpful, as is sincerely to be hoped its practical effect will be.

Two-thirds of the other body has voted for farm relief along the lines of the bill now under consideration, and every southern Senator, save and except one, voted for it. This, of itself, is conclusive evidence that it is a serious condition and not an imaginary theory with which we are confronted. Personally I have no pressure from my constituents to vote one way or the other, but those who trust me as their chosen Representative do expect that I intelligently aid in working out some feasible, practical solution of the matter. I have decided, therefore, to resolve whatever doubt there may be in my mind in favor of those who have made such a strong appeal on the merits of the case. I feel, in voting for this measure, that I am discharging my duty not only to the farmer but to the entire country as well. [Applause.]

Mr. KETCHAM. Mr. Chairman, I yield one minute to the gentleman from Louisiana [Mr. O'CONNOR] for the purpose of propounding a question.

Mr. O'CONNOR of Louisiana. Mr. Chairman and gentlemen of the committee, as I understand it the Copeland amendment struck from the original McNary bill all reference to fruits and vegetables. In that shape the bill came over to the House and was referred to the Committee on Agriculture. The Committee on Agriculture of the House struck out all after the enacting clause and substituted their own measure for the McNary bill, which, for all practical purposes, restores to the bill fruits and vegetables. Now, I hope that some member of the Committee on Agriculture will explain exactly why that

was done, because from the number of letters I have received—and I should imagine a great many Representatives from the cities have received the same sort of letters—it would appear that a great number of people are interested in that answer.

Most of these letters read substantially as follows:

JAMES O'CONNOR, Esq.,

*United States House of Representatives, Washington, D. C.*

HONORABLE SIR: The wholesale receivers and jobbers of fruits and vegetables here and throughout the State appeal to you to support the McNary farm relief bill (S. 3555), as passed by the Senate April 12, and for retention of the Copeland amendment excluding fruits and vegetables from the operation of the original bill.

It would not only be a serious mistake but a disaster to the perishable industry throughout the country to attempt through a control withholding and regulation of distribution to dictate and stabilize prices and supplies from time to time in the multiplicity of commodities, extent of area devoted to production, embracing every section of our country, the steady rotation of crops coming into maturity and the necessity of marketing and finding markets for these perishable crops as rapidly as harvested.

No man nor set of men living or yet to come can successfully substitute their will or devices for the inexorable law of supply and demand, and particularly as it relates to highly perishable products, fruits, and vegetables.

We would thank you to give this matter your most serious consideration, and ask for your earnest support of the McNary farm relief bill (S. 3555) as passed in the Senate, with the Copeland amendment, as this amendment means the protection of the great and growing fruit and truck industry of the South against a threatened disruption and calamity which would follow if such a serious mistake were made to attempt to experiment with the marketing of highly perishable products of fruits and vegetables.

I hope some one of the committee will move to strike out the reinstated language, against which there appears to be a general protest.

The CHAIRMAN. The time of the gentleman from Louisiana has expired.

Mr. WILLIAMS of Illinois. Mr. Chairman, I move that the committee do now rise.

The question was taken; and on a division (demanded by Mr. ANDRESEN) there were—ayes 32, noes 10.

So the motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. MAPES, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill (S. 3555) to establish a Federal farm board to aid in the orderly marketing and in the control and disposition of the surplus of agricultural commodities in interstate and foreign commerce, and had come to no resolution thereon.

## EXTENSION OF REMARKS—THE AGRICULTURAL SURPLUS CONTROL BILL

Mr. SELVIG. Mr. Speaker and Members of the House, Congress is again considering the farm problem. There are those who have publicly proclaimed that there is no such thing, that the farmers' difficulties exist only in the minds of the politicians and place seekers, and that in the ordinary course of events all this "fuss and flurry" regarding the farmer will disappear as if by magic.

These persons are, naturally, deeply grieved to hear anything about the farm problem. They view all discussion of farm relief with alarm. Why disturb us? they say. We are not in trouble.

To this group of our citizens the report of the Business Men's Commission on Agriculture came as a great shock. To them, too, the present agrarian revolt in the Mid West, coming as it does in a presidential election year, sounds like the rolling thunder of an impending storm. I cheerfully and willingly admit that they may have reason to feel concern over what the embattled farmers may do next November. Farmers usually are not easily aroused, but once aroused they know what they want. In the year 1928 they will not be satisfied with a mere gesture.

Those who are opposed to farm-relief legislation could perhaps combat the views of men in public office who have raised their voices in behalf of the farmers. But the commission's facts, figures, and conclusions can not be lightly waved aside. That is a different matter.

This intensive report of the farmers' present status deserved careful study. There is ample evidence that it received sincere consideration. The members of this commission were not special pleaders for the farmers. Actually the report portrayed the condition of agriculture in darker colors and in a more unfavorable light than had many of the much-maligned political friends of the farmer.

The result is a demand that the farm problem must receive consideration. Careful study has resulted. Leaders in every State have grappled with the problem.

The great Committee on Agriculture of the House of Representatives spent weeks in listening to ideas and suggestions from every possible source. Most of the members of the committee have had the problem before them continuously since 1920. The bill they have presented to the House for consideration is the result of their careful and earnest and painstaking deliberations and work. It represents a carefully thought out plan for one phase of farm relief. Unless some one can suggest a better plan it is our duty to enact it into the law of the land and to give it a trial.

I shall not, with the limited time at my disposal, go into the causes of the farm depression which came so suddenly upon the country in 1920. By many this farm-price deflation is considered the greatest catastrophe that ever befell any group in our beloved land. I shall not either take the time to recount the toll it took. Even if time did permit, it would be unnecessary to do so. The essential facts are too well known to require restatement.

The great forward step that has been taken since that year, and the most encouraging one for our farmers, is that the people of the entire United States have come to recognize the existence of an urgent farm problem. The entire Nation has come into a general agreement that it is a problem of transcending national importance.

The farmer is the victim of legislation, both Federal and State, which has increased his costs. I do not here state that this legislation necessarily was intended as recrimination against the farmer. Perhaps the opposite is true. The fact remains that much of the legislation has injured him. He feels, as a result, that the Government has not been fair to him.

He stands, therefore, to-day with his back to the wall. He will fight to regain a position of equality. He must make the fight, for he is lost if he does not.

The farmer's greatest weakness is that he is an unorganized seller of his products. It is not possible to organize 6,500,000 farmers into selling groups. The cooperatives have tried to do it. In some special instances, particularly with localized products, there has been achieved a modicum of success. In most cases there has been failure.

The history of farm marketing during the past 25 years is one of disappointment and distress. The failures have been due to the producers outside. They have broken the cooperatives. These outsiders have tried to gain the benefits without paying any of the costs.

This bill seeks to assist the farmer in the marketing of his products. It invokes the aid of the Government in organizing the sellers. The farmer can not now enforce the cost of production. He must take what the buyer will give. This bill stabilizes the flow to market. It will reduce the fluctuations in price and promote orderly marketing of farm products.

In addition to being the victim of discriminatory legislation and of his inability to organize effectively his marketing machinery, the farmer is in a disadvantageous position in comparison with other groups, due to his greatly increased tax burden. Freight rates, which he pays both on what he sells and on what he buys, have been nearly doubled since the war. The interest load on a greatly increased mortgage indebtedness bears heavily on him. The high cost of what he must buy, in contrast with the low or world price level on which he must sell many of his products, adversely affects him.

Something must be done to remedy this situation. Students of the agricultural problem will agree with me in this statement. The President, in his message, expressed the hope that satisfactory farm legislation might be enacted at this session of Congress. The only satisfactory farm legislation is that which the farmers themselves approve. The Business Men's Commission stated in their report, previously referred to, that a national policy, including legislation, would prove of undoubted benefit to the farmers. They went further. They stated it was an absolute necessity.

The special committee of the American Association of Agricultural Colleges and Experiment Stations made several suggestions looking toward legislation favorable to agriculture. The largest and most representative farm organizations have gone on record in favor of farm-relief legislation. The list could be prolonged.

The Government has given much aid to the farmers in encouraging production and in helping the farmer combat insect pests, plant, and animal diseases. A beginning also has been made in giving assistance, through advice and information, in the solution of his marketing and economic problems. The attention has been largely centered upon production, however.

On the other hand, a different department of the Government has actively aided and abetted reclamation projects, thereby adding to the surplus production and accentuating the farmers' difficulties.

There are reasons to believe that substantial help will result to the farmers by opening and developing river transportation. The Mississippi River Barge Line service has helped. The St. Lawrence waterway, which should come in the near future, will also prove to be a boon to agriculture. But much of this lies still in the future.

The tariff policy of the country is of value to the producers of many nonsurplus products. There is much that must be done to give our farmers adequate tariff protection against those imports of crops and commodities that can be produced in this country, but which, on account of too low tariff rates, are coming here in large quantities. Over three and one-half billions of dollars in value of agricultural products were imported into the United States in 1926, most of which were directly competitive. This gives an idea of the assault by foreign competition against our farmers. This disastrous competition is one of the farmers' chief troubles.

The bill before the House of Representatives to-day seeks to give the farmer an American price on American production of the crops and products of which we now produce a surplus. The bill provides for a farm board. Each commodity has its own advisory council. If cooperative-marketing agencies fail to carry out the provisions of the act, outside concerns will be called in to do it. The processor will be paid for his services, as he is now.

The bill provides for orderly marketing. An increased price will come to the farmers because the part of the crop required for domestic consumption will be sold at home under the tariff protection for that crop. The losses incurred in selling the surplus abroad at the world price will be borne by the producer. This will be done through the imposition of an equalization fee. This fee will carry its own load. The increased price will redound to the producer.

Those who oppose doing anything for the relief of our distressed agriculture are now proposing direct financial aid to the farmer. This is a delusion and a snare. The farmer does not want a subsidy. He knows that public opinion would not long countenance such a thing.

The farmer has always fought subsidies.

He now seeks legislative authority for an equalization fee which will permit each producer equitably to share in the expense of disposing of the price-depressing surplus and still leave him a substantial margin above the world price.

The farmers, through their support of the Haugen bill, want Congress to create for them an economic structure and to provide machinery to place them on an equality with industry, which enjoys the full benefit of the protective tariff. They are simply asking Congress to be placed upon an equality with labor and industry. No more.

Business interests all over the country agree there has been an appreciable slowing down of industry.

How could it be otherwise?

When 30 per cent of our population who live on farms suffer from a lower purchasing power, when almost one-third of the average farmer's cash income is demanded for taxes, when increased transportation costs still further decrease the farmer's purchasing power, it is no wonder that the farmer can buy less and that industry in general, retail and wholesale establishments, and labor have begun to feel the change.

The slump in business and our present unemployment are traceable, in a large part, to the agricultural depression. To a large degree the interests of the farmer and the industrialist are mutually interdependent. No permanent prosperity can exist for one group, in the long run, at the expense of other groups.

Organized labor appreciates this fact. Their representatives have repeatedly urged equality for agriculture. The decrease in farm population of about two and one-half millions since 1920 has served to fill the industrial centers with men from the farms who seek the city man's job.

The proud boast of the United States is that each man must be given his equal chance for prosperity and advancement. The national income is sufficient for both farmers and others to have the comforts our civilization affords. The task is to equalize opportunity for both the man in the country and the one in the city. This is our country's greatest problem to-day.

After many years' consideration the House is called upon to enact legislation which its proponents believe will assist in restoring equality to the farmers. The frank purpose of the bill we are considering to-day is to give the farmer stable prices upon a higher level.

It does not call for a governmental subsidy. It does not call for a cent of the taxpayer's money. It places on each farmer the cost of maintaining this higher level. The equalization fee, in itself, is a deterrent against overproduction.

The argument that this bill is unworkable comes from those who oppose granting justice to the producers of our food. The sincerity of those who oppose the bill on that ground can fairly be questioned. If they were sincere in their belief that the plan proposed in the pending bill is unworkable, they should have no hesitancy in supporting it, as evidence of their conviction that it will fail to function.

This they do not do. They know that it will work. They know that it will give the farmers relief.

Others proclaim that the equalization fee is unconstitutional. The loan and other features of the bill remain. If they are sincere in their belief that the equalization-fee feature is clearly unconstitutional, a belief in which I do not share, they should support the bill and allow the court to pronounce the decision they regard as inevitable. Other valuable features to which they can not object would remain. This would afford some assistance to the farmers.

If the equalization fee were declared unconstitutional, then the farmers would know that way is blocked and seek to set up other machinery to accomplish what must be done.

I come from an agricultural district. I have seen the devastation that has come over our farms. I have seen the hundreds who have lost their life's savings and have been compelled to start out anew amidst unfamiliar scenes to begin work in some other field.

The past 20 years of my life have been spent in close contact with the farmers. I know their troubles, trials, and tribulations; their long hours of labor, their insufficient income, their loss of faith in the justice of the present situation.

I know also the magnificent part the farmers have played in the making of America. I need not dwell upon that thought. The very lifeblood of our beloved Nation has come from the farm homes in hill and dale over our broad land. No nation can long endure which neglects its rural population.

Something must be done. This bill represents the considered judgment of the agricultural leaders of our country. It should be enacted. The plan proposed should be given a trial. Imperfections, if any develop, can be corrected in succeeding sessions. To-day a national crisis confronts us. As loyal citizens we owe equality of opportunity to our farmers. As the elected representatives of the people it is our duty to assist in reestablishing agriculture upon a parity with other groups. The farmers do not ask for more than this. They should not be given less.

Mr. HOLADAY. Mr. Speaker and Members of the House, the business world is now viewing the farm problem as one in which business, too, is vitally interested. Agriculture can not flourish with other lines of business languishing, and other lines of industry can not long maintain their prosperity with agriculture prostrate.

The McNary-Haugen bill only attempts to bring agriculture up to the level of other industries. The consumers of farm produce are quite as much interested in this measure as are the farmers themselves. They feel that they are paying enough for agricultural products. Wide fluctuations in the prices of farm products result in a loss to the producer and farmer alike. The speculative middleman is the only person profiting by this extensive variation in prices.

In many lines of manufacturing a quiet change as to methods of control of production and determining selling price has been going on. In some industries a single corporation practically dominates the field, and its competitors, not being united, are forced to follow its dictates as to prices.

Many other industries have their trade associations which make for a cooperative control of the industry rather than competitive control by a single large corporation. Such trade associations with only a few hundred, or perhaps only a dozen members, will represent almost 100 per cent of the producers of a particular commodity. At the annual convention of such a trade association the past year's business is reviewed and the propects for the coming year are discussed. The members learn that there has been a 10 per cent overproduction, or that there will be a 5 per cent increase in the demand for the coming year. While no hard-and-fast agreement is made to limit production in violation of the Sherman antitrust law, individual members have a knowledge of conditions and govern their production accordingly.

Through this and other similar practices, the manufacturers have acquired the ability to control the prices of their products. Knowing the probable output for his product, the manufacturer has but to fix the price by computing the cost of production plus a more or less reasonable profit.

If the estimate of the demand for his article has not been entirely accurate, and he is faced with an overproduction at the end of the season, the manufacturer, or his trade associa-

tion, disposes of his surplus by dumping it on the foreign market at the best price obtainable, regardless of the cost of production.

Suppose a manufacturer produces 10,000 machines to sell at $100 each, and on each machine he estimates his profit at $10. He discovers at the close of the season a 10 per cent overproduction in his product and finds that he has on hand 1,000 machines for which there is no market in this country. If he should undertake to dispose of these machines on the domestic market at the cost of production or below there would be a demoralization of prices for the coming year. He decides for that reason to sell them on the foreign market at the best price obtainable and takes his loss on the 1,000 machines. If these 1,000 machines were sold at $80 each, he has lost $10,000, but on the 9,000 machines sold in this country he has made a profit of $90,000, leaving him a net profit of $80,000 for his year's production.

Under the present conditions of marketing agricultural products the world price also becomes the standard for the domestic market.

If there is a 10 per cent surplus of a particular agricultural commodity that must be sold on the foreign market at the world price, and this quotation is below the cost of production, the farmer not only takes a loss on the 10 per cent disposed of abroad but loses a certain per cent on the 90 per cent sold on the domestic market.

The opponents of the McNary-Haugen bill ask why the farmer does not organize in a manner similar to the manufacturer.

The farmers, under existing conditions, can not organize to control production for two reasons: A trade organization of farmers could not be made to function successfully because of the very great number of individual producers, and the fact that these farmers are scattered over the 48 States of the Union prohibits close cooperation essential to the practical carrying out of this idea. If an agricultural trade association of 500 men, representing 90 per cent of the agricultural production, could be organized, the appeal for farm-relief legislation would have never been made to Congress.

The inherent nature of agriculture prevents control of production. One hundred acres may produce 7,000 bushels of corn in one year and, because of poor weather, produce only 2,000 bushels the next year. The farmer can never be quite certain of his crop because of the many unknown factors over which he has no control.

With the annual production of agricultural products depending upon weather conditions to a large extent and the impossibility of obtaining voluntary control of marketing due to the wide distribution of his great numbers, the farmer is here asking for legislation which will enable him, to some extent at least, to control the marketing of his produce. He is only asking for aid to dispose of his commodities under a system similar to that used by the manufacturers.

It is charged that the McNary-Haugen measure is "radical," which is not surprising, as new legislation of any kind is usually labeled radical. The interstate commerce law and the Federal reserve act were thought extreme when first proposed, but to-day they are accepted as conservative, and are permanent.

The McNary-Haugen bill represents the consensus of opinion of the best-known men engaged in the agricultural industry. If the measure will do what its friends believe it will do, our entire Nation will benefit immensely.

Of course, the bill is not perfect; few, if any, major legislative measures have been adopted that were not amended as experience gained under their operation showed that modifications were advisable, and it is probable that various changes will be made in this measure, if it becomes a law, as time passes and they seem warranted.

I am supporting the McNary-Haugen bill because I believe that agriculture will be benefited materially if its provisions are put into operation.

Mr. SMITH. Mr. Speaker, under the general authority providing for the extension of remarks on S. 3555, to establish a Federal farm board to aid in the orderly marketing and in the control and disposition of the surplus of agricultural commodities in interstate and foreign commerce, I submit herewith for insertion in the CONGRESSIONAL RECORD an article prepared by Hon. Robert N. Bell, of Boise, Idaho, one of the most prominent citizens of the State and a recognized student of agricultural problems:

AMERICAN AGRICULTURAL MINERALS AND FARM RELIEF

By Robert N. Bell

The farm relief question now agitating Congress is one of the most vital questions confronting the industrial progress of this country, and the discussion of the question by a rank outsider of the farming business—a miner in fact—is from an angle that has not been stressed, to say the least, either in or out of Congress, and is given with a view of inviting more competent discussion by specialists, of the complex angles involved.

The suggestion of a mineral remedy for our agricultural problems as indicated by the caption of this article may seem inconsistent. However, it is an indisputable fact that the agricultural industry depends upon the mineral industry for the substance of its success and progress or our higher educational system is a failure, and the arguments here presented are with a view of suggesting a means of virtually cutting in two the present operating costs on the American farm by fallowing half of the cultivated area and producing the present annual yield on the other half, after proper soil fertility reclamation, and the marketing of any serious surplus production that might accrue in the process.

To the ordinary reader, the relation between minerals and plant life will seem widely divergent, but as a matter of fact the relation is intimate. With all due respect to the sentiment of the question, geologic studies conclusively indicate an original plantless earth surface and that all organic life is primarily of inorganic origin and the result of chemical changes in the soil brought about by the action of sunlight and atmospheric gases.

Soil represents the decayed or disintegrated rock surface of the earth's crust left in its present position and loose condition, either by residual decay of the formation of which it is composed or by being transported to its present position by the restless process of nature's forces such as freezing, thawing, wind, water, and glacial ice action.

It is well recognized by competent students of the subject that fertile soil is a delicately balanced and conditioned mineral substance. The natural fertility of a given area of soil in its primary unworked condition represents the slow accumulative effect of natural processes of oxidation and atmospheric nitrification through the medium of natural plant life, especially wild legumes, whose available plant-food results have been conserved by the protective mat of prairie grasses and other growth.

The relative fertility value of the different American soil areas in their primary condition before they were farmed at all is governed by the simplicity or complexity of the rock formations from which they were derived. And in order to intelligently understand the particular fertility element in which they are deficient, either naturally or by unwise cropping, a detailed survey and analysis of different soil-type areas is essential for their economic renovation. This is one of the services that the American farmer should demand from the scientific departments of his governmental authorities, both State and National, in order to avoid duplication and reduce the cost of soil renovation to supplying only the essential weaker elements.

The trouble with the American farmer as a whole has been a total disregard of the first and simplest problem in mathematics—addition—and a reckless use of the second—subtraction—together with an unwillingness to study and understand the nature of the soil medium upon which he solely depends to produce his crop results, in spite of the persistent educational endeavors and encouragements to this end that have been and are now being so urgently advocated by the able scientists of practically every State agricultural department as well as the Federal Agricultural Department at Washington during recent years. The result is that the American dirt farmer is exhausting the primary fertility of his soil to the extent of millions of tons of agricultural minerals a year without adequate regard to their renewal and replacement.

The essential minerals and elements of soil that enter into the composition of growing plants are numerous, three of which are atmospheric gases. These elements with minor amounts of other mineral elements are contained in normal fertile soil in practically exhaustless supply, with the exception of calcium, magnesium, nitrogen, potassium, and phosphorus.

Plant and animal growth are extravagant users of all five of these soil elements, which are absorbed and largely shipped away from the land on which crops are grown in enormous total quantities with each annual crop yield, leaving the soil that much more deficient of these elements for succeeding crops, and resulting in its ultimate sterility and consequent unprofitable yields where these mineral deficiencies are not resupplied.

Another loss of soil fertility, quite generally overlooked, is the leaching and erosion effect on the soil accentuated by our extensive cultivated crop areas which leaves the land bare and open to the insiduous but constant loss of its more valuable and soluble salts. It is estimated by competent authorities that the annual loss by leaching alone aggregated 20 per cent of that abstracted by crop production, as applied to soil phosphates, and that fertile areas of Wisconsin and Illinois that have been farmed for more than 60 years have lost by these processes more than 40 per cent of this crucial and limiting element of soil fertility.

The millions of acres of agriculturally abandoned lands in the original thirteen States is due to the exhausting effect upon the soil of only a few generations of crop production. These soils have suffered such a serious loss of mineral plant food as to justify their practical abandonment for further agricultural uses. This includes some of the

choicest old plantation areas of the original cradle of American agriculture.

This condition of progressive soil sterility is creeping rapidly westward. It has already reached the Mississippi River, and in fact extends beyond to the former very fertile fields of Iowa, whose alarming annual increase of soft corn can doubtless be traced, to a certain extent, to the deficiency of one or two soil minerals that play an important part in the finished perfection of this and other grain products.

It is likely to be found in a serious and unbiased study of this vital national question that the basic cause of our present agricultural depression is due primarily to soil depletion and its subsequent inability to respond with full crop yields of former days, with the resulting high unit cost of production.

No better proof of this condition is needed than the following statistics of commercial fertilizer consumption in this country, which is graduated westward largely in proportion to the period that the lands have been cultivated. The consumption of commercial mineral fertilizer materials has shown a rapid increase in recent years. In 1919, under the favorable conditions of the Southern States, it was for North and South Carolina $50,000,000 each, for Georgia $46,196,434. In our more northern climates and shorter growing periods it was for New York $15,067,371, Ohio $13,206,018, Indiana $8,734,698, Illinois $2,996,403, Iowa $596,537, Nebraska $64,752, and for California (intensively cultivated lands) $8,182,998.

In spite of these vast expenditures on our older cultivated areas they probably do not represent more than 10 per cent of the amount of fertility annually absorbed from the soil of this country by growing crops, and this deficiency is what is having such an effect upon the declining fertility of our soil. To illustrate—It is a well known fact that the average acre yield of wheat in this country, which is one of the simplest and most important food crops grown, has never yet exceeded 15 bushels per acre, with all our new land and superior climate, while the national average acre yield of this cereal in several European countries, where intelligent mineral plant food methods are employed on the soil, ranges from 25 to 40 bushels per acre.

Soil, under our present average American agricultural methods, is a wasting asset and as subject to depletion as a metallic mineral deposit. It carries, however, a distinct advantage in the power of partial self renovation of one of its most costly mineral element losses through crop production, and the economic renewal and full balance of its primary productive capacity. But this is the crux of the question involving a serious study and research application for its fuller economic solution.

In this connection, the appeals made last fall at the Salt Lake meeting of the Utah Chapter of the American Institute and the Mining Congress for more liberal congressional appropriations with which to finance the activity of the Federal Bureau of Mines and the Geological Survey would have a direct application in farm relief as these two scientific institutes of the Government could divert a large proportion of such financial support to the simplification and economic availability of our domestic agricultural mineral resources.

The mineral fertilizer industry of this country more than 20 years ago represented an invested cash capital of $300,000,000. This stupendous sum probably has been largely increased since that date, and according to present reports its products annually marketed in this country exceed $300,000,000 in value.

This important industry should and ultimately will be one of the largest and most important factors in our national progress. To date, however, it has been one of the most poorly organized and mishandled of our national big business institutions. Its activities are based on the private ownership of low-grade rock phosphate deposits principally in Florida and Tennessee. The character of these privately owned phosphate deposits and their quality in place as compared with the nationally owned rock-phosphate deposits of our northwestern field is like comparing a patchy lignite coal deposit to a persistent bituminous-coal bed of the Pocahontas quality, a statement which I think will be substantially verified by a responsible Government publication recently issued.

The product of the present American commercial fertilizer industry consists largely, in its general formula, of a small percentage of available nitrates and potassium salts, with a large proportion of phosphoric oxide—the chief element of soil deficiency. The potash and nitrate elements, now almost wholly imported from foreign sources of supply, should and can be made available from domestic sources.

Under the present system of commercial fertilizer manufacture the resulting cost of the product to the American farmer is so excessive as to seriously limit its use. While its necessity is already seriously felt in the Southern and Eastern States and as far west in the prairie grain States as Illinois, its more extensive use is barred by excessive freight and manufacturing costs. The cost of this essential necessity to successful farming results will have to be modified in order to stimulate the industry, and this end can be attained only by consistent chemical research endeavors and a view to cutting off the excessive tributes now paid to Chile and Germany for nitrates and potash salts used in general farm practice by the development of domestic sources of supply and a substantial reduction of domestic transportation charges on these key products in the interest of expanding higher-class freight business which they will definitely insure.

Probably the most pronounced absorption of mineral matter from the soil by growing crops is that of calcium. This element, however, can be very cheaply and economically renewed in the form of coarsely ground raw limestone, which is one of the commonest bedrock formations of our farming areas, and readily available at low cost. Where magnesium limestone is used for this purpose it supplies magnesia as well. The use of coarsely ground limestone not only supplies and renews this essential mineral plant food to the soil but has the added advantage of neutralizing soil acidity and inertia due to single cropping. These minerals thus applied in this form are found to be far superior for this purpose than in their oxidized or treated condition, with the result that this feature of soil fertility renovation is not a serious problem and can be economically supplied and provided at low cost.

Nitrogen is one of the most essential elements in soil fertility, both as a plant food and for its solvent power in the conditioning and making available other mineral plant foods in the soil.

"Nitrogen" has been one of the most abused words in the dictionary by high-hatted politicians and lobbyists at the National Capitol since the inception of the Muscle Shoals power plant. A lot of cheap propaganda has been expended in an effort to court the political support of the farmer vote to help these biased propagandists pull this important power chestnut out of the fire as a war-emergency source of nitrogen for explosive manufacture and other chemical uses and as a source of cheap fertilizer for the farmer in peace time. This half-baked process, however, never had a chance to supply nitrogen to the farmer at a price that he could afford to pay for fertilizer uses. The most likely sources of domestic supply of nitrogen now in sight are through the ammonia route under a process evolved after expensive research endeavors by one of the prominent southern chemical companies, in which it is a by-product from low-grade coal treatment, and from the inevitable utilization of our vast resources of oil shale for motor-fuel supply, with their relatively high ratio of this by-product. As a power site Muscle Shoals can be duplicated at half a dozen points in the Northwestern States, where greater power units are now running to waste.

As a matter of fact, the latent nitrate resources of this country that can be made economically available are far superior in total volume to those of Chile, and can doubtless be converted at a much lower cost than that now paid for the mineral from that foreign source of supply.

Nitrogen for soil-fertilizer purposes is not a serious problem, and never has been in up-to-date agricultural practice, although it is doubtless true that in methods of intensive cultivation involved by truck farming or gardening near dense population centers, by which methods annual products running into $200 or $300 of value per acre may be obtained, the purchase of nitrates and other high-priced combined mineral fertilizers is justified.

It is demonstrated, however, that in general farm practice the farmer can virtually grow his own nitrogen where essential crop-rotation methods are employed. Fully 75 per cent of the atmosphere we breathe is nitrogen and there is thus suspended over the surface of every acre of land 70,000,000 pounds of this element in its primary gaseous form, in which form it is totally unavailable to ordinary plant growth.

Fortunately for the farmer, forage plants of the legume family, the most valuable of stock feeds, develop on their roots tubercles containing bacteria that have the power of gathering nitrogen from the air and fixing it in the plant. When plowed into the soil, a second crop of these legumes grown the same season not only automatically supplies this vital element of fertility but also provides the desired fresh humus, ten times as effective as ordinary animal manure, whose contingent biochemical action results in the development of organic acids and provides not only soil nitrates at a lower cost than any synthetic process can ever compete with, but other humic-acid solvents as well that increase the availability of other mineral fertility constituents of the soil for several succeeding crops of a different variety. These crops also furnish a periodic covering and a partial prevention of natural erosion and leaching losses.

Potassium, another of the expensive mineral elements of soil fertility for the use of which we are now almost wholly dependent upon France and Germany, like nitrogen, is another factor that is of less serious import to successful results under modern methods of soil treatment than is generally supposed. As a matter of fact, normal soils in this country are abundantly supplied with this element, whose availability is readily supplied by the solvent power of the organic acids developed in the legume treatment process described for obtaining atmospheric nitrogen.

It has been shown by extensive studies of unbiased scientific authorities that the worn-out upland soils of the South after only a few generations of cropping have been exhausted to within a few hundred pounds of their phosphorus contents but still contain 30,000 pounds of potassium per acre, within the range of ordinary plow-share depth. The contents of potassium in the soils of the Corn Belt States still

aggregate fully 40,000 pounds and the problem in connection with this particular element is the method of making it available by modern rotation practice rather than the want of a primary supply.

A domestic supply of potash, however, is not only desirable but, like nitrogen, is essential for agricultural purposes on soil areas deficient in this element. If a domestic supply can be developed that would give this country immunity from foreign sources of this valuable industrial mineral, such a consummation is devoutly to be wished for and encouraged.

While on this subject a brief review of domestic potash resources and their economic possibilities will be pertinent. Under the keen appreciation of this national necessity, a fund of $500,000 was provided by the last Congress with the urgent support of Mr. Hoover, with which the Federal Bureau of Mines and the Geological Survey departments were enabled to carry on research studies and investigations of the association of soluble potash salt deposits with our extensive mid-continent salt fields.

These American salt deposits are probably the most widespread and extensive of any similar deposits known anywhere on earth. They were formed by the desiccation of sea water in inclosed basin areas, under almost the exact conditions and during the same Permian period of geologic history under which the famous Stasfert potash deposits of Germany were formed.

This is one of the most justifiable prospecting grubstakes that Congress ever provided to our scientific investigators, and should be made a continuing appropriation with each congressional period, until the problem is fully solved. The field for investigation is so large and its environment of such sound promise for success, that ultimate favorable results are practically insured if the search is continued.

If potash deposits are disclosed that bear any relation to the proportion found in other salt fields, it is not unlikely that volumes of soluble potash minerals will be disclosed by this investigation immeasurably greater than those from which our present foreign supply is now derived.

Another promising source of American potash supply is indicated by an apparently authentic report from eastern Utah where an oil well test failing to find oil is said to have passed through a bed of common salt a thousand feet thick, in Permian strata, that is underlaid with a bed of clean, high-grade soluble potassium salt 40 feet thick.

While on this subject it may not be out of place to call attention to another enormous source of American potash supply whose availability involves some serious research work, but whose volume running into billions of tons of 10 per cent potassium silicate rocks contained in the lucite hills of western Wyoming is worthy of consideration.

The one remaining mineral element, phosphorus, so essential to successful farming results is contained in normal American soils in their primary condition to the amount of about 1,200 pounds per acre at an economic plowshare depth. This mineral is removed by each annual crop grown on the land, whether it be grass, grain, or animal products produced and shipped away from the area, and its original limited supply is so rapidly exhausted that it becomes the crucial and limiting factor in soil fertility maintenance. The rapidly increasing deficiency of this element is the principal cause of our low acre yields and consequent high unit cost of farm production, and can only be replaced by being physically put back on the soil from concentrated sources of supply.

Phosphorus is one of the undivisible simple elements of matter. The word is of Greek origin and, translated, means "light bringer." Its meaning could better be covered by the expression "life bringer," for, as a matter of scientific fact, this element is an essential component of all forms of life.

The late Charles R. Van Hice, former president of the University of Wisconsin, and chief scientific spokesman for the Roosevelt Conservation Commission, in his published review of our varied natural resources, places the importance of this mineral on a par with our great iron and coal supply in our national industrial progress in its bearing on agriculture and soil fertility maintenance. The following from the work of this author, "The Conservation of Natural Resources in the United States," is pertinent to the subject:

"The most important of the elements in soil fertility which we need to consider is phosphorus. Just as we find in the arid regions that water is a crucial factor limiting production, so for the humid regions of the United States phosphorus is the crucial, the limiting factor in the productivity of the soil.

"Phosphorus is an essential constituent of blood and flesh and bone and brain. How essential it is has been very clearly shown by experiments which have been carried on in the Wisconsin experiment station, following somewhat analogous experiments elsewhere. Healthy animals have been fed with a ration deficient in phosphate, with the result that these animals thrived for a time but after three months they collapsed. In an intermediate stage some of them were killed and it was found that the flesh was taking the phosphate from the bone in order to supply its need. This went on until the bones were no longer able to supply phosphorus to the flesh and then the irretrievable collapse came; they could not recover when fed a normal ration.

"In this connection the relation of the phosphorus in wheat grain and wheat bran is interesting. Henry states that bran comprises about one-fourth of the kernel. According to Tottingham, the average of phosphorus in the entire kernel is 0.39 per cent and in the bran 1.26 per cent. From this it follows that 100 pounds of wheat grain contain 0.39 pounds of phosphorus and that the 25 pounds of bran in the same contains 0.32 pounds of phosphorus; that leaves only 0.07 pounds of phosphorus in the grain exclusive of the bran. Hence, about 80 per cent of the phosphorus is removed with the bran.

Potatoes in this country, the most common food other than the white bread, contain only one-sixth as much phosphorus as wheat. It is clear that the human beings whose main food is bread made from white flour or such bread and potatoes are using a deficient phosphate ration. It is not surprising that mothers whose main articles of diet are white bread and potatoes are not able to properly nourish their babies.

To bring this subject still closer home and emphasize the essential bearing of this element on the human structure, take the dry bones of a human skull, no matter whether formerly housed the brain of a Shakespeare or a Yorick, a scientist or a clodhopper, they now analyze almost exactly the same proportions of lime and phosphorus as a lump of 70 per cent tricalcium phosphate.

The existence of the northwestern phosphate deposits which practically insure an abundant supply of this vital element of successful farming results to the agricultural industry of this country for all time is of public interest from the fact that they are 99 per cent owned by all the people under irrevocable Government control. Less than 1 per cent of the deposits of this field have been passed to private ownership, an area aggregating less than 10,000 acres out of a million acres reserved in the richest portion of the field under the Federal mineral land leasing law.

The nature of these deposits has been extensively studied by the United States Geological Survey department and a series of excellent sectional progress bulletins issued. This work was carried on for several years prior to 1921 and resulted at that time in the compilation of the material for a professional paper on the subject under the authorship of Dr. G. R. Mansfield, which has recently been issued by the United States Geological Survey. This important public document should prove of great scientific interest. It covers the geology and resources of the western phosphate field, extending along the east and west State boundaries of Idaho and Wyoming and on the north well into Montana, with an important overlap south into Utah, embracing an area of several hundred miles in length by over a hundred miles in width.

The richest center of this great agricultural mineral field is in southeastern Idaho with a limited overlap into Wyoming and Utah, this center embracing about 800,000 acres of reserved phosphate land, and is shown to carry an estimated resource of fully 5,000,000,000 tons of 70 per cent tricalcium phosphate, with a low maximum average of 2 per cent iron and alumina, which is the minimum chemical grade of rock sought for in cleaning the low-grade Florida and Tennessee deposits.

These western phosphate deposits were originally laid down as sediments in a shallow marine plateau condition during the upper Carboniferous times and have since been elevated and folded into a high mountain region, with the Yellowstone National Park area as the present central topographic feature.

The basal bed of rich rock on which the above tonnage estimates were exclusively made will average 5 feet thick. It is succeeded, however, by three or four additional beds of rock phosphate varying in width from a few inches to 15 feet, and in values of 80 per cent down to 50 per cent tricalcium phosphate.

The development of the field so far has been almost wholly confined to the basal bed, which has been explored quite extensively on several privately owned properties at different points.

These phosphate formations aggregate about 150 feet in thickness, consisting, in addition to the phosphate beds, of intervening horizons of brown phosphatic shale and thin beds of nearly pure shell fossil limestone. They are overlaid and underlaid by conspicuous fossiliferous sandy limestone as a foot-wall formation, and a thick bedded cherty limestone as a hanging-wall formation. These inclosing rocks are resistant to erosion and outcrop conspicuously for miles throughout this high-mountain region of several southeastern Idaho counties.

The phosphate mineral is distinctly coalitic in texture, usually dark brown or black in color. Its bedded structure very much resembles the occurrence of pitching coal veins. A good percentage of the immense reserve above mentioned is above drainage level. The pitch of the veins or beds is usually quite steep, ranging from 30 to 70 or 80 degrees, and from the experience already obtained, it is evident that the rock can be mined clean by ordinary coal-mine methods and equipment and produced at as low or lower cost than coal. For so far as experience has gone in quite extensive underground work, no occluded gases have been found, a factor that so greatly enhances the cost of coal mining. And the elevated position of the deposits simplifies their development and operation as it insures natural gravity handling and ventilation as well as immunity from pumping costs.

While no estimate is made of the tonnage resources of the superimposed beds above the basil member of this series, it is not unlikely that their contents of lower grade but possible commercial mineral will double the immense tonnage estimate above given. The field probably represents the largest quantity concentration of high-grade rock phosphates known anywhere on the face of the earth. Its quality is as uniformly dependable as would be a constant coal seam, and has been checked by thousands of samples over the extent of the field taken as segmental exposures due to folding erosion channels and block faulting movement, which give a widespread access to the deposits for sampling purposes, and these natural conditions practically insure the uniform high-grade quality of the mineral.

The most important privately owned deposit of rock phosphate in this field is that of the Anaconda Copper Co., at Conda, Idaho. This great industrial corporation in an endeavor to conserve the last fume of its furnaces at its Montana smelting works, which represented an annual loss of several million dollars' worth of potential sulphuric acid, put its research chemists to work, who evolved a method of concentrating rock phosphate with the use of sulphuric acid as a primary solvent, with a view to providing a market for its sulphur dioxide losses. These studies were so successful that the company purchased the largest privately owned tract in the Idaho field, embracing between 2,000 and 3,000 acres, and containing an estimated resource of a hundred million tons of 70 per cent tricalcium phosphate.

The company has since extensively developed the deposit. It has constructed a 9-mile railway spur from the Soda Springs station on the Oregon Short Line Railway to the mine and built a model town for employees. It has also provided a mine plant capable of handling 3,000 tons of mine product a day and has installed a crushing and drying mill of a thousand tons' daily capacity.

The rock is shipped to the company acid plant at Anaconda, Mont., where it is pulverized and concentrated by chemical processes to a pure mineral salt containing 45 per cent soluble superphosphate, guaranteed free from sulphuric acid.

The present general method of reducing rock phosphate to marketable form and making its valuable elements available to plant growth is to treat the pulverized rock with an equal weight of sulphuric acid, producing a soluble superphosphate containing about 18 per cent of phosphoric oxide. This product in complete mineral fertilizer manufacture is mixed with a small amount of imported nitrate and potassium salts and a large amount of inert filler, and sold to the consumer at a high price, which is largely composed of the high manufacturing cost and freight charges on the materials involved, with the result that the product is sparingly used and difficult to finance by the ordinary farmer.

Several processes, both by heat treatment and chemical methods, for the reduction of rock phosphate to available plant-food form have been discussed in technical publications during recent years. But as far as the writer is aware, none of these methods have as yet reached a commercial stage or show any definite promise at this time of superseding the common method of sulphuric acid treatment. However, this is a very promising field for research work, that may ultimately bring results of decided economic value.

Following the previous bulletin findings, the new professional paper on the western phosphate field by Doctor Mansfield shows that the chief bar to the progressive development of these western phosphate deposits is the high freight cost of putting the mineral into the most desirable market, which is the central Corn Belt States.

The most prolific field of American agricultural production is the immense prairie-land area represented by the upper Mississippi Basin above the mouth of the Ohio River, which authorities say is responsible for fully 70 per cent of the annual cereal production of the United States and probably also a similarly large proportion of the animal products.

This great triangular shield of our choicest agricultural territory, with its subshield of rich, alluvial soil derived from the complex, largely igneous formations of upper Canada and conveyed to its present position by glacial ice action, covers a large portion of our two northern tiers of States below the Canadian boundary and carries most of the noted Corn Belt soils of America.

Clinton, Iowa, would be about the geographic center of this most important agricultural area of this country, and would seem a desirable distributing center for western phosphates, as this point is not any farther distant from their richest center of development at Montpelier, Idaho, than it is from the next important point of supply, which is in Florida.

Iowa carries probably the largest proportion of the choice glacial drift soil of any of the States whose fertility has apparently been so seriously depleted in spite of its original natural advantages, and, by reason of single cropping methods, the Iowa farmers are among the loudest howlers for Government aid.

In traveling through that State recently the writer met a prominent operating official of one of the State's dominant railway companies, a company that depends largely for its business on agricultural traffic. This official made the statement that business conditions in Iowa were bad; that his road had trackage and equipment capable of handling four or five times the amount of freight that they were able to obtain from this territory; that this source of their revenue had shown a steady but constant annual decline for the past 10 years. He is keenly interested in the suggested remedy of rebalancing these otherwise fertile soils with their apparent deficiency in phosphate from the northwestern fields, and providing it at a price at which the farmer could afford to use it liberally. This is a traffic matter of vital importance to transportation companies as well as to the farmers.

If Iowa's lands are falling off in productive capacity through this cause, it is manifest that the older and longer worked lands of the States farther east are suffering in a greater proportion. And if the haulage cost of the remedy is the only bar to increasing traffic resources of a high-class freight, it would seem that a consolidation of interests and a joint assumption of the burden would be justified by the transportation companies covering the entire cereal shield, by carrying this vital element of increased production at the lowest possible cost.

It has been demonstrated on a quite extensive area in the Illinois corn belt that by the intelligent use of phosphate mineral with other minerals locally available, the productive capacity of the land can be increased from 100 per cent to 150 per cent, from which it would be apparent that one ton of rock phosphate applied quadrennially is capable of producing twice as much railway traffic on 1 acre of land over land operated without the lever of this medium in production.

According to the recent reports, the class A carriers of this country, in spite of our general abounding prosperity, are experiencing a steady decline in car loading that can only be checked by recognition and renovation of their principal source of traffic agriculture. In this connection Government aid in the form of bonus or otherwise in lowering the cost of transportation of this key mineral to agricultural success would be fully justified.

The suggestion of an American carrier hauling freight at absolute cost may at sight seem socialistic and unwarranted, but as a matter of fact it has its practical business angle, as illustrated by another little incident on the same trip. The writer met an operating official of another railroad farther west, who told of an incident where an irrigation dam in western Nebraska was seriously threatened with destruction by a sudden and excessive flood period in its drainage basin. His company immediately rushed to the scene a couple of hundred track workers with tools and equipment, whose strenuous work extending over a period of several days helped to save the dam from destruction, the assistance being furnished without charge to the farmers. This apparently altruistic move had its business angle in the fact that if that dam had gone out it meant a crop season's loss of a thousand cars of profitable agricultural traffic to that railway company.

The Union Pacific main line with its branches bisects and largely encircles this great western phosphate field through its richest center of development and with the Rio Grande system serves a vast territory of other agricultural minerals in less available form consisting of billions of tons of rich potash-bearing lucites; billions of tons of rich oil shales, carrying relatively high ratios of by-product nitrogen; billions of tons of high grade coal resources; billions of tons of salt and limestone, and in the present great metallurgical center of Salt Lake City, vast resources of potential sulphuric acid are now wasted in the form of sulphur dioxide fume for the want of a market to justify its conversion. This great center of the primary agricultural minerals has available within reasonable transmissible distances millions of idle hydroelectric horsepower and every natural condition for the development of complete mineral fertilizer and other chemical industries on an extensive scale. These vast supplies of American agricultural minerals have all been described in technical detail by the United States Geological Survey. They are almost entirely Government owned or controlled and amply justify the establishment by the Government of a superresearch station, in this interesting nonmetallic mineral field, for the study of their economic availability in the interest of American farming and of other chemical industrial progress.

The method of soil improvement most extensively used in Illinois practice and highly indorsed by the agricultural department and farm organizations of that State was developed by the late Cyril G. Hopkins, who was chief agronomist at the University of Illinois for a number of years.

The system of soil improvement developed by the unbiased endeavors of this great authority is probably the most economical yet devised. This system consists of first supplying a liberal amount of coarsely ground raw limestone to correct soil acidity where such a condition has ensued. Then to grow clover or alfalfa, harvest a crop of hay, and the same season turn under the second crop with an application of 1 ton per acre of high grade raw rock phosphate, pulverized to pass through a 100-mesh screen, and thus supply the phosphate deficiency in the soil at one-fourth of the cost of supplying it through the use of high-priced superphosphates. This treatment is repeated at four-year intervals with intervening crops of grain.

The plant-food value of phosphate applied in this form is not immediately available as in the application of higher-priced superphosphate, but it gradually becomes available, the process as well automatically

supplying fresh humus and atmospheric nitrogen, and other acid solvents developed from the fermentation of the legume crop plowed into the soil, whose natural solvents break down the calcium radical in the fine particles of raw-rock phosphate and also dissolve and make available as plant food the abundant potash and other minerals in the soil as the process progresses.

This method has been followed at the Bois D'Arc 500-acre farm near Gilman, in the center of the Illinois corn belt, for the past five-rotation periods of four years each, with astonishing results and receding requirements of periodic mineral application. On this farm, which carries a substantial strip of untreated soil for comparison, the yield of wheat has been increased from 20 to 50 bushels per acre, and of corn from 35 to 75 bushels per acre, as a 10-year average for the second half of the period under consideration. The cost involved of the added mineral is said to have averaged not over $3.50 per acre and by the end of the tenth year showed an annual profit in increased yield of 500 per cent above the cost of the medium employed, and has increased the intrinsic profit earning capacity of the land over the untreated area fully 300 per cent.

This is probably an extreme example which could not be expected in average practice, but it is a pertinent illustration of the immense and widespread industrial expansion possibilities of American agriculture when its principles are fully understood and its inexorable requirements appreciated and respected in soil-fertility maintenance.

These Illinois results bring into play the natural processes of soil chemistry in developing the solubility and availability as plant foods of the inert minerals already contained in or added to the soil in balancing up its waning fertility and developing its productive capacity back to or even above its primary prairie-sod condition.

The time factor in this process is a sound investment in the ultimate result aimed at, and the process offers a surer and more profitable return than any other conservative business venture in this country. If generally applied and surplanted with the variations of agricultural mineral application that would be involved in more depleted soils than those under discussion, this process can do more for the creation of intrinsic national wealth and permanent industrial progress by bringing into play our exhaustless supply of domestic agricultural minerals than any other single industrial activity this country affords.

The rich western phosphate fields were unknown prior to 1900. They were brought to light and public attention by the western mineral prospectors. They immediately attracted the attention of governmental authorities by reason of the recognized national scarcity of this vital element of agricultural success. The important known resources of phosphate prior to that time in Florida and Tennessee were threatened with exhaustion at the current rate of production in 40 or 50 years, and the choicest product of these mines was being shipped to Europe to the extent of 1,000,000 tons a year, to the ultimate detriment of a billion bushels a year of American cereal production, according to the conservation critics of that period.

Under the far-seeing policy of President Roosevelt in the protection of future generations of the American farmer laws were passed for the conservation of this new national resource. These activities curbed the acquisition of phosphate lands by private interests and resulted in the withdrawal of several million acres of the phosphate-bearing area of this western field and the passing of the mineral land leasing law, which puts the title to these lands irrevocably in the Government and all the people. It provides an embargo against foreign exportations of the mineral, with operating control and rather stiff royalties for such a low-valued spot product, with the result that the deposits, as far as the Government is concerned, have remained a dead asset, presenting no inducement for their industrial development by private interests. With the present state of American soil deficiency in phosphate, and as an encouragement to private endeavor, the Government policy could well be reversed and pay its present royalty demands as a bonus, with no restriction except that against exporting the mineral to other countries, which prospective business would be well taken care of by the few privately owned deposits.

As previously shown, the average soils of the United States before they were worked at all were deficient in phosphate, with a few limited exceptions, some pertinent examples of which will be justified.

The limited bottom-land bluegrass regions of Kentucky and Tennessee that have been cropped for a hundred years are still the most productive lands in the United States under the modern rotation methods fostered by the local State authorities of that region. And, judging from their splendid farm homes, outbuildings, and fresh paint, the farmers of this section are not hollering for Government aid.

The secret of the success of this limited American farming area is the fact that its soils are derived from the erosions of silurian limestone formations conspicuously associated with low-grade rock phosphate deposits and have resulted in a soil said to be ten times as rich in soil phosphate as the Corn Belt lands farther north. This is believe to be the chief factor of their durability and productive capacity.

The volcanic soils of the States of Washington and Idaho, chiefly of basaltic origin, both under irrigation and where sufficient natural humidity prevails, are among the most productive in crop results in this country.

The production of wheat in Idaho in 1927 was about equally divided between irrigated and semihumid lands and topped the list in acre yield in wheat in all the wheat-producing States of the Union. Idaho is the leader in legume-seed production both as to quality and acre yield. The irrigated areas of this State were originally practically all desert sagebrush land, very deficient in organic nitrogen, which, however, has been abundantly supplied by the cultivation of legume forage crops and the periodic plowing under of the stubble of these crops.

In this State, under intelligent practice and handling of irrigation water and extension department advice, acre yields of 10 tons of alfalfa hay, 20 bushels of alfalfa seed, 500 bushels of potatoes, 25 tons of sugar beets, 100 bushels of corn, oats, and barley, and 70 bushels of wheat are a common occurrence in large-sized tracts.

These are, of course, exceptional yields, but illustrate the responsive capacity of the soil to intelligent handling, and are of interest from the fact that these remarkable yields are obtained without the purchase or use of mineral or other fertilizer. The chief factor of their capacity is unquestionably found in the fact that these volcanic soils are said to contain several times the amount of soil phosphate as the primary soils of the Corn Belt States.

The activities of the Federal Department of Agriculture in recent years in State agricultural extension work on seed selection and better cultivation methods, adaptability of crops to different sections of the country, crop forecasts, cooperating marketing endeavors, and other educational suggestions is a service to the American farmers of vital importance that well justifies its cost, and should be continued. Its only weakness is its lack of emphasis on soil-fertility maintenance and the most economic means to that end.

The bogie man surplus of this argument, for lower production cost by increased yields, is more a shadow than a substance, and as time is the big factor in soil improvement for greater capacity production it is likely to afford ample opportunity for marketing conditions by the time such surplus can prove of material importance.

According to a recent statement of Senator BROOKHART, the average surplus of American staple food products produced in this country does not exceed 10 per cent of the whole. This is not a very serious margin and could be easily disposed of if broader foreign marketing conditions for such products were improved.

The suggestions to this end lie principally in the improvement of our internal and international waterways so stanchly advocated by the Secretary of Commerce. This is particularly true of the cementing thread of international amity that should result with our northern neighbors by the construction of the St. Lawrence-Great Lakes canal, which would bring the Atlantic water front to Chicago, Milwaukee, and Duluth, greatly reduce transportation costs to broad European markets for our surplus food products from the very heart and center of their best productive area, and provide a close relation with this virile section of North America that would ultimately prove a sound factor in world progress.

A 10 per cent surplus of our domestic food supply is almost a necessary balance in the interest of rational living costs in this country and is a preventative of runaway prices with disastrous results that would ensue in further inflation of our present high-wage scale in our manufacturing and other industrial activities.

According to the entertaining optimism of Arthur Brisbane, our domestic food supply can be largely increased on demand. The adverse angle of this flattering opinion, however, is contained in a serious discussion of the subject by a committee of soil specialists of the American Department of Agriculture at Washington, who expressed the opinion that by 1953, at the present normal rate of population increase, we shall have to raise a domestic food supply for 150,000,000 people. In order to do this from the present farmed area of the country, its productive capacity will have to be increased by soil renovation fully 40 per cent.

The only serious agricultural surplus of this country at this time is cotton, and the recent development and constantly lowering cost of rayon and other fiber fabrics are likely to cut a serious gash in the present available markets for this important American agricultural product, whose present relative status in such markets can only be maintained by the improvement of the product as to quality through improved soil-fertility methods.

If a serious surplus of staple food products should result from increased production in this country, it is likely that a market for such surplus can readily be found in Europe. It is a recognized fact that the progressive European countries exhibit an almost Oriental disregard for the effect of rapidly increasing population, with the result that their available domestic agricultural lands, while developed to the utmost capacity of production by the use of soil improvement minerals, are unable to feed their people and they are nearly all heavy importers of foodstuffs.

The American farmer with his superior mechanical advantages can well afford to take a sporting chance on world market prices by reason of his superior facilities for production and low labor costs through the advantage he enjoys by mechanical devices which give him an acre working capacity per man far superior to that of any other nation on earth, with the possible exception of our northern neighbor.

And with fuller crop yields of which his soil can be made capable, he should be in a position to compete with any other source of supply in any market of the world.

An illustration of the above argument is afforded by the California rice grower, who with direct water transportation for his product is able to pay his farm labor $6 per day and sell his product to Chinamen in China in competition with their native rice grown with labor that costs 15 cents per day.

An able writer in a popular American weekly magazine advocated scientific farming on a mass-production basis, and a consolidation of small units into tracts of 10,000 or more acres, with centralized management and community settlements of workers. While this plan has some sound scientific aspects that industrial centralization in this country seems to want, it savors too much of plantation days and Simon Legrees, and is decidedly un-American in its modern Americanism.

The Sherman antitrust law may justifiably be liberally construed in its application to some of our industries that are overdeveloped and involve cut-throat competition, but its repeal would be disastrous if it permitted the concentration of our agricultural activities into a few dominant hands, and savors too much of "Days of old, when knights were bold," and central government control ignored.

Agriculture, by reason of its magnitude and the wide-spread individual opportunity it affords to our people if developed to its justifiable capacity, is this country's safest and best first line of defense. It is our most supreme national industrial asset, whose success or failure will be definitely reflected in all our other industrial activities. It is a Golconda and Eldorado of national progress and apportunity that, in the parlance of the western miner, has so far simply been "high graded."

If the American farmer could be imbued with a little of the mineral prospector's optimism, and recognize that his soil deposit is a mineral deposit that is capable of producing twice the money yield that he is now obtaining from it for the same labor and effort, plus a little additional gray matter, with a limited amount of the principal floatation reagent necessary to raise larger crops, which appears to be phosphorus, and will recognize the fact that he is a stockholder in the world's largest and richest deposit of this reagent, farming will become an attractive occupation.

If these conclusions are based on sound reasoning and founded on actual facts, as I believe they are, this is a line of propaganda and assistance that can give the American farmer more substantial relief than any other angle that has so far been proposed to this end.

In this connection, bonanza farming results, varying from $100 to $500 per acre profit a year, in 10 to 40 acre tracts, could be exhibited from different parts of the country, extending from coast to coast, and while their results are dependent occasionally upon exceptional marketing conditions, they are generally obtained by the most intelligent preparation, utilization, and appreciation of soil capacity for production, that constitutes a line of propaganda in a back-to-the-farm movement that is well justified.

The average industrial worker who lives in a city cliff dwelling or spends from one to three hours a day getting back and forth between his urban abode and his coveted eight-hour stint of usually monotonous piecework, living largely in the fouled atmosphere of automobile exhausts and spent oil fumes and daily treading the goose step of big business military discipline, enjoys no great advantage in life over the agricultural worker.

Farming is hard work, but the farmer is his own boss. He lives in the healthy atmosphere of free air, is sure of a living for his family; and if shown how he can improve his own business and build up in place of tearing down the credit balance of his soil, the business will become more popular and attractive to the natural American instinct, which is independent and not servile.

The farmer is nature's creative agent. In human kind he has furnished the leading figures of our national life, both past and present. In the animal kingdom he has surpassed the natural products in the perfection and improvement of the species. In plant life, with the help of the scientific departments of the Government, he has created a wide improvement and variety of food products; and has gone Shakespeare one better in the adornments of creation, where he has both improved the lily and added a perfume to the violet, as the Saint of Santa Rosa did attest.

The encouragement of his creative attainments and the sound protective balance of his soil medium, with its insurance to our national progress, is and should be the most pressing obligation of our governmental authority.

Mr. EDWARDS. Mr. Speaker, can agriculture be relieved by the levy and collection of an equalization fee tax? Has it ever happened in the experience of any bankrupted man that he has been relieved by putting additional burdens on him in the way of taxes? Everyone admits that the farmers are in distress. Thousands of them are not able to pay the State and county taxes that are assessed against them, yet it is proposed to tax cotton, bright-leaf tobacco, and other products of the farmers who are financially distressed in order to relieve them. It is an absurd and unjust idea.

Every one admits that any legislation that might be passed for farm relief at best is an experiment. That being true, why not first experiment on it without this tax on cotton, tobacco, hogs, and other farm products?

When the railroads were broken down and "busted" the Government gave many millions of dollars as a revolving fund to revive them, and did not put a dollar of tax on them. The same thing was done with respect to the banking business. Hundreds of millions of dollars were made available without the levy of a fee or tax on them. Relief was given to labor and no tax was levied or collected. It was not thought of when the railroads, banks, labor, and other industries were being relieved. Why has it been thought of in connection with cotton, tobacco, hogs, and other products of the southern farms?

The McNary bill that has recently passed the Senate and was voted for by the two Senators from Georgia is a different bill to the Haugen bill before the House, with its unlimited tax on cotton, bright-leaf tobacco, hogs, and other southern products. The McKellar amendment to the McNary bill in the Senate practically eliminated the objectionable equalization fee and made it practically inoperative, which put it in such shape that not only the Senators from Georgia but other southern Senators could vote for it. Why not give us an opportunity to vote for the bill as it passed the Senate?

The McNary bill that passed the Senate was stricken out, all but the number, title, and enacting clause by the committee in the House, and the Haugen bill, which is referred to as a companion bill, was substituted. It is, as stated, a different bill and provides a board of 12 to administer its provisions, and only 3 of this number would come from the States that are primarily interested in cotton and tobacco making the board stand 9 to 3, the 9 being from sections that are interested in buying cheap cotton and cheap tobacco.

Is it right to deliver the destinies of the cotton and tobacco farmers of the South to a board of this kind? This bill provides $400,000,000 to be supplemented by a fund to be raised through the fee or tax on cotton, tobacco, hogs, and other farm products. Why not start the thing going with the $400,000,000 as a gift to the agricultural industry for the common good, see if that helps, and if it does, appropriate as a direct subsidy several millions more and help the farmers just as the railroads, labor, banks, and other industries were helped, by subsidies and without a single cent of tax? Why make fish of one and fowl of the other? Give us an opportunity to vote for the bill without the fee tax.

To pass the bill with the fee in it means to pass a bill that will be vetoed by the President, which will result in no legislation for tha relief of the farmers at this session. Why take the chance? We know almost certainly the President will veto the bill, for he vetoed it before because he thought the fee unconstitutional, and he sent the opinion of the Attorney General of the United States to Congress along with his veto, in which the Attorney General held it was unconstitutional. It is the opinion of many of the very best constitutional lawyers of the House that to give the board the authority to levy the fee, which is unlimited but certain, is unconstitutional. If you really want to help the farmers by legislation, why "gold brick" them with an unconstitutional measure that is certain to be vetoed and will not be passed over the President's veto; and if passed over his veto will be declared invalid and of no effect by the Supreme Court? The farmers need help now. Let us be practical and give help that will immediately relieve and will go immediately in effect without putting a tax on him.

Much deliberate deception has been practiced in certain quarters on the farmers, and in some cases many good farmers believe, through literature, articles, and other propaganda, that the tax on cotton, tobacco, hogs, and other farm products will likely not become operative.

Any honest student of this legislation will tell you that the initial fund provided in the Haugen bill, under consideration, could all be allocated and used for wheat or for any one or several crops, to the entire exclusion of cotton, tobacco, or other crops, which would compel the levy and collection of the fee-tax on cotton, tobacco, or other crops that funds had not been allocated for. From my careful study of the fee tax I am afraid of it. I do not want to risk the levy of an unlimited fee-tax on the cotton and tobacco farmers whom I have the honor to represent.

To get any loans under the Haugen fee-tax bill, farmers will have to be members of the cooperative associations. It has been demonstrated in the section I am from, a great number of our very best farmers do not want to join the cooperatives for reasons that must be satisfactory to themselves.

I have nothing to say against the cooperative for I think if properly worked it is a good thing to be able to market cooperatively. Is it right to force millions of farmers to join associations they do not want to join? There will be the dues and expenses incident to joining and belonging to these associations for the salaries, of the president and officers and agents, as well as other expenses, will have to be paid and those things are paid by the farmer if he is forced in, as this act will do. I do not think we should take away from the people any more rights and liberties than we really have to take away for the good of society and in the interest of good government. It was the thought of Washington and Jefferson, and other statesmen of their day, that "the people best governed are those least governed." This proposed legislation would establish an army of agents who would be scouring the country, nosing into the private affairs of the people, trying to find those who had not paid the tax required. If the tax is not paid then there is the penalty to be exacted and collected, after annoyance and trouble, in the United States court. Our people have been eaten up with taxes and annoyed too much already with many kinds of regulations and laws that are doing little good. The people are tired of it and I do not think we should permit them to be subjected to any new burdens.

Of course I may be wrong and this idea of laying more taxes on the people might be the right and wise thing to do. If I am wrong, it is because of my deep sympathies with the toiling masses who are already too heavily burdened and too much governed and regulated by the present-day bureaucratic agencies of Government into which we are too rapidly degenerating. As God is my judge, my heart is with the great toiling masses and with the farmers who bear the burdens of life. From them I sprung and have my being and of them, I thank God, I am a part, and I am proud of it. I am for anything that will help more than it will harm or hurt the farmer, and I am against anything that I believe will hurt more than it will help the farmer. I am thoroughly convinced the fee tax on cotton, tobacco, hogs, cattle, and other farm products will be far more hurtful, harmful, and annoying than it will be beneficial to the farmers of my section. I think it is wrong. Many times, countless in number, have I taken this question to the Throne of Grace and asked for light on it. I have asked whether it was right or wrong, and my conscience has spoken back that the tax is wrong and that it will be harmful and hurtful to the people who have intrusted me here to represent them. Now what is my duty? What am I to do? Am I to yield to what might be temporarily popular and what I believe is a sham? Am I to yield to the demagogic expediency of voting for a thing that might be popular for a season in order to get the plaudits of certain people who are urging this fee or tax upon our crops and products, or am I to do what my conscience dictates is wise, right, and best for the people I love with all my heart? Earnestly have I tried to see the benefit others claim to see in this agricultural tax, I have tried hard to find wherein it will give any benefit whatever, but I have failed to find it, and each time the voice of my conscience has condemned it as unjust and unfair. I have wrestled with this question, for I want to do the right and best thing for the people, regardless of what the political effect might be upon me or how it might hereafter affect my political fortunes. Only the good God knows the hardships through which the South has passed.

Amid it all our people have been brave and true. I can not be a party to adding to their troubles by joining in with the Corn and Wheat Belt in this movement to put a tax on cotton, tobacco, and other crops. It will work with respect to wheat and corn because they are already benefited by the tariff, but cotton is an exportable crop and the tariff on cotton will do the producer no good. The South grows practically no wheat and not much corn as compared to the great grain section of the United States. We buy corn, wheat, and western meats.

You say this is the only thing open to you. Well, if it is right I ought to vote for the tax; if it is wrong I likewise ought to be courageous enough to vote against it. The people will stand with me if they think I am honest in my convictions. My people expect me to do what I can for them in getting through wise and constructive legislation along beneficial lines, but likewise they will hold me to strict account if I fail to protect them against hurtful and unwise measures. In this I feel I am voting to protect them against an unwise, unfair, and unjust tax. In this I am sure they agree I am honest and acting for what I firmly think is to their best interest.

I am pledged to stand for tax reductions, and my career here has been in favor of tax reductions and tax eliminations. We will not help the people in their fight against high taxes if we keep building up this bureaucratic system of government at Washington that gives new jobs and additional high salaries to armies of people who will live in luxury and ease on the tax money to be collected from cotton, tobacco, hogs, and other crops. I had rather vote any time to repeal a tax that is burdening the people than to vote to create a new and oppressive one, and that is my conception of this Haugen tax on cotton, tobacco, hogs, and other crops.

You say you are against the tax that the Wheat and Corn Belt people are proposing—what have you to offer? In answer to this I introduced a bill, H. R. 11286, on February 21, 1928, that is, to my mind, the best bill for the farmers that has thus far been offered. It is similar, in some respects, to the Crisp and Hare bills, and provides for a revolving fund of $750,000,000 with which to relieve agriculture. This is a gigantic task ahead of us, and we must think and act in big figures and in a big and effective way.

My bill is somewhat on the plan of the War Finance Corporation through which the railroads and other industries were relieved. It is in some respects like the McNary-Haugen bill, except it does not provide a fee or tax on the farmers. It carries nearly as much again money as almost any other bill that has been introduced on the subject, and in my honest opinion would relieve agriculture, at the expense of the Government, just as the railroads, the banks, and other industries and labor were relieved.

Then there are the Crisp, Hare, Jones, Aswell, Fort, and many other good bills that provide ample revolving funds and carry no equalization fee. I am, of course, committed first to my own bill, which I have worked out after much thought and study, which is the largest in point of revolving fund than any of the other relief measures. Then I will vote for the Crisp, Hare, Aswell, Jones, Ketcham, and, in fact, for the Haugen bill if the fee is stricken out. I want to relieve and not burden the farmer, and I know that there never was a tax that was not a burden, and to put a tax on him in this legislation means to harness more burdens on him in the long run. It will be harmful just as soon as the levies and collections are made, and they are likely to be made at any time, for the Haugen bill in that regard is wide open and the fee is unlimited. It will tax every bale of cotton and every pound of tobacco and other products. The fees could be levied just as high or just as low as the board might decide, and I frankly mistrust a board that might not be friendly to southern agriculture. "An ounce of prevention is worth a pound of cure," and I had rather prevent this tax being levied on my people than to later try to cure the trouble. It will be almost impossible to ever repeal the tax. I will vote for anything that even promises relief to the farmers that does not levy a tax on them, but if I know it I will not be a party to putting new taxes upon them. If it meant better prices for cotton it would be different, but it in no sense promises it. It is admittedly an experiment, so let us first experiment without the fee and not get burnt with this fire with which some of our cotton folks are playing.

Mr. REED of Arkansas. Mr. Speaker and Members of the House of Representatives, I am glad of the opportunity of making a few observations upon the bill now before the House of Representatives. The Seventieth Congress has been in session for many months and at last we have before us for consideration the McNary-Haugen bill, a bill purporting to offer relief to the farmers of our country. I had hoped, owing to the fact that there has been such a general demand, and I may add that I think it is a just demand, for legislation tending to help the farmer, that this Congress would have had an opportunity earlier in this session to consider this proposition, but it was not destined to be so. The reactionary or stand-pat element of the Republican Party is in absolute control of the House of Representatives and they would not permit this bill to come upon the floor of the House prior to this time.

In the past it has been said of the United States Senate that that body was further removed from the rank and file of the American people than the House of Representatives. To-day this is not true. The House of Representatives is controlled, of course, by the steering committee of the Republican Party, and they happen to be at this time the archangels of standpatism and reactionaryism. Personally, of course, they are very fine gentlemen; but, legislatively speaking, they stand for the old type of Hamiltonian doctrine. They believe that all legislation should be so enacted that it will first inure to the benefit of the very wealthy and eventually escheat to the ordinary person in life. I am amused occasionally when I hear one of these reactionaries claim to be a representative of the Lincoln variety. If that statesman, Abraham Lincoln, were living to-day he would say to that group of statesmen, "Depart from me; I never knew you."

UNIVERSAL DEMAND

There can be no question about there being a real farm problem before the American people. It is admitted by both friends and foe of this bill that there is a general demand upon the part of the farmer of America for some legislation tending to give the farmer an equal opportunity with those engaged in other lines of human endeavor. It would not seem necessary to enlarge upon this topic. Able Members of Congress have quoted statistics upon the floor of this House showing conclusively to my mind that the various farm organizations and the rank and file of the farmers as a whole demand the passage of the McNary-Haugen bill. I have attended many of the hearings before the Agricultural Committee and I have carefully read the report of those hearings, and with one exception all of the great farm organizations of America have indorsed the McNary-Haugen bill. I am not one of those who believe that the farmer does not know what he wants. The farmer wants this bill passed and I am going to vote for it.

WHY FARM RELIEF?

This bill purporting to aid the farmer, the question naturally arises, Why the necessity of farm relief? This subject has been dwelt upon at great length by many able Members of this House. I want to submit some observations as, in my judgment, entitles the farmer to at this time knock at the door of the American Congress.

DEFLATION

I insist that the Federal Government itself is to some extent to blame for the predicament the farmer finds himself in. It will be recalled that during the World War the farmers were encouraged and almost commanded to produce all kinds of food products that could be produced upon the farm. It was even suggested at that time that all gardens in America should be cultivated. Be it said to the credit of the American farmer that he complied faithfully with the requirements of the Federal Government. In 1920 the panic came. As we know, the farmer produced these various crops which were quite expensive to produce at that time, and at harvest time of the same year he sold these various products on an average of less than 50 per cent of the amount it cost to produce most of these farm products. I personally know this to be true because I was then engaged and am now in raising farm products. I will give the Members of the House the benefit of my own experience along this line later on in this address.

Just what do we mean by deflation?

As has been said the farmers were encouraged to produce farm commodities. Money was easy to obtain and the farmer borrowed considerable money upon his personal assets in order to make these big crops. About the middle of the year 1920 the Federal Reserve Board, an agency of the Government, or at least a creature of the Federal Government, issued a call for the prompt payment of these loans heretofore made to the farmer. Of course the farmer could not pay, as he only received 50 per cent as much for his products as it cost to produce them. It can logically be seen that the farmer was helpless. In my judgment the arbitrary demand upon the part of the Federal Reserve Board for the prompt payment of these loans is 80 per cent of the cause of the terrible condition in which the American farmer is to-day.

I personally know many farmers who were absolutely solvent in January, 1920, but who were so terribly depressed in the harvest time of 1920 that they had to mortgage or remortgage, as the case might be, all of their assets, both real and personal, in an attempt to tide over another year, and as a result of their terrible loss these farmers have paid interest and have continued to pay interest until they are absolutely insolvent to-day. I can name many cotton and rice farmers in my State who in January, 1920, were in a good solvent condition who have since that time been compelled by no fault or carelessness on their part to take bankrupt law and lose everything they had. If it were proper, I would call the names of dozens of these good men. In other cases, and especially cotton and rice farmers, I know of many who through all these years have attempted to brave the tide and are going along as best they can, and yet are insolvent.

I promised to give you in brief a little of my personal experience along this line. During the year 1920 I operated a cotton farm in the sixth district of Arkansas, the district I have the honor to represent in this body. I produced a quantity of cotton that the Federal Government itself said cost the producer on an average 32 cents per pound to make. I sold that cotton the 14th day of May, 1921, for 12.19 cents per pound. It does not take a mathematician to see that I lost greatly on this crop, and this is the experience of multiplied thousands of farmers, not only in the Cotton and Rice Belt but in the Wheat and Grain Belts of this great Commonwealth. I take it that it is unnecessary to dwell upon the topic of deflation further.

GENERAL CONDITIONS OF THE FARMER

The general financial condition of the American farmer is most deplorable at this time, and there must be something done to alleviate these conditions. Hon. Charles Barrett, president of the Farmers Union of America, has made the public statement that the records show that if the mortgages now outstanding upon the farms of America were foreclosed the farms could not be sold for enough money to pay these mortgages.

The statistics show that farm values have decreased from $79,000,000,000 to $59,000,000,000 since the deflation period heretofore referred to. Twenty years ago 60 per cent of the population of the United States lived upon the farm; to-day the converse is true. Throughout the history of all nations the progress of a nation and the stability of a nation have been measured and reckoned with more regard to the interest taken in the cultivation of the land of a nation than any other aspect by which a nation is or has been judged. If something is not done to remedy the present condition of the American farmer we will have conditions in this country in a very short time that no one would desire. Why should not the man who produces the raw products which feed and clothe the world be entitled not only to be able to meet his bills for cost of production, but should be so situated that he can have some of the luxuries of this life and further be able to send his children to the best schools of the land? I certainly believe that this condition should be a chief aim of every lawmaker of the American Congress as well as every lawmaker for every State in this Union.

COTTON

A few days ago I heard a conversation between two gentlemen; one of them stated that the cotton farmer only had to work about three months in the year to produce his crop. I could not resist the temptation to tell that friend that he knew more about manufacturing in which he was engaged than he knew about the production of cotton, that ordinarily we had a habit of saying that it took 13 months in the year to raise a cotton crop. Those of us who know a little something about the raising of cotton know that cotton is a jealous master and it requires all of your time to cultivate this delicate plant and harvest the fruit thereof. One of the most amusing statements I have heard upon the floor of this House is that the cotton farmer can be helped by the protective-tariff system.

We import about 300,000 bales of cotton per year; we raise approximately an average of 11,000,000 bales per year and export about 65 per cent of the amount of cotton we produce. The cotton farmer buys his wagons and other implements under the protective-tariff system, getting no protection on the cotton he produces. It is further suggested that we should diversify in the cotton country. It may be true that we should diversify our crops to some extent, but, in my judgment, this question will never be solved by diversification. The nine States that produce practically all the cotton of the United States and nearly 70 per cent of the cotton of the world are so adapted—yea, I may say so ordained, by the God of nature—to the production of this commodity, by the fertility of the soil, by rain and sunshine, by climatic conditions that it is essentially a cotton sphere. Indeed the ingenuity of man is most wonderful and we can not tell to-day what invention of to-morrow will bring forth, yet the wisdom of man can not contradict or contravene the handiwork of God himself.

RICE

Of all the farmers in the United States who have suffered the most in my judgment the rice farmers stand at the top. I happen to live in the heart of the rice industry of Arkansas, to wit, Lonoke and Arkansas Counties. It is a well-known fact that rice is a very expensive crop to raise and it so happens that the lands which are well adapted to the raising of rice are not really productive for other commodities. In the fall of 1920 I saw on the streets of my town rice which cost $2.50 per bushel to make actually sell for $0.60 per bushel. These rice farmers are doing their dead-level best to pay off the mortgages on their farms. Of course, many of them have given up in despair; others have been forced into bankruptcy and lost their farms. Would anyone suggest to the rice farmer, "All quit and let your farms lie out"?

Surely in great America no one would make that suggestion. The poor rice farmer who has to buy extensive and expensive machinery by reason of the protective tariff pays more for it in Stuttgart, Ark., than the American manufacturer sells the same machinery for in Paris, France. And yet we still have those who say that the farmer should favor the iniquitous Fordney-McCumber Tariff Act.

PROVISIONS OF BILL

I have been a Member of Congress for a little more than four years. This bill is before the House for the third time. I have voted for the bill each time before and will vote for it now. Those of us who favor the bill do not contend that it is a cure for all evils; however, we do contend that it is a step in the right direction and it is the best we can get the present Congress to pass. In the main, this bill creates a board selected by the President, selecting one member for each of the 12 Federal land districts, the Secretary of Agriculture being an ex officio member. And this board is delegated the general powers to put into operation the plan outlined in the bill. This board is further required to create an advisory council of seven members, to be selected from a list submitted by farm associations or organizations for each agricultural commodity which the board determines may require stabilization.

This bill provides an appropriation of $400,000,000 out of the Treasury of the United States to be used as a revolving fund to carry out the provisions of this plan. Under the terms of this bill the board created under the bill has the power to make contracts with farm organizations to purchase cotton or other commodities in open market; the commodities so purchased may be taken off the market and held until such time as the board may deem advisable to sell the commodity, therefore keeping this product from being forced upon a market that is already congested, stabilizing the marketing of the given product which in my judgment is much needed by the farmers of our country because the farmer himself is not financially able to withhold a given commodity from sale when he needs the proceeds thereof to liquidate his debts.

SURPLUS

It is admitted by all who have given this subject study that the main proposition that gives the farmer worry is the surplus of the commodity that he raises, in other words, the farmer raises more of a given product, for instance, cotton, than is consumed in domestic markets; as heretofore stated 65 per cent of the cotton raised by the American farmer is exported. Under our present system of marketing, the price we receive for our cotton is governed by the world market. The agency created under the terms of this bill has the power to go out in the open market and purchase cotton, and in my judgment they would not have to purchase very much cotton before the buyers of cotton in this Nation, as well as other nations, would realize that the Government of the United States is making an earnest effort to stabilize the price of cotton, and the effect would, therefore, be that cotton would naturally be sold at a price of cost of production plus a reasonable profit. Why not let this Government take a leading hand in helping the farmer, for since Alexander Hamilton to the present time this Government has been helping industry even in a more direct manner.

SPECULATION

It is admitted by all those really interested in helping the farmer that there are too many parasites engaged in speculation and manipulation of prices of the products of the farmer. A friend of mine told me that he knew one individual in his town who made $30,000 in one season in manipulation of the cotton market alone. The only assets this individual had were a fountain pen, a Ford car, and, of course, unbounded nerve. If this bill becomes a law, such individuals as this, in my judgment, will not last long in competition with the organized farmers under this bill, assisted by the Federal Government itself. For a long time I have longed to see some power or agency that would put these nefarious manipulators out of business.

EQUALIZATION FEE

There will be an effort made to eliminate the equalization fee from this bill. I intend to vote for the bill with the equalization fee in it; however, if the equalization fee is stricken from the bill I will support it anyway. This board has the right to put this equalization fee on any given commodity when the board deems it advisable to do so. This fee is collected from the producer and is used for the purpose of helping the farmer in the manner of accumulating a fund for his benefit and his alone.

VETO

It is urged by those who are opposed to this bill that the President will veto the bill. Let each Member of Congress realize that if this bill does not become a law the Congress itself will be to blame, for it has, under the Constitution of the United States, the right and the power to pass this or any other bill over the veto of the President, provided we can secure two-thirds of the Members to vote for said bill. Frankly, I think the President will veto this bill. I have the very highest regard for the President of the United States personally, but judging from the manner in which he has considered measures in the past tending to help the ordinary man in life, I can hardly expect this bill or a bill of similar import to meet with his approval. There are many Members of Congress upon the Republican side, including the chairman of the Agricultural Committee, actively supporting this bill, but the Republican President belongs to the reactionary or stand-pat Republican régime, and, of course, is not naturally in sympathy with a bill tending to help the rank and file of the American people. My hope is that the Congress will pass this bill over the veto of the President; I say hope; I really do not know whether there will be enough brave souls on the Republican side to pass the bill over the veto of the President. Let it be remembered that a greater per cent of the Democrats of the last Congress voted for the McNary-Haugen bill than were to be found on the Republican side.

As I view conditions before the American Congress to-day I can not refrain from longing for and looking for a real Andrew Jackson as a leader, who will come forward as an advocate of the masses to lead the Democratic Party, together with the progressive element of the Republican Party, to a victory where the American people will again have and have a right to have the utmost confidence in their Government; where the strong will not oppress the weak, where might will not intimidate right, and where the great numbers are working together in unison for the common good of all.

Mr. ARNOLD. Mr. Speaker, if we do not settle the agricultural problem during this Congress, and settle it right, it will rise to haunt us at every recurring Congress. This is a question that will not down until the agricultural interests of the country are placed on a parity with trade and industry, so far as legislation can accomplish that purpose. We had just as well disabuse our minds of the thought, if any such thought lingers, that we can have a well-balanced prosperity between agriculture, trade, and industry under existing laws. We had just as well disabuse our minds of the further thought that we can have nation-wide prosperity with more than one-third of our people laboring under the handicap of the depressing influences of world competition, while trade and industry enjoy a status free from the depressing influences of world competition.

Through a period of years there has grown up in this country what is commonly spoken of as an "American standard," a standard that is on a higher plane generally than that prevailing in foreign countries. This standard applies to living conditions, price conditions, and wage conditions. I am not quarreling with this differential. I think American industry, American labor, American activities in every form of human endeavor are entitled to the best. The best is none too good for any citizen claiming protection within the folds of the American flag. What I do object to is that those engaged in agricultural pursuits have not been taken in on the deal and given a distinct American standard along with other specially favored activities.

I am a strong believer in the old Jeffersonian doctrine of "Equal rights to all; special privileges to none." Had we adopted that doctrine and adhered to it as our rule and guide, agriculture would not be in the distressed condition it is in to-day. That agriculture is in a distressed condition but few will deny. Mounting prices on the things the farmer has to buy for use on the farm, increased tax burdens, and the cost of living sky-rocketed, demoralization in land values and mortgages multiplying make the lot of the American farmer to-day extremely hard.

The migration from the farm to the cities at the rate of 3,000 or more per day is alarming. This fact alone shows something materially wrong. Something must be done to check this influx into our industrial centers. Unless it is checked a reaction will set in—and indications are now apparent that it has already set in—that will bring about a more unfortunate condition than we have yet experienced in this country. The best way to check this exodus from the farm to the city, in fact, the necessary way is to relieve the farmer from the handicap under which he has been laboring and bring about a state of affairs whereby opportunities on the farm will be more attractive. Our country is growing top-heavy industrially. That growth has been due largely to the special privileges granted the industrial interests of the country through legislation in their behalf.

To give special privileges to some is to deny equal rights to others. To give special privileges to none or to give special privileges to all in a like degree is to give equal rights to all. But that is the very thing the specially favored interests oppose. They know that special privileges to all alike is equivalent to special privileges to none. As long as the industrial interests of the country can purchase their raw products and food supplies under the dominating and domineering and depressing influences of open competition in the world markets and sell their output in a highly protected American market,

uninfluenced by world markets, they have an advantage with which they are loath to part, and are fighting and will continue to fight to the end to maintain that advantage.

This is a selfish viewpoint prompted by selfish interest alone. In the end it will prove a boomerang and return to smite its benefactors. All we are asking for agriculture is that it be treated as fairly as other interests have been treated. It is entitled to it and the farmers of the country will fight to accomplish that end and will be satisfied with nothing short of equal privilege. If this Congress, or this administration, does not treat agriculture with the same consideration other activities are shown, the fight will go on through the years until its purpose has been accomplished. The agricultural interests of the country are determined to get its just deserts, and I for one expect to go along with the real friends of agriculture and fight it out to a final conclusion.

By friends of agriculture I mean those who are sincerely and earnestly interested in agricultural relief, not those who proclaim it in public places only. It is no time for surrender, it is no time for acceptance of substitutes that will be a measure of relief in part only. The agricultural interests of the country are aroused as never before and are determined that legislation be enacted that will have the effect of placing this great industry on a plane of equal opportunity so far as legislation to that end can bring about this condition.

I am unable to understand the philosophy of those opposing effective remedial legislation in the interest of this great basic industry. They are or should be interested in seeing the purchasing power of the Nation increased. It means a greater outlet for their factories and their mines; it means greater opportunities for labor; it means a more rapid turnover in their products; it means a clearing out of the warehouses and a more speedy rotation of goods on the shelf; it means an accelerated circulation of money and money's equivalent; it means contentment, prosperity, and happiness throughout the land, not sectionally but nationally.

A nation can not be prosperous unless that prosperity is coextensive with its domain and reaches and affects all classes within its domain. A happy, contented people is the greatest asset of a nation. Happy, contented people will fight for their country against internal as well as foreign foes. Happiness and contentment are the greatest guaranty against anarchy and Bolshevism. What we are pleading for is equal opportunity for agriculture in the great field of human endeavor. Agriculture asks nothing for itself that it is not willing to concede to others. We do not ask subsidy of the Government; we ask equal opportunity. Give the agricultural interests of the country an equal opportunity and it will take care of itself. Keep it in the position it has so long been in—unequal opportunity—and it is bound to continue to retrograde and in its wake will follow greater discontentment, unhappiness, and demoralization reaching throughout the whole realm of the nation.

We must have a well-balanced prosperity if we are to have a happy, prosperous nation, if we are to have a contented people. Some people urge that inasmuch as Congress has heretofore placed a tariff on agricultural imports we have given agriculture the same advantage that we have given industry. Such people lose sight of the basic difference between agriculture and industry. They lose sight of the fact that the farmer can not control his output as the manufacturer can; they lose sight of the fact that the elements of nature, storm, and drought, insect and pest, are beyond the control of man, and these elements are the dominating influences in his inability to control his output. That the tariff alone will not restore agriculture is beyond question.

Tariffs benefit the producer of no commodity the price of which is dominated by competition in the world markets. What we want is a distinct American price for our agricultural commodities as the products of our factories enjoy on their output. Tariffs stay the hand of foreign competition on the output of the factories, tariffs can not stay the ravaging hand of foreign competition on the output of the farm. As we produce a surplus of agricultural commodities, under existing conditions, the price of the surplus sold abroad determines the price of the commodity not only sold abroad but on that part sold and consumed at home.

Not so with the output of the factory. Then why not give the products of the farmer the same degree of protection that tariff duties give the output of the factory? Give us a market for the output of the farm freed from the domination of world competition, as the tariff gives a market for the output of the factory freed from the domination of world competition, and agriculture will be content. It asks nothing more, nothing less than an equal opportunity in the field of human endeavor.

A direct tariff can not operate to this effect on agricultural products. The bill we have under consideration, after many years of thought and study by those who have made the agricultural problem a distinct study, is presented for our consideration in this Congress. It is the only plan that human ingenuity has yet been able to devise that will give to agriculture the same benefit that a tariff gives the manufacturer. It does not seek, nor ask, nor demand from the Government a subsidy. It simply provides the machinery, the vehicle, upon which the farmers of the country may move along and keep step with other activities.

The bill under consideration is more than a surplus control bill. The object sought to be attained as to agricultural commodities is well set forth in the declaration of policy stated in section 1 of the bill, as follows:

> To provide for the control and disposition of surpluses of such commodities, to preserve advantageous domestic markets for such commodities, to prevent such surpluses from unduly depressing the price obtained for such commodities and from causing undue and excessive fluctuations in the markets of such commodities, to minimize speculation and waste in marketing such commodities, and to further the organization of the producers of such commodities into cooperative associations.

Any legislation that fails to place agriculture on an equality with the industrial interests of the country falls short of the mark of effective relief. To place agriculture on an equality with the industrial interests of the country it is necessary to deal with the surplus. That is fundamental. The bill before us is the only one presented dealing with this basic requisite. Other bills have been presented dealing with certain phases of the agricultural industry which will offer some measure of relief, but they do not reach the vital spot, the real source of the farmers' ills. They are mere antidotes designed to alleviate the trouble, not to eradicate it.

Trade and industry have been propped up by special legislation. To put agriculture on an equality with trade and industry, we must either put props under agriculture or remove the props from trade and industry to put all on a level of opportunity and treat the agricultural interests of the country fairly. One or the other must sooner or later be done.

It is argued the principles of the bill are unworkable, unscientific, and unsound, that it is unconstitutional. These are stock arguments urged by special interests that have been thriving at the expense of the farmers of the country, a smoke screen designed to conceal the true motives of the opposition. It is no more unscientific and unsound in principle than a tariff system designed to protect American industries from competition from abroad. It is no more unscientific and unsound than an immigration law designed to protect American labor from cheap foreign labor. It is no more unscientific and unsound than an authorization to the Interstate Commerce Commission to fix freight and passenger rates at a level to give a return to the railroads of the country of 5½ per cent on their valuation. It is no more unscientific and unsound than a law that puts the United States Government back of the Federal reserve banking system of the country and gives it a most commanding influence over the finances of the country. Other enactments might be cited equally as vulnerable to the unscientific and unsound charge.

Special legislation in other activities has stood the test of constitutionality and has accomplished the purpose sought when placed upon the statute books. They say it is unconstitutional to delegate the power to the farm board to collect a service charge on farm commodities entering the channels of trade to make the plan self-sustaining and independent and relieve the Federal Treasury of contributing other than through the revolving-loan fund provided. Yet the Supreme Court recently approved the law which delegates the power to the President of the United States to raise or lower tariff rates at his discretion. The equalization fee is not a tax levied for the purpose of revenue, but is a service charge levied on the farm commodities in the channels of trade when an operating period has been declared for the specific benefit of the commodity affected.

This is an experiment in legislation to be sure. All legislation is more or less experimental and especially so when new principles are involved. The object sought by this bill is the same object sought by the protective tariff policy; that is, to protect the agricultural interests of the country as the tariff protects the manufacturers from foreign domination. The bill may not accomplish the desired result. It is to be hoped it will. Men well versed who have made a most thorough study of the principles of the bill say it will be effective; that it is practicable and will accomplish the desired result. We ought to give it a trial. We should not stand idly by and permit the agricultural interests of the country to suffer greater injury if we can prevent further demoralization. It is the best plan so far offered that goes to the real gist of the farmers' troubles.

It is the only plan so far offered that will have the effect, if workable, of placing agriculture on an equality with trade and industry.

If it needs corrections in some of its provisions, experience will point out the necessity for change. Future Congresses will be here to make the necessary changes or amendments experience demonstrates necessary. The test of experience alone will tell the story of success or failure. We can not have the test of experience without legislation which will make possible the experience. It should be given a fair, honest trial.

The power vested in the farm board provided by the bill is a vast power to be sure. If the farm board selected is not in full accord and sympathy with the true intent and purpose of the bill, or if it is antagonistic to its provisions, the plan will prove a failure. It must be administered by its friends. The men composing the board must be honest and conscientious men of good judgment and true to the cause of agriculture, and who will apply these principles in their official acts.

Mr. EVANS of Montana. Mr. Speaker, for the third time in three years we are seriously considering a bill for the relief of agriculture. No one longer doubts that we have an agricultural problem.

A year ago the President said in his veto of the McNary-Haugen bill:

> That there is a real and vital agricultural problem is keenly appreciated by all informed men. The evidence is all too convincing that agriculture has not been receiving its fair share of the national income since the war. Farmers and business men directly dependent upon agriculture have suffered and in many cases still suffer from conditions beyond their control. They are entitled to and will have every consideration at the hands of the Government.

The United States Chamber of Commerce, representing the great commercial and industrial interests of the country, recently published its conclusion on the subject and said, in part:

> The evidence is clear that American agriculture has undergone a prolonged and trying readjustment to postwar conditions, in the course of which those engaged in it have suffered seriously in their relative economic prosperity in comparison with those engaged in other fields. On the human side it has been deprived of the energy, experience, and knowledge of many thousands of farmers who have lost their resources and have been persuaded or compelled to leave the farm for other occupations, while the land resources of the Nation have been impaired by neglect and by wasteful exploitation under the pressure to which those who have remained in the business have been subjected.

Thinking men everywhere agree that we are confronted with the problem, and it is the duty of this Congress to try and meet it. The bill under consideration is the culmination of a long period of evolution, and, in my judgment, represents an economically sound and workable plan, which, if enacted into law, will result in placing our greatest American business—agriculture—upon an equality with industry and labor and thus establish and maintain a well-balanced permanent prosperity throughout the country that will not only insure the happiness of all our people but will be the means of preserving our free institutions as well.

In less than eight years farm values, including land, improvements, livestock, and equipment, have decreased more than $20,000,000,000, estimated by some to be thirty billion, while industrial, financial, and transportation values have increased more than $50,000,000,000 during the same period of time. Since the war 3,000,000 acres of land have been abandoned, and annually more than 2,000,000 farm people have left the farms and drifted into the cities. Why have these people left the farms? In view of the situation how could they have done otherwise? Hundreds of thousands have lost their homes through foreclosures, there being an average of 170,000 such foreclosures annually. Farm mortgages have mounted from three and one-half billion dollars in 1910 to twelve and one-quarter billion dollars in 1928.

I grant that some sections of the country have enjoyed prosperity in recent years, especially industrial and financial centers, but unfortunately that prosperity has not been shared by the farmers. As further evidence of that, permit me to call your attention to the fact that of the more than 4,000 bank failures which have occurred in this country since the war, more than 95 per cent have been in the rural communities.

Although bank deposits have increased from $21,000,000,000 in 1914 to $57,000,000,000 in 1928, and the American farmers have been struggling to secure an income each year that would be sufficient to pay operating expenses, to pay their interest on an increasing indebtedness, to pay their rapidly increasing taxes, and have something left with which to clothe and feed themselves and the other members of their families, there are those who maintain that the economic situation is becoming more favorable to agriculture and that the farmers will soon be enjoying their fair share of the economic income of the Nation. I wish that that were true, but, unfortunately, the facts do not so indicate. If that is true, then why is it that, according to reports of the Department of Agriculture, the farmers' income of 1927 was 20 per cent less than in 1926? If that is true, then why is it that there were more bank failures in 1927 than during any year previous to that in the history of this country? And remember, as I have already stated, that 95 per cent of those failures were in rural communities. Furthermore, how can the farmers be prosperous in view of the comparatively small income that they are now receiving? According to the 1926 Agricultural Yearbook, issued by the Department of Agriculture, the total value of farm products has dropped from fifteen billions in 1919 to eight billions in 1926, a reduction of 43 per cent; and since the income of the farmers in 1927 was 20 per cent less than in 1926, the total income for last year was less than one-half of the income of 1919. Again, according to the same report, in 1925 there were 6,371,640 farms that were being operated. These farms had an average valuation of $9,000 and average income for that year of $1,200. After deducting interest on the investment less than $700 remained with which to pay taxes, to pay the cost of the upkeep and equipment, and to meet the living expenses of the family.

The bill declares it to be the policy of the Congress to promote the orderly marketing of agricultural commodities; to provide for the control and disposition of surplus; to preserve advantageous domestic markets; to prevent undue and excessive fluctuations in the markets; to minimize speculation and waste in marketing; and to further the organization of producers of such commodities into cooperative associations. Certainly, these objects are most laudable, and if carried out in any measurable degree will tend toward a general uplift of our great basic industry. It has been stated that the farmers have failed to properly organize, and I grant that to a certain extent is true. However, I fear that some of those who offer that criticism may have had little or no experience in the effort to secure effective and desirable organizations among farmers, and for that reason are not familiar with the difficulties to be encountered. In the first place, the farmer by training, experience, environment, and the peculiar type of his particular vocation, is an individualist. He is not inclined to surrender to collective management any part of that which he has previously directed in person. Besides, he has experienced so many difficulties, and often failures, in his effort to secure proper organization that he has become discouraged to a certain extent. Even so, the farmers have striven, although with only limited success, to effect through organization and the use of cooperative methods a solution of their problems. But the present situation, as I view it, is not primarily the result of what the farmers have done or may have failed to do, but is very largely due to forces beyond their control.

We have been passing through a period of readjustment, during which industrialization has been taking place. Industries that are representative of great wealth have become organized along the lines of mass effort and control. On every hand efforts have been put forth and are still being put forth to secure the benefits and advantages that can be enjoyed through combination and cooperative effort. That is true of the manufacturing industries, of the large banking institutions, of certain distributing and merchandising establishments, of the railroads, of organized labor, and to a greater or less degree of other activities as well. With this trend the farmers have been unable to keep pace, but their failure is not due so much to the lack of effort on their part as to the fact that they have been denied opportunities and privileges which others have enjoyed. In other words, by law we have extended aid to other industries but have denied similar aid to the farmers. If the farmers were given a fair field in which to operate and were given an equal chance with all others, they would in time effect a solution of their problem; but denied that measure of justice, we can not hope or expect that they will succeed to the degree that they deserve.

For 50 years the legislation has discriminated against agriculture in this country. It is a well-known fact, conceded on every hand, that the protective tariff has enabled the manufacturers of this country to raise the price of their product to the American consumers and to realize great profits as a result thereof. Legislation did that. It is equally well known that the "guaranty provision" of the transportation act enacted after the war resulted in the direct payment of more than $500,000,000 by the Government to the railroads and a further guarantee, in pursuance of which the Interstate Commerce Commission has maintained rates that have been remunerative to the railroads. Legislation did that.

Much as the Federal reserve system was fought by some of the leading bankers and certain other big financial interests of this country at the time of its enactment, it has proved a boon to the banking industry, especially to the larger banks and other large financial institutions of the Nation. Legislation did that. It is everywhere recognized that the Adamson law, in providing shorter hours and more favorable working conditions, and the immigration bill, in limiting the admission of immigrant labor that would compete with American labor, has greatly benefited organized labor. As a result, American labor is enjoying a higher standard of living, to which it is justly entitled. Legislation did that. Legislation has very materially aided each of these and many others that I might mention, and yet we are told that the Congress can not legislate prosperity for any class, group, or interest. The farmers are not asking for special privilege or for subsidy; they are simply demanding that the special privileges and subsidies that are granted other industries shall not be permitted to operate unfairly against their own progress and prosperity.

In other words, by law we have placed these other interests upon a higher economic level where they are permitted to operate in a protected and privileged field. If the farmers could limit their production to the actual demands of home consumption, or if through cooperative effort they could control, withhold from sale, or market in an orderly manner their surplus, they, too, could enjoy similar protection and the same advantages now enjoyed by others. In the absence of such conditions, however, the farmers have been forced to sell their products, in most instances in an open market in competition with the world, where the price received for the surplus has decided the price to be received for the entire commodity. That is, with all other American consumers the farmers have bought in a closed and protected market, and have been forced to sell in an open and unprotected market. What has been the result of that policy? It has resulted in bankruptcy and financial ruin for many and has seriously reduced the purchasing power of all American farmers.

Sooner or later one of two courses must be pursued—either the tariff must be reduced and the prices of manufactured articles brought to a lower level or by legislation raise the prices of agricultural products to the level now enjoyed by protected articles. Since there seems to be no apparent disposition on the part of the Congress to employ the former method, it is to be hoped that, in an earnest endeavor to work out a solution of the farm problem, the pending measure will be passed and approved so that the farmers of the Nation may receive the benefits to be gained thereby and the relief too long delayed already.

This measure, if enacted into law, will enable the American farmers to secure the benefit of the tariff on farm products, a benefit generally not realized at the present time. Then the farmers will be permitted to sell in a closed market all except that smaller per cent of their commodity which must then, as now, be sold in foreign markets. However, since only about 10 per cent of the agricultural products produced in this country are sold in foreign markets, the benefits to be realized from the operation of this law, if enacted, will be very great. The farmers are not asking for a subsidy and this bill does not provide for one. Through the equalization fee the farmers will be able to finance their own operations and to achieve what they have so long desired and have so long strived to secure, a marketing machine that will permit of the orderly merchandising of their products.

Mr. CANFIELD. Mr. Speaker, ladies, and gentlemen, to those of us who are really interested in seeing that helpful legislation is passed for the farmers during this session of Congress, we are indeed glad that the Agricultural Committee has finally reported a bill and we are at last permitted to take it up here on the floor for consideration.

I feel that this is the most important legislation that can be taken up during this session of Congress, and why it was necessary to delay it until this late date I can not understand. Everyone knows that the farmers of the country are entitled to consideration, and everyone knows that there was no reason for this delay, as farm legislation is one of the first questions that should have been considered during this session of Congress.

The farm question is one that has been discussed and cussed by more of the citizens of this country than any one question that has ever been taken up for consideration by this body, and with it all everyone must agree that something must be done for our farmers, and that without delay.

The bill that has been reported by the committee is not entirely to my liking, but I have found out during my stay here in Congress that it is seldom possible for us to have bills reported on this floor that are just as we would like to have them, and I trust that it will be possible to amend the bill here on the floor.

This bill, as I understand it, proposes two distinct remedies, first, loans to cooperative associations at a very low rate of interest, and second, if the first remedy fails to accomplish the purposes desired, the making of a marketing agreement, with the understanding that the cost and losses on transactions authorized under this agreement would be paid by the producers that receive the direct benefit. Both of these methods have for their purpose orderly marketing and making the present tariff effective, and this we will all agree is not possible at the present time.

This bill instead of enumerating certain commodities makes no distinction among agricultural commodities, but lays down certain rules by which the board is to be guided in determining to what commodities the provisions of the bill are to be applied at any time. Under this bill rules are laid down under which any agricultural commodity can be given relief if the board, in its judgment, feels that it is entitled to help under this legislation.

Under this bill, as I understand it, cooperative clearing houses and terminal marketing associations are to be established that will be for the purpose of stabilizing the movement in commerce of agricultural commodities.

Under this bill the tremendous spread between the producers and consumer should be cut down and a nation-wide marketing control system can be established which would insure a larger return to our farmers and not raise the price to consumers.

In my opinion "farm commodity marketing" should be placed on a nation-wide basis. Marketing of farm products should be controlled by the farmers themselves, and under this bill this plan can be worked out if the right kind of men are selected to take charge of the system that will be put into operation when this legislation becomes a law.

Under this bill the liability of the United States Government is limited to the amount available in the revolving fund and the stabilization funds, and if for any reason the plans stipulated under this bill should fail to work as they are expected to work, there will be no additional liability to the United States, as the liability is limited to amounts available in the funds for which the bill makes provision.

Personally, I feel that the amendments suggested Thursday by the gentleman from Kentucky [Mr. KINCHELOE] should be adopted. As I understand it, his amendments are in part as follows:

Recommendations for the guidance of the President in appointing the original and each succeeding member of the board from any Federal land-bank district may be made by bona fide farm organizations and cooperative associations in such district as herein provided. Within 30 days after the approval of this act and thereafter not later than 30 days after the occurrence of a vacancy in the office of the member of the board from such district, the Secretary of Agriculture shall (1) fix the date and place of a convention of representatives of bona fide farm organizations and cooperative associations to be held in such district, (2) designate and notify the farm organizations and cooperative associations in such district eligible to participate in such convention, and (3) prescribe rules and regulations for the procedure at the convention, including the basis of representation of such farm organizations and cooperative associations. Such convention shall meet upon the date and at the place so fixed and agree upon and recommend to the President a list of not more than three individuals from such district for appointment to the board.

No individual shall be eligible for appointment to the advisory council for any commodity unless he resides in a region in which the commodity is principally grown and is a producer of the commodity or is interested in and truly representative of agriculture.

No marketing period under section 9 in respect of any agricultural commodity shall be commenced or terminated unless the advisory council for such commodity concurs in the respective finding or findings which the board is required to make prior to the commencement or termination of the marketing period. No equalization fee shall be collected unless the estimates upon which the determination of the amount of the equalization fee is based are concurred in by the advisory council for the commodity.

If these amendments are adopted, and I hope they will be, the farm organizations will have the right to submit to the President three names from each Federal land-bank district in the United States for appointment and in that way the President can, if he chooses, select men that are satisfactory to the farm organizations themselves.

No one should be eligible for appointment to the advisory council for any commodity unless he resides in the district in which the commodity is principally grown and this will be taken care of by one of the amendments suggested by Mr. KINCHELOE.

The amendment that should be adopted without fail is the one that provides that the board in Washington shall not have the right or power to declare an operating period on any commodity or terminate that period unless the advisory council for such commodity agrees with the board that it shall be done.

The advisory council will be made up of men who should know when an operating period ought to be declared on a commodity, as these men will be men chosen and appointed on the recommendation of the farmers who raise the commodity. The members of the advisory council can and will always safeguard the interests of the farmers, and as was stated by Mr. KINCHELOE—

> Be the mouthpiece between the farmers, the raisers of the product, and the board that sits here in Washington.

I hope that these amendments will be accepted by the committee for I feel that they will make the proposed bill a much better bill and when it becomes a law will make it so those that are in need of consideration will get it when this legislation is put into effect.

Mr. Speaker and gentlemen, the lack of balance between industry and agriculture is growing more apparent each year and something must be done to stop this continual increase of inequality. This bill may not accomplish everything that it is desired that it should accomplish, but it will be a start in the right direction. No major legislation has ever been passed by Congress that was perfect. No legislation has ever done everything that it was intended it should do; even the Constitution of the United States had to be amended; so has every piece of important legislation had to be amended and I do not doubt but what this legislation will have to be amended, possibly many times, before it will do everything that should be done for the farmers; but gentlemen, that is no reason why this legislation should not be passed, for something must be done to help the "equality for agriculture."

The attention of the Members of the House has been called to the conditions of agriculture many times. Every Member of Congress from agriculture sections realizes that something must be done and that without delay. Business interests and labor interests through their organizations have been given the legislation they have asked for. They have been given legislation that has been helpful to them, legislation that in many cases has helped to bring on the present depressed condition of our farmers. Now, our farmers, through their organizations, are asking for legislation that they think will help solve their problems. They are asking that the legislation we are now considering be passed, and in all fairness to the farmers of the country I feel it is the duty of every Member of this body to vote for this bill. Give them the legislation they feel will solve their problems.

I know it has been said here on the floor that this bill should not be passed because the President will veto it. That to me is a very poor reason to give for not voting for this bill. It is our duty as Representatives of the people that have put confidence in us by sending us here as their Representatives to do our duty toward all the people in our country, and right now, everyone knows, it is our duty to pass legislation that will be helpful to our farmers; and if the President in his wisdom feels it is his duty to veto this legislation and thereby deprive the depressed farmers of the country from a just compensation for their labors, that should never be given as a reason why we should not do what we can to see that the farmers are given justice.

The reestablishment of a sound agricultural condition requires stabilization. Yes; it requires the legislation that was promised to our farmers by both political parties in 1924.

In the Democratic platform adopted at New York we find the following:

> We pledge ourselves to stimulate by every proper Government activity the progress of the cooperative-marketing movement and the establishment of an export marketing corporation or commission in order that the exportable surplus may not establish the price of the whole crop.

In the Republican platform adopted at Cleveland, we read as follows:

> In dealing with agriculture the Republican Party recognizes that we are faced with a fundamental national problem, and that the prosperity and welfare of the Nation as a whole is dependent upon the prosperity and welfare of our agricultural population. We recognize that agricultural activities are still struggling with adverse conditions that have brought deep distress. We pledge the party to take whatever steps are necessary to bring back a balanced condition between agriculture, industry, and labor. The Republican Party pledges itself to the development and enactment of measures which will place the agricultural interests of America on a basis of economic equality with other industry to insure its prosperity and success.

The Republican Party was successful at the election in 1924. Yes; and it has had complete control of both Houses of Congress since March 4, 1919, and complete control of all branches of our Government—the House, Senate, President, and Cabinet—since March 4, 1921, and if it had kept its pledge to the farmers of our country the deplorable condition of agriculture would have been taken care of long ago.

Many Representatives and Senators of both parties, that come from agricultural States, have worked hard to carry out the pledges made in 1924, but a majority of the party leaders in the party that is held responsible for legislation through the majority they have in both branches of Congress have made no effort to fulfill the promise made in their 1924 platform, and many of them have done everything they could in opposition to farm legislation. In addition to this the President, who was elected on the same platform, nullified by a veto the act of Congress for agriculture, therefore the responsibility for failure to secure agricultural legislation must rest with the party in power.

Gentlemen, if there is a promise that has ever been made that should be fulfilled, it is the one made to the farmers of our country, and while they have not been given relief up to this time there is no reason why it can not be done now by putting them in position to handle their commodities in a businesslike way, the same as it is handled by large institutions that are successful and able to do a profitable business by working together and making it possible to control their surplus product so that the surplus will not determine the price of their product.

This legislation has the indorsement of practically all of the leading farm organizations in the country. They say it is the legislation they want. They feel that it will help solve their problems. Why not give it to them?

As I have stated before, at the present time the balance between agriculture and industry is out of all reason. The permanent well-being of the future is threatened. Legislation that will be helpful to the farmers must be passed. Something must be done that will bring agriculture up to the high standard given to others. As it now stands the farmer is the victim of injustice, and that injustice must be removed.

With farm conditions as they are at the present time, the purchasing power of our farmer has been cut off; he is not in position to buy the things he needs in his home or on his farm. This is already being felt by both business men and labor, and to-day, according to reports given us, there are 4,000,000 laboring men out of employment and 4,000,000 more only working part time. Business men, especially in agricultural sections, are unable to make expenses, and business organizations, both manufacturers and retailers, as well as banks, are going broke. And why? Because the farmer has not been given helpful legislation that would make the purchasing power of his dollar equal in value to the purchasing power of others who have been given helpful legislation in the past.

These conditions must not be allowed to continue. To oppose farm legislation just because you can not get exactly the kind of legislation you want is not only detrimental to our farmers but likewise harmful to general business conditions throughout the country, for business conditions can not improve with the buying power of one-third of our population cut off, and with these facts confronting us I feel it is the duty of every member of this body to see that justice is given to our farmers by voting for this legislation.

Mr. Speaker and gentlemen, I supported what was known as the Haugen agricultural relief bill in the Sixty-eighth and Sixty-ninth Congresses and shall support the pending legislation for farm relief, because I believe it will help the farmers of the country and thereby make it possible for them to receive a price for their products that will put them on an equality with others that have in the past been given consideration; not only that, I also firmly believe that when our farmers are put on an equality with others, then, and not until then, will business conditions be improved. For this reason, if for no other, those of you who represent industrial sections, that have voted against farm legislation in the past, should join those of us who represent and are deeply interested in the cause of our farmers by helping us pass this all-important legislation.

Mr. COX. Mr. Speaker, the conditions prevailing in agriculture which recently have been so forcibly brought to the attention of the American people demand that some reasonable and constructive legislation be enacted in behalf of those citizens of the Republic who because of the nature of their vocation are alone unable to combat the hazards incident thereto.

Agriculture, the basic industry of America, is suffering from economic distress such as has never attended the other indus-

tries of the country, or which a considerate and benign Government has long since corrected. Of all the major industries of the Nation agriculture, upon which the wealth of the Nation was primarily established, has been permitted to suffer under the doctrine of laissez faire while every other industry has been at some time the beneficiary of governmental protection and care.

The farmer has even been the victim of a system by which he must pay as an ultimate consumer a price which he can not affect by competition, while at the same time he is a producer without control over the price he is to receive for his products. Of all producers he is perhaps the only one unable to establish a price for his product based upon the cost of production.

The manufacturer bases the cost of his commodities upon the cost of production plus a margin of profit commensurate with the capitalization and the technique and the hazard involved. Our public utilities generally are permitted to base the charge for their services upon such a sum as will yield a profit of at least 6 per cent upon the capital invested. Unionized labor not only fixes the compensation which it is to receive for its services, but stipulates as well the number of hours of its working day and the number of days of its working week. It limits by rather stringent regulation the number of persons who may enter its ranks and the period of preparation which they must serve before they may compete on a qualified basis.

The farmer is poorly paid in actual or real wages, and the return upon his invested capital has declined to the vanishing point. Although the national income is at the present larger than ever before, the farmers of America are bankrupt, their mortgages are being foreclosed, their land values have depreciated, and they have in thousands of instances either abandoned their farms for debt or permitted them to be sold for taxes.

Since 1913 the farm debt of record has increased from four to fourteen billion dollars, farm taxes have increased more than 200 per cent, and all the overhead costs of farm operation, maintenance, and so forth, have risen, while the purchasing power of the farmer's dollar has shrunken by a third.

The disparity between urban and farm incomes has but emphasized the disparity in the standards of living in rural and urban populations, and the farmers of America find themselves suffering from a prolonged and inexorable deflation of their economic expectations, their standards of living, and their social status.

Particularly since the war prices of farm products have persisted in an uneconomic and unfavorable adjustment to the general price level, and the farmer finds himself unable to occupy his proper place in our economic scheme. He is at the mercy of all the inequalities of our economic system, or of the forces of nature, over which he has no control, or of both.

Agriculture suffers at present from the accumulative ills not only of constant and prolonged neglect, but of the development legislatively of an economic system from which it has been rigidly excluded. Agriculture suffers from haphazard development, uncontrolled production, and disorderly marketing. The situation is perhaps best presented by the following abstract from the report of the business men's commission on agriculture:

> The evidence is clear that American agriculture has undergone a prolonged and trying readjustment to postwar conditions, in the course of which those engaged in it have suffered seriously in their relative economic prosperity in comparison with those engaged in other fields. On the human side it has been deprived of the energy, experience, and knowledge of many thousands of farmers who have lost their resources and have been persuaded or compelled to leave the farm for other occupations, while the land resources of the Nation have been impaired by neglect and by wasteful exploitation under the pressure to which those who have remained in the business have been subjected.

AGRICULTURE A NATIONAL PROBLEM

That agriculture is a matter of national concern worthy of engaging the best thought of the Nation and calling for deliberate and far-sighted national policy has long since been conceded. American agriculture has unsuccessfully undergone a prolonged and trying attempt at readjustment to the constantly changing economic status of the Nation, and finds itself to-day unable longer to cope with the forces arrayed against it.

The welfare of America is inseparably connected with the welfare of agriculture, and committed to a national policy of conservation as we are, it is as sound doctrine for us to prevent a squandering of our agricultural resources as those of any other character. Prolonged depression in any industry, and especially in an industry of the size of agriculture, can not but have a disastrous effect upon the general prosperity of the Nation. Agriculture is not receiving a just or an equitable part of the national income. Although comprising approximately 30 per cent of the total population, the farmer is so poorly organized that the more highly organized groups find him ineffective in his bargaining power. In an average year he receives but $10,000,000,000 for products for which consumers pay $30,000,000,000. To accuse him of personal inefficiency is but to ignore the fact that as the farmer abandons the farm to find his place in the industrial life of the Nation he has been inevitably successful. Indictment under such circumstances can not lie against the personnel of the industry, but must lie against the industry itself. Industry has become effective in part because of its carefully planned development, whereas many of the ills of agriculture may be attributed to a haphazard and uncoordinated development.

Secretary Jardine says—

> the problem of agriculture is one of coordinating production. To a large extent each of 6,500,000 farmers produces without reference to the plans of his neighbors and without a consideration of factors which may be instrumental in determining whether he produces at a profit or loss.

When the United States produced an 18,000,000-bale cotton crop, and cotton fell to 10 cents a pound on the North Carolina farms, the North Carolina State College published a bulletin containing this significant language:

> The present distress is not due to any appreciable extent to increased production of cotton in North Carolina. While there has been an increase in acreage coupled with an increased production per acre, yet the main factor in the large crops of both 1925 and 1926 is the fact that during the last five years Texas and Oklahoma have put into cotton more than 10,000,000 acres of land that was formerly devoted to grazing and other purposes. This is approximately five times the total acreage devoted to cotton in North Carolina. Another factor which should be taken into consideration is that it is conservatively estimated that an additional 10,000,000 acres of land in Texas and Oklahoma can be cultivated in cotton at a decidedly less production cost per acre than is the case in this State.

It is absolutely impossible for farmers, numerous as they are, distributed widely over the national domains, engaged in the various types of agriculture and subject to conditions so diversified and varied as to climate, markets, and other economic conditions to come together like the units of industry. The organization of oil and steel has proved feasible in part because of the presence of a common denominator of laboratory method and control. Agriculture, when represented in the great financial marts of the world derives no benefit for the industry itself but creates one for those who profit from the industry to their own advantage. Because of better organization and of a stronger economic position than agriculture, industry even without governmental aid would have experienced a degree of prosperity to which agriculture could not hope to attain. But agriculture asks for no preferred economic position. It does demand, however, an equal opportunity with industry and labor to be protected in its domestic markets, and to be able to meet world competition under equivalent protection in order that it may not suffer economic slavery.

The accepted doctrine in America to-day is that a service is worthy of its hire. As already indicated this doctrine has been accepted as regards our railroads, our public utilities generally, as regards industry generally, and the field of commerce and finance. If it is unhealthful for a nation to compel these groups to do without a profit, it is axiomatic that it must be equally unhealthful to force upon agriculture a loss. Agriculture can not recover until there has been made effective a national agricultural program to restore an equilibrium which has been destroyed by the exclusion of agriculture from the preferred position accorded industry and finance. There must be a thoroughgoing reorganization of agriculture which will improve the economic status of the farmer and renew the vitality of rural social life, even though to accomplish such purpose it be necessary to set up machinery to mobilize the technical knowledge and skill of our governmental agencies.

It has been asserted that the ills of agriculture are those of our own creation. The farmer has been accused of ignorance of the essentials of his craft. He has been pointed to as lacking even the rudiments of business methods, technique, and skill, and worst of all he has been said to violate the fundamental principles of his ailing industry, namely, overproduction, by planting annually an acreage far in excess of that dictated by experience and business acumen. In certain sections of the Nation he has been accused of adhering to the policy of one-crop farming despite advice to the contrary in the light of disastrous experience.

Whatever may be the elements of truth in this indictment against the farmer, there are half truths which in their effect may be mischievous in the extreme. Within the generation the farmer has contributed through taxes, which have fallen upon

him with an ever-increasing burden, to the establishment and development of agricultural colleges and high schools to an even greater degree. He or his children have availed themselves of the benefit of this education to the fullest degree commensurate with his means, and usually at great personal sacrifice. He has adopted and applied in ever-increasing degree such knowledge as has been made available as to the methods of modern agriculture. His sons and daughters are in hundreds of instances the graduates of agricultural colleges, who, inspired by the hope of following in the footsteps of their parents, have returned to aid in the development of the farm. Yet despite all this, the farmer has seen himself receding more and more from economic equality with his more fortunately situated competitor in industry.

Even though the individual farmer might find himself never so shrewd, so far as the business side of his vocation is concerned, he is confronted at the very outset with an economic system and economic conditions which alone he is incapable of meeting on a basis of equality.

Even if he were able to fix exactly the number of acres to be planted in any given period, his yield would vary by hundreds of thousands of bushels of grain or bales of cotton. Unanticipated changes in climate, the depredations of insects or disease might totally destroy his crop. On the other hand, his yield might be so bounteous as to upset entirely his calculations.

It is no easy or simple problem to change the agriculture of the Nation. Although diversified farming may represent the peak of agricultural desirability, there is involved not only a long process of experimentation to discover the most desirable substitutes which may fit into the scheme, but there is involved as well the economic life of entire communities which by long and careful process has been erected upon a more fundamental agricultural program. The customs of a community or of a nation do not change overnight. For some time it has been accepted by leaders, not only in agriculture but in other fields as well, that the time has come when we must abandon the present doctrine of laissez faire as regards agriculture and, statesmanlike, enter upon an entirely new program in which there may be accorded to agriculture the same legislative consideration as has enabled industry and finance and commerce to meet the exigencies by which from time to time they have been confronted. It is universally conceded that reasonable and constructive legislation adequate to rectify the adverse conditions which at present obtain in agriculture is both justifiable and imperative.

Congress has recognized the need of farm-relief legislation and has given to the problem serious consideration, such as has rarely been bestowed upon any major legislative problem. But the question is not merely one of legislation, but rather of legislation which may be fully adequate to meet the situation. The only legislation worth while in the premises is that which seeks to affect a permanent remedy. Temporary or halfway measures are ineffective at best and may under adverse conditions prove of positive harm.

It has been urged that the farmer in seeking to overcome the ills by which he is afflicted through the medium of legislation is pursuing the wrong method, that he should seek a remedy through the adoption of better methods all along the line and evade the pitfalls of the legislative maze. It is particularly urged that in seeking to invoke the Federal legislative machinery the farmer is surrendering his erstwhile priceless freedom and submitting himself to the iniquities of Federal buracuracy with all the evils which are thereby entailed. In the abstract and without regard to the economic history of the Nation this apparently forceful but specious contention would seem to be pertinent and effective. But let us view the facts in the light of the economic history of the Nation and the system which has been developed.

The second act passed by Congress under the Constitution on July 1, 1789, opened with the following preamble:

> Whereas it is necessary for the support of the Government, for the discharge of the debts of the United States, and for the encouragement and protection of manufactures that duties be laid on goods, wares, and merchandise imported; be it enacted, etc.—

And ever since that first act industry has been increasingly the protected protégé of the Government.

During the 20 years, from 1850 to 1870, the Federal Government granted to the railroads more than 160,000,000 acres of land of the public domain. Eager to develop their lines and to have industries established along their routes, railroads offered them preferential rates, agriculture bearing the burden of the gratuity. This development of a freight-rate structure preferential to manufactured products has exacted its toll throughout the years.

In 1880 the great mass of our people—approximately 44 per cent of those gainfully employed—were engaged in the pursuit of agriculture. With the development of manufactures and the growth of our cities, there has been a constant movement away from the farms and a consequent concentration in industrial centers. Prior to 1880 there was practically no labor legislation, and our doors were open to immigrants from every land. With the industrial development of the Nation during the last half century there has come a corresponding development in labor organizations and a regulated industry and wages at a height never before conceived of. But the boon of labor has not ceased with advanced wages. In addition to these advantages which labor has been able to secure by means of its own efforts, by means of conditions which readily lend themselves to cooperative and coercive programs, labor has benefitted by a restrictive policy of immigration adopted by a beneficient Government in its behalf.

Thus we have witnessed the development of a national policy by which our industries have been protected by a tariff since the early days of the Republic; labor has been protected by immigration laws; our railroads and public utilities, generally, by legislation which assures them an adequate income upon capital invested; interest rates fixed by the Federal reserve system, which at the same time permits commercial credits to be used as a basis for currency for the commercial world. Through the Interstate Commerce Commission the resources of our railroads are conserved, and by means of the loans which have been extended them through the Federal War Finance Corporation they have been permitted to overcome the disasters which ordinarily attend periods of deflation in our economic system. While our railroads, our public utilities, or manufactures, and our banks in most instances are all prosperous and earning satisfactory dividends, while organized labor is receiving higher wages than at any previous period in our economic history, agriculture alone is operating at a loss.

A tariff levied by the Government for protection of our industries from cheap foreign goods, or an immigration law passed by the Government to protect our labor from cheap foreign labor is but another form of governmental subsidy, even though the immigration law was not written with this object in view, but rather as a benefit to the Nation as a whole.

During the period of the World War the American farmer was called upon to feed the world. The European source of production had been practically entirely eliminated and the farmer appeared for the first time to be able to profit by an unrestricted demand and the untrammeled operation of the law of supply and demand. But his dream was rudely interrupted. Although the price of his commodity was fixed by legislative enactment he was compelled to bid for labor in a market already preempted by the Government with vast resources at its command. Unable to avail himself of the free operation of an economic principle because of governmental intervention, the farmer became at the conclusion of the only era of success which had been open to him within a generation, the victim of conditions attendant upon reconstruction and deflation which have swept him into a debt from which he can not hope to emerge within the decade.

Restricted by governmental intervention to his disadvantage during a period of inflation, it was but natural that during the succeeding period of deflation the farmer should look to the Government for legislation tending at least to restore him to his previous condition; and certainly it must be regarded as a proper function of the Government to help agriculture occupy the position to which it is justly entitled by virtue of its position as a basic industry.

As a consumer the farmer is compelled to pay the cost of a protected market. As a producer he is compelled to accept a price dictated not by the level of the market in which he is a consumer, but by a world market, the prices in which are dictated by purely agricultural nations where farm labor is obtainable at trivial cost. The labor and capital of the farmer are not protected by the Government on a parity with labor and capital in other lines of industry; agriculture is not surrounded by legal safeguards.

A policy of legislative protection which protects only a part of the people or a part of their property is certainly not American. If a national policy of protection as applied to industry is sound, it must also be extended to agriculture. If legislation having for its object the granting of governmental benefit to agriculture is unsound, then it must likewise be unsound to grant it to industry and to the other groups to which it has been granted. It is only simple justice to accord to the farmer the same measure of protection provided for industrial workers and manufactures by a wise and beneficial Government.

THE M'NARY-HAUGEN BILL ANALYZED

Proceeding upon this principle, Congress has made a serious effort to meet the situation by the enactment of legislation de-

signed not only to meet the conditions which immediately obtain but legislation which may prove to be of permanent benefit to the industry.

Of the various measures which since 1920 have been proposed in the Congress purposing to aid the farmer, only one has succeeded in passing both Houses. That measure was vetoed by the President on the 25th of February, 1927.

With the convening of Congress in December of 1927, the Committees on Agriculture of both Houses renewed their studies of the problem, and on April 5, 1928, a bill, H. R. 12687, was reported from the House committee. The major provisions of this bill are as follows:

Section 1: Policy.—Section 1 of the bill declares that it is the policy of the Congress to promote the orderly marketing of agricultural commodities in interstate and foreign commerce. In promoting orderly marketing the board created by the bill through the execution of the powers vested in it by the act is specifically authorized to accomplish the following ends:

First. The control and disposition of surpluses of agricultural commodities.

Second. The preservation of advantageous domestic markets for agricultural commodities.

Third. The prevention of agricultural surpluses from unduly depressing the prices obtained for commodities and from causing undue and excessive fluctuations.

Fourth. The minimizing of speculation and waste in marketing.

Fifth. The furtherance of the organization of producers into cooperative associations.

The declaration of policy is not only a direction to the board but a limitation upon the board in its operations under the act.

Section 2: Farm board.—Section 2 provides for an administrative board composed of 12 members appointed by the President, 1 from each of the 12 Federal land bank districts. The Secretary of Agriculture is made an ex officio member.

The present bill differs from the former in that it contains no limitation or restriction upon the President's power to appoint. The former bill provided that nominations should be made by farm organizations to the President, thereby limiting his power of appointment to the list of nominees, a principle which he regarded as unconstitutional, and upon which he in part based his veto message.

Section 3. Section 3 of the bill applies to the organization and duties of the board. Under this section the board is authorized to advise producers in the development of suitable programs of planting or breeding in order that they may avoid burdensome surpluses and secure maximum benefits under the act.

The present bill differs from the former bill in defining "surplus" as meaning—

any seasonal or year's total surplus produced in the United States, and national in its extent.

Section 4: Commodity advisory councils.—Section 4 of the bill provides for the creation of advisory councils of seven members each to be selected from lists submitted by cooperative associations and farm organizations, for each agricultural commodity which the board may determine needs stabilization. The function of the advisory council is to advise the board with respect to operations in the commodity it represents, and to assist the board in advising producers as to suitable program of planting or breeding.

Section 5: Loans.—In order to carry out the provisions of the act, the board is authorized to make loans at 4 per cent interest out of a revolving fund provided in section 13 to cooperative associations or corporations created and controlled by the cooperative associations.

Loans may be made for the purpose of assisting in controlling a seasonal or a year's total surplus produced in the United States and either local or national in its extent. The term "surplus" in this sense may be construed to mean that which is in excess of the requirements for orderly marketing, or in excess of the domestic requirements for such commodity.

The board may further make loans for any of the following purposes:

(1) For working capital to be used by the cooperative association or corporation created and controlled by one or more cooperative associations.

(2) For the assistance of such associations or corporations in the acquisition of necessary facilities, plants, and equipment.

(3) To assist such associations or corporations to merge or federate or to extend their membership.

(4) For funds to be used by such associations or corporations as capital for agricultural credit corporations to function in connection with intermediate credit banks.

The aggregate amount which may be used for loans for these four specific purposes is limited at any one time to $25,000,000, while the aggregate amount of loans for federating cooperative associations and extending their membership is limited to $2,000,000. No loan may run for more than 20 years, and is to be secured by marketing contracts of the cooperative associations. The repayment of the loan is to be effected through a charge to be deducted from the proceeds of the disposition of each unit of the commodity, and is known as an equalization fee.

The language of the present bill differs from the previous bill in that it is now permitted to authorize loans for the purpose of controlling a seasonal or year's total surplus produced in the United States, and either local or national in its extent. Section 5 further provides for the qualifications to be possessed by the corporations to which the loans are to be made, and the conditions to which the corporations must conform to be eligible to receive loans under the bill.

Section 5 of the present bill sets forth more specifically than formerly the purposes for which loans may be made out of the revolving fund to cooperative associations. All loans under section 5 are made upon such terms and conditions as will afford adequate assurance of repayment.

Section 6: Increased production.—Section 6 provides that if producers, disregarding the advice of the board, increase planting or breeding abnormally the board may refuse advances for the control of surplus to any cooperative association or corporation dealing in that commodity.

No such provision as this was contained in any of the previous McNary-Haugen bills. The effect of the provision is to give the board the power to prevent abnormal expansion under the stimulus of stabilized prices.

Section 7: Investigations by the board.—Section 7 provides that the board may investigate the conditions surrounding the marketing of any agricultural commodity for the purpose of determining the existence of a surplus, or whether the existence of such a surplus threatens to depress the price of a commodity below the average cost of its production in the United States during the preceding five years, and whether the nature of the commodity is adaptable to safe storage and future disposal.

Since section 7 does not control or limit the board's action either in making loans or marketing agreements, it is in effect an elaboration of the general powers of the board as set forth in section 3.

Section 8: Clearing house and terminal marketing associations.—Section 8 authorizes the board to assist cooperative associations in establishing clearing-house associations and terminal-marketing associations, especially for the benefit of fruits, vegetables, and other perishable products, the object being to prevent gluts or famines and to reduce waste. This principle was recommended by the agricultural conference on agricultural legislation, submitted to the President in 1924, and transmitted by him to the Sixty-eighth Congress in his message of January 26, 1925.

The assistance to be given under this section is not financial, but advisory and educational. Financial assistance through loans, however, would be available under section 5. The clearing house or terminal-marketing associations would be "market agencies" within the meaning of the Capper-Volstead Act. This section has been added to the bill to meet the President's objection to this feature of the bill of 1927, as follows:

If this is a true farm-relief measure, why does it leave out the producers of beef cattle, sheep, vegetables—

And so forth. Thus, instead of enumerating only certain commodities, the present bill makes no distinction among agricultural products.

Section 9: Marketing agreements.—The plan provided in section 9 of the bill is not to be applied by the board to any commodity unless and until the provisions for control of surplus through loans to cooperative associations (sec. 5) have proven ineffective. In such event the board is to operate through marketing agreements and equalization fees, provided certain other findings prerequisite for such action are made by the board. These other findings are—

First. That there may be a seasonal or year's surplus.

Second. That the nature of the commodity adapts itself to the operations contemplated.

In order to harmonize this section with section 5 of the bill the language has been changed. The word "local" has been omitted, so as to prevent the board from entering into marketing agreements financed by equalization fees to cover a surplus purely regional or local. Under the language of this section the agreement may be entered into only when the surplus is

national in its extent; that is, the total supply available at any time must exceed the total national demand.

Under this section the only commodity for which the board may establish a marketing period is one which is adaptable to this form of surplus-control assistance. Perishable crops would be excluded from the use of marketing agreements financed by equalization fees.

The marketing agreements provided for in this section are to be made with cooperative associations or corporations created by them, and are to withhold from the market, to buy, remove from the market, export, or otherwise dispose of such quantities as are agreed upon. This assistance is to be continuous throughout a marketing period, which commences with the publication of findings and can be terminated by the board when no longer necessary or desirable.

The types of marketing agreements are as follows:

First. The board may contract with a cooperative association to withhold from the market for the length of time fixed in the agreement any portion of the commodity delivered to it by its members, the cost to be paid by the board out of the stabilization fund for the commodity. The contract may specify the length of time for which the commodity may be withheld or it may provide for storage until agreement may be made for its disposal.

Second. Or the board may contract with a cooperative to purchase part of a supply and withhold it and dispose of it as agreed upon.

Losses are paid from the stabilization fund. Profits are to be turned into the stabilization fund.

The cooperative association is responsible for the repayment of the advance in full where no loss has occurred. The liability of the United States is limited by other sections of the bill.

Of this section of the bill it has been said that the Government must in effect go into the business of buying and selling farm crops, unless the cooperative associations make a success of controlling the entire crop of any given agricultural commodity period. It is said that farmers' cooperative marketing associations can not control even with the financial and moral support that would be given by the Federal farm board. Cooperative associations could not successfully and prudently control the entire producing capacity of all the farmers. Farm organization leaders themselves do not expect the cooperatives to control successfully, through the loan feature of the bill, the marketing of their crops in such a way as to raise basic price levels.

In testifying before the committee Mr. Chester H. Gray, of the American Farm Bureau Federation, said the cooperatives would avail themselves of the loan features of the bill for current marketing operations, but would be unwilling to utilize them for surplus disposal, being unwilling to obligate themselves to pay back the loans at interest for the disposition of the surplus.

Under the present section the board may not enter into a marketing agreement to be financed by equalization fees unless the loan provisions have proven ineffective.

This section of the bill has been changed in many particulars from the former bill in order to meet the objection raised by the Attorney General that in former provisions Congress attempted to delegate to private associations and corporations the power to determine whether the regulation for commerce provided in the bill should be put into effect. Thus the provisions giving unofficial groups a veto power over the decisions of the board have been omitted.

Section 10: Equalization fee.—When the board enters into marketing agreements it makes the revolving fund established by the Federal Government responsible for the losses, costs, and charges incurred under the agreement. In order that the revolving fund thus advanced by the Treasury may not suffer impairment from such advances it is provided under this section that each marketed unit of a commodity for which marketing agreements have been entered into shall contribute a ratable share of the costs and losses incurred.

Since marketing agreements are to be resorted to only when the board finds them necessary for the regulation of interstate and foreign commerce as intended by the bill, the contribution exacted from each unit of the marketed commodity, called an equalization fee, is provided to care for the regulation of the commerce.

The bill provides that the board is to estimate in advance of any marketing period the probable sum needed to cover the costs, losses, and charges that may result from the marketing agreements, as well as the unit charge or fee necessary to secure that sum from the commodity.

The board is required in advance to specify the time during which the fee shall remain in effect, as well as the unit amount of the fee so that if necessary it may be revised subsequently.

The board is required to collect the fee upon the transportation, processing, or sale of the commodity, utilizing for this purpose the most effective and economical means of collection with respect to each unit of the commodity marketed during the marketing period.

The agencies collecting the fees are to transmit the fees to the board, and the board is to pay them a reasonable charge for their services. The agencies are penalized one-half the sum due for failure to collect or to transmit the fee.

The bill further provides that an equalization fee may be collected upon the importation of any food product manufactured in whole or in part from the commodity. This provision has particular application to wheat and flour. The previous bill would have permitted the collection of the fee from the millers in the case of wheat. If that were the arrangement, the mills would pay the fee upon foreign wheat milled in this country exactly as in the case of domestic wheat. Therefore the maximum price for all wheat, whether of domestic or foreign origin, would approximate a level that included both tariff and equalization fee. At the instance of the American millers, so that their product would not need to compete with imported flour, or that the American miller would have to purchase his wheat whether of domestic or foreign origin at a price level that would include both tariff and equalization fee, the present bill authorizes an equalization fee upon importation, so that the flour sold by the miller would not be in competition with imported flour which had paid the tariff but had paid no equalization fee. The situation was discussed by the President in his veto message of February 25, 1927.

The present bill differs from the previous bill by bringing together into this section—10—the general provisions contained in sections 8, 9, and 10 with such changes as laid down more specific instructions to the board for the collection of the fee. There are also included definitions of the terms "transportation," "processing," and "sale." The present bill authorizes the board to reimburse a collection agency for the collection of the fee; the old bill did not.

Section 11. Section 11 directs the board to establish a stabilization fund for each agricultural commodity dealt with through the marketing agreements provided for in section 9. The money of the stabilization fund would, in the first place, be advanced from the revolving fund as required.

Equalization fees collected from the commodities are to be deposited in the stabilization fund for each particular commodity in order to make good any payments required under the marketing agreements, so that advances from the revolving fund may be repaid as the equalization fees come in. Profits are also to go into the stabilization fund for the particular commodity dealt in.

From the stabilization fund the board may pay costs, losses, charges, salaries and service charges, repayments, and interest.

Section 12. Insurance.—Section 12 describes the insurance contract which the board is authorized to enter into with a cooperative association engaged in handling an agricultural commodity. Such an insurance contract can be applied only to a staple agricultural commodity which is "regularly traded in upon an exchange in sufficient volume to establish a recognized basic price for the commodity."

Insurance as here provided for is in reality a form of market hedging; it provides against price decline, the association being assured that the average price for the basic grade of the commodity during the period in which the sales take place will not be less than the average price for the same grade in the same market during the period in which the deliveries of the commodity to the association by its members take place.

The price against whose decline the board is authorized to insure a cooperative association would be the average price for a basic grade in the particular market designated in the contract.

The advantage which a cooperative association would get from the insurance feature arises from the fact that with this protection cooperative association would be able to borrow and advance to its members at the time of delivery practically the current market value for the commodity. Such an insurance agreement would provide the cooperative association with a hedge against loss caused by decline in the average market price.

In his veto message of the previous bill, the President referring to the insurance section said in effect, that it amounted to a straight Government agreement to pay the cooperative as-

sociation any loss which it might incur in withholding commodities from the market, no matter how high the price might be advanced. The President felt that nothing could be imagined which could be more destructive of the orderly process of trade or unfair to the nonmember of the cooperative association, since his equalization fee would be used to pay the losses.

The proponents of the bill feel that the language of this section of the present bill has been so clarified as to express more accurately and clearly the exact nature of the insurance agreement, and thus remove in part some of the objections which may have attached to it in the past because of vagueness.

Section 13. Revolving fund.—The bill authorizes an appropriation of $400,000,000, to be advanced by the Treasury and used as a revolving fund for the purpose of initiating the stabilization fund. The sum in the present bill is an increase over that carried in previous bills. The increase may be due in part to the objection of the President in which he pointed out that the bill failed to restrict the contracts to the sum appropriated in the measure which he vetoed.

Sections 14–21. These sections of the bill are largely routine and regulatory, and are not treated in detail at this time.

CONCLUSIONS

The measure at present before the Congress is the outgrowth of a series of legislative trials and failures since 1924, when the first McNary-Haugen bill was considered. A bill was again presented in 1926, clothed in somewhat different language; and the bill of 1927 was based upon that of 1926.

The bill of 1924 had but little support. It was defeated in the House and failed of consideration in the Senate. The bill of 1926 failed of passage in both Houses. Both Houses of Congress passed the bill of 1927, but it was vetoed by the President, and to-day with but slight modification it is again before the Congress.

The present bill, Mr. Speaker, represents the major legislative proposal which since 1920 has been presented to the Congress for the relief of agriculture. The McNary-Haugen bill comes with a degree of prestige which rarely attends legislative proposals, having run the full gantlet of legislative vicissitudes. Having alternately failed of passage and passed the Congress and been vetoed by the President, it is once again undauntedly braving the uncertainties of both congressional and executive approval.

Fairness compels one to admire and commend the authors of the measure for their courage and persistence, as well as for their sincerity of purpose and their honesty of intent. By the same token those who may favor or oppose the measure must be regarded as having come to their conclusions upon a basis free from bias or prejudice. The crux of the problem is not farm relief in the abstract, but rather a particular proposal drafted as a legislative measure to remedy a situation by methods which appear adequate, correct, and relatively free from inherent defects. This is the test to which the proposed legislation must be subjected, and the criterion by which it must be evaluated.

Does the present measure purpose to secure for agriculture the relief it so sadly requires? Is it the only form of relief adequate under the circumstances? Does it secure the relief required by all branches of agriculture, or is it at best but makeshift in its nature, conferring benefits upon some branches of the industry to the determent and at the sacrifice of others? Will the plan herein proposed prove of benefit to agriculture, bringing down upon, however, the whole economic structure of the country disaster so grave as may constitute a menace rather than a benefit? These are the inescapable considerations which force themselves upon everyone who would honestly seek an approach to the measure and a study of its details.

The present bill, like its predecessors, sets up as a declaration of policy the orderly marketing of agricultural commodities by means of the intervention of governmental agencies. As to just exactly what orderly marketing may be, as to the exact manner in which it would affect the several commodities which it presumes to regulate, indeed as to any aspect of the entire principle involved there is no definite expression.

Farm board: The agency created by the bill for the enforcement of its principles and its policy is a farm board composed of 12 members, who so far as the provisions of the bill are concerned are clothed with powers so vast and so extensive as to constitute a practical dictatorship of the operations of the basic industry of America.

America has ever suppressed the military to the civil, autocracy to democracy, tyranny to self-government, and yet in the legislation now presented it is proposed to create a body so armed with power and potential tyranny that a military dictatorship such as has been recently witnessed in several states of Europe would be benevolent in comparison. It is said that the farm board would not abuse its powers, that its operations would be benevolent, far-sighted, and protective. Yet nowhere is there proposed any check either by the Congress or the Executive upon its assumption of power or its operation.

But even omitting all adverse criticism as to the temptation to which the board might be subjected, it would nevertheless be confronted with a task so stupendous as to be almost staggering in its contemplation. At best it would need to be composed of highly competent men, able not only to suppress their individual differences in the desirability of harmonious conclusions, but men capable of securing the loyal cooperation of an army of assistants, more vast than are engaged in any other single activity of the Federal Government. It would require prescience, competence, acumen, and diplomacy such as has characterized no similar body of men in the history of the world.

Vagueness: In all the years the bill has been before the Congress, no one has at any time been able to explain just exactly how it would work in actual practice. It may well be regarded as one of the chief criticisms of the bill that it is vague in all its essential points. Many of the passages of the bill are not clear as to their terms.

Surplus control: The measure under consideration contemplates relief through the principle of surplus control, and leaves to implication the conclusion that as at present written this end is to be achieved through the principle of acreage reduction. That there is an intimate relation between acreage and production can not, of course, be denied. As to the accuracy of this yardstick of measurement, however, there is a wide variation of opinion. Into the problem of production enters not only acreage but a wide range of factors and elements over which the producers of agricultural products have little, if any, control. Weather, insects, plant diseases, all occupy an important position in the vastly complex system of agriculture and tend to put to route estimates of production.

The experience which the agricultural world has suffered at the hands of official forecasters warrants it in the assumption of grave doubt as to the performance of this task under conditions which will tend to place upon it both direct and indirect financial obligations. Acreage alone is neither a certain or accurate yardstick by which to measure production; yet the bill provides no more practical or adequate method.

Dumping: Fundamentally the proposed legislation can operate only through the principle of dumping. And the effect of dumping in reality is to raise the price on that part of the crop consumed in the United States and to take a loss by reducing the price on that part sold abroad. Thus the American consumer is compelled to pay a price higher than normal, while the European consumer would pay a price lower, perhaps, than the cost of production; but under any circumstance lower than that paid by the American consumer.

In addition to this very obvious effect of dumping there is a more far-reaching and pernicious evil not so apparent. The principal objective of the bill, as expressed throughout its several sections, and as admitted by all its proponents, is the raising of prices; dumping is the process by which this is to be brought about. It is a foregone conclusion that the wheat grower will expand his acreage under the stimulation of high prices, with an ever and ever increasing exportable surplus resulting. The immediate effect of this procedure would be an increase in the equalization fee with all its attendant evils; but ere long the European processor would find himself in a preferred position so far as stocks of raw material might be concerned and retaliate by dumping upon the American market cheap manufactures resulting from cheap raw materials. The effect upon the American farmer would be to force upon him an ever-increasing tax through the equalization fee, because of his constantly declining American market, forced out by dumped European manufactures.

Price fixing: Like its predecessors, the bill is primarily and essentially a price-fixing measure, a circumstance which caused the defeat of those measures in some part of the legislative process. Under the provisions of the bill the board is required to estimate the losses, costs, and charges of any marketing agreement before entering upon it. This entire procedure is dependent upon the price at which the domestic surplus is to be bought and sold. Thus, however carefully the unpleasant fact is disguised, it constitutes price fixing nevertheless. Attempted on a large scale during the period of the World War, at a time when the spirit of patriotism was marshalled to its support, price fixing proved not only unsuccessful in practice but constituted an ever-present reminder of the fact of the existence of war. Is it proposed to place America of the future under the dictates and threat and inconvenience of war-time measures?

Artificially stimulated prices, or control which can stimulate them, has not infrequently forced the use of substitutes and has encouraged production in noncontrol areas as well. British control of rubber has so reacted as materially to stimulate production elsewhere and to encourage the reclamation of used rubber. The world has paid a bounty for the control of both rubber and coffee, and yet in the end the nations which have imposed the bounty of control will suffer most, for they have but stimulated research that will ultimately make the world free from their impositions.

That the bill contemplates putting the Government into business is inescapable from the facts. It is no palliative to concede that the business would be that of buying and selling farm crops.

Equalization fee: As has already been stated, the fundamental and essential principle which the bill purposes to adopt as a means of aiding agriculture is that of surplus control. This is the definite objective of this legislation. Any analysis of the bill will fall short of its purpose if it fails at all times to keep this principle in view. This is the center around which all other principles of this measure radiate. The description of the method by which the control of surplus is to be accomplished constitutes the burden of the bill.

Surplus control, then, being the objective of the measure, it is pertinent in analysis to inquire as to the method by which this may be accomplished. Without conceding the principle, however, that surplus control is the only or the most desirable method of farm relief, and anterior to an examination of the machinery set up in this measure to secure this end it might be well for a moment to view the problem divorced from its legislative psychology.

If independent and private enterprise were to adopt this program, how would it proceed? Judging from past experience, if it were decided to withhold from market a quantity of goods for the purpose of bringing about an increase in price of that offered for sale, the group entering upon such a program would most naturally buy up with funds which it had voluntarily contributed that portion of the surplus necessary to be removed. All members of the group involved would as parties to the action contribute voluntarily to the pool and share in profits or loss in direct ratio to their participation. The action would be voluntary, the results would be restricted to the particular group involved, and there would be no interference with freedom of contract or individual enterprise.

What on the other hand would be the procedure under the provisions of this bill? First of all, marketing agreements under the bill are immediately removed from the entire realm of individual enterprise and private business, and become governmental contracts.

Marketing agreements under the bill are financed primarily from a revolving fund established by the Federal Government and set aside from other public funds of the Federal Treasury. From this fund are advanced the sums to be expended in surplus control. But in order that this fund may not suffer impairment it is provided in this section of the bill that each marketed commodity for which agreements have been entered into shall contribute a ratable share of the costs and losses incurred. This ratable share exacted from each unit of a commodity is called an equalization fee, and it is the assessment of this fee and its collection that removes from freedom of contract and individual enterprise America's basic industry.

Here, those who would avail themselves of the principle of surplus control are given no choice as to who may participate, as to the extent of their participation, nor even as to the profit they may derive or loss they may sustain. They have surrendered all individual rights, for the bill provides that the board may estimate in advance of any marketing period the probable sum needed to cover the costs, losses, and charges that may result from the marketing agreements, as well as the equalization fee necessary to secure that sum from the commodity. But there is no freedom of participation, the fee falls upon all alike—participants and nonparticipants. And only by fixing a price can the board estimate the fee.

It has been found necessary in discussing other aspects of the measure to allude to the iniquities which must inevitably flow from a system so complex and so obnoxious; for emanating from this principle of an equalization fee come all the evils entailed in this legislation.

As has already been indicated, the artificial stabilization of prices by surplus control and dumping, the twin evils of this measure, can not but result ultimately in a train of events having as their culmination the dumping by retaliation of cheap European processed goods into the United States.

In an attempt to meet this objection, so forcibly stated by the President of the United States, the proponents of the measure have amended the present bill so as obviously to overcome the dilemma by conferring upon the board the power to impose an equalization fee upon the importation of any designated unit of agricultural commodity coming into the United States for consumption therein.

But the matter lies wholly within the discretion of the board. It may or may not impose an import fee; the import fee, if imposed, may not be equitable to all branches of the industry, and under any circumstances its collection, already involving an army of governmental agents, will still further invade the realm of the customs.

Thus, there would ensue the imposition of an equalization fee in the first instance for the removal of a surplus and its dumping at a loss abroad; production would tend to increase, the exportable surplus would also be increased, dumping would become retaliatory on the part of European processers; and at the point of entry there would be an importation fee not necessarily adequate to prevent a mounting of the tariff—import fee barrier—and so, the vicious circle once begun, would be continuous in extent. Somewhere there must ultimately come a contest between these irresistible forces.

If upon the producers of a crop largely exportable the equalization fee falls as a particular burden, what of the added import fee which may now be assessed upon its processed products? Are America's cotton producers to bear the total burden of America's agricultural ills? Cotton, under no circumstances, could be benefited by an equalization fee, but as it represents a continuous exportable surplus action of the board is mandatory and it must pay the fee notwithstanding.

Perhaps no better description of the unworkability of the equalization fee can be found than that given by the President in his veto message of February 25, 1927, in which he says that some conception of the magnitude of the task of collecting the fee may be had when it is considered that if the wheat, the corn, and the cotton crop had been in operation in 1925, collection would have been required from an aggregate of more than 16,000,000,000 units. The fee will have to be collected either from processers or transportation companies. In the case of transportation companies the difficulty would be enormous in view of the possibility of shipping commodities by unregistered vehicles. So far as processers are concerned it is safe to say that the estimate is far in excess of 10,000 considering the number of factories engaged in the business of canning corn or manufacturing food products other than millers.

As to the accuracy of the estimates which the board is compelled to make the President's observation again becomes pertinent, for he says in effect that the board could hardly do better in this matter than the Department of Agriculture has done in its recent estimates of wheat and cotton. Of the recent estimates in spring wheat those of the department were 90,000,000,000 bushels too large; in winter wheat 126,000,000 bushels too small, and 140,000,000 bushels too large; in corn 430,000,000 bushels too small, and 650,000,000 bushels too large. In cotton the range has been 2,983,000 bales too small for 1926, and 3,286,000 bales too large for 1918.

As to the unconstitutionality of the equalization fee there can be but little doubt. Whether it be regarded as a tax or a regulatory fee, the principle involved implies a delegation of the powers of Congress.

The Attorney General, in an opinion rendered at the instance of the President, reviewing the contemplated operation of the fee said, in effect, as follows: "The board set up in the bill in estimating the equalization fee would be compelled, in exercising due regard for probable losses which might accrue from its operation, and in making its estimates, to not be engaged in a finding of facts, but in predicting future prices which would prevail in the markets where the surpluses would be disposed of. To the board there would be left absolute discretion, unregulated by any rule or principle, to say whether the fee should be imposed on the sale, the manufacture, or the transportation of the commodity."

Here, then, is the ingenious device by which the ills of agriculture are to be cured. Vague in its intricacy, uncertain in its effect, offensive in its operation, unconstitutional, it is nevertheless presented as the principal instrumentality around which there has been drafted a mass of legislative language as heterogeneous as it is vague. Revolving fund, advisory council, cooperative associations, stabilization fund, equalization fee. What a mass of legislative formulary. Grave indeed must be the distress for which such a prescription is necessary. The farm board creates advisory councils; advisory councils create cooperative associations; cooperative associations create marketing associations; the revolving fund creates a stabilization fund; the stabilization fund necessitates equalization fees. This is indeed the house that Jack built.

The bill seems to have ignored entirely the farmer as a consumer, for although it purports to aid him as a pro-

ducer, it overlooks the fact that he is himself a large consumer of the products of agriculture.

The farmer consumes half of the wheat crop. His gain on this commodity would be offset by his loss as a consumer. Nor is it possible to ignore the results of the operation of the bill upon the several sections of the Nation. Desirable as may appear the principle of diversification, it is an inescapable fact that nature has herself variously endowed the several sections of the country with special qualifications. Benefits accruing to farmers of one section of the Nation would be largely offset by the losses sustained by those in other sections.

Operations under the bill must necessarily fall particularly heavy upon the farmers of the South. To protect the wheat farmer of the great Northwest the farmer of the South would be compelled to carry not only the burden of a protected industrial market as at present, but in addition thereto an enhanced cost of living for all the products of the Corn Belt.

Much has been said about the benefits which will accrue to the producers of wheat under the proposed legislation, and in the endeavor to meet the opposition which must properly have come from the producers of other commodities, the proponents of the legislation have added cotton to the list of enumerated commodities, with the intended implication that cotton and its producers would benefit under the act.

As one who in part represents that section of America which by climatic condition is endowed with the inherent natural properties necessary to produce the world's cheapest fabric it is but natural that the effect of this legislation upon this commodity should be one of grave concern.

The presumption has been fostered that the board provided for in the measure would operate only when there is a contemplated surplus of the commodities of agriculture. There is always a surplus of cotton and tobacco. And, incontestably, these products would be under the continuous control of the board's operation.

Cotton: America's exports of cotton approximate 60 per cent of the crop; there is no protective tariff in aid of the cotton grower as a producer, but as a consumer he is compelled to buy in a protected market. Of the total equalization fee contemplated the cotton growers of America would pay more than 50 per cent of that collected by the wheat growers. Conservatively estimated, the cotton grower's family would find itself contributing to a tax—from which it could in no way derive any benefit whatever—more than $12 per year. And since, presumably, the equalization fee would be imposed to relieve distress in the industry, either actual or implied, the tax would become upon the cotton grower in what would constitute "hard times."

Whatever justification for the measure may exist, so far as other commodities are concerned, there is none for the inclusion of cotton. Cotton growers have within their own control the means for the regulation of the crop as thoroughly as any superimposed governmental agency.

Certainly if the past operations of Federal agencies are to constitute a criterion, the disaster of regulation by the industry itself could not be greater. Because of the greatly reduced acreage and unprecedented boll-weevil damage the cotton crop of 1921 was the smallest in 26 years. Two additional years of inadequate crops resulted in prices exceeded in recent years only during the World War period. As a consequence of the stimulation of high prices, there came a greatly expanded acreage. And with the insignificant damage of the boll weevil in 1926, there was produced the largest American crop on record, and a precipitate decline in price. Again, responding naturally, there came a decrease in acreage, and the 1927 crop was the smallest since 1923.

There can be found perhaps no more dramatic picture than this of the direct influence of the natural and uninterrupted operation of economic laws. Could a Federal agency operating under conditions which would make it obnoxious to millions of American citizens, possessing power arbitrarily to impose burdensome and odious taxes have contributed any relief to the industry at the time of its depression? Could it have enforced the law of supply and demand any more rigidly, extensively, or effectively?

Note the efficacy of a governmental agency which did intervene and the effect of its intervention. On October 2, 1923, the crop-reporting board of the United States Department of Agriculture forecast a cotton crop of 11,013,000 bales. On November 2 the board dropped its forecast to 10,240,000 bales. Prices began to soar. But in April of that year the "Intentions to Plant" forecast of the department had indicated that there would be a 12 per cent greater cotton acreage in 1923 than had been planted in 1922. With the decline in prices incident to this information it was but natural that the department's "Intentions to Plant" reports fell into disrepute in the South.

Largely as a result of these disastrous experiences Congress enacted a law in 1924 specifically prohibiting the Department of Agriculture from issuing reports on intentions to plant cotton, and provided for semimonthly forecasts of cotton production from July 1 to December 1. But the increased publication of forecasts failed to prove effective. They were erratic and uncertain, and in 1927 the law was again amended to abolish mid-month forecasts as well as July 1 and August 1 forecasts.

Here, then, is the result of Government intervention under most favorable conditions. Change the picture to include an army of Federal snoopers, an unconstitutional tax, fraud, and corruption.

Against the contention that the bill is primarily a farm-relief measure, it is important to bear in mind that the language of the bill itself provides for the payment by the Federal board of all losses, costs, and charges of packers, millers, cotton spinners, and other processers operating under contract with the board; for, as the bill provides, when cooperatives or corporations created by them are unable to handle the surplus the board may contract with other agencies to do so.

Thus it would appear that the Government under the bill guarantees a profit to these classes, who under any program of operation become a preferred group.

Bureaucracy: The President of the United States has himself pointed out the menace of bureaucracy contained in the measure. To carry into effect the principles of the legislation provided in the measure involves the creation of a new governmental machine far more extensive and far-reaching than that involved in any legislation proposed by the Congress within the last half century.

The legislation involved deals with the most minute details of intimate business relations of America's basic industry, involving millions of individuals and billions of transactions. The President states the case in forceful terms when he says there is involved the erection of a governmental bureaucracy to let and inspect billions of dollars of contracts with all their infinite variety of terms covering different goods, their grades and qualities.

Although we have attempted in the past to resist the invasion of our offices and our homes of the many ramifying agencies of the Federal Government which have been constantly increasing both in extent and power, we have nevertheless been compelled to yield to the point where at present but little is sacred from the prying eye of a Federal inspector or investigator. We have ever been derisive of the governments of Europe with their alleged curtailment of individual and private rights. We may well pause to observe the trend of our own progress.

It is easy in these days for the legislator to find himself giving support to measures the object of which is to create additional Federal bureaus requiring additional appropriations from the Federal Treasury. It is easy to give support to the impairment of the rights of the States, and to interfere with the exercise of their sovereignty, for the tendency in favor of consolidation in the Federal Government of all governmental powers receives more and more support in Congress from an increasingly large part of its membership. It is easy to support the continually advancing encroachment of the Federal Government upon State and individual rights, because it is the line of least resistance. The doctrine of expediency has many followers.

The legislation proposed by this bill can not be enforced without an administrative army more extensive than any ever witnessed in America. It calls for an aggregation for bureaucratic officials dominating the fortunes of American farmers and allied industry, intruding into their affairs and offering infinite opportunities for fraud and incapacity. The farmer will be set upon by thousands of Government officials, whom he must pay from his own pocket for their undesired surveillance. This extension of paternalism and bureaucracy can not but excite in the minds of patriotic Americans the most gloomy forebodings.

It has ever been the high ideal of the Democratic Party to preserve individual rights and local self-government, and they who believe in the magic touch of bureaucracy and visionary schemes, and who would set up new Federal agencies possessing unlimited authority will find that they will have in the operations of this proposed legislation sold their birthrights for less even than the traditional mess of pottage, for the intricacies of the income tax would be slight in comparison.

There is no opposition to farm relief in America. Industry has come to have a high regard for agriculture as basic in the national scheme, and it is unwilling to witness its decline. Com-

merce and finance both are fully aware of their close interrelationship with agriculture, involved as they are in so many aspects of agricultural activity.

The attitude of the business world finds no more adequate expression, perhaps, than through the United States Chamber of Commerce, which has consistently placed itself on record as eager not only to see the restoration of agriculture to a safe economic basis but which is lending its vast influence and resources to the accomplishment of that end. But even the United States Chamber of Commerce questions the adequacy of the proposed measure and expresses itself doubtful in the extreme of its efficacy.

It would be eminently unfair to conclude that opposition to the proposed legislation constitutes opposition to farm relief. Somewhere within the province of the legislator must lie the prerogative of determining national issues as they present themselves before the Congress. Conclusions as to these problems must be based upon a study in which the national as well as the local point of view is given just consideration, not only for the immediate and the obvious but for the future and the more obscure. The honest duty of an advocate of the cause of agriculture is primarily not to champion a cause blindly but to support it in such a way as may reflect a conviction based upon a thorough analysis and an estimate of its future effect. It may be proper to support a particular measure when no other seems to offer a solution, but it must not be regarded as unstatesmanlike to do the opposite.

Constitutionality: Chief among the objections to the proposed measure is its doubtful constitutionality, which has been presented both by the President and the Attorney General.

As to the board itself, if it be its duty to determine the price at which agricultural commodities shall be bought and sold in the domestic markets then it has been given legislative power to determine the price in its entire discretion, without any formula or rule to guide its judgment prescribed by Congress.

In fixing the amount of equalization fee the board proceeds upon a prediction of future prices to prevail in the markets where the surplus is to be disposed of. It is a question of grave importance to delegate to Federal officers unlimited discretion in deciding whether price fixing shall be commenced, what the price shall be, and on whom shall be placed the burden of collecting the charges.

The only provision in the Constitution, in the opinion of the Attorney General, which can be relied upon to supply the power for the proposed legislation is that which gives Congress the power to regulate commerce; and he concludes:

> A painstaking search has not disclosed anything in our constitutional history or in the decisions of the Supreme Court to justify the belief that the power of the Federal Government to regulate commerce includes the power to establish and maintain, or to take steps to establish and maintain, the price at which merchandise may be bought and sold in interstate commerce, with the necessary consequence of fixing the price at which the commodity in question shall be bought and sold in every place in the land whether in or out of interstate commerce.

It is of course true that our tariff acts and immigration laws do affect the market prices of merchandise and labor. But this is only the incidental result of admitted power. In the legislation contemplated, price fixing and maintenance is not the incidental result of an administrative power, but presumptively a direct power conferred upon the board, and the question arises as to whether that constitutes a regulation of commerce within the meaning of the commerce clause. Instead of preventing, the operation of the act contemplates the creation of burdens and restraints upon commerce.

As to the equalization fee, there arises the question of its nature. If the fee be not a tax, its imposition and collection must constitute a taking of property without due process, for under the act all producers directly or indirectly would be forced to make a contribution toward the losses and expenses suffered in the operation of the group and for the common benefit. Compelling some citizens to participate in business operations by requiring them to contribute to the loss and expense thereof is in violation of the fifth amendment, and constitutes a taking of property without due process.

If the equalization fee be a tax, then its proceeds constitute public funds in the Treasury, with the result that the Public Treasury would bear the losses and expenses and take the profits, if any, of the business of buying, storing, and selling agricultural commodities, thus engaging in activities hardly supported as a regulation of interstate commerce.

Basing conclusions upon past occurrences, it is impossible to see how the measure can escape the Executive veto. It must be recalled that the present farm-relief measure is the climax of all the measures that have preceded it during the past four years. The passage of all legislation involving the principle embodied in the present measure has met with continued resistance, and the present measure is presumably a compromise and an attempt to meet Executive objection. Viewed in the most impartial manner, the present bill, like its predecessors, falls short of meeting the essential objections of the President as stated in his veto message of February 25, 1927.

It is impossible, Mr. Chairman, for one who has made a serious study of this legislation to escape the foregoing conclusions.

The ultimate effect of the proposed legislation can not but affect adversely the farmer as well as the entire Nation. The bill is invaded by politics, by bureaucracy, by governmental intervention and domination. Legislation of this character is unsound in theory, violates well-established economic laws, and can not be effectively applied in practice.

Prosperity in America has always in the past and must in the future depend primarily upon individual initiative and private enterprise. Whenever legislation must be enacted in behalf of American enterprise it must at least carry the assurance that there shall not be involved governmental domination.

Mr. MORROW. Mr. Speaker and Members of Congress, the problem of agriculture and the method of assisting our American farmer to realize his proper return from agriculture is one of our difficult problems yet unsolved. We have always heard that the tiller of the soil, the producer of our food, should have an adequate and just return for his labor and capital invested. His return certainly should be upon a proper percentage basis, the same as all other industries in the Nation.

That the farmer does not get that return is very apparent from the conditions existing in the standard agricultural districts of our country. It is accepted as true that the Nation needs the farmer; it is further accepted as true that the American farmer is discouraged with the present returns from his labor and investment. It is still further a fact that no legislation thus far enacted has solved his problem.

Men and women upon the farms are discontented and dissatisfied; they believe that the law and policy of the Government does not work for them, but militates against them. The farmer has adopted and attempts to follow a new plan of living—in keeping with the plan of American leisure and comfort. To right-thinking citizens it is obvious that the farmer, too, should benefit by the new plan of life. Instead of farm drudgery there should be farm comforts and pleasures in keeping with those comforts that other citizens of the Nation enjoy. Conforming to the returns the farmer now receives for his investment and hard labor he must lag in the march of prosperity, which is said to exist in the Nation.

The farmer notes the progress of the large corporations—the Steel Trust, the Power Trust, the Food Trust, and practically all lines of large invested capital in the industrial and manufacturing world; he notes their extra dividends and continually increasing stock, and the added returns upon the same. In turn he sees his return diminishing and his tax burden increasing.

To all schemes of developing the country the farmer must contribute his tax return. But does he benefit by the increase in the price of his food product, which he is compelled to market in competition with the markets of the world?

When we say that agriculture is the basic industry of the Nation, we mean that our wealth, as a whole, is based largely upon our American farmer's success in reclaiming our lands and in utilizing them successfully in raising the food products so essential to man's sustenance and support.

When we become involved in war we call upon the farmer to produce a food supply sufficient to sustain our people and our soldiers, and the world, if necessary. To this call the American farmer has always responded, even though at times it has placed him in a position of expansion which has ruined many farmers who heretofore had been successful.

The solution of the farm problem must be a well-thought-out and a comprehensive plan, into which the great mass of farmers must be brought by a system of cooperation with State and Federal agencies. State cooperation is necessary in organizing the farmer to the fact that the State feels the need for the farmer's independence and success.

The farmer must utilize that which he produces to the best advantage possible, and must adapt the product best suited to his soil and to the nearest profitable consuming community; waste and unnecessary transportation charges must be eliminated. To this end the State and the Federal Government should cooperate in assisting the farmer to market his products without unjust burden and delay.

Political parties realizing the problem of the farmer have made party pledges to take the necessary steps to remedy conditions. The party in power, due to its majority, has the best opportunity to right the wrongs of the agricultural man. Will it do it?

The Republican Party claims that industry is exceedingly prosperous; that they have the transportation problem in healthy operation; that the financial structure is secure; but that party also admits that agriculture, the so-called basic industry, is sick, and that they are going to call into power some of the leaders to remedy this situation. Will they do it?

Many believe in the theory of the tariff which forces the American farmer to buy his clothing, machinery, and so forth, in a high protective market—and compels him to sell his farm products in competition with the world. We get back to the adage, "The farmer pays the freight."

A criticism is made that the farmer has left his staid methods of living in which he was born and which his forebears trod before him; he is criticized for entering into the life of the Nation, because he wishes his family to enjoy the auto, the movies, the radio, as his fellow men are doing. One must admit that the farmer, above all others, is entitled to these recreations.

Another problem that must be solved is the freight burden of the farmer. In August, 1920, freight rates were raised 40 per cent in the Northwestern States; 35 per cent in the West; 25 per cent in the far West and South; there has been a reduction of but 10 per cent since.

The farmer pays taxes not upon the income return from his product of the farm, but upon the capital value. Taxes collected from the farmer during 1920 and 1921 were 13 per cent of his total net income, and six times his total net farm profits. In 1926 taxes collected from farm profits averaged 83.1 per cent of the net profit from the farm profits. Taxes have gone up and the farmer's land value has come down. In 1913 direct taxes amounted to $315,000,000 and in 1922 to $861,000,000, or an increase of 173 per cent.

Another factor is the high interest rate which the farmer is compelled to pay. This rate is from 25 to 30 per cent too high, and should be reduced and fixed lower by law.

The taxes of the farmer in 1913 were $624,000,000 and in 1922 they had increased $1,436,000,000, or an increase of 130.1 per cent; upon land this is an increase of 31 cents per acre.

The farm population is decreasing at the rate of a half million a year; in 1921 there was a decrease from 31,000,000 to 28,982,000, and in 1925 a loss of 2,018,000 was shown; in 1926 we note a loss of 441,000, and in 1927 a loss of 649,000; in 1927 there was a farm population of but 27,892,000. Going back 100 years, or to 1820, we find that 90 per cent of the entire population of the country was on the farm, while to-day it is reduced to 29.9 per cent. The colored farm population of the South is leaving the farm much more rapidly than the white farm population of the Nation. From 1920 to 1925 the colored farm population decreased 15 per cent, while the white farm population decreased 7 per cent; this shows that the South, in its farm problem, is having a greater struggle than other parts of the Nation, and the colored person can earn a better return elsewhere than upon the farm.

While farm population is decreasing, farm indebtedness is not decreasing; in 1920 farm indebtedness was estimated at somewhat under $8,000,000,000. The total farm indebtedness, including mortgage and other farm debts for 1925, has been estimated at approximately $12,250,000,000. This estimate is made by the Bureau of Agricultural Economics. The farm mortgage debt on owner-operated farms in 1925, as reported by the Bureau of the Census, was approximately $4,500,000,000.

The farmer, who seldom knew a bankrupt court 25 years ago, is now the leading one to come under the ban of such courts. Statistics for the years 1924 and 1925 show that forced transfers of farm property constituted slightly more than one-third of all transfers. In the West, Northwest, and other localities such transfers exceeded 50 per cent. In the States of Montana and South Dakota 66 to 71 of every 1,000 farms changed hands for this reason—farm failure.

From 1905 to 1914 the average bankruptcy for each 1,000 farms was 0.14 per cent.

Now note the average bankruptcy for the following years, for each 1,000 farms:

| Year: | Average bankruptcy |
|---|---|
| 1921 | 0.21 |
| 1922 | 0.50 |
| 1923 | 0.93 |
| 1924 | 1.23 |
| 1925 | 1.25 |
| 1926 | 1.22 |
| 1926–27 | 1.00 |

And note the bank failures for the following years:

| | |
|---|---|
| 1921 | 291 |
| 1922 | 339 |
| 1923 | 239 |
| 1924 | 837 |
| 1925 | 523 |
| 1926 | 573 |
| 1927 | 1,013 |

Control of the farm product through properly organized farm associations and orderly marketing is the first problem for the American farmer to solve. The great deflation of farm property during the past seven years reduced that valuation from $79,000,000,000 to $56,000,000,000, or a loss in valuation of nearly one-third. This great slump, which has made 100,000 farmers bankrupt without homes, calls for some remedy to restore agriculture back to at least a living basis.

Some of the imports that materially affect our farmers and especially in the Corn Belt of the Nation are herein included, as reported by the Department of Agriculture. These figures apparently show that the tariff is not preventing the importation of large quantities of dairy products and meats into the United States and I respectfully call attention to the very large quantity coming in during the year 1927.

*Imports, 1927*

| | | |
|---|---|---|
| Butter | do | 8,459,741 |
| Milk | gallons | 5,592,539 |
| Cream | do | 4,843,138 |
| Milk, condensed, evaporated, and powdered | pounds | 10,356,469 |
| Cheese | do | 79,796,042 |
| Eggs, in shell | dozen | 249,967 |
| Eggs, whole, dried | pounds | 962,482 |

| Sugar, refined | do | 250,645,670 |

The tariff rate should be sufficient in order to protect American manufacturers and labor, and high enough to equalize the difference in the cost of production at home as compared with that which is imported from other countries. When this parity is maintained our country can stand fairly well protected and we should be able to take care of and protect our trade with our sister Republics to the south, who, with other countries, can use our surplus grain, cotton, and wool in exchange for their coffee, rubber, sisal, and tropical fruit. In like manner exchange could be made with those countries of Europe who owe us billions of dollars and thus an enormous debt could be paid and we in turn could wipe out our own enormous liability from the war. The Government could at once reduce taxes and lift a load off the American people and especially from the American farmer. It would appear that our meat and dairy products need a revision of the tariff, as you will see from the immense importations during the year 1927.

I am heartily in accord with legislation of a character that may assist the farmer in improving his present financial condition by aiding him in the proper marketing of his farm products, and especially in the disposition of the surplus above the proper supply needed within our own country.

The debenture plan introduced by the gentleman from Texas [Mr. JONES] and the gentleman from Michigan [Mr. KETCHAM] in my opinion has much to commend the same; it will accomplish every claim made by the friends of the equalization fee, without the question of unconstitutionality being raised; if placed in the farm relief bill it would tend to in some degree assure the enactment of proper farm legislation.

I maintain that education toward expert knowledge in every calling, profession, and occupation is the best way of reaching solutions of problems arising. To this end the farmer must study his condition from the standpoint of ascertaining what is wrong with his soil, his crops, his overhead expense, in order that he may know how to solve his problem and make his investment of capital and labor give to him a proper return.

The States, through their agricultural colleges and other organizations, can do much in diffusing agricultural education.

To this State movement the Department of Agriculture of the Government should be closely affiliated in a practical way so that complete cooperation can be maintained. The producer and consumer should be brought closer together, so that the middleman can be eliminated and the cost of distribution can be materially reduced, with a direct benefit to each class. This means also that the transportation must be equalized in the same proportion upon railroad capital as it bears to the farmer's capital.

Mr. BRAND of Ohio. Mr. Speaker, the discussion of the McNary-Haugen bill has resolved itself into whether or not we are going to make the tariff actually apply on northern agricultural products, and whether or not we are going to control the surplus of cotton in the South, using the equalization fee to cover the costs and losses sustained on the various operations. I think it is fair to say that the opposition want to help agriculture without raising the price of its products.

LOANS TO COOPERATIVES

The opposition, after four years of struggle on this question, are finally willing to make Government loans to farm cooperatives for the purpose of stabilizing prices on farm surplus crops. This means that the Government will loan money to a cooperative in a surplus year for the purpose of buying up the surplus and withholding it from the market probably until there is a lean year, at which time this surplus would be disposed of. The result of this would be smoothing out the hills and the hollows and making an average price continuous.

OBJECTION NO. 1

The objection to the plan is, first, that the cooperative is composed of a small portion of the people raising any particular crop and this cooperative would have to bear all of the overhead, shrinkage, and so forth, at its own expense and for the benefit of all of the people raising that crop. That is, 1 per cent or perhaps 10 per cent of the growers of that crop would foot the bill for the benefit of all of the growers of that crop and this means that the cooperative would probably be bankrupt at the end of the operation.

OBJECTION NO. 2

The next objection to this plan is that it does not contemplate raising the prices above world prices, whereas everybody else in the United States has been raised above world conditions by the operation of many different laws. To raise prices above world prices results in heavy losses incurred in handling the surpluses and no provision is made by the opponents of the McNary-Haugen bill for meeting any such heavy losses. Such a loss can only be covered by a subsidy out of the Treasury or by the application of the equalization fee.

OTHER PRICES RAISED BY LAW

Uncle Sam, by law, has raised railroad income from $4,000,000,000 per year to about $7,000,000,000, and the railroads are prosperous and all of the men who are working for the railroads also are prosperous.

Uncle Sam has protected all labor in the United States from cheap foreign labor by means of the immigration bill, and labor generally is on a remunerative basis; the immigration law meaning billions of dollars annually to the labor of the country.

Uncle Sam has, by means of the tariff law, continually kept the price of manufactured articles above European prices, thus bringing adequate income to manufacturers and to men employed by them.

Uncle Sam, by means of the Federal reserve act, has given the banks control of the surplus money in the United States and the banks pay a fee in the nature of money without interest that amounts to an equalization fee. Public utilities generally have been put upon a paying basis by laws in the States. The gas one burns; the electricity that illuminates; the insurance rate that protects the home; the street-car fare have all been "regulated" on a paying basis by law.

FARMER COMPETING WITH WORLD

The farmer is competing with all of the world on most of his products. His wheat, corn, hogs, cotton, barley, and oats all go to European markets to find their price and there they meet the same products of the European farmer upon an equal basis, and there come also the surpluses from all the nations of the world and the American farmer gets less for his product than the European farmer by the amount it costs in transportation and overhead, from his point to the European market.

Under these conditions, selling in the low market and buying in the American market the things he must buy, his land is depreciating annually in value, and he is constantly going deeper in debt on an average, trying to sell at world prices and buying in the American market.

THE EQUALIZATION FEE

The only contention in this legislation is the equalization fee in the McNary-Haugen bill. The first objection is that it is, the opponents claim, unconstitutional.

IS IT CONSTITUTIONAL?

A few weeks ago, the Supreme Court of the United States declared that the flexibility of the tariff act is constitutional. This provision provides in effect, the transfer of authority to the President of the United States from Congress the power to raise or lower the tariff on an article to the extent of 50 per cent and amounts to a change in the amount of taxation entirely in the hands of the President.

When the Supreme Court took this action I had occasion to confer with one who opposes the McNary-Haugen bill on the grounds that the equalization fee is unconstitutional. I asked him whether or not the decision of the Supreme Court had any bearing upon the constitutionality of the equalization fee, and rather to my surprise he admitted at once that the two were on a par, and that if Congress had a right to transfer its power to the President it undoubtedly had the power to transfer the same power to a board or a commission, and if there did appear in the minds of any a difference the McNary-Haugen bill could easily be changed so that the President would apply the equalization fee.

Not being a lawyer, I have no opinion to express in this matter, but I do hope the opponents of the bill, on constitutional grounds, will go carefully into this recent decision of the Supreme Court and develop what grounds they have for continuing to claim that the equalization fee in the McNary-Haugen bill is unconstitutional.

From my viewpoint the equalization fee in the McNary-Haugen bill is the only part of the bill that is absolutely essential if we are to raise the price of farm products above the world price and be successful in handling the surplus of the cotton in the South.

I think that we could get along without the farm board, as such a board could be formed by the farmers themselves.

I think that we could get along without the revolving fund, as money could be secured if we had the equalization fee by which losses could be met.

SHALL THE FARMER GET THE TARIFF?

The equalization fee is the essential part, and it seems to me that those who are opposed to the equalization fee are opposed because they do not want American prices higher than foreign prices. The Republicans who are opposed to this bill are simply saying in effect that we put the items in the tariff bill for the benefit of agriculture, but we do not mean to have those tariffs actually apply.

This leaves a peculiar situation, with industry enjoying the benefits of the tariff and agriculture competing with the world and denied the actual benefits of the tariff—a situation that can not be long maintained.

For fear that some do not understand the necessity of the equalization fee, I will try to illustrate.

THE EQUALIZATION FEE AND COTTON

Take cotton, for example. Suppose we have a crop of cotton that shows a surplus of 2,000,000 bales. If the McNary-Haugen bill were a law, an organization would be formed to buy up this surplus cotton at a price not less than the cost of production. This organization would go on to the market at the beginning of the crop season. Without the McNary-Haugen bill the record of the past shows that cotton went to 10 cents a pound under the conditions of the illustration. The organization has made an investigation and finds that it costs 16 cents per pound to produce cotton on the average plantation, so the organization offers to buy cotton at 16 cents per pound of a certain grade. Eventually this organization will have on its hands this 2,000,000 bales of surplus cotton, and the question then arises: "What are they to do?" It seems to me that they will at once attempt to dispose of as much of this cotton as possible for uses that are new. For example: The cotton people of the South are now packing their cotton in jute bags—in jute raised over in India that costs 7 cents or 8 cents per pound—and bags made out of cotton are conceded to be better for the purpose and close to a million bales of cotton can be used annually in place of jute. However, the price of jute is lower than the price of cotton. Would not this organization handling this surplus cotton be wise if they should set aside the cheap grades of cotton which they had accumulated and make a price on that cotton to compare with jute, even though a considerable loss were sustained by such a transaction? What would this loss amount to? They would probably have to sell this low-grade cotton at a loss of 5 cents per pound, which, I believe, would amount to $25 per bale, and a million bales

would amount to $25,000,000. If such a loss is sustained, how would this cotton organization meet such a loss?

That is where the equalization fee would come in. The organization could sustain the loss and spread such loss over all the producers of cotton and thereby get rid of a surplus in the neighborhood of a million bales. If there were 2,000,000 bales of surplus in that year, the other million bales probably would have to be carried over, and the carrying charges would be no small amount, and somebody would have to pay those charges and the equalization fee would come into play again. Another year the crop might be short, and this million bales could be fed into the market.

The loss in handling the surplus of the surplus year is the point that we have in mind and the condition we have to deal with and the equalization fee is the essential part, unless we are to take a subsidy out of the Treasury, which the farmers of the country are against.

Cotton cooperatives have tried to withhold surpluses and avoid disastrous prices. Congressman HARE stated on the floor of the House that he had been with a cooperative ever since it started, but that the cooperative had never been able to accomplish its purpose. Congressman STEVENSON stated on the floor of the House that all of the cooperatives in the South were on their last legs. The cooperatives borrowing money, attempting to handle surpluses have been tried and found decidedly wanting, and what is lacking and what they need is a way to spread their losses over all the growers of cotton.

NET GAIN OF $400,000,000 IN COTTON

In the illustration I have made above, there would probably be a loss, all told, of $40,000,000 for that year, and that loss would amount to almost $3 per bale on each bale of cotton raised. But what would be the net result to the cotton farmer if the illustration worked out exactly? Instead of 10 cents per pound he would receive 16 cents per pound, or an increase of $30 per bale. In other words, by paying the equalization fee he would trade $3 for $30, or a total gain on an ordinary crop of about $400,000,000.

EQUALIZATION FEE AND WHEAT

Take wheat, for example. There is a surplus of from one hundred to two hundred million bushels more wheat raised in the United States than is used in the United States, and this makes us accept the world price for our wheat. In fact, the American wheat grower gets less than the Liverpool price by the amount of the freight and overhead from his point to Liverpool.

Ohio, for instance, gets about 30 cents per bushel less for wheat than the farmers in Europe get for theirs. If there be any exception to this it is all from high-protein wheats, of which some years we do not raise enough for our home demand; but this kind of wheat is a small proportion of our production, said to be about 2 per cent.

If the McNary-Haugen bill were in operation an organization would be formed which would eventually buy the surplus wheat at the world price plus the tariff of 42 cents per bushel, and the organization might eventually have on its hands from 100,000,000 bushels to 200,000,000 bushels of wheat that cost 42 cents more than the world price. If the price of wheat were extremely high, as it is just now, the board would probably not operate; but this is the first time that wheat has been at its present level in the last eight years.

When this board finds itself in possession of surplus wheat, what is it going to do with this wheat? It is surplus wheat in the United States, but there has always been a demand for it in the world and a place where it is needed and where it can be sold at the world price which, by the way, will only make wheat 12 cents lower in Liverpool than in the American market, because wheat, on an average, is 30 cents higher in the Liverpool market than in the American market under present conditions. As a matter of fact, in actual practice this surplus is not likely to accumulate in the hands of the organization, but will flow gradually throughout the year into world channels in response to demand.

The board will sell this surplus wheat abroad and sustain a loss equivalent to the tariff, which would amount to from $40,000,000 to $80,000,000 per year, according to the size of the surplus, and this loss would come out of the revolving fund in the Treasury provided for by the bill. If there were no equalization fee the Treasury would stand this loss and the Congress would be called upon at the next session of Congress to reimburse the revolving fund to this extent, and if operations were carried on in the case of cotton, tobacco, pork, wheat, and so forth, the revolving fund might be exhausted each year and the Congress might be called upon to provide a new revolving fund each year which we who believe in the equalization fee think the Congress would not do, because it would amount to an expense at least every two years out of the Treasury of perhaps $400,000,000, which might entail some new form of taxation. Even though we might feel that such a policy was fair and that this was not a subsidy, yet we believe it is a perfectly impractical plan which could never be carried out year after year.

So we believe in the equalization fee, which will work something like this on wheat: The board would sustain a loss on the surplus wheat and apply an equalization fee upon all of the wheat, probably collected when the farmer sold his wheat. There have been times when the surplus would have warranted a 4 cents per bushel equalization fee and there have been times when a 12-cent equalization fee would have been necessary. The point is, the farmer would receive the world price for his wheat plus the tariff of 42 cents less the equalization fee, which would net him an increase of from 30 to 38 cents per bushel.

LET US MAKE IT PLAIN

Perhaps this is not plain enough. Suppose the price of wheat is $1 per bushel the world over. The organization under the McNary-Haugen bill to handle wheat goes into the market at harvest time and offers to buy at the world price of $1 plus the tariff of 42 cents, and this year there are 100,000,000 bushels surplus over and above the needs of the people of the United States. Eventually the organization might have in its hands the 100,000,000 bushels of surplus wheat, which cost $1.42 per bushel. What will they do with it? They will sell it out over the world in the usual channels at the world price of $1 per bushel, and the organization will lose 42 cents per bushel, or $42,000,000.

Where do they get this money? Out of the revolving fund created by the bill, but a revolving fund means that you must put back what you take out. How will the organization get this $42,000,000?

HERE IS THE EQUALIZATION FEE

When John Jones brings 100 bushels of wheat to the elevator at his market place in Indiana, the elevator man will say to him: "Wheat is worth $1.42 per bushel, but I can only pay you $1.36 in cash, but I will give you a stamp that cost me 6 cents at the post office on each bushel. That stamp is not really worth anything to you, but it proves that I purchased the stamp. It pays the loss in handling the surplus wheat this year."

When the elevators all over this country have purchased the 700,000,000 bushels of wheat they will have purchased at the same time 700,000,000 stamps at 6 cents each, and that money will have traveled back from the post offices to the United States Treasury and brought to the Treasury exactly $42,000,000, which balances the deficit in the revolving fund occasioned by the loss on wheat.

What will this mean to the wheat growers? They will have received 42 cents per bushel extra for their wheat by the operation of this bill less 6 cents per bushel equalization fee or a net gain of 36 cents per bushel. The stamp idea of collecting the equalization fee may not be used, as the board may find an easier way.

WILL THE M'NARY-HAUGEN BILL INCREASE FOOD COSTS?

The real objection to this bill comes from Congressmen from consuming centers where they think that an increase in the price of farm products must necessarily increase the retail price. This would be undoubtedly perfectly fair as the retail price of practically all other products have been already increased by law and the farmer is entitled to a like increase in his prices. However, the situation is peculiar.

BREAD

It is a fact that during the last six years the price of wheat has varied from 83 cents per bushel up to $1.85 and the price of bread has practically remained the same. The price of bread in Ohio where full pound loaves are sold has remained constant at 8 cents per pound since 1922 although wheat has varied more than 100 per cent. I give here a telegram dated May 1 from the director of agriculture, who administers the bread law of Ohio.

COLUMBUS, OHIO, *May 1, 1928.*

No change in retail price. Pound loaf of bread still 8 cents.

CHAS. V. TRUAX,
*Director of Agriculture.*

The reason of this is apparent to a student of the question. Recently the Federal Trade Commission made a report on the baking industry showing that the farmer got 1.15 cents out of a loaf of bread that retailed at 8 cents and that the wholesale baker got 5.11 cents out of the same loaf of bread. When wheat is high the wholesale baker gets a little less. When wheat is low, he gets a little more. The figures show that he has a wide range for adjustment. The fact of the matter is that the cost of the wheat in a loaf of bread is a small matter,

and it does not determine the selling price of bread. We know from experience that an addition of 42 cents to the price of wheat has not, in the past, affected the price of a loaf of bread.

COTTON GOODS

Now, take another example of cotton. The ordinary man's shirt costs about $2, and if you will weigh up the amount of cotton in that shirt you will find that there probably is not 5 cents worth of cotton in that shirt and if you raise the price of cotton 50 per cent there is no way to reflect that addition to the price of cotton in the retail price of a shirt.

MEAT AND TOBACCO

Does anyone think the price of bacon will be any higher than 50 cents or 60 cents per pound if the farmer receives the 1 cent or 2 cents per pound tariff on hog products? Does anyone think a package of cigarettes will cost more if the tariff is actually applied to tobacco? You will find that the bread conditions I have detailed likewise apply to tobacco.

THE SPREAD IS UNREASONABLE

The raw materials produced on the farm are a small proportion of the retail prices now being paid by consumers of agricultural products. The fact of the matter is, the Government reports show that the farmer receives about $10,000,000,000 a year for what he raises and the consumer pays about $30,000,000,000 for these products. You can raise the income of the farm by the McNary-Haugen bill about $2,000,000,000 a year probably without raising at all the amount that the consumer pays.

M'NARY-HAUGEN PRINCIPLES INEVITABLE

After four years of constant study of the agricultural problem the Senate has passed the measure by a vote of 53 to 23—a very marked increase over last year's vote.

The House will do likewise. Congress is convinced. There may be a delay but the measure is inevitable. The opposition is crumbling; business is suffering on account of the lack of the buying power of the farmer. There are too many farmers in this country to permit a persistent discrimination against them. Equality of treatment will be the final result.

The tariff will be for industry and agriculture alike.

MESSAGE FROM THE PRESIDENT OF THE UNITED STATES—INTERNATIONAL CONFERENCE ON LITERARY AND ARTISTIC PROPERTY (S. DOC. NO. 89)

The SPEAKER laid before the House the following message from the President of the United States which, with the accompanying papers, was referred to the Committee on Foreign Affairs and ordered printed:

*To the Congress of the United States:*

I transmit herewith a report from the Secretary of State recommending a request to Congress for legislation authorizing an appropriation of $1,500 for the expenses of a delegate of the United States to the International Conference on Literary and Artistic Property, to open at Rome, Italy, on May 8, 1928.

I am strongly in favor of this, and trust that the appropriation may be promptly granted in view of the short interval of time remaining before the opening meeting.

CALVIN COOLIDGE.

THE WHITE HOUSE, *April 26, 1928.*

SIXTH INTERNATIONAL CONFERENCE OF AMERICAN STATES

Mr. BACON. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the recent Habana Pan American Conference.

The SPEAKER. The gentleman from New York asks unanimous consent to extend his remarks in the RECORD on the recent Habana Pan American Conference. Is there objection?

There was no objection.

Mr. BACON. Mr. Speaker, I have introduced House Joint Resolution 220 for the purpose of extending the thanks of the American people and of the Congress to Chairman Hughes and the American delegation for their work at the recent Pan American Conference held at Habana and for the results which they were able to accomplish.

In the past 30 years Congress has seen fit to extend its thanks on seven occasions. Two of these six occasions were to military heroes. I suggest that this is a proper and fitting time to recognize Americans for their work in furthering the cause of international peace. After all, this is the only way that the people can give recognition to the notable achievements and accomplishments of their representatives.

In passing this resolution Congress will have an opportunity of setting its seal of approval upon the work for Pan Americanism, upon the Pan American Union, and upon the furtherance of our friendly relations with our sister Republics on this continent.

Mr. Hughes and his fellow members of the American delegation by their notable achievements and distinguished services at the Habana conference not only assured the conference success but greatly enhanced the friendly relations between the Republics of the western world.

The Habana conference will be considered a milestone on the path toward permanent international good will and understanding, and particularly because it is the first time in any international conference that obligatory arbitration of juridical disputes has been unreservedly advocated, and the first time it has ever been adopted.

Action by Congress on this resolution would lend encouragement to the work of the Pan American Union, and, I am informed by those in a position to know, that its passage would also be most acceptable to the Latin-American Republics.

The recent International Conference of American States met at Habana January 16, and adjourned February 20, 1928. This gathering was the sixth of the series, the first conference having met in Washington from October 2, 1889, to April 19, 1890. The meeting of the American Republics was proposed by Secretary of State Blaine in 1881, but the war between Chile on the one hand and Bolivia and Peru on the other, which is commonly called the War of the Pacific, rendered it inexpedient, if not impossible, for representatives of the different countries to meet at that time and in that atmosphere.

The purpose of this first conference was primarily, and in each succeeding case has been, to discuss the means whereby the peace of the continent could be kept without a resort to arms. Secretary Blaine's method was arbitration, and his suggestion was approved by Mr. Garfield, then President of the United States, and who had had large experience of war. The conference finally met in the administration of President Harrison, who had likewise seen years of service in the field.

The conference met with representatives from 18 States, and declared, among other things, arbitration to be the public law of the Americas. A treaty of arbitration was proposed, with the proviso that the disputes of the American Republics should be submitted to arbitration and that wars of conquest should be abolished because of the resort to arbitration.

Secretary Blaine was chairman of this conference and has to his credit the series of Pan American conferences, which are already six in number. In the first conference—that is to say, Secretary Blaine's original conference—the first adequate discussion was had of arbitration in any international gathering composed of plenipotentiaries of free and sovereign nations. In it the first step was taken to outlaw war by agreement to submit disputes to arbitration and to renounce conquest, just as the Sixth Pan American Conference, in which former Secretary of State Hughes represented the United States, adopted the first unanimous resolution of 21 Republics outlawing aggressive warfare and unanimously agreeing to submit their disputes of a juridical nature to arbitration—obligatory arbitration without the customary reserves thus being established for the first time in an international conference composed of official representatives of all American Republics.

There had been sporadic statements in favor of obligatory arbitration, but the Sixth International Conference of American States did not content itself with a declaration; it adopted it in principle and in fact by the unanimous agreement of the American Republics. A conference is to meet within the twelvemonth in Washington in order to embody in a solemn and continental treaty this principle of obligatory arbitration already adopted. Just as Secretary Blaine was able to declare obligatory arbitration public law of America, former Secretary of State Hughes, representing the United States and in its behalf, has made obligatory arbitration the practice of the American Republics.

Had the United States, through Mr. Hughes, not declared itself in favor of obligatory arbitration, it could not have been adopted; and if Mr. Hughes had not presented the matter in such a convincing manner and in such acceptable form, it would not have been adopted. His attitude on this occasion alone justifies not merely the gratitude of his fellow citizens of North America, but the gratitude of every American Republic. It is the sober truth to say that no pronouncement of an American statesman has gone further to convince the Latin American peoples of the earnest desire and the firm intention of the United States to replace force by law in its relations with Latin America. Through Mr. Hughes's presence and timely intervention in the last days of the conference the American continent as a whole has been dedicated to peace through obligatory arbitration. The original proposal of Blaine thus finds its full fruition under Hughes.

The Pan American conferences are a contribution of the wisdom and foresight of an American Secretary of State. As

the result of the first meeting, in Washington, a bureau of the American Republics was established, with the modest functions of collecting and distributing commercial, economic, and other statistics. The usefulness of the bureau having been demonstrated, its nature and scope were enlarged, with the result that instead of the bureau a Pan American Union came into being, with the palace of the American Republics in Washington, upon ground procured by Secretary of State Root from the Congress of the United States for a home of the American Republics.

Here once a month, or oftener upon special call, the representatives of the American Republics accredited to Washington meet to discuss their common interests. It is not a political body, although composed of political agents. It has hitherto met under the chairmanship of the Secretary of State of the United States. He is only a presiding officer, elected by his colleagues, without more initiative than any other member. The director general is the administrative officer of the union, chosen by the governing board. It is a diplomatic assembly, in which each American Republic is represented by its diplomatic officer or by any other representative whom it may choose—a provision adopted at this last conference of the American Republics in Habana.

For well-nigh 40 years the union has been meeting under a resolution of successive conferences. At the recent Habana gathering a convention—that is, a treaty—placing the Pan American Union on a firm and permanent basis was unanimously adopted, to be ratified by all of the American Republics, reserving, however, the right of each of them to withdraw should it so desire. This happy transformation and preservation of the Pan American Union, as it had grown in the light of experience, was due to the constant, insistent, and successful efforts of former Secretary of State Hughes.

The Pan American Union is now no longer dependent upon a mere resolution, to be changed by a chance vote of any conference; it is a permanent organization under a convention to be ratified by all of the American Republics, with the full force and effect of a treaty.

The American Republics have decided after years of experience and much discussion that they will not modify the union in such a way as to make it a political agency of the Republics in economic, commercial, tariff, immigration, or other matters of a purely domestic concern. Of the movement to preserve it from attack and modification, former Secretary of State Hughes was the head and front; and at the conclusion of his final address on the subject, in the closing days of the conference, on a vote taken, 19 of the Latin-American Republics sided with him against the one American Republic which had wished to change the existing organization of the union. Later, in the last plenary session of the conference, on February 18, the delegate of that country announced, pursuant to express instructions, that it would approve and sign this convention. Thus was harvested the fruits of 40 years' experience, giving to the Pan American Union the definite form and dignity which come only through international treaties. And it is the mere truth to say that this achievement through Mr. Hughes's intervention gives definite and permanent form and shape to Secretary Blaine's wisdom and vision.

The traditional policy of the United States in its relation with foreign nations has always been based upon fundamental conceptions of international law—that is to say, upon the right of each and every State to exist, and to conserve its existence, without, however, endangering the just rights of other States in the process; the independence of each and every State, with the right to control its internal policy without intervention from other States, provided that in the exercise of its independence no State violates the just rights of any other State; the right of each and every State to equality before the law; the right of all States to have their rights respected by all, inasmuch as right and duty always have been, are now, and must be under a legal system of international law correlative.

The policy of the United States in its relations with foreign countries, based upon these fundamental principles of international law, was admirably stated and justified by former Secretary of State Hughes in the Sixth International Conference of American States, in approval of the report of Mr. Victor Maurtua, a delegate of the Republic of Peru, who had been selected by the Commission on Public International Law to prepare and to present a report on "The fundamental bases of international law and States." Mr. Hughes's address on this occasion—as was the case with his address in the last plenary session of the conference—was based upon these fundamental principles of international law, which necessarily imply the duty of every State claiming the right to exist, the right to independence, and the right to legal equality, to organize its government in such a way as to perform its duties under international law, and, in the present case, to recognize the right of other States to existence, to independence, and to legal equality, and in all its actions to respect those rights of other States which it would ask of others.

The inability of a State to perform its duties under international law to such a degree as to jeopardize the life, liberty, and property of citizens of other States necessarily permits the friendly interposition of the State whose just rights have been violated. This is the recognized practice of nations under accepted international law, and friendly interposition is the more obligatory when made at the request of the State in which government either has ceased to exist to function or is unable to comply with its duties.

On these fundamentals of international law Mr. Hughes, as chairman of the delegation of the United States and in behalf of every member of the delegation in both commission and in plenary session, said:

One hundred years ago we declared the policy that all the American Republics should be recognized in their independence. We have given our arms and our blood for the independence of the American Republics and are always ready to do so. We yield to none in the establishment of the ideal of sovereignty and independence for every one of the American Republics from the greatest to the smallest. And I have the right, speaking here on behalf of the delegation of the United States, to declare the policy of my country. I joined readily in the resolution of the delegation of Mexico against aggression. We want no aggression. We want no aggression against ourselves. We cherish no thought of aggression against anybody else. We desire to respect the rights of every country and to have the rights of our own country equally respected. We do not wish the territory of any American Republic. We do not wish to govern any American Republic. We do not wish to intervene in the affairs of any American Republic. We simply wish peace and order and stability and recognition of honest rights properly acquired so that this hemisphere may not only be the hemisphere of peace but the hemisphere of international justice. Much has been said of late with regard to Nicaragua. There sits the Foreign Minister of Nicaragua, a delegate of his country to this conference. He can tell you the situation in Nicaragua and I can tell you that we desire nothing more than the independence and peace of his country, and that we are there simply to aid them in obtaining free elections in order that they may have a sovereign and independent government.

I mention that merely because I speak in a spirit of entire frankness. Now, what is the real difficulty? Let us face the facts. The difficulty, if there is any, in any one of the American Republics, is not of any external aggression. It is an internal difficulty, if it exists at all. From time to time there arises a situation most deplorable and regrettable in which sovereignty is not at work, in which for a time in certain areas there is no government at all, in which for a time and within a limited sphere there is no possibility of performing the functions of sovereignty and independence. Those are the conditions that create the difficulty with which at times we find ourselves confronted. What are we to do when government breaks down and American citizens are in danger of their lives? Are we to stand by and see them killed because a government in circumstances which it can not control and for which it may not be responsible can no longer afford reasonable protection? I am not speaking of sporadic acts of violence, or of the rising of mobs, or of those distressing incidents which may occur in any country however well administered. I am speaking of the occasions where government itself is unable to function for a time because of difficulties which confront it and which it is impossible for it to surmount.

Now, it is a principle of international law that in such a case a government is fully justified in taking action—I would call it interposition of a temporary character—for the purpose of protecting the lives and property of its nationals. I could say that that is not intervention. One can read in textbooks that that is not intervention. But if I should subscribe to a formula which others thought might prevent the action which a nation is entitled to take in these circumstances, there might come later the charge of bad faith because of acceptance of a formula with one interpretation in my mind while another interpretation of it is in the mind of those proposing the formula. So it was necessary to have a fair understanding. Of course, the United States can not forego its right to protect its citizens. No country should forego its right to protect its citizens. International law can not be changed by the resolutions of this conference. International law remains. The rights of nations remain, but nations have duties as well as rights. We all recognize that. This very formula, here proposed, is a proposal of duty on the part of a nation. But it is not the only duty. There are other obligations which courts, and tribunals declaring international law, have frequently set forth; and we can not codify international law and ignore the duties of States by setting up the impossible reign of self-will without any recognition upon the part of a State of its obligations to its neighbors.

Any other position would have resulted in a change of the fundamentals of international law because of a temporary political expediency. A duty arises in the above situations for interposition, and a failure to comply with that duty would be at variance with international law as a system of rights and duties and the practice of the nations in such matters.

In the last plenary session of the conference, on February 18, and when its very adjournment was in sight, a motion was made from the floor of the conference and in express terms to the effect that "no State has the right to intervene in the internal affairs of another State." Mr. Hughes accepted this challenge to the fundamental principles of international law and stated with clarity, force, and persuasiveness the right of all nations to interpose wherever and whenever government is nonexistent or powerless adequately to protect life, liberty, and property, thus failing in the performance of its duties under both the universal law and the accepted practice of nations. At the conclusion of Mr. Hughes's address the delegate who had made the motion withdrew it with the unanimous approval of the delegates present.

The importance which the Sixth International Conference of American States would undoubtedly have in the history of a rational and acceptable Pan Americanism was so evident to the Government of the United States that President Coolidge decided to attend in person the opening session of the conference, and by his presence and by his words to testify that the conference was a meeting of the 21 free, sovereign, and independent States of America.

It is impossible to overstate the friendly effect of President Coolidge's presence, and his address is destined to take its place among the great state papers of the western world.

The importance of the conference was further emphasized by the selection of former Secretary of State Hughes, an outspoken friend of the American Republics, to head the American delegation, and by the nonpartisan delegation of distinguished American citizens who accompanied him as members.

If history is to be believed, there are two methods of settling disputes between nations: The time-honored one of force and the American doctrine of justice expressed in rules of law. When the 13 American Colonies proclaimed their independence on the ever-memorable day of July 4, 1776, the appeal which they made was to "the laws of nature and of nature's God." The framers of the Declaration foresaw that there should be some form of union. They wished it to be a union of law, and not of force. Therefore all disputes of any kind which might arise between the States were to be settled by arbitration through temporary commissions or courts appointed for the purpose. And when, a few years later, the more perfect Union of the States under the Constitution was formed, a Supreme Court of the States was also formed, in which each State of the American Union could sue every other State and have its controversies settled by due process of law, without an appeal to arms. The appeal to law for the settlement of controversies through principles of law derived from the immutable principles of justice has been an American ideal and a traditional policy.

The adoption by the Sixth Pan American Conference of the duty to submit controversies of a legal nature between the American States to obligatory arbitration is a realization upon a continental scale of the practice of the founders of the American Republic. That arbitral or judicial settlement may have its full fruits, it is necessary that there be a law whereby the controversies may be settled, and, to the extent of that law, arbitral and judicial settlements are possible. Therefore the statement of the law to be applied between the American Republics has been an aspiration of the Western World since the independence of the American Republics, and because of this aspiration the codification of international law has become the order of the day.

The Sixth International Conference of American States offers the first conscious fruits of codification. In addition to the reaffirmation of the fundamental principles of international law so clearly expounded by Mr. Hughes, 11 conventions were adopted by the conference.

In addition to these 11 treaties, 60 resolutions, some of far-reaching importance, were also adopted. I will append a summary of the results of this conference at the close of my remarks.

In the Sixth International Conference of American States the ideals of North America and of Latin America mingled and took definite form and shape, through the realization of the common hope of the continent to substitute law and justice for force. Already we are within measurable distance of the realization of the prophecy of Bolivar, of "the free and independent States of America, united among themselves by a body of common law which shall control their foreign intercourse."

President Coolidge, in his opening address, put the seal of Executive approval upon the Pan American conferences and the noble aspirations which they seek to accomplish. The Congress of the United States, by the passage of this resolution, has the opportunity to lend its approval to the placing of Pan Americanism upon a more firm, secure, and acceptable foundation of law and justice, thereby encouraging our sister Republics to continue their collaboration with the Republic of the north, to the end that all their Governments may become governments "of law and not of men," and that our international policies shall be policies based upon law and justice and not upon the shifting sands of political expediency.

CONVENTIONS, MOTIONS, AGREEMENTS, AND RESOLUTIONS APPROVED AT THE SIXTH INTERNATIONAL CONFERENCE OF AMERICAN STATES

The Sixth International Conference of American States resulted in the adoption of 11 conventions, 8 motions, 3 agreements, and 60 resolutions. There is given below a list of the conventions adopted, together with a brief summary of the motions, agreements, and resolutions approved by the conference:

CONVENTIONS

1. Convention accepting and putting into effect the code of private international law.
2. Convention on commercial aviation.
3. Convention on the Pan American Union.
4. Convention on the revision of the copyright convention of Buenos Aires of 1910.
5. Convention on the status of foreigners.
6. Convention on treaties.
7. Convention on diplomatic officers.
8. Convention on consular agents.
9. Convention on neutrality.
10. Convention on the right of asylum.
11. Convention on the rights and duties of States in case of civil war.

MOTIONS

1. Expression of appreciation to the President of the United States, Hon. Calvin Coolidge, for his presence at the opening of the conference.
2. Vote of gratitude and appreciation to the President of Cuba, Gen. Gerado Machado.
3. Invitation to the professors of the University of Habana to attend the sessions of the conference.
4. Tribute to Woodrow Wilson for his work in the interests of peace.
5. Authorization to the president of the conference to consider the report of the committee on credentials.
6. Tribute to Dr. Guillermo Sherwell, former secretary of the Inter-American High Commission.
7. Invitation to the women's associations to present their views relative to the rights of women.
8. Tribute to the Chilean jurist, Dr. Alejandro Alvarez.

AGREEMENTS

1. Recommendation to the governing board of the Pan American Union that the program of the next conference include a topic providing for the study of the improvement of the conditions of workers.
2. Tribute to Dr. Carlos J. Finlay.
3. Designating February 20 as the date for the closing of the conference.

RESOLUTIONS

1. Recommending that the countries which have not yet ratified the Pan American sanitary code ratify it as soon as possible and to give the widest possible application to its provisions.
2. That the Governments of the American Republics send to future international conferences of American States technical advisers to serve on the committee on hygiene; that the American States present to future international conferences reports on progress made in technical matters in the respective countries; that the American countries organize visiting-nurse associations; that the respective countries promote the interchange of specialists in public health and hygiene between official and private institutions; that the Pan American sanitary bureau undertake a study of the types or standards for the preparation of biological products.
3. Calling the attention of the respective governments to the important work of the Red Cross in time of peace; expressing approval of the results of the first and second Pan American Red Cross conferences, and recommending that the American Republics lend their support to the third conference, to meet at Rio de Janeiro; and that the Pan American Union continue its work of ecoperation for the development of the Red Cross in America.
4. Recommending that future Pan American conferences of representatives of public health give preferential attention to the views and experiences relative to sanitation and hygiene, which may serve as a basis for the programs of the sanitary conference; and recommending that an official representative of the Pan American sanitary bureau attend future conferences of representatives of public health.

5. That the application of the principles and procedure of public-health administration approved at the fifth conference represents an efficient factor in the development of sanitation and hygiene; and requesting that the Ninth Pan American Sanitary Conference established the bases for the instruction of the personnel engaged in sanitary work.

6. Recommending that the governments study and apply, as far as possible, the conclusions of the First Pan American Conference on Eugenics and Homoculture; requesting that the Ninth Pan American Sanitary Conference and the Second Conference on Eugenics and Homoculture, both of which will meet at Buenos Aires, harmonize the functions of the Pan American Bureau on Eugenics and Homoculture and the Pan American Sanitary Bureau; requesting the American Republics which do not possess technical representatives for the study of immigrants in the country of origin, as well as those which do not possess them in sufficient number, to avail themselves of the services of the representatives of those countries which have a sufficient number, and whose services may be utilized as ex-officio representatives of the Pan American Sanitary Bureau.

7. Recommending that future Pan American Congresses of Journalists be held at the time and place designated by the governing board of the Pan American Union; and requesting the governing board to study the organization of a permanent body to serve as the organ of the congresses of journalists.

8. Recommending that the next Pan American Congress of Journalists consider the quality of news transmitted between the American Republics; the appointment of news correspondents acquainted with the history, language, legislation, and customs of the countries to which they are accredited; frequent visits of journalists to various American countries; the establishment of schools of journalism; and the protection of property rights in articles and photographs published in the newspapers.

9. That the Fourth Pan American Commercial Conference be composed principally of representatives of commercial associations of the American Republics; that consideration be given to the development of closer relations between such associations; and that the Pan American Union continue the publication of statistics of the foreign commerce of the American Republics.

10. Creating the Pan American Institute of Geography and History to serve as a center of coordination and dissemination of reports on the geography and history of the American Republics; the institute to be composed of delegations appointed by each of the States and to be established in the capital city of the American Republics designated by the Pan American Union. National committees of the institute shall be established in each of the respective countries.

11. That the countries members of the Pan American Union which may not yet have done so, publish geodetic, geologic, and agricultural maps showing their natural resources, possibilities of development, and means of communication.

12. Recommending a meeting of a technical commission of bibliographic experts at the time and place designated by the governing board of the Pan American Union, the board also to be intrusted with the preparation of the program and with carrying into effect the conclusions of the commission.

13. Recommending a Pan American Pedagogical Conference, to be held at the time and place determined by the Pan American Union, in which representatives of normal schools and institutions of higher learning should participate, the representatives being appointed by the respective Governments.

14. That an inter-American conference on plant and animal sanitary control be held, if possible, in January, 1929, in the city designated by the governing board of the Pan American Union. This conference to study quarantine and sanitary measures affecting agricultural and animal products, and the bases of organization of an inter-American board of agricultural defense.

15. That the countries, members of the Pan American Union, enact in their legislation the principle of obligatory leave for a prospective mother for a period of 40 days before and 40 days after childbirth, with the right to full pay during that time.

16. Recommending the study of the regulation of the industrial and agricultural use of the waters of international rivers, the conclusions to be submitted to the seventh international conference of American States.

17. That the Pan American Congress of Highways consider and adopt agreements tending toward the construction of a longitudinal highway to traverse the continent, the Pan American Union to compile the necessary material as a basis for this study.

18. That the Governments of the American Republic study the adoption of a standard coin, the Pan American Union to submit a definite project to the seventh international conference of American States on the basis of these studies.

19. That the governing board of the Pan American Union convene a conference of representatives of all the Governments, members of the union, to study the question of the inter-American protection of trade-marks, the conclusions of the conference to be transmitted by the union to the respective Governments.

20. Recommending the completion of the dictionary of Don Rufino J. Cuervo, for which purpose the respective Governments agree to contribute fixed amounts, to be collected by the Pan American Union; the union to take the necessary steps for the completion and publication of the dictionary.

21. Approving in general the conclusions of the Pan American commission on the simplification and standardization of consular procedure, and recommending that a second meeting of the commission be called to consider the standardization of consular fees, the results of the meeting to be submitted to the governing board of the Pan American Union.

22. Refraining from studying in all its aspects the problem of immigration in view of the Second International Conference of Immigration and Emigration to meet at Habana, but establishing certain principles and declarations as representing the point of view of the American nations.

23. That the Second Pan American Congress of Highways formulate the basis of a convention for the international regulation of automobile traffic, and a uniform law on the regulation of traffic, which should be sent to the governing board of the Pan American Union.

24. That the States, members of the Pan American Union, signatories to the Convention on Electrical Communications of Mexico of 1924, and the General Radio Telegraphic Convention of Washington of 1927, ratify these conventions as soon as possible.

25. That the Pan American Union convene a conference of experts representing the American Republics to study the most effective measures for the establishment of steamship lines and means for the elimination of unnecessary port formalities.

26. That the governments of the American Republics that have navigable rivers undertake technical studies on their conditions of navigability and the obstacles that hinder navigation, as well as on the methods and cost of eliminating such obstacles and the possibility of connecting or improving existing connections with other rivers, these studies to be sent to the Pan American Union for the consideration of the seventh conference.

27. To maintain in full effect the agreements of previous conferences that the Pan American Railway should follow the Andean route; that national committees be appointed in each country; that those countries in which links in the railway yet remain to be constructed take measures for the early completion of the line; that the central committee study the proposals of the engineers, Briano and Havens, as possible routes for future railways.

28. Recommending that a subcommittee of the Pan American Railway Committee be organized to study all the provisions that affect international railway traffic; that regulations affecting freight and passenger traffic be formulated with a view to facilitating this traffic; and that customs practices and procedures be so formulated as to facilitate the operation of international railway traffic.

29. That the recommendation of the First Pan American Congress of Highways that steamship lines have their vessels stop at ports of certain Republics of the West Indies, be amended so as to have the recommendation apply also the Central American Republics.

30. Approving the construction of an inter-American highway, and recommending that the American Governments lend their cooperation to the early realization of this project.

31. Expressing approval of the plan of the President of the United States of America to convene an international conference on civil aviation.

32. That a Pan American commission be organized, composed of representatives of organizations of consumers and exporters of the United States, and of producers and exporters of Latin America, to meet at periodic intervals at the time and place designated by the Pan American Union, to consider the uniformity of specifications of commodities entering into inter-American commerce; that the governments, members of the union, cooperate in securing the adoption of uniform standards; and that the Third Pan American Standardization Conference shall convene in Cuba within three years.

33. That the metric system be adopted in those countries in which it does not yet prevail.

34. That national committees be appointed to consider the proposed simplification of the calendar, and that the respective countries may participate in an international conference to consider the best method of reform.

35. That through the Pan American Union the first Pan American congress of municipalities be organized, to be composed of representatives of municipalities of more than 50,000 inhabitants, as well as of organizations and individuals closely associated with municipal affairs; that a preliminary meeting be held at Boston in 1930 on the occasion of the three hundredth anniversary of the founding of that city; and that the first Pan American congress of municipalities meet at Habana in 1931.

36. That the countries members of the Pan American Union establish diplomatic and consular schools or institutes in order that the greatest possible uniformity may be reached in the legislation on the studies and requisites for entry into the Foreign Service.

37. Designating the city of Montevideo as the seat of the Seventh International Conference of American States.

38. That the Pan American Union continue to be governed by the resolutions in force until altered by the member States, with the following modifications: That the governing board be composed of representatives that each Government may appoint, which appointment may devolve upon the respective diplomatic representatives at Washington; that the director general, with the approval of the governing board, shall appoint the personnel, endeavoring to distribute the positions among the nationals of all the countries represented in the union; that neither the governing board nor the Pan American Union shall exercise political functions; that the governing board shall determine the status of the employees, fixing their salaries and conditions of retirement; that the member States may withdraw at any time, but shall pay their quotas for the current fiscal year.

39. That the Pan American Union convene as special commission of exports of the American Republics to formulate the bases of an inter-American convention on statistics of maritime and fluvial communications, as well as of land and aerial communications; the conclusions to be sent by the Pan American Union to the seventh conference.

40. Recommending that those countries that already have the metric system adopt as a new unit the hectarea meter, equivalent to 10,000 cubic meters.

41. To send to the Pan American Union reports introduced in the sixth conference on continental agricultural cooperation, in order that the union may take them into consideration and transmit them for study to the seventh conference, to a commission of experts, to the fourth commercial conference, or make whatever other disposition may appear desirable.

42. That the States, members of the Pan American Union, adopt a uniform law on bills of exchange, taking as a basis the regulation approved at The Hague in 1912, with certain modifications; the project of law to be formulated by a commission to be appointed for the purpose, or by the Inter-American High Commission; this project to be submitted for the consideration of the seventh conference.

43. That the respective countries amend their legislation to permit the organization of stock companies without the necessity of expressing the amount of their capital or the value of their stock.

44. That chambers of commerce be organized in important import and export centers, and that these associations enter into agreements for the arbitration of commercial disputes; that the Inter-American High Commission study the principle of the obligatory arbitration of commercial disputes.

45. That an inter-American commission of women be organized to prepare the juridical information necessary for a proper consideration of the seventh conference of the civil and political equality of women, this commission to be composed of seven women designated by the Pan American Union from different countries of America, and eventually to consist of representatives from all the republics.

46. That the states members of the Pan American Union facilitate the circulation of magazines, reports, and other publications through the mail.

47. That the Pan American Union, in including in the programs of the conferences, modifications, or alterations of treaties or conventions, submit technical studies on these topics as a basis of discussion.

48. That the American governments take measures against the production or exhibition of motion-picture films that may offend the public sentiment of any American country.

49. Recommending the establishment of the inter-American institute of intellectual cooperation, to promote the interchange of professors and students, the establishment of special chairs on the history, geography, literature, sociology, hygiene, and law of the American States, and the establishment of the university city in the countries of America; the Pan American Union to formulate the bases of organization of the institute, which will be submitted to a congress of rectors, deans, and educators to be called by the Pan American Union.

50. That the American countries, in their courses of primary instruction, incorporate courses on the rudiments of finances and of political and social economy.

51. That the countries of America recognize journalism as a public function and that pension and retirement funds be established for journalists.

52. That the countries of America consider the most desirable means not only for the protection of their frontiers but also to arrive at better and closer relations with their neighbors.

53. That the American Republics adopt obligatory arbitration as the means that shall be employed for the pacific settlement of international differences of a juridical character; that a conference on conciliation and arbitration shall be held at Washington within a year to give conventional form to this principle.

54. That the American Republics that have not done so ratify or adhere to the convention signed at Santiago in 1923, providing for commissions for the investigation of international conflicts.

55. That the Pan American Union take measures to obtain the adherence of the American Republics to the Brussels conventions on assistance and salvage at sea of September 23, 1910, on maritime hypothecations of April 10, 1926, and on limitation of the responsibility of shipowners of November, 1922.

56. Providing for the future formulation of international law in the following manner: The International Commission of Jurists of Rio de Janeiro, which shall meet on the dates agreed upon by the Governments, acting through the Pan American Union; a permanent committee on public international law to be established at Rio de Janeiro; a permanent committee on private international law to be established at Montevideo; a permanent committee at Habana to carry on studies in comparative legislation and uniformity of legislation; the opinions of the Inter-American High Commission also to be considered in economic, financial, and maritime questions. Reports from these permanent committees to be transmitted to the respective Governments, which shall determine whether they shall be submitted to the International Commission of Jurists or included in the program of the next International Conference of American States. The three permanent committees to be formed by the respective Governments from among the members of their respective National Societies of International Law, the Pan American Union to cooperate in the preparatory work as far as its organization may permit.

57. That the technical committees concerned with private international law study the best means for the judicial organization in each country in order to give effect to the agreements of the conference.

58. That the Governments study the resolutions of the previous conferences that have not been modified by the sixth conference, and inform the Pan American Union of the reasons why they have not been adopted.

59. That every aggression is considered illegal and is therefore prohibited, and that the American States shall employ every pacific means for the settlement of controversies that may arise between them.

60. That there be included in the program of the seventh conference the consideration of the fundamental bases of international law.

### DR. FRANK P. BOHN

Mr. MAPES. Mr. Speaker, I ask unanimous consent to proceed for five minutes.

The SPEAKER. The gentleman from Michigan asks unanimous consent to proceed for five minutes. Is there objection?

There was no objection.

Mr. MAPES. Mr. Speaker, a few days ago the newspapers, in reporting the proceedings of the Federal Trade Commission in its investigation of the power companies of the country, made the following statement:

> Among prominent persons on the power lobby's pay roll the names were disclosed of two former United States Senators, a former United States ambassador to Italy, and Dr. Frank Bohn, a former socialist and coauthor of a book on Industrial Socialism with William D. ("Big Bill") Haywood, former I. W. W. agitator, who fled to Russia to escape prosecution by the United States Government.

Mr. Speaker, it so happens that the name of our colleague in this body who represents the eleventh congressional district of Michigan, the gentleman from Michigan [Mr. BOHN], is the same as that of the person mentioned in the paragraph which I have read—namely, Dr. Frank Bohn. Our colleague's given name is Frank; he is also a doctor of medicine; but he is not the Dr. Frank Bohn referred to in the article.

Some people who have read the article, overlooking the description of the party mentioned in it as "a former socialist and coauthor of a book on Industrial Socialism, with William D. ("Big Bill") Haywood, former I. W. W. agitator, who fled to Russia to escape prosecution by the United States Government," have jumped to the conclusion that the article refers to our colleague the gentleman from Michigan, Doctor BOHN. Of course, it does not. Anyone who knows our colleague does not need to be told that it does not refer to him or that the description in no wise describes our colleague.

Mr. Speaker, I am making this statement at the suggestion and request of my colleague the gentleman from Michigan, Doctor BOHN, who is confined to his rooms by illness. [Applause.]

### RESERVATION OF CERTAIN LANDS ON THE PUBLIC DOMAIN IN VALENCIA COUNTY, N. MEX.

The SPEAKER. The Chair lays before the House the following order:

*Ordered*, That the House of Representatives be respectfully requested to return to the Senate the bill (H. R. 11479) to reserve certain lands on the public domain in Valencia County, N. Mex., for the use and benefit of the Acoma Pueblo Indians.

The SPEAKER. Without objection, the request will be granted.

There was no objection.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted—

To Mr. BLOOM, indefinitely, on account of being designated by the President as a delegate to the Copyright Convention at Rome on May 8.

To Mr. BEGG, indefinitely, on account of serious illness of his father.

To Mr. DOUGLAS of Arizona (at the request of Mr. LANHAM), indefinitely, on account of illness.

SENATE BILLS AND JOINT RESOLUTIONS REFERRED

Bills and joint resolutions of the following titles were taken from the Speaker's table and, under the rule, referred to the appropriate committees, as follows:

S. 162. An act for the relief of William M. Sherman; to the Committee on Military Affairs.

S. 1458. An act providing for a survey of the natural oyster beds in the waters within the State of Florida; to the Committee on the Merchant Marine and Fisheries.

S. 1480. An act authorizing certain Indian tribes and bands, or any of them, residing in the State of Washington, to present their claims to the Court of Claims; to the Committee on Indian Affairs.

S. 1530. An act for the relief of Gilpin Construction Co.; to the Committee on Claims.

S. 1645. An act for reimbursement of W. H. Talbert; to the Committee on Claims.

S. 2042. An act for the relief of Rolette County, N. Dak.; to the Committee on Claims.

S. 2076. An act authorizing the allotment of Carl J. Reid Dussome as a Kiowa Indian, and directing issuance of trust patent to him to certain lands of the Kiowa Indian Reservation, Okla.; to the Committee on Indian Affairs.

S. 2139. An act conferring jurisdiction upon the Court of Claims to hear and determine claims of certain bands or tribes of Indians residing in the State of Oregon; to the Committee on Indian Affairs.

S. 2340. An act to transfer to the city of Duluth, Minn., the old Federal building, together with the site thereof; to the Committee on Public Buildings and Grounds.

S. 2538. An act for the construction of a road across the Makah Reservation to Neah Bay, Wash.; to the Committee on Indian Affairs.

S. 2821. An act for the relief of Capt. Will H. Gordon; to the Committee on Claims.

S. 2945. An act relating to the payment of advance wages and allotments in respect of seamen on foreign vessels, and making further provision for carrying out the purposes of the seamen's act, approved March 4, 1915; to the Committee on the Merchant Marine and Fisheries.

S. 3438. An act authorizing a per capita payment to the Rosebud Sioux Indians, South Dakota; to the Committee on Indian Affairs.

S. 3463. An act to recognize commissioned service in the Philippine Constabulary in determining rights of officers of the Regular Army; to the Committee on Military Affairs.

S. 3501. An act to provide for the construction of a boarding school for Indian children at Belcourt, in the Turtle Mountain Indian Reservation, State of North Dakota; to the Committee on Indian Affairs.

S. 3503. An act to authorize the Secretary of the Interior to purchase certain lots in the city of Needles, San Bernardino County, Calif., for Indian use, and authorizing an appropriation of funds therefor; to the Committee on Indian Affairs.

S. 3565. An act to provide compensation for disability or death resulting from injury to employees in certain employments in the District of Columbia, and for other purposes; to the Committee on the District of Columbia.

S. 3581. An act authorizing the Commissioners of the District of Columbia to settle claims and suits against the District of Columbia; to the Committee on the District of Columbia.

S. 3771. An act vacating the alley between lots 16 and 17, square 1083, District of Columbia; to the Committee on the District of Columbia.

S. 3808. An act to authorize the construction of a temporary railroad bridge across Bogue Chitto River at or near a point in township 5 south, range 13 east, St. Helena meridian, St. Tammany Parish, Louisiana; to the Committee on Interstate and Foreign Commerce.

S. 3862. An act authorizing J. T. Burnett, his heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across the Mississippi River at or near Tiptonville, Tenn.; to the Committee on Interstate and Foreign Commerce.

S. 3903. An act to provide for the reinterment of bodies now interred in the grounds of St. Francis de Sales Church in the District of Columbia; to the Committee on the District of Columbia.

S. 3917. An act for the relief of the State of Florida; to the Committee on the Judiciary.

S. 4036. An act to authorize the Secretary of War to transfer the control of certain land in Oregon to the Secretary of the Interior; to the Committee on Military Affairs.

S. 4039. An act to exempt joint-stock land banks from the provisions of section 8 of the act entitled "An act to supplement existing laws against unlawful restraints and monopolies, and for other purposes," approved October 15, 1914, as amended; to the Committee on the Judiciary.

S. 4166. An act to remit estate tax on the estate of John Sealy; to the Committee on Ways and Means.

S. 4170. An act to authorize plans for a hospital at the Home for Aged and Infirm in the District of Columbia, and for other purposes; to the Committee on the District of Columbia.

S. J. Res. 50. Joint resolution providing that the Secretary of Agriculture be directed to give notice that on and after January 1, 1929, the Government will cease to maintain a public market on Pennsylvania Avenue between Seventh and Ninth Streets NW.; to the Committee on Public Buildings and Grounds.

S. J. Res. 119. Joint resolution granting an easement to the city of Duluth, Minn.; to the Committee on Public Buildings and Grounds.

ENROLLED BILLS AND JOINT RESOLUTIONS SIGNED

Mr. CAMPBELL, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled bills and joint resolutions of the following titles, when the Speaker signed the same:

H. R. 484. An act to amend section 10 of the plant quarantine act, approved August 20, 1912;

H. R. 2654. An act for the relief of Anton Anderson;

H. R. 4068. An act for the relief of the Majestic Hotel, Lake Charles, La., and of Lieut. R. T. Cronau, United States Army;

H. R. 4126. An act authorizing the Secretary of the Interior to issue a patent to Katie Cassiday for a certain tract of land;

H. R. 6103. An act to amend an act entitled "An act making appropriations for sundry civil expenses of the Government for fiscal year ending June 30, 1884," and for other purposes;

H. R. 6862. An act authorizing and directing the Secretary of the Interior to investigate, hear, and determine the claims of individual members of the Sioux Tribe of Indians against tribal funds or against the United States;

H. R. 7184. An act authorizing J. L. Rowan, his heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across the Ohio River at or near Shawneetown, Ill.;

H. R. 7722. An act authorizing the health officer of the District of Columbia to issue a permit for the opening of the grave containing the remains of the late Nellie Richards;

H. R. 8128. An act to authorize a permanent annual appropriation for the maintenance and operation of the Gorgas Memorial Laboratory;

H. R. 8487. An act to adjudicate the claims of homestead settlers on the drained Mud Lake bottom, in the State of Minnesota;

H. R. 9047. An act to authorize appropriations for the construction of roads at the Presidio of San Francisco, Calif.;

H. R. 9485. An act authorizing Roy Clippinger, Ulys Pyle, Edgar Leathers, Groves K. Flescher, Carmen Flescher, their heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across the Wabash River at or near McGregors Ferry in White County, Ill.;

H. R. 9569. An act authorizing the payment of an indemnity to the British Government on account of the death of Reginald Ethelbert Myrie, alleged to have been killed in the Panama Canal Zone on February 5, 1921, by a United States Army motor truck;

H. R. 11212. An act authorizing Paul Leupp, his heirs, legal representatives, or assigns, to construct, maintain, and operate a bridge across the Missouri River at or near Stanton, N. Dak.;

H. R. 11265. An act authorizing the Cabin Creek Kanawha Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Kanawha River at or near Cabin Creek, W. Va.;

H. R. 11266. An act authorizing the St. Albans Nitro Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Kanawha River at or near St. Albans, Kanawha County, W. Va.;

H. R. 11267. An act granting the consent of Congress to the board of county commissioners of Itasca County, Minn., to construct, maintain, and operate a free highway bridge across the Mississippi River at or near the road between the villages of Cohasset and Deer River, Minn.;

H. R. 11279. An act authorizing the Postmaster General to establish a uniform system of registration of mail matter, and for other purposes;

H. R. 11356. An act authorizing the State of Indiana to construct, maintain, and operate a toll bridge across the Ohio River at or near Rockport, Ind.;

H. R. 11473. An act granting the consent of Congress to the States of North Dakota and Minnesota to construct, maintain, and operate a bridge across the Red River of the North at Fargo, N. Dak.;

H. R. 11478. An act to amend an act to allot lands to children on the Crow Reservation, Mont.;

H. R. 11578. An act authorizing the B & P Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Rio Grande River at or near Weslaco, Tex.;

H. R. 11583. An act granting the consent of Congress to the State Highway Commission of Arkansas to construct, maintain, and operate a toll bridge across the White River at or near Cotter, Ark.;

H. R. 11625. An act granting the consent of Congress to the State of Montana, Valley County, Mont., and Garfield County, Mont., or to any or either of them, jointly or severally, to construct, maintain, and operate a bridge across the Missouri River at or near Glasgow, Mont.;

H. R. 11764. An act conferring jurisdiction upon the Court of Claims of the United States or the district courts of the United States to hear, adjudicate, and enter judgment on the claim of A. Roy Knabenshue against the United States for the use or manufacture of an invention of A. Roy Knabenshue covered by Letters Patent No. 858875, issued by the Patent Office of the United States under date of July 2, 1907;

H. R. 12179. An act to provide for the reimbursement of the Government of Great Britain on account of certain sums expended by the British chaplain in Moscow, the Rev. F. North, for the relief of American nationals in Russia in 1920;

H. R. 12320. An act to amend the longshoremen's and harbor workers' compensation act;

H. J. Res. 145. Joint resolution to provide for the payment of an indemnity to the Chinese Government for the death of Chang Lin and Tong Huan Yah, alleged to have been killed by members of the armed forces of the United States;

H. J. Res. 146. Joint resolution to provide for the payment of an indemnity to the Dominican Republic for the death of Juan Soriano, who was killed by the landing of an airplane belonging to the United States Marine Corps;

H. J. Res. 147. Joint resolution for the relief of the estate of the late Max D. Kirjassoff;

H. J. Res. 148. Joint resolution to provide for the payment of an indemnity to the British Government to compensate the dependents of Edwin Tucker, a British subject, alleged to have been killed by a United States Army ambulance in Colon, Panama;

H. J. Res. 149. Joint resolution to authorize an appropriation for the compensation of William Wiseman;

H. J. Res. 150. Joint resolution to provide for the payment of an indemnity to the Government of the Netherlands for compensation for personal injuries sustained by two Netherlands subjects, Arend Kamp and Francis Gort, while the U. S. S. *Canibas* was loading on May 1, 1919, at Rotterdam;

H. J. Res. 151. Joint resolution to provide for payment of the claim of the Government of China for compensation of Sun Jui-Chin for injuries resulting from an assault on him by a private in the United States Marine Corps;

H. J. Res. 152. Joint resolution authorizing and requesting the President to extend invitations to foreign governments to be represented by delegates at the International Congress of Entomology to be held in the United States in 1928;

H. J. Res. 230. Joint resolution to provide for the membership of the United States in the American International Institute for the Protection of Childhood;

H. J. Res. 244. Joint resolution authorizing a modification of the adopted project for Oakland Harbor, Calif.;

H. J. Res. 259. Joint resolution authorizing assistance in the construction of an inter-American highway on the Western Hemisphere; and

H. J. Res. 262. Joint resolution requesting the President to extend to the Republics of America an invitation to attend a conference of conciliation and arbitration to be held at Washington during 1928 or 1929.

ADJOURNMENT

Mr. TILSON. Mr. Speaker, before moving to adjourn, I wish to make a very brief statement and it is addressed directly to the committee in charge of the bill now under consideration. It seems that the committee has run out of debate and that a motion for the committee to rise has been agreed to at 20 minutes past 4. We have reached the stage in the session where it is necessary to stay in session later than 4 o'clock, so I hope that the committee in charge of the bill will make an effort to-morrow to have their orators on hand and be ready to run on at least until the usual time of adjournment before moving to rise.

Now, Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 4 o'clock and 21 minutes p. m.) the House adjourned until to-morrow, Friday, April 27, 1928, at 12 o'clock noon.

## COMMITTEE HEARINGS

Mr. TILSON submitted the following tentative list of committee hearings scheduled for Friday, April 27, 1928, as reported to the floor leader by clerks of the several committees:

COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE

(10 a. m.)

Providing that Congress encourage the use of American materials in American-made goods (H. Con. Res. 19).

COMMITTEE ON THE JUDICIARY

(10 a. m.)

A bill for the establishment of two narcotic farms for confinement and treatment of persons addicted to the use of habit-forming narcotic drugs who have been convicted of offenses against the United States (H. R. 12781).

COMMITTEE ON EDUCATION

(10.30 a. m.)

To create a department of education (H. R. 7).

COMMITTEE ON NAVAL AFFAIRS

(10.30 a. m.)

To consider private bills on the calendar.

COMMITTEE ON MINES AND MINING

(10 a. m.)

Authorizing an appropriation for development of potash jointly by the United States Geological Survey of the Department of the Interior and the Bureau of Mines of the Department of Commerce by improved methods of recovering potash from deposits in the United States (H. R. 496).

COMMITTEE ON EXPENDITURES IN THE EXECUTIVE DEPARTMENTS

(10.30 a. m.)

To provide for the transfer to the Department of the Interior of the public-works functions of the Federal Government (H. R. 8127).

COMMITTEE ON THE DISTRICT OF COLUMBIA

(10.30 a. m.)

To authorize the merger of street-railway corporations operating in the District of Columbia (H. J. Res. 276).

## EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

466. A communication from the President of the United States, transmitting supplemental estimate of appropriation under the legislative establishment, Architect of the Capitol, to be immediately available and to remain available until June 30, 1930, in the sum of $500,000 (H. Doc. No. 248); to the Committee on Appropriations and ordered to be printed.

467. A communication from the President of the United States, transmitting supplemental estimate of appropriation for the Smithsonian Institution for the fiscal year 1928, to remain available until expended, amounting to $20,000 (H. Doc. No. 249); to the Committee on Appropriations and ordered to be printed.

468. A communication from the President of the United States, transmitting supplemental estimate of appropriation for the War Department for the fiscal year ending June 30, 1928, for settlement of the claim of the Franklin Ice Cream Co., Camp Funston, Kans., $23,445.95 (H. Doc. No. 250); to the Committee on Appropriations and ordered to be printed.

## REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of Rule XIII,

Mr. COLTON: Committee on the Public Lands. H. R. 12706. A bill for the relief of the town of Springdale, Utah; with amendment (Rept. No. 1381). Referred to the Committee of the Whole House on the state of the Union.

Mr. LEHLBACH: Committee on the Civil Service. H. R. 6518. A bill to amend the salary rates contained in the compensation schedules of the act of March 4, 1923, entitled "An

act to provide for the classification of civilian positions within the District of Columbia and in the field services"; with amendment (Rept. No. 1382). Referred to the Committee of the Whole House on the state of the Union.

Mr. LUCE: Committee on the Library. S. J. Res. 23. A joint resolution providing for the participation of the United States in the celebration in 1929 and 1930 of the one hundred and fiftieth anniversary of the conquest of the Northwest Territory by Gen. George Rogers Clark and his army, and authorizing an appropriation for the construction of a permanent memorial of the Revolutionary War in the West, and of the accession of the Old Northwest to the United States on the site of Fort Sackville, which was captured by George Rogers Clark and his men February 25, 1779; with amendment (Rept. No. 1386). Referred to the Committee of the Whole House on the state of the Union.

Mr. WILLIAMSON: Committee on Indian Affairs. H. R. 8901. A bill to amend and further extend the benefits of the act approved March 3, 1925, entitled "An act conferring jurisdiction upon the Court of Claims to hear, examine, adjudicate, and enter judgment in any and all claims, of whatever nature, which the Kansas or Kaw Tribe of Indians may have or claim to have against the United States, and for other purposes"; with amendment (Rept. No. 1387). Referred to the Committee of the Whole House on the state of the Union.

Mr. PEAVEY: Committee on War Claims. S. J. Res. 59. A joint resolution authorizing the President to ascertain, adjust, and pay certain claims of grain elevators and grain firms to cover insurance and interest on wheat during the years 1919 and 1920, as per a certain contract authorized by the President; without amendment (Rept. No. 1388). Referred to the Committee of the Whole House on the state of the Union.

Mr. WILLIAMSON: Committee on Indian Affairs. H. R. 7346. A bill conferring jurisdiction upon the Court of Claims to hear, examine, adjudicate, and enter judgment thereon in claims which the Winnebago Tribe of Indians may have against the United States, and for other purposes; with amendment (Rept. No. 1389). Referred to the Committee of the Whole House on the state of the Union.

## REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of Rule XIII,

Mr. WOLVERTON: Committee on Naval Affairs. H. R. 7330. A bill for the relief of E. M. Gillett and J. H. Swenarton; without amendment (Rept. No. 1383). Referred to the Committee of the Whole House.

Mr. VINSON of Georgia: Committee on Naval Affairs. H. R. 11260. A bill for the relief of Frans Jan Wouters, of Antwerp, Belgium; without amendment (Rept. No. 1384). Referred to the Committee of the Whole House.

Mr. BURDICK: Committee on Naval Affairs. S. J. Res. 51. A joint resolution tendering the thanks of Congress to Commander Albert Cushing Read, United States Navy, for his achievement in completing the first trans-Atlantic airplane flight, and providing for his advancement on the list of commanders of the Navy; without amendment (Rept. No. 1385). Referred to the Committee of the Whole House.

Mr. PEAVEY: Committee on Indian Affairs. H. R. 3539. A bill for the relief of Frank Murray; with amendment (Rept. No. 1390). Referred to the Committee of the Whole House.

Mr. JOHNSON of Oklahoma: Committee on the Public Lands. H. R. 10550. A bill to provide for the acquisition by Meyer Shield Post No. 92, American Legion, Alva, Okla., of lot 19, block 41, the original town site of Alva, Okla.; with amendment (Rept. No. 1391). Referred to the Committee of the Whole House.

## CHANGE OF REFERENCE

Under clause 2 of Rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

A bill (H. R. 7102) granting retirement annuity or pension to John B. Fitzgerald; Committee on Pensions discharged, and referred to the Committee on the Civil Service.

A bill (H. R. 13018) granting a pension to Ella N. Lamp; Committee on Pensions discharged, and referred to the Committee on Invalid Pensions.

## PUBLIC BILLS AND RESOLUTIONS

Under clause 3 of Rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. DRIVER: A bill (H. R. 13337) authorizing D. T. Hargraves and John W. Dulaney, their heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across the Mississippi River at or near Helena, Ark.; to the Committee on Interstate and Foreign Commerce.

By Mr. BLOOM: A bill (H. R. 13338) to provide for regulating traffic in certain clinical thermometers, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. HOWARD of Oklahoma: A bill (H. R. 13339) authorizing an additional appropriation for the maintenance of the United States Bureau of Mines Petroleum Experiment Station at Bartlesville, Okla.; to the Committee on Mines and Mining.

By Mr. McMILLAN: A bill (H. R. 13340) to authorize the Secretary of the Navy and the Secretary of War to issue a commemorative button of suitable design to certain civilian employees of the Government for services during the World War; to the Committee on Military Affairs.

By Mr. UPDIKE: A bill (H. R. 13341) to create the rank of lieutenant general for the commandant of the Marine Corps; to the Committee on Naval Affairs.

By Mr. WILLIAMSON: A bill (H. R. 13342) to authorize a per capita payment to the Pine Ridge Sioux Indians of South Dakota; to the Committee on Indian Affairs.

By Mr. BURTON: A bill (H. R. 13343) to provide for the removal of the remains of certain members of the Escadrille Lafayette to the Memorial de l'Escadrille Lafayette, France; to the Committee on Foreign Affairs.

By Mr. HUGHES: A bill (H. R. 13344) authorizing Huntington-Clarksburg Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Great Kanawha River at a point at or near Winfield, Putnam County, W. Va.; to the Committee on Interstate and Foreign Commerce.

By Mr. GLYNN: A bill (H. R. 13345) to amend section 4826 of the Revised Statutes of the United States, as amended; to the Committee on Military Affairs.

By Mr. SUMMERS of Washington: A bill (H. R. 13346) to provide for exchange of public land for State and private land on Federal reclamation projects and subdivision of such lands into units deemed most economical and convenient for irrigation and reclamation; to the Committee on Irrigation and Reclamation.

By Mr. JACOBSTEIN: Joint resolution (H. J. Res. 289) creating a joint committee of Congress to gather, analyze, and appraise information available concerning unemployment; to the Committee on Rules.

Also, joint resolution (H. J. Res. 290) calling for an investigation relative to information available concerning unemployment; to the Committee on Labor.

## PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ADKINS: A bill (H. R. 13347) granting a pension to Edna L. Saxton; to the Committee on Invalid Pensions.

By Mr. ALMON: A bill (H. R. 13348) granting an increase of pension to Elizabeth Horton; to the Committee on Pensions.

By Mr. BURTON: A bill (H. R. 13349) to correct the naval record of Samuel Davis; to the Committee on Naval Affairs.

By Mr. CANFIELD: A bill (H. R. 13350) granting a pension to Thomas A. Snyder; to the Committee on Invalid Pensions.

By Mr. CARTWRIGHT: A bill (H. R. 13351) granting a pension to Nancy E. Rose; to the Committee on Invalid Pensions.

By Mr. CRAIL: A bill (H. R. 13352) granting an increase of pension to Ann G. Bicknell; to the Committee on Invalid Pensions.

By Mr. CROSSER: A bill (H. R. 13353) to authorize the President to reinstate Guy H. B. Smith, formerly captain, Fourth United States Infantry, in the Army; to the Committee on Military Affairs.

By Mr. DRANE: A bill (H. R. 13354) granting an increase of pension to Joanna D. Patrick; to the Committee on Invalid Pensions.

By Mr. EATON: A bill (H. R. 13355) granting an increase of pension to Elizabeth W. Watt Cooper; to the Committee on Invalid Pensions.

By Mr. EDWARDS: A bill (H. R. 13356) granting a pension to William Lester Mott; to the Committee on Pensions.

By Mr. ROY G. FITZGERALD: A bill (H. R. 13357) granting a pension to Smith Boyd; to the Committee on Pensions.

By Mr. W. T. FITZGERALD: A bill (H. R. 13358) granting an increase of pension to Kate B. Frederick; to the Committee on Invalid Pensions.

By Mr. FROTHINGHAM: A bill (H. R. 13359) granting an increase of pension to Emma E. Howe; to the Committee on Pensions.

By Mr. HOOPER: A bill (H. R. 13360) granting a pension to Mary V. Thompson; to the Committee on Invalid Pensions.

By Mr. LEAVITT: A bill (H. R. 13361) extending all privileges of the United States employees' compensation act to Alice L. Haley, and for other purposes; to the Committee on Claims.

By Mr. McKEOWN: A bill (H. R. 13362) granting an increase of pension to Nora M. Oberlender; to the Committee on Invalid Pensions.

By Mr. MANLOVE: A bill (H. R. 13363) granting an increase of pension to Susan E. Wilson; to the Committee on Invalid Pensions.

By Mr. O'BRIEN: A bill (H. R. 13364) granting a pension to James W. Chapman; to the Committee on Invalid Pensions.

By Mr. RUBEY: A bill (H. R. 13365) granting a pension to Annie P. Love; to the Committee on Invalid Pensions.

By Mr. SOMERS of New York: A bill (H. R. 13366) granting an increase of pension to Elizabeth Conklin; to the Committee on Pensions.

By Mr. STRONG of Kansas: A bill (H. R. 13367) for the relief of Capt. Merrifield G. Martling; to the Committee on Military Affairs.

By Mr. SWEET: A bill (H. R. 13368) granting a pension to Elizabeth Snell; to the Committee on Invalid Pensions.

By Mr. VINSON of Kentucky: A bill (H. R. 13369) granting an increase of pension to Kate Fleming; to the Committee on Invalid Pensions.

By Mr. GIFFORD: Joint resolution (H. J. Res. 287) authorizing a suitable memorial to Maj. Gen. Leonard Wood; to the Committee on the Library.

Also, joint resolution (H. J. Res. 288) authorizing a suitable memorial to Maj. Gen. George W. Goethals; to the Committee on the Library.

---

## PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

7236. By Mr. BURTON: Resolution of Stone Paver Union Local, No. 64, Cleveland, Ohio, adopted at a meeting held April 19, 1928, indorsing the Dale-Lehlbach retirement bill (H. R. 25 and S. 1727); to the Committee on the Civil Service.

7237. Also, resolution of Cuyahoga Lodge, No. 95, I. B. P. O. E. of W., Cleveland, Ohio, adopted at a meeting held March 14, 1928, protesting against any segregation of employees in the various departments of the Government at Washington, D. C., on the basis of race, color, or previous condition of servitude; to the Committee on the Civil Service.

7238. By Mr. CULLEN: Resolution of Central Trades and Labor Council, regarding the Lehlbach retirement bill; to the Committee on the Civil Service.

7239. By Mr. DAVENPORT: Petition of Mary C. Thayer and other citizens of Oneida and Herkimer Counties, of the State of New York, urging the passage of a bill to increase the pensions granted to veterans of the Civil War and widows of veterans; to the Committee on Invalid Pensions.

7240. Also, petition of the Woman's Christian Temperance Union, of Oriskany Falls, N. Y., urging the passage of House bill 11410, a proposed amendment to the so-called Volstead Act; to the Committee on the Judiciary.

7241. By Mr. FITZPATRICK: Petition of Central Trades and Labor Council of Greater New York and Vicinity, favoring the passage of the Kelly postal policy bill (H. R. 89); to the Committee on the Post Office and Post Roads.

7242. Also, petition of Central Trades and Labor Council of Greater New York and Vicinity, favoring the passage of the Lehlbach-Dale retirement bill (H. R. 25 and S. 1727); to the Committee on the Civil Service.

7243. By Mr. FURLOW: Petition favoring Civil War pension bill; to the Committee on Invalid Pensions.

7244. By Mr. GARBER: Telegram of Mrs. W. R. Marlin, department president American Legion Auxiliary of Oklahoma, Pawnee, Okla., in support of universal draft bill; to the Committee on Military Affairs.

7245. Also, petition of Ernest A. Love Post of the American Legion; the Buckey O'Neil Post, No, 541, Veterans of Foreign Wars of the United States; and the Fort Whipple Chapter No. 3, Disabled American Veterans of the World War, all of Prescott and Fort Whipple, Ariz., in support of House bill 11350, granting the right to ex-service men to sue upon their insurance policies at any time within 20 years from the accrual of the cause of action; to the Committee on World War Veterans' Legislation.

7246. Also, petition of Rev. Grover Cleveland Schwartz, of Iuka, Miss., in support of the Tyson-Fitzgerald bill for the disabled emergency Army officers; to the Committee on Military Affairs.

7247. By Mr. GLYNN: Petition of Hattie M. Newton and citizens of Durham, Watertown, Torrington, Thomaston, and other cities and towns in the State of Connecticut, favoring passage of the Sproul bill (H. R. 11410); to the Committee on the Judiciary.

7248. Also, petition of F. S. Platts and other citizens of the town of Thomaston, Conn., favoring passage of the Stalker bill (H. R. 9588); to the Committee on the Judiciary.

7249. By Mr. GRIEST: Petition of Rev. Frederick C. Fowler, of the Marietta Presbyterian Church, Marietta, Pa., favoring the Sproul bill (H. R. 11410) to amend the national prohibition act; to the Committee on the Judiciary.

7250. By Mr. HADLEY: Petition of residents of Washington State, protesting against the Lankford Sunday bill; to the Committee on the District of Columbia.

7251. By Mr. HOPE: Petition signed by the residents of Pratt County, Kans., requesting legislation on behalf of Civil War veterans and their dependents; to the Committee on Invalid Pensions.

7252. By Mr. KINDRED: Resolution of the Bronx Board of Trade, of the city of New York, protesting against the enactment into law by the United States Congress of House bill 8127, known as the Wyant bill, which proposes to transfer river and harbor improvement, etc., from the War Department to the Interior Department; to the Committee on Expenditures in the Executive Departments.

7253. Also, resolution of the Central Trades and Labor Council of Greater New York and Vicinity, expressing their approval and indorsement of the provisions of the Dale-Lehlbach retirement bill and the Kelly postal policy bill and earnestly petitioning the Congress of the United States to bring about the passage of these measures at this session of the Seventieth Congress; to the Committee on the Civil Service.

7254. By Mr. LINDSAY: Petition of M. Fine & Sons, 93 Worth Street, New York, urging early action on the Hawes-Cooper bill; to the Committee on Interstate and Foreign Commerce.

7255. By Mr. McKEOWN: Petition of W. E. Parks and approximately 400 other citizens of Oklahoma, urging that a hearing be granted the bill providing for an old-age pension; to the Committee on Pensions.

7256. Also, petition of Cora Winchester and other citizens of Olive, Okla., urging immediate passage of a bill increasing the pensions of Civil War veterans and widows of veterans; to the Committee on Invalid Pensions.

7257. Also, petition of Savanah E. Pugh and other citizens of Mill Creek, Okla., urging immediate passage of a bill increasing the pensions of Civil War veterans and widows of veterans; to the Committee on Invalid Pensions.

7258. By Mr. McLAUGHLIN: Petition of Jennie McCrea and 41 citizens of Muskegon County, Mich., urging passage of bill providing increase of pension for Civil War veterans and widows of veterans; to the Committee on Invalid Pensions.

7259. By Mr. MANLOVE: Petition of Austin Snead, James Stone, M. T. Rice, and 25 other citizens of Neosho, Mo., protesting the passage of House bill 78, or any compulsory Sunday bills; to the Committee on the District of Columbia.

7260. By Mr. MEAD: Petition of numerous residents of Buffalo, N. Y., in support of House bill 10422; to the Committee on the Post Office and Post Roads.

7261. Also, petition of numerous members of the Seneca Nation, protesting against the passage of House bill 12446; to the Committee on Indian Affairs.

7262. By Mr. O'CONNELL: Petition of the New York State Home Economics Association, Aurora, N. Y., favoring the passage of the Reed bill (H. R. 12241) for vocational education; to the Committee on Education.

7263. Also, petition of M. Fine & Sons, New York City, favoring the passage of the Hawes-Cooper bill (H. R. 7729) and the rule now pending before the Rules Committee for its consideration; to the Committee on Labor.

7264. By Mr. NEWTON: Resolution passed by the city council of Minneapolis, Minn., expressing disapproval of the council of transferring power to sell, lease, or discontinue any part or all of the barge service operated by the Inland Waterways Corporation from Congress to the executive department of the Federal Government; to the Committee on Interstate and Foreign Commerce.

7265. By Mr. ROMJUE: Petition of James Stevens, W. M. Childs, et al., of the State of Missouri, for the passage of a Civil War pension bill carrying the rates proposed by the National Tribune; to the Committee on Invalid Pensions.

7266. By Mr. SINCLAIR: Petition of 19 residents of Fort Yates, N. Dak., for the enactment of the Sproul bill (H. R. 11410); to the Committee on the Judiciary.

7267. By Mr. THOMPSON: Petition of members of the Woman's Christian Temperance Union of Fulton County, Ohio, requesting Congress to pass the Sproul bill (H. R. 11410) to amend the national prohibition act; to the Committee on the Judiciary.

7268. By Mr. VINCENT of Michigan: Petition of residents of Saginaw County, Mich., protesting against proposed compulsory Sunday observance legislation; to the Committee on the District of Columbia.

7269. By Mr. VINSON of Kentucky: Petition of Civil War pensioners of Kentucky; to the Committee on Invalid Pensions.

7270. By Mr. WURZBACH: Petition of Henry F. Achilles, Louise Achilles, J. N. Sobieski, Louis Christ, and other citizens of San Antonio, Bexar County, Tex., urging the passage of the Civil War pension bill; to the Committee on Invalid Pensions.

7271. By Mr. ZIHLMAN: Petition of Mrs. J. C. King and numerous other residents of Cumberland, Md., urging early action on the Civil War pension bill; to the Committee on Invalid Pensions.

## SENATE

### FRIDAY, *April 27, 1928*

The Chaplain, Rev. ZeBarney T. Phillips, D. D., offered the following prayer:

O Lord of heaven and earth, who leddest our fathers forth, making them to go from one kingdom to another people, we yield Thee hearty thanks for all that Thou didst for them and art doing for this land to which they came. We remember them not only as valiant in fight but as far-seeing statesmen, incorruptible patriots of the newer time, prophets of the later day. Direct us, therefore, gracious Lord, so that we may never lay our convictions on the altar of compromise with the trembling hands of fear, but that, mindful of our duty to preserve the world's sublimest hope, we may here enshrine the enlightened conscience of our Nation. Through Jesus Christ our Lord. Amen.

The Chief Clerk proceeded to read the Journal of yesterday's proceedings, when, on request of Mr. CURTIS and by unanimous consent, the further reading was dispensed with and the Journal was approved.

#### MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Haltigan, one of its clerks, returned to the Senate, in compliance with its request, the bill (H. R. 11479) to reserve certain lands on the public domain in Valencia County, N. Mex., for the use and benefit of the Acoma Pueblo Indians.

#### ENROLLED BILLS AND JOINT RESOLUTIONS SIGNED

The message also announced that the Speaker had affixed his signature to the following enrolled bills and joint resolutions, and they were signed by the Vice President:

S. 1368. An act to extend the benefits of the employees' compensation act of September 7, 1916, to Martha A. Hauch;

S. 2900. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors;

H. R. 484. An act to amend section 10 of the plant quarantine act, approved August 20, 1912;

H. R. 2654. An act for the relief of Anton Anderson;

H. R. 4068. An act for the relief of the Majestic Hotel, Lake Charles, La., and of Lieut. R. T. Cronau, United States Army;

H. R. 4126. An act authorizing the Secretary of the Interior to issue a patent to Katie Cassiday for a certain tract of land;

H. R. 6103. An act to amend an act entitled "An act making appropriations for sundry civil expenses of the Government for fiscal year ending June 30, 1884," and for other purposes;

H. R. 6862. An act authorizing and directing the Secretary of the Interior to investigate, hear, and determine the claims of individual members of the Sioux Tribe of Indians against tribal funds or against the United States;

H. R. 7184. An act authorizing J. L. Rowan, his heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across the Ohio River at or near Shawneetown, Ill.;

H. R. 7722. An act authorizing the health officer of the District of Columbia to issue a permit for the opening of the grave containing the remains of the late Nellie Richards;

H. R. 8128. An act to authorize a permanent annual appropriation for the maintenance and operation of the Gorgas Memorial Laboratory;

H. R. 8487. An act to adjudicate the claims of homestead settlers on the drained Mud Lake bottom, in the State of Minnesota;

H. R. 9047. An act to authorize appropriations for the construction of roads at the Presidio of San Francisco, Calif.;

H. R. 9485. An act authorizing Roy Clippinger, Ulys Pyle, Edgar Leathers, Groves K. Flescher, Carmen Flescher, their heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across the Wabash River at or near McGregors Ferry, in White County, Ill.;

H. R. 9569. An act authorizing the payment of an indemnity to the British Government on account of the death of Reginald Ethelbert Myrie, alleged to have been killed in the Panama Canal Zone on February 5, 1921, by a United States Army motor truck;

H. R. 11212. An act authorizing Paul Leupp, his heirs, legal representatives, or assigns, to construct, maintain, and operate a bridge across the Missouri River at or near Stanton, N. Dak.;

H. R. 11265. An act authorizing the Cabin Creek Kanawha Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Kanawha River at or near Cabin Creek, W. Va.;

H. R. 11266. An act authorizing the St. Albans Nitro Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Kanawha River at or near St. Albans, Kanawha County, W. Va.;

H. R. 11267. An act granting the consent of Congress to the board of county commissioners of Itasca County, Minn., to construct, maintain, and operate a free highway bridge across the Mississippi River at or near the road between the villages of Cohasset and Deer River, Minn.;

H. R. 11279. An act authorizing the Postmaster General to establish a uniform system of registration of mail matter, and for other purposes;

H. R. 11356. An act authorizing the State of Indiana to construct, maintain, and operate a toll bridge across the Ohio River at or near Rockport, Ind.;

H. R. 11473. An act granting the consent of Congress to the States of North Dakota and Minnesota to construct, maintain, and operate a bridge across the Red River of the North at Fargo, N. Dak.;

H. R. 11478. An act to amend an act to allot lands to children on the Crow Reservation, Mont.;

H. R. 11578. An act authorizing the B & P Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Rio Grande River at or near Weslaco, Tex.;

H. R. 11583. An act granting the consent of Congress to the State Highway Commission of Arkansas to construct, maintain, and operate a bridge across the White River at or near Cotter, Ark.;

H. R. 11625. An act granting the consent of Congress to the State of Montana, Valley County, Mont., and Garfield County, Mont., or to any or either of them, jointly or severally, to construct, maintain, and operate a bridge across the Missouri River at or near Glasgow, Mont.;

H. R. 11764. An act conferring jurisdiction upon the Court of Claims of the United States or the district courts of the United States to hear, adjudicate, and enter judgment on the claim of A. Roy Knabenshue against the United States for the use or manufacture of an invention of A. Roy Knabenshue covered by Letters Patent No. 858875, issued by the Patent Office of the United States under date of July 2, 1907;

H. R. 12179. An act to provide for the reimbursement of the Government of Great Britain on account of certain sums expended by the British chaplain in Moscow, the Rev. F. North, for the relief of American nationals in Russia in 1920;

H. R. 12320. An act to amend the longshoremen's and harbor workers' compensation act;

H. J. Res. 145. Joint resolution to provide for the payment of an indemnity to the Chinese Government for the death of Chang Lin and Tong Huan Yah, alleged to have been killed by members of the armed forces of the United States;

H. J. Res. 146. Joint resolution to provide for the payment of an indemnity to the Dominican Republic for the death of Juan Soriano, who was killed by the landing of an airplane belonging to the United States Marine Corps;

H. J. Res. 147. Joint resolution for the relief of the estate of the late Max D. Kirjassoff;

H. J. Res. 148. Joint resolution to provide for the payment of an indemnity to the British Government to compensate the dependents of Edwin Tucker, a British subject, alleged to have been killed by a United States Army ambulance in Colon, Panama;

H. J. Res. 149. Joint resolution to authorize an appropriation for the compensation of William Wiseman;

subjects, Arend Kamp and Francis Gort, while the U. S. S. *Canibas* was loading on May 1, 1919, at Rotterdam;

H. J. Res. 151. Joint resolution to provide for payment of the claim of the Government of China for compensation of Sun Jui-chin for injuries resulting from an assault on him by a private in the United States Marine Corps;

H. J. Res. 152. Joint resolution authorizing and requesting the President to extend invitations to foreign governments to be represented by delegates at the International Congress of Entomology to be held in the United States in 1928;

H. J. Res. 230. Joint resolution to provide for the membership of the United States in the American International Institute for the Protection of Childhood;

H. J. Res. 244. Joint resolution authorizing a modification of the adopted project for Oakland Harbor, Calif.;

H. J. Res. 259. Joint resolution authorizing assistance in the construction of an inter-American highway on the Western Hemisphere; and

H. J. Res. 262. Joint resolution requesting the President to extend to the Republics of America an invitation to attend a conference of conciliation and arbitration to be held at Washington during 1928 or 1929.

FLOOD CONTROL

The VICE PRESIDENT laid before the Senate the amendments of the House of Representatives to the bill (S. 3740) for the control of floods on the Mississippi River and its tributaries, and for other purposes.

Mr. JONES. I move that the Senate disagree to the amendments of the House, request a conference with the House on the disagreeing votes of the two Houses thereon, and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the Vice President appointed Mr. JONES, Mr. MCNARY, Mr. JOHNSON, Mr. FLETCHER, and Mr. RANSDELL conferees on the part of the Senate.

CALL OF THE ROLL

Mr. CURTIS. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

| | | | |
|---|---|---|---|
| Ashurst | Fletcher | Locher | Shipstead |
| Barkley | Frazier | McKellar | Shortridge |
| Bayard | George | McMaster | Simmons |
| Bingham | Gerry | McNary | Smith |
| Black | Glass | Mayfield | Smoot |
| Blaine | Goff | Metcalf | Steck |
| Blease | Gooding | Moses | Steiwer |
| Borah | Gould | Neely | Stephens |
| Bratton | Greene | Norbeck | Swanson |
| Brookhart | Hale | Norris | Thomas |
| Broussard | Harris | Nye | Tydings |
| Bruce | Harrison | Oddie | Tyson |
| Capper | Hawes | Overman | Vandenberg |
| Caraway | Hayden | Phipps | Wagner |
| Copeland | Heflin | Pittman | Walsh, Mass. |
| Couzens | Howell | Ransdell | Walsh, Mont. |
| Curtis | Johnson | Reed, Pa. | Warren |
| Dale | Jones | Robinson, Ark. | Waterman |
| Deneen | Kendrick | Robinson, Ind. | Wheeler |
| Dill | Keyes | Sackett | |
| Edge | King | Schall | |
| Fess | La Follette | Sheppard | |

The VICE PRESIDENT. Eighty-five Senators having answered to their names, a quorum is present.

GREAT LAKES-ST. LAWRENCE WATERWAY

Mr. WALSH of Montana. Mr. President, a fortnight ago I addressed the Senate in relation to the Great Lakes-St. Lawrence waterway, and at that time informed the Senate that while the Canadian Advisory Committee, appointed in 1924, had submitted its report, it had not been made public. The report has since been made public and interchanges between the Government of Canada and our Government in relation thereto have been published. I have before me a copy of the diplomatic correspondence in relation to the matter and ask that it may be incorporated in the RECORD.

The VICE PRESIDENT. Without objection, it is so ordered.

The correspondence is as follows:

[Special issue of the Great Lakes-St. Lawrence Tidewater Association, Washington, D. C., April 17, 1928]

FULL TEXT OF CORRESPONDENCE EXCHANGED BY THE GOVERNMENTS OF CANADA AND THE UNITED STATES CONCERNING THE PROPOSED ST. LAWRENCE WATERWAY IMPROVEMENT—NOTE OF JANUARY 31, 1928, FROM THE CANADIAN MINISTER TO THE SECRETARY OF STATE

SIR: I have the honor to refer to your note of April 13, 1927, in which, after reviewing the steps taken in recent years by the United States and Canada to inquire into the feasibility of a St. Lawrence ocean shipway, you stated that the Government of the United States had accepted the recommendations of the St. Lawrence River Commission, appointed by the President as an advisory body, and was accordingly prepared to enter into negotiations with Canada with a view to formulating a convention for the development of the waterway.

Acknowledgment of this communication was made in a note of July 12, 1927, addressed to the minister of the United States at Ottawa, in which it was stated that, as the report of the joint board of engineers indicated differences of opinion as to the solution of the engineering difficulties presented by the international section of the waterway, the National Advisory Committee, appointed by His Majesty's Government in Canada to report on the economic and general aspects of the waterway question, would not be in a position to advise the Government until certain alternative schemes under consideration by the joint board, and to be included in the appendices to the main report, had been received and duly considered.

The full report of the board has now been received, and the National Advisory Committee, which met in Ottawa this month, has reported its conclusions to His Majesty's Government in Canada. The National Advisory Committee concurs in the finding of the joint board of engineers that the project is feasible. It recommends, however, that should the work be undertaken, fuller allowance should be made for future requirements by providing, in addition to 30-foot depth for the permanent structures, 27-foot navigation in the reaches rather than the 25-foot navigation proposed by the joint board. While the National Advisory Committee regards the project as feasible from an engineering standpoint, and notes the findings of the International Joint Commission in 1921 as to its economic practicability, it considers that the question of its advisability at the present time depends upon the successful solution of a number of financial and economic difficulties, and upon further consideration of certain of the engineering features as to which the two sections of the joint board of engineers are not as yet agreed. I am instructed by the Secretary of State for External Affairs to inform you that His Majesty's Government in Canada concurs in these conclusions of the National Advisory Committee.

In your note of April 13 it was observed that the St. Lawrence River Commission had reported that the construction of a shipway at proper depth would relieve the interior of the continent, especially agriculture, from the economic handicaps of adverse transportation costs which, it was indicated, now operate to the disadvantage of many States and a large part of Canada. It was added that the Government of the United States appreciated the advantages which would accrue equally to both countries by opening up the waterway to ocean shipping, and that the necessary increase in United States railway rates due to the war, and the desirability of early development of hydroelectric power, were factors which must have equal application to and influence upon the Dominion of Canada.

In view of the implications as to Canadian conditions contained in these observations, it may be well to indicate certain features of the transportation situation in Canada which have a direct bearing upon the St. Lawrence waterway question.

For many years past the improvement of transportation has been the foremost task of successive governments of Canada. At heavy cost an extensive program of railway, waterway, and harbor development has been carried out, with the object of linking up all parts of the Dominion and providing adequate outlets for foreign trade. Two great transcontinental railway systems have been built up, largely with State aid, and both western and eastern Canada are now reasonably well served by railways, though increasing settlement and increasing production render it necessary for both systems to continue to spend large sums annually in the provision of branch lines. Western Canada is now looking to the early completion of the Hudson Bay route to Europe. This route, which it is anticipated will be available in about three years, will shorten the haul to Europe from the Canadian west by a thousand miles and more, and will also be of substantial benefit to shippers from the Western States. Since that work was projected, the completion of the Panama Canal, by the efforts of the United States, has supplied an alternative outlet for much of western Canada through Vancouver and Prince Rupert; and at the present time the Canadian Government is faced with a strong demand for an additional and more direct outlet to the Pacific for the Peace River country. The St. Lawrence route itself has been progressively improved, and has proved of steadily increasing service.

Partly as a result of the existence of competitive alternative outlets, railway rates in Canada are in general lower than in the United States. The rates on grain, which provides 52 per cent of the total traffic of western lines, are now below pre-war level. Material reductions have also been made in another bulk movement of importance to both eastern and western Canada, namely, coal. General commodity rates, which were the subject of the same percentage of relative increase in both countries, due to war conditions, have subsequently been reduced in Canada, in certain instances, to a greater extent than in the United States. In recent months a rate on grain has been established from the head of the Lakes to Quebec which approximates the charges incident to the movement by water by the present Great Lakes-St. Lawrence route, a route which in Canada has always exercised a restraining influence on railway rates. As the greater part of Canada's railway mileage is now owned and operated by the State, the St. Lawrence

proposals, in so far as they may possibly affect the revenues of the railways, present considerations as to which Canada's point of view is necessarily somewhat different from that of the United States.

Canada's interest in the improved navigation of the Great Lakes-St. Lawrence route would be associated largely with the movement of bulk commodities, such as grain, timber, and coal. The movement of package freight by water in Canada is at present of small volume, and Canadian railways, unlike, it is understood, those of the Mid West of the United States, are in a position to handle much more of that traffic than at present is offered.

It is believed that the development of the waterway would prove of advantage to Canadian commerce and industry, not merely in the sections directly tributary to the Great Lakes and St. Lawrence, but in the maritime sections, which would be afforded more direct access to the great interior markets of the continent. It is, however, apparent that the United States would benefit much more from the enlarged navigation facilities both in extent of use and in margin of saving. The report of the International Joint Commission in 1921, after a comprehensive review of the economic aspects of the project, presented the following conclusions, to which the national advisory committee calls attention:

"As to the economic practicability of the waterway, the commission finds that, without considering the probability of new traffic created by the opening of a water route to the seaboard, there exists to-day, between the region economicaly tributary to the Great Lakes and overseas points as well as between the same region and the Atlantic and Pacific seaboards, a volume of outbound and inbound trade that might reasonably be expected to seek this route sufficient to justify the expense involved in its improvement.

"It finds that, as between the American and Canadian sides of the tributary area, the former contributes very much the larger share of this foreign and coastwise trade, and in all probability will continue to do so for many years to come. The benefits to be derived from the opening of a water route to the sea will, therefore, accrue in much larger measure to American than to Canadian interests, though it is reasonable to assume that eventually the advantages may be more evenly distributed."

The report of the International Joint Commission continues, in a direct reference to comparative transportation conditions:

"It finds that the existing means of transportation between the tributary area in the United States and the seaboard are altogether inadequate, that the railroads have not kept pace with the needs of the country, but that this does not apply to the Canadian side of the area, where railway development is still in advance of population and production."

It will therefore be observed that the transportation situation in the two countries is not identical as to available facilities, extent of use, or rates, and that the economic handicaps to which you referred in your note of April 13 appear to have more application to United States than to Canadian conditions. In this connection it may be said that Canadian agriculture is more directly affected by the restrictions on the importation of Canadian farm products which have been imposed by the United States in recent years, with the object, it is understood, of assisting agriculture in those Western States which would share so largely in the benefits of the proposed St. Lawrence waterway. This situation, and the effects upon the maritime sections of Canada of United States duties on the products of the fisheries, are among the factors which have contributed to bringing it about that public opinion in Canada has not so clearly crystallized in favor of the waterway project as appears to be the case in the United States.

Reference was made in your note to the early development of hydroelectric power as a factor which must have equal application to and influence upon the Dominion of Canada. The opportunity of developing great quantities of power incidental to navigation is, it is agreed, a special advantage possessed by the St. Lawrence project, and an important consideration in determining its advisability. In this aspect of the project, however, there are again special features in the Canadian situation which it is desirable to make clear. Public opinion in Canada is opposed to the export of hydroelectric power, and is insistent that such power as may be rendered available on the St. Lawrence, whether from the wholly Canadian section or from the Canadian half of the international section, shall be utilized within the Dominion to stimulate Canadian industry and develop the national resources. With this view the National Advisory Committee expresses itself as in complete accord. The committee further indicates that, in view of the relatively limited capacity of the Canadian market to absorb the vast blocks of power contemplated by the St. Lawrence proposals, it follows that it is most important, in any arrangement which may be considered, that the development of power on the Canadian side should not exceed the capacity of the Canadian market to absorb it.

The situation presented by the differences of opinion brought out in the report of the Joint Board of Engineers as to the best method of development in the international section of the St. Lawrence has also received consideration by the National Advisory Committee. The committee considers it greatly in the public interest that a further attempt should be made to reconcile these varying views. Conclusive assurance is necessary as to control of the fluctuations of flow from Lake Ontario, so essential to the interests of the purely national sections of the river and the port of Montreal, and as to the situation of those Canadian communities on the St. Lawrence which under certain of the present plans might be obliged to live under levees or to rebuild in part. A plan has been presented in the appendices to the report of the Joint Board of Engineers proposing an alternative location of the upper works of the Canadian two-stage plan. It is also considered advisable that opportunity should be afforded for further conference on these alternative proposals between the Canadian section of the joint board and engineers representing the Province of Ontario, who have themselves formulated plans dealing with the international section.

The financial phases of the project have been reviewed by the committee. It is pointed out that for many years Canada has been engaged in improving the navigation of the St. Lawrence River, both above and below Montreal, and in providing navigation facilities across the Niagara Peninsula. At the same time, the United States has been similarly engaged in deepening interconnecting channels of the upper lakes and in providing suitable works at Sault Ste. Marie. Toward the common object, Canada has made particularly heavy contributions. It has expended over thirty millions on the ship channel which has made possible ocean navigation on a large scale to the port of Montreal, an expenditure by which the proposed St. Lawrence project will directly benefit. The Dominion has spent fifty millions on canals and channel improvements between Montreal and Lake Erie, in which improved navigation United States shipping has had equal use and advantage. To the present, Canada has spent eighty-seven millions on the Welland Ship Canal. In view of these facts and of the very heavy financial burdens imposed by the war, by the railway obligations arising out of the war, and by the necessity, since the war ended, of finding the large sums required for needed public works throughout the Dominion, it is considered that it would not be sound policy to assume heavy public obligations for the St. Lawrence project.

The National Advisory Committee has reached the conclusion that it is possible to work out a method by which provision could be made for the construction of the waterway on terms which would be equitable to both countries and would take adequate account of the special factors in the Canadian situation to which attention has been directed. Several methods have been considered, but the plan which chiefly commends itself to the committee is, in brief, that Canada should consider providing for the construction of the waterway in the sections wholly Canadian; that is, the Welland Ship Canal and the works in the St. Lawrence below the international boundary, and that the United States should consider undertaking the completion of a 27-foot waterway to the head of the Lakes, in addition to meeting the entire cost of the development, under joint technical supervision on lines to be agreed upon, of the international section of the St. Lawrence, both for navigation and for power. The construction of the wholly Canadian—Welland and St. Lawrence—sections, and, if the United States should see fit, of the upper lakes works, would, on this plan, be given precedence of the international section, because of the necessity alike of providing for further consideration of the engineering problems involved in the international section and of permitting reasonable absorption of the power developed on the Canadian side.

In support of this view, the following statement is submitted by the committee, based on expenditures by both countries on the present through waterway, and on the estimated cost of the presently recommended scheme, with 27-foot navigation, a new United States lock at Sault Ste. Marie of the same dimensions as proposed for the St. Lawrence shipway, and the development on the St. Lawrence of such power as is incidental to navigation.

CANADA

| | | |
|---|---|---|
| Present works: | | |
| St. Lawrence Ship Channel | $30,000,000 | |
| St. Lawrence and Welland Canals | 50,000,000 | |
| Lock at Sault Ste. Marie, Ontario | 5,560,000 | |
| | | $85,560,000 |
| Proposed works: | | |
| Welland Ship Canal | 115,600,000 | |
| Wholly Canadian section, St. Lawrence shipway, 27-foot navigation and development of 949,300 horsepower | 199,670,000 | |
| | | 315,270,000 |
| Total for Canada | | 400,830,000 |

UNITED STATES

| | | |
|---|---|---|
| Present works: | | |
| Dredging St. Clair and Detroit Rivers | $17,536,000 | |
| Locks at Sault Ste. Marie, Mich | 26,300,000 | |
| | | $43,836,000 |
| Proposed works: | | |
| International section, St. Lawrence shipway, 27-foot navigation and initial development of 597,600 horsepower | 182,157,000 | |
| To complete development—additional power 1,602,000 horsepower | 92,090,000 | |
| Upper lake channels to 27 feet | 65,100,000 | |
| | | 339,347,000 |
| Total for United States | | 383,183,000 |

In bringing these conclusions of the National Advisory Committee to the attention of the Government of the United States His Majesty's

Government in Canada desires to add that there are phases of the question, particularly as regards the development of power, as to which it is necessary to take account of the special concern of the two Provinces of Canada bordering on the waterway. The relation between navigation and power involves certain constitutional difficulties, of which, in accordance with the wishes of the governments of Ontario and Quebec, the Government of Canada proposes to seek a solution by reference to the courts. With this preliminary difficulty in process of solution, the Government of Canada will be in a position, upon learning from the Government of the United States whether in its view the procedure above outlined affords an acceptable basis of negotiation, to consult with the Provinces of Ontario and Quebec on the aspects of the problem with which they may be concerned, and thus to facilitate an understanding being reached between all concerned as to the methods and means by which the project could be undertaken.

It is the hope of the Government of Canada that in any such further consideration of the waterway question opportunity may be found for reaching a comprehensive settlement of all outstanding problems affecting the Great Lakes and the St. Lawrence, including the preservation of the waters properly belonging to the St. Lawrence watershed, of which the present discussion indicates the paramount importance.

I shall be obliged if you will be good enough to inform me at your convenience, for transmission to His Majesty's Government in Canada, of the views of the Government of the United States on the representations which are outlined above.

I have the honor to be, with the highest consideration, sir,

Your most obedient, humble servant,

VINCENT MASSEY.

---

NOTE OF MARCH 12, 1928, FROM THE SECRETARY OF STATE TO THE CANADIAN MINISTER

SIR: I have the honor to acknowledge your note of January 31, 1928, in which you inform me of the findings and recommendations of the National Advisory Committee in regard to the proposed St. Lawrence waterway improvement.

I note the view of the National Advisory Committee that the question of the advisability of the improvement at the present time depends upon the solution of a number of financial and economic difficulties and upon further consideration of certain of the engineering features and the conclusion of the committee that it is possible to work out a method by which provision could be made for the construction of the waterway on terms which would be equitable to both countries and would also take adequate account of the factors in the Canadian situation which you have set forth.

The suggestions outlined in your note have received thorough consideration. While the United States is not in complete agreement with the representations made by the Canadian Government as to the relative benefits and ultimate costs to the two countries of the proposed improvement of the St. Lawrence and the division of expense to be borne by each country, it is inclined to regard as an acceptable basis of negotiation a proposal along the general lines suggested in your note: That the prosecution of the improvement of the St. Lawrence waterway be based on the undertaking by the United States of the deepening of the necessary channels through the interconnecting waters of the Great Lakes and the improvement of the international section of the St. Lawrence both for navigation and for power and the undertaking by Canada of the construction of the waterway in the sections wholly Canadian; that is, the Welland Canal and the works in the St. Lawrence below the international boundary.

Whether the United States expends its share of the cost on the international section and Canada its share on the national sections would seem to be immaterial if in the negotiations there is a fair division of expense for a through deep waterway to the ocean. Of course, in such an arrangement all sections of the deep waterway should be so constructed as to make them most suitable for a through system of transportation. This is a detail to which I have no doubt your Government will entirely agree. The use of the waterway should be properly safeguarded by treaties between the two countries.

Concerning the value of the route to the sea to the two countries, I have noted the suggestions made in your note of January 31. I might say that, while it may not be very material to the main issue, the United States has the use of the Panama Canal which is of great benefit to it, especially on the Pacific, Atlantic, and Gulf coasts. It has also the use of the Gulf of Mexico which reaches a considerable way across the continent on the south and furnishes valuable water transportation for a large portion of the southwestern part of the United States. Both of these waterways exercise a great influence on freight rates. The United States has other harbors on the Atlantic, such as New York served by both railways and the Erie Canal, Philadelphia, Baltimore, and Norfolk, which involve a shorter railroad haul from the Great Lakes territory to the ocean than is enjoyed by Canada. Nevertheless, I feel that the construction of a deep waterway through the St. Lawrence to the ocean will be of tremendous advantage to most, if not all, of the territory in the northern part of the United States, as well as to the corresponding territory in Canada.

Referring to your suggestions as to the order in which the different works should be undertaken, it would seem to me that this matter will also have to be the subject of negotiation because the works ought to proceed so that all parts of the navigation system would be completed substantially at the same time and the United States ought to have the advantage of its share of the power of the international section without waiting until Canada may be able to sell her power from these works.

Referring to the balance sheet, which undoubtedly was included in your note to illustrate the principles of the division of costs and the work to be done by each country, I am in general accord with those principles. The amounts and some of the items would have to be considered and discussed in the negotiations. To illustrate: I am not inclined to the view that it is right to include in the balance sheet the costs of the St. Lawrence and old Welland Canals except so far as they may be of use to the deeper system. Those works are understood to be for lighter craft and of little value for the purposes of the works now proposed. These waterways are understood to have served their purpose in economic returns. It would also seem to be necessary to differentiate between the costs that may properly be chargeable to navigation and those to power in general. Those who now or in the future profit by the power should bear their share of the expense. It is understood that the power development will carry itself. To illustrate: Under the suggestions you make, the United States will have no proprietary interest in the power on the national section. It would, therefore, seem that as this development is for the benefit of Canada, your Government should be responsible for that expense, and that such expense should take into account the costs to be borne by the respective interests whether the power is actually installed now or later. The amount, therefore, which power on the national section should contribute to the cost of the improvement should be left open for consideration and subject to determination in the negotiations. All power, of course, developed for joint benefit in the international section should ultimately be paid for as a part of the joint venture. The application of this principle would change the proposed balance sheet considerably. Therefore, if, as you suggest as to this section, the United States is willing to build not only the waterway but the power, it would seem that the United States ought to be permitted to develop its power and use its half, the other half to be used by Canada or not as it should desire.

The United States is agreeable to the proposal that all navigation channels provided in improvements have a minimum depth of 27 feet, the permanent structures having a depth of 30 feet for future expansion. The United States has at present under consideration the deepening of the lake channels to the extent economically justified by the present commerce of the Great Lakes. There is one question that we should like to leave for discussion and that is, whether it would be economical to at once build a new lock and deepen the Soo Canal until such time as the St. Lawrence is nearing completion so that there would be a demand for deeper channels. It is clearly advisable that the large expenditures required for depths in excess of present needs be deferred until the greater depths can be profitably used.

The United States fully recognizes the right of the Dominion of Canada to the ownership and use of the Canadian share of the power which may be developed in the international section of the waterway as well as to all that developed in the national section, and it recognizes also that the disposition of the power is purely a domestic question. It recognizes further that this share is an inherent attribute of Canadian sovereignty, irrespective of the agency by which the power may be developed.

The United States regards it a fundamental economic principle that the beneficiaries of power developed in the improvement of the international section of the St. Lawrence should pay ultimately their fair share of the cost of its production, whether the agency constructing these works be a corporation, a State or Province, or a national government. It believes that a practicable means can be found for effecting the fulfillment of this principle in the arrangements made for the improvement of the international section of the river for the joint benefit of navigation and power development, and believes that the negotiations entered into in furtherance of the undertaking of the project should have this end in view.

The large expenditures required for the undertaking are a matter of grave concern to the United States as well as to Canada. It is felt that when the United States embarks on the enterprise all expenditures should be on a sound economic basis.

The United States accepts without reservation the principle that the operation of works in the international section must be such as will control fluctuations of the outflow from Lake Ontario in such manner as to safeguard all interests on the purely Canadian sections of the river, including especially the port of Montreal. It regards as acceptable the proposal that the design and operation of works in the international section of the river be under joint technical control and assumes that the design of all works on the waterway will comply in general with the plans agreed upon by the joint engineering board as embodying the best principles.

The United States is fully in accord with the view that the advisability of undertaking the improvement at the present time depends on the solution of the financial and economic problems involved. It shares the hope expressed that a solution will be found which will fully safeguard the interests of the two countries and will afford an equitable basis for a division of the cost. It is confident that when these economic principles are determined, the solution of the engineering problems required for their fulfillment will be speedily realized.

I have the honor to suggest, therefore, that the two countries proceed with the appointment of commissioners to discuss jointly the problems presented in your note, and those which I have presented herein with a view to the formulation of a convention appropriate to the subject.

The Government of the United States will be glad to have this discussion extended to the further consideration of any outstanding problems affecting the Great Lakes and the St. Lawrence as suggested in your note.

Accept, sir, the renewed assurance of my highest consideration.

FRANK B. KELLOGG.

---

NOTE OF APRIL 5, 1928, FROM MR. LAURENT BEAUDRY, FIRST SECRETARY OF THE CANADIAN LEGATION, TO THE SECRETARY OF STATE

SIR: I have the honor to refer to your note of March 12, 1928, on the St. Lawrence waterway project.

The Secretary of State for External Affairs has noted that while the United States is not in complete agreement with the representations contained in my note No. 30 of January 31, 1928, as to the relative benefits and ultimate costs to the two countries of the proposed improvement and the division of expenses to be borne by each country, it is inclined to regard as an acceptable basis of negotiation the suggestions of the national advisory committee summarized in my note as to the division between Canada and the United States of the tasks involved in the completion of the deep St. Lawrence waterway.

The Secretary of State for External Affairs has also noted that the United States agrees that a channel of 27 feet minimum depth would be advisable, accepts the principle that the works in the international section must be so operated as to control fluctuations of the outflow from Lake Ontario in such manner as to safeguard all interests on the purely Canadian sections, including the port of Montreal, and agrees that the design and operation of the works in the international section should be under joint technical control. It is noted also that the United States would be prepared to have the discussion extended to the consideration of any outstanding problems affecting the Great Lakes and the St. Lawrence watershed, as suggested in my previous note.

In your note under reference you raise some question as to the relative advantage of the waterway to each country and as to the validity of some of the items included on the Canadian side of the balance sheet presented for illustrative purposes by the National Advisory Committee, and refer also to the problems involved in the allocation of costs as between navigation and power. At the present stage it does not appear necessary to discuss these points in detail.

It is further noted that you do not favor the recommendation of the National Advisory Committee, which was an integral feature of its plan and of the division of tasks which it proposed, that the works on the national section should be given priority over the works on the international section in order to permit an agreed solution of the engineering difficulties in this area and to insure reasonable absorption of the power developed on the Canadian side. In view of the fact that the market for hydroelectric power in Canada, though large and rapidly expanding, has definite limitations, and that export of power is considered contrary to public policy, it is an essential factor in any plan economically feasible from the Canadian standpoint that, whether through the priority procedure set out by the National Advisory Committee or by some alternative method, the development of power to be utilized in Canada should not outrun the capacity of the Canadian market to absorb and thus to meet the proportion of the costs of the waterway fairly chargeable to power.

The National Advisory Committee laid emphasis on another phase of the situation—the necessity of reconciling the divergent views of the two sections of the joint board of engineers as to the best method of development in the international section of the St. Lawrence. Definite and agreed engineering proposals for the development of this section would appear to be a necessary preliminary to any computation of costs or decision as to the order of construction or division of tasks. His Majesty's Government in Canada has previously referred to the view of the National Advisory Committee, which it shares, that a conference should be held between the Canadian section of the joint board and engineers representing in the Province of Ontario. It would appear advisable that such a conference should be followed by reconsideration of the engineering problems in the international section by the whole joint board.

Reference was made in my previous note to certain constitutional questions affecting the Canadian situation, and to the intention of His Majesty's Government in Canada, in accordance with the wishes of the governments of Ontario and Quebec, to seek a solution by reference to the courts. Steps have since been taken to this end, and it is anticipated that the reference will come before the Supreme Court of Canada at an early date.

It was further indicated in my previous note that, with the constitutional question in process of solution, His Majesty's Government in Canada would be in a position, upon learning whether the Government of the United States considered that the procedure suggested by the National Advisory Committee formed an acceptable basis of negotiation, to consult with the Provinces of Ontario and Quebec upon the aspects of the problem with which they may be concerned. While the acceptance by the United States of this basis of negotiation is attended with important qualifications, yet the position of the Government of the United States has been made sufficiently clear and definite to permit the Government of Canada to take the necessary step thus contemplated and discuss with the Provinces the aspects in question. Following this consultation His Majesty's Government in Canada will be in a position to inform the Government of the United States further of its views on the proposals contained in your note of March 12.

I have the honor to be, with the highest consideration, sir,

Your most obedient, humble servant,

LAURENT BEAUDRY
(For the Minister).

---

NOTE OF APRIL 7, 1928, FROM THE SECRETARY OF STATE TO THE CANADIAN MINISTER

SIR: I have the honor to receive your note of April 5, 1928, with reference to the negotiations between the Canadian Government and the United States looking to the construction of the deep St. Lawrence waterway. I note your suggestion that the position of the United States has been made sufficiently clear and definite to permit the Government of Canada to take the necessary steps contemplated and to discuss with the Provinces of Ontario and Quebec the aspects in question. I entirely agree with you that there is no reason why at this time the Government of Canada should not take up such discussion with the Provinces.

I note also that His Majesty's Government of Canada suggests that it would be advisable that definite and agreed engineering proposals for the development of the international section would appear to be necessary preliminary to any computation of costs or decision as to the order of construction or division of tasks and that a conference should be held between the Canadian section of the joint board and engineers representing the Province of Ontario. Further, that it would be advisable that such a conference should be followed by reconsideration of the engineering problems in the international section by the whole joint board. Of course, the Government of the United States fully realizes the desirability of the Canadian Government's consultation with the Provinces and with the Canadian section of the Joint Board of Engineers. The United States section of the joint board will be prepared at any time to take up with the full board and discuss and reconsider engineering problems connected with the construction of the international section. I have the honor to suggest, however, that it would seem as though the entire subject of treaty negotiation need not be postponed until the termination of these discussions and of the reconsideration by the Joint Board of Engineers and that it might be desirable for the negotiations to go on concurrently with the examination of such engineers, as their advice and assistance would be necessary. The United States will be prepared to cooperate to the fullest extent with the Canadian Government at any time for the purpose of accomplishing the improvement contemplated.

Accept, sir, the renewed assurance of my highest consideration.

FRANK B. KELLOGG.

Mr. WALSH of Montana. In this connection, I am in receipt of a telegram as follows:

NEW YORK, *April 20, 1928.*

Hon. THOMAS J. WALSH,
*Washington, D. C.:*

You have made a great reputation in the oil matter. You are supporting the St. Lawrence deep waterway project. Why not figure out who is behind the St. Lawrence project besides the wheat growers of the Middle West, who now have only 31,000,000 bushels to export annually and which exports, according to Hon. Herbert Hoover, will disappear within 15 years when we will consume all of our own wheat? Why not disclose the real backers, the invisible hand of the Power Trust and the railroads?

EDWARD C. CARRINGTON,
*Chairman Great Lakes-Hudson Deeper Waterway Association.*

Mr. President, the information given by the telegram ought to be exceedingly gratifying to some of the Members of this body who have been so sincerely endeavoring to develop internal waterway improvements. Apparently the railway companies have come to their senses or lost them, because they have apparently abandoned the effort to oppose the construction of competing water lines. I call this particularly to the attention of the Senator from Louisiana [Mr. RANSDELL] and the Senator from Missouri [Mr. HAWES]. They will be pleased to know

that the railroad companies have ceased their policy of opposing parallel and competing water lines.

Likewise it will be exceedingly gratifying to the Senator from California [Mr. JOHNSON] to have the information that the Power Trust has ceased its opposition to Government development of power projects. The senior Senator from New York [Mr. COPELAND] gave us, some time ago, the very interesting information that the St. Lawrence waterway matter is a project of the power interests. It is likewise interesting to know that the power interests have evidently now become advocates of the development of power projects throughout the country, or at least have become the sponsors for the development of power on the St. Lawrence River.

Mr. COPELAND. Mr. President, will the Senator yield?

Mr. WALSH of Montana. I yield.

Mr. COPELAND. I merely want to add that it is not only the Power Trust, but also Mr. Herbert Hoover, who is the chief advocate of such a proposition.

Mr. WALSH of Montana. This information that the power interests of the country have finally come around to the advocacy of Government ownership of the railroads leads me to call the attention of the Senate to some of the testimony which has been brought out by the Federal Trade Commission in the discharge of the duties devolved upon it pursuant to a resolution which was introduced by me some time ago. I feel that these revelations before the commission are deserving of greater publicity than has thus far been given to them by the press. I offer for the RECORD a summarization of some of the testimony which appears in the United States Daily of April 13. I desire, however, to refer to a few paragraphs thereof, and particularly to the opening, as follows:

[From the United States Daily, April 13]

PUBLICITY METHODS USED BY ILLINOIS UTILITIES DEFENDED—DIRECTOR OF COMMITTEE OF PUBLIC UTILITY INFORMATION EXPLAINS ACTIVITIES TO TRADE COMMISSION—SPREAD OF INFORMATION TERMED FIRST OBJECT—DISTRIBUTION OF MATERIAL IN OPPOSITION TO PUBLIC OPERATION DECLARED TO BE ONLY "INCIDENTAL"

Publicity methods employed by public-utility organizations of Illinois were inquired into April 12 at the public hearing before the Federal Trade Commission.

The first witnesses on this phase of the investigation being pursued in compliance with a Senate resolution were the director of the Illinois Committee on Public Utility Information, Bernard J. Mullaney, of Chicago, and the assistant director, Rob Roy MacGregor, of Chicago.

LITERATURE DISTRIBUTED

The committee, they explained, was organized in 1919 to disseminate information relating to public utilities. It has expended an average of $45,000 per year, chiefly on bulletins and pamphlets relating to the gas, electrical, street railway, and kindred industries, according to a document inserted in the record while Mr. Mullaney was testifying. It has distributed approximately 5,000,000 pieces of literature, Mr. Mullaney estimated.

Mr. Mullaney, who is vice president of the People's Gas Light & Coke Co., a Samuel Insull concern, and also vice president of the American Gas Association, told the examining counsel, Robert E. Healy, chief counsel of the commission, that while he unqualifiedly opposed to the Government going into business, the distribution of material in opposition to municipal and governmental operation of public utilities was not the prime purpose of the committee. This is only incidental to its main purpose, which is to spread reliable information regarding public utilities, he said.

MR. MACGREGOR IS QUESTIONED

The first witness at the hearing was Mr. MacGregor, who was asked to explain a memorandum he had written replying to a "hypothetical question" as to what he would suggest as material for a political campaign speech against "a Senator favoring Government ownership." The memorandum, as read by Mr. Healy, suggested that "logic or reason" should not be used, because this would be understood only by a "hand-picked audience." The writer further suggested that he would "pin the bolshevist idea" onto such a candidate.

I have here a copy of a memorandum which I shall also ask to have incorporated in the RECORD. This question is supposed to be addressed to Mr. MacGregor:

Mr. MACGREGOR: If you were running for a nomination for United States Senator against a man whose speeches have indicated that he favors Government ownership generally, and you had to get up a speech or series of speeches tackling him on that line—

What have we that you would find pertinent and useful?

B. J. M.

This is the matter they have which they would furnish as pertinent and useful as a kind of outline to any man who wanted to make a speech against a man running for the office of United States Senator and was supposed to be favorable to the idea of municipal or Government ownership:

Mr. MULLANEY: If I were running for United States Senator and my opponent was an advocate of Government ownership, I should develop the following thoughts in speaking against him:

Not all of the socialists are in the Socialist Party—they know that the best type of American citizen is opposed to the name. Not all of the parlor pinks are in Greenwich Village. Not all of the deep-dyed reds are wearing long hair and are building bombs. Not all of the Russian bolsheviks are in Russia.

To be a socialist, a pink, a red, or a bolshevist all you have to do is to think and act like they do, and then you are a member, working for the obnoxious things they stand for.

It is not only possible, but it happens, that such thinkers are affiliated with other groups of people. In fact, it is one of the principles of those who would overthrow our Government to "bore from within." To insidiously work for the vicious "cause" while posing as a worker in another party.

In fact, the ——— Party might harbor such persons. Let us all be thankful that they are few and that the best type of citizens nullify their efforts at the ballot box.

But if such a person—a red or a bolshevist—aspired to the honor of being elected to the United States Senate—the seat of government where the traditions of the American Government should be most sacred—we should become alarmed.

Yet, there is a man who has openly declared that he stands for the first, most-sought principle of the reds and bolsheviks—the principle that we shall no longer have America's greatest opportunity of carving our success by our individual efforts. That man is ———, who asks that you send him to the United States Senate to represent you and your views in that great body.

He favors the Government owning and operating some of our businesses, placing the workers under the dead hand of bureaucracy, taking away their right of bargaining for their rights, stifling any right of free voting by placing workers' jobs under the domination of politics.

He said that he favored it (when said)—

Government ownership means the furthering of the cause of the bolshevik. Even though an advocate doesn't label himself as a bolshevik, you may be sure that they will call him "comrade," for he is aiding their cause.

The principle of government ownership is the first and most sought principle of the bolsheviks. It is their opening wedge. They propose to start by taking over our most important public services, the railroads, the electric light and power, gas, electric railway, and telephone companies. When these important businesses are thoroughly socialized, when the workers are whipped into servility, then they propose to take over other businesses one by one. When our turn comes we don't know, but it is planned for.

It's a disease, and the best preventive for a general infection is not to let it get a start. Kill the first germs before they multiply and kill.

What's wrong with government ownership? The answer is, it doesn't and it won't work. It's been tried time and time again. And every time it has caused the downfall of the government which tried it. Workers refuse to be dogged by an endless chain of bureaus until they can't even raise their families the way they wish. They revolt.

The principle of the Russian bolshevik—those people with whom ———, my opponent, throws his lot—is to level everyone to the lowest state of poverty. Then they are all equal—equally miserable. In America we make people equal by trying to raise all to the highest level.

Government ownership is not a principle that is in accord with the traditions of the American Government. Is my opponent dissatisfied with America?

Maybe he thinks that great loss to the people of $——— when the Government operated the trains during the war and helped bring on high taxes should be repeated. (More examples of actual failures.)

There is no question but that the socialists, the pinks, reds, and bolshevists are watching this election. There is no question that they are secretly helping their "comrade" in his campaign.

The issue then to be decided on ——— in this State is: Are we going to sell out to these who would change our form of government?

* * * * * * *

This, of course, is not an attempt at writing a speech. My idea would be not to try logic or reason but to try to pin the bolshevik idea on my opponent. I do not believe that the theories of government ownership would be much use except before a hand-picked audience.

R. R. MACGREGOR.

I continue reading from the United States Daily the report of the testimony adduced on April 12.

Mr. MacGregor said this memorandum related to the campaign of no particular person, but was written purely in response to a "hypothetical question" that had been put to him. He admitted, in reply to a question by the presiding member of the Federal Trade Commission, Edgar A. McCulloch, that his thought was to raise prejudice against the

bolshevik idea for political purposes, reasserting his belief that logic or reason is of no use in a political discussion.

The witness said he did not prepare the memorandum for any particular person, when Mr. Healy suggested it might have been intended for the guidance of a candidate for the United States Senate.

SEEKS SUPPORT OF NEWSPAPERS

Mr. MacGregor was excused after questioning, and Mr. Mullaney was called to the stand. He testified that friendly relations between the public utilities of the State and its newspapers were fostered by the committee which he heads, whose primary purpose, he said, was "to inform the public of all phases of utility activities" and "to safeguard the property and interests of the investors." He was questioned regarding a letter sent to its members urging them, especially if they had advertising relations with the newspapers to strive for favorable notice in the news columns.

Mr. Mullaney denied any intention on his part to trade advertising for favorable news, declaring that it would be "foolish and bad practice to try to influence news columns by reason of advertising." He said that the weekly news bulletin issued by the committee was sent to more than 900 daily and weekly newspapers of Illinois, and that he estimated 5,000 columns of news matter was printed each month.

Mr. Mullaney said that the publicity organization built up in Illinois was the first of its kind, and was being used as the model for public utility organizations in other States. He said it issues speakers' bulletins, which its local committees are urged to place in the hands of persons who can use them; sponsors speakers favorable to public utilities and distributes bulletins and pamphlets on various phases of the industry.

He estimated that three-fourths of the high schools of Illinois use utilities literature prepared by his committee, asserting the pamphlets so distributed are made as "strictly informative" as possible. They deal with the gas, electrical, telephone, and street-car industries, and are sent to teachers first as samples and then in larger quantities, according to demand. He estimated that 8,000 to 10,000 of the pamphlets prepared for school children were distributed the first year of the committee's organization, and from 65,000 to 75,000 last year.

MUNICIPAL OWNERSHIP NOT AN ISSUE IN STATE

"Municipal ownership has not been a live issue in the State, so that propaganda against public ownership has not been necessary," said Mr. Mullaney.

"There has been no need to point out the inherent fallacies of public ownership," said the witness. When Commissioner McCulloch inquired further whether Mr. Mullaney was opposed to public ownership, he replied:

"Commissioner, of course, we're not heartily in favor of anything that will destroy our business."

He repeated that propaganda against public ownership was not the object of his organization.

"Any attitude we may have toward public ownership," said he, "is only incidental to our efforts, which are to point out the glaring inaccuracies cited by those in favor of public ownership. As for this committee being organized to agitate against or fight public ownership, that was furthest from our thoughts."

Mr. Mullaney said that Samuel Insull was the instigator of the Illinois committee on public utility information. He again testified that he was absolutely opposed to active participation in business by the Government when he was questioned regarding a speech he had made in London on this subject. In it he had asserted that "Government ownership is the massed advance agent of communism," and that "having the Government go into one line of business will ultimately conclude in its going into all lines."

Mr. Healy inquired into a document circulated among members of the committee, in which he said, "the advocates of municipal ownership were linked with communism." Mr. Mullaney said this was for private distribution among the membership only. Commissioner McCulloch remarked that this was "passing on a very serious charge."

COMMITTEE WAS FORMED TO AID STREET RAILWAYS

Mr. Mullaney concluded his testimony with a voluntary recital of the facts which he said were incidental to the history of the organization of the Illinois committee. It was first formed, he said, particularly because of the depressed economic condition of the electric street-railway industry just after the war. So acute were its circumstances and those of other utilities that official cognizance was taken by President Wilson, said Mr. Mullaney, and he quoted from an address by the President before a conference of the industry in which frankness and publicity were urged.

In consequence of the situation, Mr. Insull proposed to reach the people served and the stockholders alike by "open and bold" publicity methods, and undertook to devise a method of disseminating information regarding the industry's economic situation, said Mr. Mullaney. Accordingly, the organization and promotion of the committee was begun, he said.

At the inception, the subject of Government and municipal ownership was not mentioned, he continued. If it was dealt with later, this was because it came in the natural course of events and gross misinformation and fallacies of the proponents of public ownership, said he, expressing his belief that such projects as Boulder Dam, Muscle Shoals, the Colorado River Basin, and others were merely a part of a program to brand the industry as interstate in its nature, so that the Government might go into the proper province of private enterprise.

The next witness was Robert B. Prather, secretary-treasurer of the Great Lakes division of the National Electric Light Association, and holding the same office in the Illinois State Electric Association, Illinois Electric Railway Association, and the Illinois Gas Association. He testified he was formerly secretary of the State public-utilities commission of Illinois.

A letter from Mr. Prather to the then manager of the N. E. L. A., Mr. M. H. Aylesworth, was then inserted in the record by Mr. Healy in memorandum form, the contents of which were verified by the witness. It had been found in the files of Mr. Prather's office by an investigator for the Federal Trade Commission, W. Wooden.

Mr. Prather said it related to a "purely personal matter," but did not object to its introduction in evidence when Commissioner McCulloch ruled that "influences to be brought to bear on the legislature of a State come within the purview of the resolution."

Mr. Healy explained that the original had been destroyed by Mr. Prather the day before. Dated January 20, 1921, the full text of the memorandum read:

"The legislature is in session here and it looks like a very stormy session, and I could use very handily a little J. Walker to very good advantage, and it occurred to me that you could do me a very great favor if the first time you are coming west you would call up a friend of mine in New York and bring me half a dozen * * *"

Mr. Healy inquired into the letter. Mr. Prather denied having any ulterior purpose in mind in writing for liquor.

"Do you suppose," said he to Mr. Healy, "that six bottles of Johnny Walker would go very far among 200 members of the Illinois Legislature? I want to say that I never gave a bottle to a member of the Illinois Legislature in my life."

Another letter of similar purport, dated 1925, was also found in Mr. Prather's files by Mr. Wooden. According to Mr. Healy, who inserted the letter in the record without reading it, but mentioning that it advised Mr. Aylesworth that he (Mr. Prather) had to have "something to sweeten the palates of the legislature."

A confidential document, entitled "Red Activities in the United States," distributed by the Illinois Committee on Public Utility Information and listing various organizations, and persons said to be active in or tending toward "communistic, socialistic, and pacifistic" principles, was inserted in the record. It included, besides names correctly associated with these activities, the names of such organizations as the American Association of University Women, the American Farm Bureau Federation, American Federation of Teachers, National Education Association, National Council of Jewish Women, National League of Women Voters, the National Board of the Y. W. C. A., the Religious Society of Friends, and the Foreign Policy Association, all of which were said to be engaged in antiwar activities.

Of Mr. Prather, the commission counsel inquired regarding expenses of his office, his activities at the Illinois and Wisconsin State capitals, and his various duties.

And this makes me inquire, Mr. President, if it is possible that the "good old ladies"—as they were characterized by William Allen White—of the Daughters of the American Revolution have simply been taken in by this literature circulated by the Public Utilities Information Bureau.

I offer likewise for the RECORD the United States Daily of April 14, giving equally interesting proceedings of the day following.

The VICE PRESIDENT. Without objection, the article will be printed in the RECORD.

The matter referred to is as follows:

[From the United States Daily of Saturday, April 14, 1928]

LETTERS OFFERED TO SHOW PUBLICITY USED BY UTILITIES—FEDERAL TRADE COMMISSION INFORMED OF EFFORTS TO OBTAIN COOPERATION OF EDUCATORS—UNIVERSITY STUDENTS OFFERED SCHOLARSHIPS—CORRESPONDENCE OF ILLINOIS COMMITTEE ON PUBLIC UTILITY INFORMATION READ INTO RECORD AT HEARING

Identification of a mass of correspondence from the files of the Illinois Committee on Public Utility Information, largely comprising letters entered by counsel for the Federal Trade Commission as exhibits to show alleged efforts to maintain a liaison with educational institutions, occupied a further hearing April 13 into publicity phases of the public utilities investigation directed by the Senate.

Offers of scholarships to college and university students and of aid to professors to pursue researches or to public works relating to public utilities and the furnishing of speakers on public utility subjects were contained in the correspondence obtained by William B. Wooden, investigator for the commission, and entered into the record of the present proceedings by Robert E. Healy, chief counsel of the commission.

SESSION ADJOURNED TO APRIL 24

The witness who identified the documents was the assistant director of the Illinois Committee on Public Utility Information, Rob Roy MacGregor. Upon request of Mr. Healy the presiding officer of the hearing, Commissioner Edgar A. McCulloch, adjourned the session until April 24, when Mr. Healy announced that further testimony would be taken in connection with publicity methods pursued by different elements in the industry.

Mr. MacGregor identified various letters separately and in groups. One of the first letters read into the record was received from the Nebraska Power Co., which wrote of the need of "special work" in Nebraska "on account of Senators NORRIS and HOWELL." Another letter relating to "congressional propaganda," Mr. MacGregor said, he could not recall, and he told Mr. Healy he could not say that it related to the Reed committee's Senate campaign-fund investigation.

INTERESTED IN PUBLIC PROJECTS

The witness admitted having an active interest in the Muscle Shoals and Swing-Johnson bills and in the Walsh resolution. He said his organization had never done anything actively to defeat this legislation.

It did, however, circulate matters relating to these subjects to a State mailing list of 3,400, he said, adding that it was opposed to the Walsh resolution in line with its opposition to the general proposition of Government participation in business.

None of the matter his organization sends out to editors is in the nature of propaganda, Mr. MacGregor maintained. He said it prepares nothing that it does not regard as news, and no news matter containing opinions of its own.

Asked whether the Joint Committee of National Utility Associations was not the real head of his organization, Mr. MacGregor asserted that they worked together in opposition to the principle of Government ownership, but were otherwise not affiliated.

MODEL FOR OTHER COMMITTEES

The Illinois committee was shown in the testimony to be the "model" upon which similar information bureaus were established by utility groups in other States. Much of the correspondence placed in the record was from such organizations.

Mr. MacGregor said the committee sent a considerable amount of data to university professors, prepared articles for publication upon the request of editors, obtained speakers for appearance at meetings of civic and club organizations, and used various other avenues of publicity favorable to its cause.

Asked what means were not employed by the committee, he said it did no billboard advertising or other paid advertising and did not circulate motion pictures. Such publicity, he said, was left to the individual companies.

ENTIRE POPULATION OF STATE REACHED

"Will you agree," asked Mr. Healy, when the school literature phase of the inquiry was being developed, "that almost everybody beyond the eighth grade is reached before you get throug?"

"I should say," came the reply, "that almost everybody in the State is reached who can be reached by the methods we use."

The witness asserted the Illinois committee did not regard it worth while to circulate its pamphlets among pupils below the eighth grade.

Numerous college professors were named in letters exchanged between the directors of the various State utility information committees and their attitudes toward public utilities, especially with respect to public ownership, were discussed in the correspondence.

The files of the Illinois committee included an address made by Dean Ralph E. Heilman, of Northwestern University, before the Illinois State Normal College in 1924, which was printed and circulated by the Illinois committee. Dean Heilman was also requested, in a letter from B. F. Mullaney, director of the committee, to go over a "Municipal Credo," mentioned as having been prepared by Mr. Mullaney.

A letter to Dr. J. R. Benton, of the college of engineering of the University of Florida, was introduced, offering to aid in obtaining publishers for textbooks that might be in course of preparation that had to do with public utilities. It was stated that this was the kind of offer made to various colleges throughout the country.

OFFER OF AID TO OBTAIN PUBLISHER OF TEXTBOOK

Another letter contained a proposal to help arrange for Prof. E. E. Lincoln, formerly of the Harvard School of Business Administration, to write a textbook.

Various university professors were characterized in certain letters in so far as their views on public utilities were concerned. Of Prof. E. R. Dillavau, of the University of Illinois, it was stated that "generally his conclusions are as they should be."

A letter concerning Charles E. Merriam, of the University of Chicago, made the statement that "he is all wrong on the question you asked." In the same letter Prof. William B. Munro, Harvard economist, was labeled as "fair."

Another letter told of the appointment of Professor Splawn, formerly of the University of Texas, to the Texas State Railroad Commission. He was said to be "sound."

No explanation of the letters was sought from Mr. MacGregor. Most of his testimony was merely an identification of the correspondence.

One of the letters introduced at the afternoon session was a form letter circularized by the Michigan committee on public utility information and signed by its director, Arthur W. Stace. It contained a list of municipal leagues in the several States and showed their attitude toward the matter of public and private ownership of utilities.

Twenty-three States were listed. Colorado, Illinois, Iowa, Kansas, Louisiana, Minnesota, and Nebraska were shown to have leagues favorable to municipal ownership. Arkansas, New York, and Texas were labeled as "friendly" to private ownership. Wisconsin was labeled as "divided" and Michigan as "indifferent."

ATTITUDE OF STATES TO PUBLIC OWNERSHIP

The director of the New England Bureau of Public Service, Samuel T. McQuarrie, followed Mr. MacGregor to the stand. He said the bureau was formed for the purpose of creating a better understanding between the members and the public which it serves.

Distributing pamphlets, furnishing speakers, exhibiting certain motion-picture films and other methods of publicity, were mentioned by Mr. McQuarrie as among its activities. Radio is not generally utilized except by individual companies, one of which, the Edison Co., of Boston, has its own radio stations, he said.

NEWSPAPERS SELL NO NEWS SPACE

Mr. McQuarrie estimated that last year 7,403½-column inches of news matter and 1,504-column inches of editorial were published by New England newspapers as the result of the bureau's publicity efforts. He asserted that while the fact that the public utilities are substantial advertisers may weigh in their favor in the editorial rooms of newspapers, he knew that no news space could be bought and that no effort has been made to buy news space.

He said the information distributed by public utilities is no different from that sent out by automobile concerns, but Mr. Healy observed the automobile industry has not been charged with practices such as those charged against public utilities.

The witness showed that between January 5, 1925, and July 1, 1926, it had sponsored 1,137 speeches on public utilities. He was questioned at length regarding this and other publicity work of his bureau, with particular relation to the attention paid to educational institutions.

Mr. WALSH of Montana. Further, Mr. President, I read the Associated Press report of a more recent session of the commission inquiring into these matters:

Payment of substantial fees to former Senator Irvine L. Lenroot, of Wisconsin, and Richard Washburn Child, former ambassador to Italy, by the joint committee of National Utilities Associations, was revealed yesterday in the Federal Trade Commission's public utility financing investigation.

The disclosure came in the testimony of Ira L. Grimshaw, of New York, assistant director of the joint committee. He said Lenroot received $20,000 to oppose the Walsh resolution proposing the inquiry before the Senate Interstate Commerce Committee, and Child was paid $7,500 for writing a book for the joint committee about the proposed Boulder Dam project.

Producing an account book taken by the commission investigators from the files of the joint committee, Robert E. Healy, chief counsel for the commission, asked Grimshaw to identify certain payments noted in it.

Grimshaw said that Lenroot was given a $10,000 retainer early this year and that a like payment was made March 16, 1928. He also testified that $5,000 had been advanced to Ernest Greenwood, a former Washington newspaper man, for publicity service.

I pause to remark, Mr. President, that this same gentleman, Mr. Ernest Greenwood, came to my office some time ago, when we had under consideration the resolution to which reference has been made, or some time theretofore, and passed himself off to me as an ordinary newspaper man who was desirous of gathering information for the enlightenment of the public. I assumed him, of course, to be what he represented himself to be, and not the paid agent of people that were interested in legislation, and freely gave him answers to such questions as he addressed to me. Subsequently I found an article which he had published in one of the magazines giving a perfectly distorted view of the interview that was thus secured.

I continue:

HAD $1,000,000 ANNUALLY

J. Bart Campbell, a Washington newspaper man, was receiving $150 a month from the committee in payment for distribution information, he added.

George H. Francis, of New York, auditor for the joint committee and the National Electric Light Association, testified that besides its more than $1,000,000 yearly income, the association has handled a special fund for education and research at Harvard, Johns Hopkins, and Michigan Universities and other institutions.

The larger power companies contribute to this fund in addition to taking care of the deficiencies incurred by the association, he said.

Francis denied knowledge of any other special fund handled by the National Electric Light Association.

LIST OF CONTRIBUTORS

The sudden increase in the activity of the joint committee last year was gone into by Mr. Healy and Commissioner Edgar A. McCulloch. Under examination Grimshaw said the committee had only $700 when it was reorganized June 1, 1927, and within a few months had more than $400,000, had opened a Washington office and had increased activities and personnel.

The committee is composed of representatives of the National Electric Association, the American Gas Association, and the American Street Railway Association, he said.

Mr. Healy then introduced a list of contributors into the record, which was headed by the Insull interests, of Chicago, which contributed $61,000. The Electric Bond & Share Co., of New York, was second, with $60,000; the Byllesby group, of Wisconsin and Minnesota, $36,000; Consolidated Gas Co. group, of New York, $32,000; and the North American group, of Detroit, $28,000.

CAMPBELL'S WORK EXPLAINED

Maj. J. S. S. Richardson, of New York, head of the department of information of the joint committee, made a statement on the stand in behalf of J. Bart Campbell. He said Mr. Campbell is not an employee of the committee, but that the committee pays him $150 a month for news on public utilities, and that he is not a publicity man for the committee.

Richardson testified that the book prepared by Richard Washburn Child was a very elaborate affair, gotten up with the aid of competent engineers and edited by Dr. Frank Bohn.

Mr. Healy asked him if Doctor Bohn was the same man who collaborated with William D. Haywood, whom he described as a communist, in the writing of a socialistic book. Richardson said he did not know.

Following the testimony of A. H. Herrman, of Richmond, Va., treasurer of the Public Utility Association of Virginia, the hearing recessed until Wednesday morning.

Mr. VANDENBERG. Mr. President, will the Senator yield for a moment?

Mr. WALSH of Montana. I yield.

Mr. VANDENBERG. The Senator mentioned the name of Dr. Frank Bohn. Michigan happens to have a very distinguished and honorable Member of the House of Representatives by that precise name who has been greatly embarrassed by being confused with this person. I should like to testify, if the Senator will permit me, to my knowledge that our Doctor BOHN is not this gentleman.

Mr. WALSH of Montana. I am very glad to be interrupted for that purpose, so that justice will be done to the Member of the House. But, Mr. President, I submit that every reflecting man must realize how dangerous it is to our institutions and to public thought to have the children in the schools and the young people in the high schools of the country filled up with this kind of stuff. They become the future governors of our country; and to instill these ideas in the public mind in this way is simply tampering—no other word properly expresses the idea—with the instruction given in the public educational institutions of our country.

Mr. President, I desire to say that though these matters have been detailed before the commission, as was indicated when the matter was under consideration upon this floor, they will pass unnoticed by the great public; while if the investigation had proceeded as some of us thought it ought to, all of these revelations of sinister influences would be blazoned in such a way that the public would be advised about them. I felt it my duty to see that public attention was called to the matter in this way; and I shall take occasion in the future to call the attention of the Senate and the country to similar revelations which are coming out every day. The paper this morning tells us of some other testimony of the same character that went in on yesterday.

PETITIONS AND MEMORIALS

Mr. WARREN presented a resolution adopted by Travis Snow Post, No. 5, the American Legion, of Torrington, Wyo., favoring the passage of legislation to provide for aided and directed settlement on Federal reclamation projects, which was referred to the Committee on Irrigation and Reclamation.

Mr. ROBINSON of Arkansas presented a letter in the nature of a memorial from M. D. L. Cook, of Little Rock, Ark., protesting against adoption of article 3 of the pending treaty between the United States and Panama providing for the use of concrete in road construction to the exclusion of other materials, which was referred to the Committee on Foreign Relations.

Mr. MOSES presented a petition of sundry employees of the navy yard at Portsmouth, N. H. (at Kittery, Me.), praying that the retirement law for Federal employees be so amended as to grant a maximum annuity of $1,200 per annum after 30 years in service, and also to grant optional retirement after 30 years of service provided the fiftieth birthday has been reached, which was referred to the Committee on Civil Service.

Mr. VANDENBERG presented numerous petitions signed by sundry citizens of the State of Michigan, praying for the passage of Senate bill 1418, the so-called fair trade act, which were referred to the Committee on Interstate Commerce.

Mr. COPELAND presented a petition of sundry citizens of New York City, N. Y., praying for the passage of legislation granting increased pensions to Civil War veterans and their widows, which was referred to the Committee on Pensions.

He also presented a resolution of the Italian Chamber of Commerce, of New York, N. Y., favoring the adoption of Senate Joint Resolution 6, requesting the President to proclaim October 12 as Columbus Day for the observance of the anniversary of the discovery of America, which was referred to the Committee on the Judiciary.

He also presented resolutions adopted by the Public Forum, of Brooklyn Heights, N. Y., favoring an equitable adjustment of the present controversy in the bituminous coal fields, which were referred to the Committee on Interstate Commerce.

JURISDICTION OF UNITED STATES DISTRICT COURTS

Mr. TYSON. Mr. President, I have received several letters from citizens of Tennessee, protesting against the passage of the bill (S. 3151) to limit the jurisdiction of the district courts of the United States, which I ask may lie on the table and be printed in the RECORD.

There being no objection, the letters were ordered to lie on the table and to be printed in the RECORD, as follows:

LAW DEPARTMENT,
THE NASHVILLE, CHATTANOOGA & ST. LOUIS RAILWAY,
*Nashville, Tenn., April 6, 1928.*

Hon. L. D. TYSON,
*United States Senate, Washington, D. C.*

DEAR SENATOR TYSON: Supplementing my letter of yesterday, I am now advised that Senate bill 3151 was reported by the Judiciary Committee "without notice and without hearings." Our interests would like to have been heard in a matter of this importance. I am wondering if it is feasible to have this bill recommitted to give those of us who are interested and vitally affected an opportunity to express our views. The present law has been on the statute books or substantially so from almost the commencement of our Government, and I can not see any particular reason why it should be rushed through without giving those very much interested a chance to be heard.

Yours respectfully,

FITZGERALD HALL,
*Vice President and General Counsel.*

---

HUGHES & HUGHES,
*Columbia, Tenn., April 7, 1928.*

Hon. L. D. TYSON,
*United States Senate, Washington, D. C.*

MY DEAR SENATOR: We have been advised of the amendments to the jurisdiction of Federal courts as contained in Senate bill 3151, and, being corporation attorneys, are vitally interested in the question involved.

Diversity of citizenship alone, we feel and have always felt, should confer jurisdiction of disputes between residents of different States, whether the parties be individuals or corporations, on the Federal courts.

But our representatives have seen fit first to provide that suits brought to recover an amount less than $2,000 should not be removable to the Federal court, which was later amended, increasing the amount to $3,000. There may be an excuse for this restriction on account of the small amount involved and on account of the fact that it is sometimes expensive to both plaintiff and the defendant to try a case in the Federal court where the situs of the court is not close to the place where the injury occurred or where the cause of action originated and the witnesses are located.

Although under an ideal state of facts and ideal conditions as to the selection of juries there should be no material difference in trying a case in Federal court from what one would experience in a State court.

Nevertheless every lawyer and every judge, as well as the better-informed laymen, are fully aware that such is not the case.

It is well known that where the plaintiff is an individual and the defendant is a corporation, and the plaintiff has by his pleading and his proof made a sufficient case upon which to go to the jury, that it is practically impossible for the defendant corporation to obtain justice at the hands of the ordinary jury encountered in the State courts.

This is not alone due to the method of selecting the jury in the State courts, but results because of the very great limitations against

the State trial judge's right to express any opinion as to the evidence introduced before the jury.

Of course, we can not assume that any jury can be as well qualified to weigh and pass upon evidence as is the trial judge, who has had many years' study preparing for his profession as well as many years' experience in the practice of law to qualify him to perform these functions, and yet in the State courts he is not allowed to express any opinion as to the evidence, to point out that which is important and that which is unimportant, or to call particular attention to the unreasonableness of testimony and signify which testimony he thinks is best supported by all the facts and circumstances.

All of these rights the trial judges of Federal courts possess, and it is imperative in order to do even-handed justice to the corporations and the individuals that all trial judges should have such power to exercise in their discretion.

It can not be claimed that the parties plaintiff do not recognize this distinction, for, of course, you are familiar enough with the history of such matters to know that even in towns and cities where both the State and Federal courts hold their sessions the plaintiff in every case brought against a foreign corporation will, if at all possible, join some resident defendant who is an employee of the defendant corporation, whether he be solvent or insolvent, merely for the purpose of obtaining local or State jurisdiction and thereby getting the benefit of the prejudices which everyone knows exists against corporations, and especially the feeling upon the part of the average juror that the rich defendant corporation will never miss the money which the plaintiff so badly needs.

And in nine cases out of ten, if they can not actually join a resident defendant employee, they will bring the cause in the State court against the corporation alone; and if a petition to remove is filed, will reduce the amount claimed to a sum less than $3,000 so as to avoid going into a court where they know exact justice will be done the corporation.

Among our clients are some railroad companies, and the passage of the Senate bill above referred to would do irreparable injury to such corporations.

For instance, there can be no more vital questions in the land to-day than those arising out of grade-crossing accident cases. The Supreme Court of the United States, the greatest judicial tribunal in the world, has reached what we conceive to be the absolutely correct view to be taken of such cases, and has declared what it terms to be a rule and standard of conduct which should be laid down once for all by the courts. We refer to the case of Baltimore & Ohio Railroad Co. *v.* Goodman, decided October 31, 1927, and reported in advance sheets of November 15, 1927, No. 2, page 22.

As you, of course, know, this decision is not binding upon our State courts.

The question of crossing accidents is not a local question, county question, or State question, but the number of accidents of this character, the number of grade crossings in existence, and the number of automobiles in operation in this country have made this a national question.

The rules of law in the various States applicable to such cases are vitally different and a very great proportion of the accidents occurring are to tourists or transients not within the boundary of their own State.

There were in the United States at the close of 1925, as we are informed, 232,755 grade crossings.

Of course, it is impossible to eliminate all of said crossings, it being estimated that to do so would cost more than the public debt, or about $20,000,000,000.

From 1917 to 1926, inclusive, there were in the United States 20,021 persons killed in crossing accidents and 55,771 persons injured, on an average of 2,000 deaths and 5,570 injuries per year through accidents at railroad crossings.

The statistics further show that the process of elimination of such crossings has been and is still being carried on by the railroads, but that in one recent year, while the railroads were eliminating 972 crossings, at a cost of about $100,000,000, 3,065 new grade crossing were constructed under conditions over which the railroads had no control, and the construction of which they could not prevent.

A railroad engineer must serve many years as fireman before he earns his right to the position of engineer, and he must be thoroughly familiar not only with the mechanism and operation of the engine but also with the rules governing its movement over the roads before he can occupy such a position, while on the other hand, in most States, and particularly ours, there is no qualification except possibly in some of the cities that the driver of an automobile has to meet except that in most States it is provided he shall be 16 years of age or over, which provision of law has met with utter disregard, and almost at any time you drive you will see children under the age of 16 years operating automobiles.

Of course, we are not statisticians, and can not vouch for the figures above quoted, but they are taken from an article that appeared under the title "Science and invention" in the Literary Digest of December 24, 1927, the author's name not being given, but we are sure you can secure his name from Funk & Wagnalls.

Certainly the figures given prove that this is a national and not a State question, and that one rule of law should apply to the whole Nation.

While this most desirable result probably can not be realized, it can be given very great encouragement and more nearly accomplished by defeat of the above-mentioned bill than in any other way we can think of at this time.

We are sorry to have written you at such great length, but we are so vitally interested in the question and so thoroughly convinced of the injustice of denying the corporations the principal avenue open to them of securing proper decisions from juries under proper instructions from the trial courts that we feel we should express our views fully on the subject.

We do not feel that the fact that we represent several corporations has in any way influenced our attitude as to this question, though, of course, it has given us the more frequent opportunity to observe those miscarriages of justice which we have herein referred to.

We hope you will give to this measure your usual careful attention and sincerely trust that you may oppose it.

In this connection we beg to advise that Mr. Otto Y. Schnering, president of the Baby Ruth Candy Co., and who has obtained national recognition as a safety authority, has some very interesting data on this subject of crossing accidents, and if you have a hearing on this bill we feel sure would be glad to give your committee such information as he possesses, though, of course, we never met the gentleman in question and can not be positive of this statement.

Respectfully yours,

GEO. T. HUGHES, Jr.

---

BROWN & SPURLOCK,
*Chattanooga, Tenn., April 9, 1928.*

Hon. L. D. TYSON,
*United States Senate, Washington, D. C.*

DEAR SENATOR: The Judiciary Committee of the Senate has reported for passage, as I understand, a bill to abolish that jurisdiction of the Federal courts depending on diversity of citizenship. It is under this provision of the existing law that the State and Federal courts have had, since the foundation of the Government, concurrent jurisdiction of those controversies involving the application of general principles of the law. Because these courts, on this ground of common jurisdiction, construed and applied the same rules of law and followed the same procedure, there has always been a general tendency toward harmony in the decisions of all the States. Where there have been differences in opinions of the different State courts, on questions of commercial or general law, the decisions of the Supreme Court of the United States have been the reconciling factor. This would not have been so if the jurisdiction of the Federal courts had been confined to questions arising under the Constitution and laws of the United States. This does not mean that each State has not had its own local rules of property and statutory rights, because the Federal courts have always recognized the conclusive effect of State decisions on local questions.

The bill referred to is a radical departure from the rules and practices under which the laws of this country have been developed. If the United States courts can only take cognizance of Federal questions, then they become foreign courts in each of the States. To be consistent the new system should deprive the State courts of jurisdiction over Federal questions. In other words, there should no longer be any reason for conferring on State courts jurisdiction to try suits arising under the Federal employers' liability act, or of contracts and rights involved in interstate commerce. The time of the State courts is taken up largely in the trial of cases arising under the laws of the United States, and heretofore much time of the Federal courts has been consumed in the trial of cases depending on the diversity of citizenship. It would seem that the present statute means to say that this cooperation or exercise of concurrent jurisdiction must cease. It is this disruptive effect of the bill against which I protest more than on any other account.

Of course, the law which it is now proposed to change has always secured the nonresident a fair trial of his rights. There has never been any question of the propriety of this ground of jurisdiction unless by some person desiring the benefit of local prejudice. I can not understand how any person desiring a just administration of the law can see any reason for changing this old rule of law. I do not know whether the bill is intended as a reflection on the Federal courts or for their relief. It is true that they are degenerating into police courts, but the more appropriate remedy would be for Congress to cease the creation of crimes.

As one of your constituents, and as a lover of the law of the land as it has existed through all my life, I most respectfully ask that you oppose this bill.

Respectfully,

FRANK SPURLOCK.

TONNAGE OF VESSELS

Mr. TYSON. I ask unanimous consent to have inserted in the RECORD a letter which I have received from H. L. Ferguson, president of the National Council of American Shipbuilders.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NATIONAL COUNCIL OF AMERICAN SHIPBUILDERS,
*New York, April 20, 1928.*

Hon. LAWRENCE D. TYSON,
*Senate Office Building, Washington, D. C.*

DEAR SIR: The National Council of American Shipbuilders invites your attention to the tabular statement below, taken from Lloyd's Register of Shipping, showing gross tonnage of vessels under construction in the various countries of the world at the end of the last quarter of 1927 and at the end of the first quarter of 1928:

| | Mar. 31, 1928 | Dec. 31, 1927 |
|---|---|---|
| Great Britain and Ireland | 1,440,842 | 1,579,713 |
| Germany | 443,939 | 472,295 |
| Italy | 171,016 | 183,216 |
| Holland | 162,973 | 174,887 |
| France | 103,494 | 115,029 |
| Denmark | 103,110 | 97,710 |
| Russia | 94,658 | 87,658 |
| Japan | 91,775 | 68,870 |
| Sweden | 91,075 | 100,700 |
| United States | 56,049 | 97,370 |
| Total | 2,758,931 | 2,977,448 |

At the end of 1927 the United States was building 97,370 gross tons, or 3¼ per cent of the world tonnage under construction.

At the end of the first quarter of 1928 the United States was building 56,049 gross tons, or 2 per cent of the world tonnage under construction.

At the end of 1927 the United States ranked number eight in the volume of tonnage under construction.

At the end of the first quarter of 1928 the United States ranked number 10, or at the bottom of the list in the percentage of world tonnage under construction by the chief maritime nations.

At the end of 1927 the amount of tonnage under construction in the United States was the lowest it had been at any similar period for 35 years. At the end of the first quarter of 1928 the condition was even worse, being only 58 per cent of what it had been at the end of 1927.

The foregoing analysis of the statement of Lloyd's Register of Shipping discloses that almost no construction of new merchant vessels is now in progress in the United States to replace or supplement the vessels now in operation in the foreign trade to meet the competition of modern high-speed vessels recently constructed and now being constructed by foreign nations for their international trade.

Is any more convincing argument than the above necessary to show the deplorable condition of the shipbuilding industry in the United States and of the merchant marine and the necessity for legislation at this session of Congress that will correct these conditions?

Yours very truly,

H. L. FERGUSON, *President.*

REPORTS OF COMMITTEES

Mr. FESS, from the Committee on the Library, to which were referred the following bills and joint resolution, reported them severally without amendment and submitted reports thereon, as indicated:

A bill (S. 1855) to provide for cooperation by the Smithsonian Institution with State, educational, and scientific organizations in the United States for continuing ethnological researches on the American Indians;

A bill (H. R. 7475) to provide for the removal of the Confederate monument and tablets from Greenlawn Cemetery to Garfield Park (Rept. No. 907);

A bill (H. R. 10544) to abolish the office of administrative assistant and disbursing officer in the Library of Congress and to reassign the duties thereof (Rept. No. 908);

A bill (H. R. 11482) to amend section 2 of an act entitled "An act to authorize an appropriation for the care, maintenance, and improvement of the burial grounds containing the remains of Zachary Taylor, former President of the United States, and the memorial shaft erected to his memory, and for other purposes," approved February 24, 1925; and

Joint resolution (S. J. Res. 82) providing for the erection of a public historical museum on the site of Fort Defiance, Defiance, Ohio (Rept. No. 905).

Mr. FESS also, from the Committee on the Library, to which was referred the joint resolution (S. J. Res. 92) to provide for a monument to Maj. Gen. William Crawford Gorgas, late Surgeon General of the United States Army, reported it with an amendment and submitted a report (No. 906) thereon.

Mr. DALE, from the Committee on Commerce, to which were referred the following bills, reported them severally without amendment and submitted reports thereon:

A bill (S. 4059) authorizing the State Highway Commission, Commonwealth of Kentucky, to construct, maintain, and operate a bridge across the Tennessee River at or near the mouth of Clarks River (Rept. No. 909);

A bill (S. 4060) authorizing the State Highway Commission, Commonwealth of Kentucky, to construct, maintain, and operate a bridge across the Cumberland River at or near Canton, Ky. (Rept. No. 910); and

A bill (S. 4061) authorizing the State Highway Commission, Commonwealth of Kentucky, to construct, maintain, and operate a bridge across the Cumberland River at or near Smithland, Ky. (Rept. No. 914).

Mr. DALE also, from the Committee on Commerce, to which was referred the bill (S. 4034) authorizing the Calhoun Bridge Co., an Illinois corporation, its successors and assigns, to construct, maintain, and operate a bridge across the Illinois River at or near Grafton, Ill., reported it with an amendment and submitted a report (No. 911) thereon.

He also, from the same committee, to which were referred the following bills, reported them each with amendments and submitted reports thereon:

A bill (S. 4045) granting the consent of Congress to the Highway Department of the State of Tennessee to construct a bridge across the French Broad River on the Newport-Asheville (N. C.) road in Cocke County, Tenn. (Rept. No. 912); and

A bill (S. 4062) authorizing the State Highway Commission, Commonwealth of Kentucky, to construct, maintain, and operate a bridge across the Tennessee River at or near Egners Ferry, Ky. (Rept. No. 913).

Mr. ASHURST, from the Committee on Indian Affairs, to which were referred the following bills, reported them each with an amendment and submitted reports thereon:

A bill (S. 2738) for the relief of C. R. Olberg (Rept. No. 915); and

A bill (S. 3779) to authorize the construction of a telephone line from Flagstaff to Kayenta on the Western Navajo Indian Reservation, Ariz. (Rept. No. 916).

Mr. FRAZIER, from the Committee on Indian Affairs, to which was referred the bill (H. R. 441) to authorize an appropriation to pay half the cost of a bridge and road on the Hoopa Valley Reservation, Calif., reported it without amendment and submitted a report (No. 917) thereon.

OHIO RIVER BRIDGE

Mr. DALE. From the Committee on Commerce I report back favorably with an amendment the bill (S. 4046) authorizing the Henderson-Ohio River Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Ohio River at or near Henderson, Ky. I call the attention of the Senator from Kentucky [Mr. SACKETT] to the bill.

Mr. SACKETT. I ask unanimous consent for the present consideration of the bill.

There being no objection, the bill was considered as in Committee of the Whole.

The amendment was to strike out all after the enacting clause and in lieu thereof to insert:

That in order to facilitate interstate commerce, improve the Postal Service, and provide for military and other purposes, the Henderson-Ohio River Bridge Co., its successors and assigns, be, and is hereby, authorized to construct, maintain, and operate a bridge and approaches thereto across the Ohio River, at a point suitable to the interests of navigation, at or near Henderson, Henderson County, Ky., across said river to a point opposite in Vanderburg County, Ind., in accordance with the provisions of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906, and subject to the conditions and limitations contained in this act.

SEC. 2. There is hereby conferred upon Henderson-Ohio River Bridge Co., its successors and assigns, all such rights and powers to enter upon lands and to acquire, condemn, occupy, possess, and use real estate and other property needed for the location, construction, operation, and maintenance of such bridge and its approaches as are possessed by railroad corporations for railroad purposes or by bridge corporations for bridge purposes in the State in which such real estate or other property is situated, upon making just compensation therefor, to be ascertained and paid according to the laws of such State, and the proceedings therefor shall be the same as in the condemnation or expropriation of property for public purposes in such State.

SEC. 3. The Henderson-Ohio River Bridge Co., its successors and assigns, is hereby authorized to fix and charge tolls for transit over such bridge, and the rates of toll so fixed shall be the legal rates until

changed by the Secretary of War under the authority contained in the act of March 23, 1906.

SEC. 4. From the tolls charged for the use of such bridge, the Henderson-Ohio River Bridge Co., its successors and assigns, shall pay all reasonable operating costs, taxes, assessments, insurance, cost of maintenance, repairs, necessary replacements, and interest on the bonds and dividends on the stock issued to procure necessary funds for the construction of such bridge and its approaches and other costs incidental thereto; all other funds received for the use of such bridge, after the payment of the foregoing costs and charges, shall be set aside in the manner hereinafter provided as a sinking fund for retiring the bonds and the stock issued and sold by the Henderson-Ohio River Bridge Co., its successors and assigns, for the purpose of providing the funds with which to construct said bridge and its approaches. Any mortgage or deed of trust issued by the Henderson-Ohio River Bridge Co., its successors and assigns, to secure funds for the construction of said bridge and its approaches, shall provide for the appointment of the Kentucky State Highway Commission, or such bank or bank and trust company in Henderson County, Ky., as said commission may designate as trustee, and the net revenues received from the use of such bridge as provided for in this section shall be paid to the trustee and used for the payment or redemption at par, as soon as possible, of all bonds issued and sold in connection with the construction of such bridge; after all such bonds have been paid or retired, the trustee shall continue to act as such and shall apply the net proceeds from the use of such bridge as rapidly as possible to the retirement of the outstanding stock at par issued by the Henderson-Ohio River Bridge Co. in connection with the construction of such bridge. No bonds or stock issued and sold for the purpose of providing funds for the construction of said bridge, its approaches and appurtenances, shall bear interest or pay dividends at a rate exceeding 7 per cent per annum. Such bonds and stock so issued shall not exceed in the aggregate the total actual cost of constructing such bridge and its approaches and any real estate that may be necessarily required in connection therewith, and organization and financing charges, not exceeding 10 per cent of the actual cost of constructing such bridge and approaches and acquiring such real estate.

SEC. 5. When all of the bonds and stock issued and sold in connection with the construction of said bridge shall have been paid or redeemed, or shall have been called for payment or redemption, and the funds with which to redeem such as shall not have been presented for redemption shall have been provided, the bridge and its approaches and appurtenances shall thereupon be and become the property of the State of Kentucky, and the proper officials or agents of the Henderson-Ohio River Bridge Co., its successors and assigns, shall immediately, by proper deed of conveyance, convey, transfer, and assign to the State Highway Commission of the State of Kentucky the said bridge and its approaches and all real estate, franchises, and other property necessarily held in connection therewith. Thereafter such bridge shall be maintained and operated free of tolls. An accurate record of the costs of the bridge, its approaches and appurtenances, the expenditures for maintaining, repairing, and operating the same and for taxes, insurance, betterments, and other necessary charges and of the daily tolls collected, shall be kept and shall be available for the information of all persons interested.

SEC. 6. After the completion of such bridge, the State of Kentucky, through its State highway commission, or, with the consent and approval of the State highway commission, the county of Henderson, may, at any time, acquire and take over all right, title, and interest in such bridge and its approaches, and any interest in real property necessary therefor, by purchase or by condemnation, or expropriation, in accordance with the laws of the State of Kentucky governing the acquisition of private property for public purposes by condemnation or expropriation. If the bridge and its approaches and appurtenances are acquired by condemnation, the amount of damages or compensation to be allowed shall be such an amount as will equal the amount necessary to redeem and retire all the bonds and stock outstanding at the time of such condemnation proceedings.

SEC. 7. If such bridge shall at any time be taken over or acquired by the State of Kentucky, or by Henderson County, as provided by section 6 of this act, and if tolls are thereafter charged for the use thereof, the rates of toll shall be so adjusted as to provide a fund to repay for the reasonable cost of maintaining, repairing, and operating the bridge and its approaches under economic management and to provide a sinking fund sufficient to amortize the amount paid therefor, including the reasonable interest and financing cost, as soon as possible under reasonable charges. After a sinking fund sufficient for such amortization shall have been so provided, such bridge shall thereafter be maintained and operated free of tolls.

SEC. 8. The right to sell, assign, transfer, and mortgage all the rights, powers, and privileges conferred by this act is hereby granted to Henderson-Ohio River Bridge Co., its successors and assigns, and any corporation to which or any person to whom such rights, powers, and privileges may be sold, assigned, or transferred, or who shall acquire the same by mortgage foreclosure or otherwise, is hereby authorized and empowered to exercise the same as fully as though conferred herein directly upon such corporation or person.

SEC. 9. The right to alter, amend, or repeal this act is hereby expressly reserved.

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

Mr. SACKETT. There are on the calendar two bills, the bill (S. 3837) authorizing the West Kentucky Bridge & Transportation Co., its successors and assigns, to construct, maintain, and operate a bridge across the Ohio River at or near Henderson, Ky., and the bill (S. 4013) authorizing the Henderson-Ohio River Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Ohio River at or near Henderson, Ky., which should be indefinitely postponed. I make that motion.

The motion was agreed to.

TABLET OR MARKER AT MEDICINE LODGE, KANS.

Mr. FESS. From the Committee on the Library I report back favorably, without amendment, House bill 8132, authorizing the appropriation of $2,500 for the erection of a tablet or marker at Medicine Lodge, Kans., to commemorate the holding of the Indian peace council, at which treaties were made with the Plains Indians in October, 1867, and I submit a report (No. 902) thereon.

I ask unanimous consent for the immediate consideration of the bill.

The VICE PRESIDENT. Is there objection?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which was read, as follows:

*Be it enacted, etc.*, That the sum of $2,500 is hereby authorized to be appropriated to be expended, under the direction of the Secretary of the Interior, in the erection of a tablet or marker at Medicine Lodge, Kans., to commemorate the holding at Medicine Lodge, Kans., of the Indian peace council, at which treaties were made between the United States and the Kiowa, Comanche, Apache, Cheyenne, and Arapahoe Indians in October, 1867.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

URN PRESENTED BY REPUBLIC OF CUBA

Mr. FESS. From the Committee on the Library I report back favorably without amendment Senate Joint Resolution 125, authorizing the President of the United States to accept a monumental urn to be presented by the Republic of Cuba and providing for its erection on an appropriate site on the public grounds in the city of Washington, D. C., and I submit a report (No. 903) thereon.

I ask unanimous consent for the immediate consideration of the joint resolution.

The VICE PRESIDENT. Is there objection? The Chair hears none.

The Senate, as in Committee of the Whole, proceeded to consider the joint resolution, which was read, as follows:

*Resolved, etc.*, That the President of the United States is hereby authorized to accept as a gift from the Republic of Cuba a monumental urn, which shall be erected on a site on the public grounds of the United States in the city of Washington, D. C., other than those of the Capitol, the Library of Congress, the White House, or the grounds south of the White House: *Provided*, That the site shall be chosen by the Director of Public Buildings and Public Parks of the National Capital with the approval of the Joint Committee on the Library of Congress and the National Commission of Fine Arts: *Provided further*, That the urn shall be erected under the direction and supervision of the said Director of Public Buildings and Public Parks, and there is hereby authorized to be appropriated, out of any money in the Treasury of the United States not otherwise appropriated, a sufficient sum to cover the entire cost of the erection and dedication of the said urn.

The joint resolution was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

MONUMENT IN MEMORY OF PETER MUHLENBERG

Mr. FESS. From the Committee on the Library I report back favorably without amendment House Joint Resolution 239, authorizing the erection in the District of Columbia of a monument in memory of Peter Muhlenberg, and I submit a report (No. 904) thereon.

I ask unanimous consent for the immediate consideration of the joint resolution.

The VICE PRESIDENT. Is there objection?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the joint resolution, which was read, as follows:

*Resolved, etc.,* That the Peter Muhlenberg Memorial Association is authorized to erect, without expense to the United States, a monument in memory of Peter Muhlenberg, eminent statesman, clergyman, and soldier, as a gift to the people of the United States, in the public park lying between Ellicott Street, Connecticut Avenue, and Thirty-sixth Street NW., in the District of Columbia. Such monument shall not be erected until the plans and specifications therefor have been submitted to and approved by the Joint Committee on the Library and the Commission of Fine Arts. Such monument shall be erected under the supervision of the Director of Public Buildings and Public Parks of the National Capital.

The joint resolution was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

Mr. FESS. I move that the Committee on the Library be discharged from the further consideration of the joint resolution (S. J. Res. 126) authorizing the erection in the District of Columbia of a monument in memory of Peter Muhlenberg, and that it be indefinitely postponed.

The motion was agreed to.

PORTRAIT OF CHIEF JUSTICE MARSHALL

Mr. BRUCE. Mr. President, may I have the attention for a moment of the Senator from Ohio [Mr. FESS], the chairman of the Senate Committee on the Library? I should like to ask the Senator, as chairman of that committee, what, if anything, has been done in relation to the bill which seeks to have the Government purchase an original portrait of Chief Justice Marshall by the celebrated artist of Chief Justice Marshall's time, St. Memim. That portrait was offered to the Government through that bill; and the bill named—of course, more or less tentatively—$50,000 as the price for the portrait. Later on, I suggested that the committee might have the portrait valued by experts; and still later I was informed that some members of the Supreme Court of the United States were very much interested in the portrait, and desired to have an opportunity to inspect it; and still later I had reason to believe that the members of the Supreme Court were afforded an opportunity to inspect it.

Of course, any original portrait by a famous artist of any one of the great men of our early history has almost a priceless value. Some years ago a replica of George Washington sold by a neighbor of mine in the State of Maryland to a purchaser for $75,000. Without going into the problem of comparative fame, I should say that if a portrait of George Washington were worth that much, it might well be that a portrait of Chief Justice Marshall would be worth the same sum, approximately, anyhow.

I am not disposed to think that any committee of the Senate or of the House would be unduly insensible to the Government acquiring the ownership and possession of such a portrait as that, but as far I can see, there is no apparent interest taken in the matter at all, except to some extent by the chairman of the committee himself. I really think that if the committee does not take a little interest in it, I would be justified in asking the Members of the Senate generally to take a little interest in it, to see that that portrait becomes the property of the Government.

Mr. FESS. Mr. President, this portrait, which was brought to the committee some time ago, is one of the most famous and valuable in the country. It was made in 1808. The owner, who is a descendant of John Marshall himself, asked the privilege of bringing the portrait over from Baltimore to be viewed by members of the committee. I assented to that on condition that they would assume all risk, because the portrait is too valuable to be placed anywhere here unless under lock and key.

I will say to the Senator from Maryland that the price seems to be entirely beyond what our committee would want to consider. We have no national art gallery here. I should think that portrait ought to be picked up by some private individual having an appreciation of it. I might say that there is a replica of it in the Supreme Court room now. The original is with the committee.

Mr. BRUCE. If the Senator will allow me to interrupt, not a replica but a mere copy.

Mr. FESS. Yes; probably that is a better designation.

Mr. BRUCE. There is a vast difference between a replica and a copy.

Mr. FESS. I will say to the Senator that if he will come to the committee at 10 o'clock on Tuesday morning, we shall be glad to have him say anything he wants to say in regard to the matter.

Mr. BRUCE. I am very much obliged to the Senator. I shall make a point to attend the meeting.

INDIAN TRUST ESTATES

Mr. THOMAS. From the Committee on Indian Affairs I report back favorably without amendment the bill (S. 4222) to authorize the creation of Indian trust estates, and for other purposes, and I submit a report (No. 918) thereon. I ask for the immediate consideration of the bill.

Mr. CURTIS. Let the bill be reported. Will it lead to debate?

Mr. THOMAS. I think not. It relates to Indian trust estates.

The VICE PRESIDENT. The bill will be read for the information of the Senate.

The bill was read, as follows:

*Be it enacted, etc.,* That the Secretary of the Interior be, and he is hereby, authorized to permit, in his discretion and subject to his approval, any Indian over the age of 21 years, including the Quapaws, Five Civilized Tribes, and the Osages, having restricted funds or other property subject to the supervision of the Secretary of the Interior, to create and establish, out of the restricted funds or other property, trusts for the benefit of such Indian, his heirs, or other beneficiaries designated by him, such trusts to be created by contracts or agreements by and between the Indian and incorporated trust companies or such banks as may be authorized by law to act as fiduciaries or trustees: *Provided,* That unless otherwise ordered by the Secretary of the Interior the trustee shall be located in the State or Territory of the residence of the Indian creating the trust: *Provided further,* That no trust company or bank shall be trustee in any trust created under this act, which has paid or promised to pay to any person other than an officer or employee on the regular pay roll thereof, any charge, fee, commission, or remuneration for any service or influence in securing or attempting to secure for it the trusteeship in any trust.

SEC. 2. That the Secretary of the Interior be, and he is hereby, authorized, upon the execution and approval of any trust agreement or contract as herein provided, to transfer, or cause to be transferred, to the trustee, from the individual restricted or trust funds or other restricted property of the respective Indian, the funds or property required by the terms of the approved agreement, and the funds or property so transferred shall in each case be held by the trustee subject to the terms and conditions of the trust agreement or contract creating the trust.

SEC. 3. That none of the restrictions upon the funds or property transferred under the terms of any such trust agreement or contract shall be in any manner released during the continuance of the restriction period provided by law, except as provided by the terms of such agreement or contract, and neither the corpus of said trust nor the income derived therefrom shall, during the restriction period provided by law, be subject to taxation, alienation, or encumbrance, nor to the satisfaction of any debt or other liability of any beneficiary of such trust during the said restriction period. The Secretary of the Interior shall at all times have sole authority to require an accounting of the trustee as to the administration thereof.

SEC. 4. That trust agreements or contracts executed and approved as herein provided shall not, during the restriction period provided by law, be revoked, except with the consent and approval of the Secretary of the Interior: *Provided,* That if any trust, trust agreement, or contract be annulled, revoked, or set aside by order of any court, or otherwise, prior to the date of the expiration of the restriction period provided by law, the principal or corpus of the trust estate, with all accrued and unpaid interest, shall be returned to the Secretary of the Interior as restricted individual Indian property.

SEC. 5. If, after the creation and approval of any trust, the Secretary of the Interior shall find that any trust has been created in violation of the provisions of this act, he shall submit the facts to the Attorney General, whose duty it shall be to institute appropriate proceedings in the Federal courts for the cancellation and annulment of said trust by court decree, and upon decree of annulment and cancellation, which shall be at the cost of the trustee, and after accounting, but without the allowance of any fee, charge, or commission for any services rendered by the trustee, all funds held by the trustee shall be paid to the Secretary of the Interior as restricted funds.

SEC. 6. That the Secretary of the Interior is hereby authorized to make rules and regulations for the purpose of carrying into effect the provisions of this act, and that the trust agreements and the trusts under this act shall be under such rules and regulations and subject to such restrictions as the Secretary of the Interior may prescribe.

The VICE PRESIDENT. Is there objection to the present consideration of the bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The bill was reported to the Senate without amendment,

ordered to be engrossed for a third reading, read the third time, and passed.

DISTRICT JUDGE, NORTHERN DISTRICT OF ILLINOIS

Mr. DENEEN. From the Committee on the Judiciary I report back favorably, without amendment, the bill (S. 4183) authorizing the filling of a vacancy occurring in the office of district judge for the northern district of Illinois created by the act entitled "An act for the appointment of an additional circuit judge for the fourth judicial circuit, for the appointment of additional district judges for certain districts, providing for an annual conference of certain judges, and for other purposes," approved September 14, 1922.

Mr. President, I ask for the immediate consideration of the bill.

Mr. JONES. Does the bill provide for an additional judgeship?

Mr. DENEEN. No; it does not provide for an additional judgeship. It simply authorizes the President to make an appointment to fill a vacancy occurring in the northern district of Illinois.

Mr. ROBINSON of Arkansas. I think the bill ought to go to the calendar, and we can take it up a little later. There are a number of Senators about me here who have suggested that they want to look into it.

Mr. DENEEN. I have no objection to that course.

The VICE PRESIDENT. The bill will be placed on the calendar.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. CURTIS:

A bill (S. 4239) granting a pension to George L. Canady (with accompanying papers); and

A bill (S. 4240) granting an increase of pension to Eliza A. Porter (with accompanying papers); to the Committee on Pensions.

By Mr. HALE:

A bill (S. 4241) granting an increase of pension to Georgie A. Willey (with accompanying papers); and

A bill (S. 4242) granting an increase of pension to Mary J. Gooding (with accompanying papers); to the Committee on Pensions.

By Mr. ROBINSON of Indiana:

A bill (S. 4243) granting an increase of pension to Mary Belle Orr (with accompanying papers); and

A bill (S. 4244) granting an increase of pension to Anna Coffin Anderson (with accompanying papers); to the Committee on Pensions.

By Mr. BLEASE:

A bill (S. 4245) to prohibit the employment of certain persons within certain degrees of relationship in the various Government departments; to the Committee on Civil Service.

By Mr. DILL:

A bill (S. 4246) granting a pension to Carrie E. Aram; to the Committee on Pensions.

By Mr. ROBINSON of Arkansas:

A bill (S. 4247) for the relief of the First National Bank of Junction City, Ark.;

A bill (S. 4248) for the relief of the Merchants and Farmers Bank, Junction City, Ark.; and

A bill (S. 4249) for the relief of the National Bank of Commerce, El Dorado, Ark.; to the Committee on Claims.

By Mr. THOMAS:

A bill (S. 4250) for the relief of David E. Jones; to the Committee on Claims.

A bill (S. 4251) to amend section 303 of the World War veterans' act, 1924, as amended; to the Committee on Finance.

By Mr. MAYFIELD:

A bill (S. 4253) authorizing H. L. McKee, his heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across Lake Sabine at or near Port Arthur, Tex.; and

A bill (S. 4254) authorizing the State of Texas and the State of Louisiana to construct, maintain, and operate a free highway bridge across the Sabine River at or near Pendletons Ferry; to the Committee on Commerce.

WORLD WAR VETERANS' COMPENSATION

Mr. BRATTON. Mr. President, in July, 1926, a bill proposed by the senior Senator from Arizona [Mr. ASHURST] was enacted into law. It provided that veterans of the World War who had tuberculosis of a compensable degree, who had reached a state of complete arrest, should have their compensation fixed at a flat basis of $50 per month. There was considerable discussion on the floor of the Senate as to the reasons prompting the Senator from Arizona to propose that legislation. It was clearly expressed and understood that it was intended to give those men a definite, fixed status, with definite compensation that should be uninterfered with by the bureau.

In the administration of that act the bureau has departed from the intent of Congress, as I understood it then and as I understand it now. It has done that in this manner: An ex-service man may have received compensation. The bureau necessarily adjudicated that he had tuberculosis in a compensable degree at the time it began paying him. Later it was determined by the bureau itself that he had reached a state of complete arrest, and consequently his compensation was fixed at a definite figure of $50 per month.

Afterwards, and in contravention of the express intent of Congress, the bureau has disturbed and changed the status of men falling within that condition by determining that, notwithstanding the prior adjudication made by the bureau, actually the veteran never did have tuberculosis of a compensable degree. Consequently the veteran's compensation in many cases has been discontinued.

Mr. ASHURST. Mr. President, will the Senator yield?

Mr. BRATTON. I yield.

Mr. ASHURST. I presume the Senator proposes some amendment?

Mr. BRATTON. I do.

Mr. ASHURST. Will the Senator please advise the Senate, and especially for my information, whether he proposes to alter, modify, amend, or in any way to change the language of the legislation which I introduced and to which he refers?

Mr. BRATTON. I do not, Mr. President. I propose an addition to the language enacted at the request of the Senator from Arizona, solely for the purpose of making it so clear that no one can misunderstand what was contemplated by his amendment.

Mr. ASHURST. I thank the Senator. From my glimpse of the Senator's amendment and from the Senator's statement I have no doubt his amendment would improve the legislation, but I would not consent to any legislation which might modify or change the language of the original legislation.

Mr. LA FOLLETTE. Mr. President, will the Senator yield?

Mr. BRATTON. In just a moment. I do not propose that, Mr. President, because the legislation offered by the Senator from Arizona was excellent in its purpose, and if it had been administered as he intended it and as the Congress intended it there would be no occasion for additional legislation. My sole purpose is to supplement the legislation proposed by the Senator from Arizona.

Now I yield to the Senator from Wisconsin.

Mr. LA FOLLETTE. Can the Senator inform the Senate as to whether there are a large number of ex-service men suffering with tuberculosis who are having their status changed in the manner in which the Senator points out the bureau is proceeding?

Mr. BRATTON. Mr. President, a number of men in the State of New Mexico have reported to me that they have been accorded that treatment, and I assume that condition prevails throughout the country generally and in the Southwest in particular.

Mr. LA FOLLETTE. I am heartily in sympathy with the Senator's efforts in the matter, and I trust the committee will give every consideration to it.

Mr. BRATTON. Concluding my explanation, Mr. President—and if the Senator from Arizona will now give me his attention—not changing the language in his legislation but adding thereto as an independent provision, I propose this:

That the third paragraph of subdivision (7) of section 202 of the World War veterans' act, 1924, as amended, be amended by striking out the period at the end thereof and inserting a colon and the following:

*Provided further,* That the rating of any person once awarded compensation under this provision shall not thereafter be so modified as to discontinue such compensation or to reduce it to less than $50 per month, and any such person whose rating has heretofore been so modified shall be restored his rating of tuberculous disease of a compensable degree, completely arrested, and payments thereunder shall be resumed from the date of the approval of this amendatory act.

Mr. ASHURST. Mr. President, of course I have not had opportunity to reflect carefully upon this, but from my grasp of the amendment as read and as stated by the Senator, I think it will improve the present law and will give relief in many cases.

Mr. BRATTON. Mr. President, I send the bill forward and ask that it be referred to the Committee on Finance; and I express the hope, in the presence of the chairman of the committee, that it may receive consideration by his committee during the present session of Congress.

Mr. SMOOT. Mr. President, in answer to the Senator, I will say that as soon as the revenue bill is out of the way a subcommittee of the Finance Committee is going to take up for consideration all pending bills before the Finance Committee with a view of reporting them to the full committee at the first opportunity.

Mr. BRATTON. I thank the Senator.

The bill (S. 4252) to amend subdivision (7) of section 202 of the World War veterans' act, 1924, as amended, was read twice by its title and referred to the Committee on Finance.

CHANGES OF REFERENCE

On motion of Mr. FESS, the Committee on the Library was discharged from the further consideration of the following bills, and they were referred to the Committee on Military Affairs:

A bill (S. 2034) to authorize the erection of a monument on the battle field of Saratoga;

A bill (S. 3050) to erect a tablet or marker to mark the site of the Battle of Kettle Creek, in Wilkes County, Ga., February 14, 1779; and

A bill (H. R. 8546) authorizing an appropriation of $2,500 for the erection of a tablet or marker at Lititz, Pa., to commemorate the burial place of 110 American soldiers who were wounded in the Battle of Brandywine and died in the military hospital at Lititz.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Chaffee, one of its clerks, announced that the House had disagreed to the amendments of the Senate to the bill (H. R. 12286) making appropriations for the Navy Department and the naval service for the fiscal year ending June 30, 1929, and for other purposes; requested a conference with the Senate on the disagreeing votes of the two Houses thereon, and that Mr. FRENCH, Mr. HARDY, Mr. TABER, Mr. AYRES, and Mr. OLIVER of Alabama were appointed managers on the part of the House at the conference.

NAVAL APPROPRIATIONS

The VICE PRESIDENT laid before the Senate the action of the House of Representatives disagreeing to the amendments of the Senate to the bill (H. R. 12286) making appropriations for the Navy Department and the naval service for the fiscal year ending June 30, 1929, and for other purposes, and requesting a conference with the Senate on the disagreeing votes of the two Houses thereon.

Mr. HALE. I move that the Senate insist on its amendments, agree to the request of the House for a conference, and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the Vice President appointed Mr. HALE, Mr. PHIPPS, and Mr. SWANSON conferees on the part of the Senate.

HEARINGS BEFORE THE COMMITTEE ON INTEROCEANIC CANALS

Mr. EDGE submitted the following resolution (S. Res. 209), which was referred to the Committee to Audit and Control the Contingent Expenses of the Senate:

*Resolved*, That the Committee of Interoceanic Canals, or any subcommittee thereof, be, and hereby is, authorized during the Seventieth Congress to send for persons, books, and papers, to administer oaths, and to employ a stenographer at a cost not exceeding 25 cents per hundred words to report such hearings as may be had in connection with any subject which may be before said committee, the expenses thereof to be paid out of the contingent fund of the Senate; and that the committee, or any subcommittee thereof, may sit during the sessions or recesses of the Senate.

RAILWAY RATES ON GRAIN

Mr. WALSH of Montana. Mr. President, I desire to offer a Senate resolution, induced by the following paragraph of the letter addressed by the Government of Canada to the Government of the United States, to which reference was made a short while ago:

Partly as a result of the existence of competitive alternative outlets, railway rates in Canada are in general lower than in the United States. The rates on grain, which provides 52 per cent of the total traffic of western lines, are now below pre-war level. Material reductions have also been made in another bulk movement of importance to both eastern and western Canada, namely, coal. General commodity rates, which were the subject of the same percentage of relative increase in both countries, due to war conditions, have subsequently been reduced in Canada, in certain instances, to a greater extent than in the United States. In recent months a rate on grain has been established from the head of the Lakes to Quebec which approximates the charges incident to the movement by water by the present Great Lakes-St. Lawrence route, a route which, in Canada, has always exercised a restraining influence on railway rates. As the greater part of Canada's railway mileage is now owned and operated by the State, the St. Lawrence proposals, in so far as they may possibly affect the revenues of the railways, present considerations as to which Canada's point of view is necessarily somewhat different from that of the United States.

Mr. NORRIS. Mr. President, may I ask the Senator, before he introduces the resolution, from what he was reading?

Mr. WALSH of Montana. I was reading from the letter of the Government of Canada to the Government of the United States.

Mr. NORRIS. I thought I recognized that language. It is part of the official correspondence?

Mr. WALSH of Montana. It is part of the official correspondence, in which the Government of Canada advises that their railway rates have been reduced now to the pre-war level.

Mr. NORRIS. Even below the pre-war level.

Mr. WALSH of Montana. Below the pre-war level. I ask that the resolution be read, and I ask unanimous consent for its immediate consideration.

The VICE PRESIDENT. The Secretary will read the resolution.

The legislative clerk read the resolution (S. Res. 208), as follows:

*Resolved*, That the Secretary of Commerce be, and he hereby is, directed to transmit to the Senate information as follows:

1. What is the rate for the transportation of wheat by rail from the following points in the United States, to wit: Fargo, Devils Lake, Bismarck, Glasgow, Billings, Bozeman, Havre, Helena and Kalispell, to (a) Duluth, (b) New York, (c) Philadelphia, (d) Baltimore.

2. What is the rate from points in the western Provinces of Canada at distances from Fort William corresponding in distance from Duluth to the points west thereof first above listed to (a) Fort William, (b) Montreal.

3. What is the aggregate amount that would be realized annually by American shippers of (a) wheat, (b) of all grains over and above what they do realize during any 12-month period where the rates on such freight on American railroads are no higher than they are on the Canadian railroads.

4. To what extent are such lesser rates on the Canadian railroads (if they are less) due to charter provisions of said railroads and to what extent are such excessive rates on American railroads (if they are excessive) attributable to the act of Congress approved February 28, 1920.

Mr. NORRIS. Mr. President, may I ask the Senator from Montana another question?

Mr. WALSH of Montana. Certainly.

Mr. NORRIS. I did not notice that Chicago was included as one of the points the rates to which were inquired about. I think the Senator ought to include Chicago.

Mr. WALSH of Montana. I will be very glad to do so.

Mr. NORRIS. In addition to Duluth and these other points.

Mr. ROBINSON of Arkansas. Mr. President, I did not hear the reading of the resolution quite clearly. What is the act to which the Senator refers in the resolution?

Mr. WALSH of Montana. The act referred to is the railroad act of 1920.

Mr. ROBINSON of Arkansas. The transportation act?

Mr. WALSH of Montana. The transportation act.

Mr. FESS. Mr. President, will the Senator allow the resolution to go over until to-morrow?

Mr. WALSH of Montana. It is simply the ordinary resolution asking for information.

Mr. FESS. Is that all? Does it only ask for information?

Mr. WALSH of Montana. That is all.

Mr. NORBECK. Mr. President, if it is a resolution asking for information, I think it ought to ask for all the information instead of only a part of it. I sincerely hope that the Senator will allow the resolution to go over. We want to get all the information we can bearing on these matters.

Mr. ROBINSON of Arkansas. Of course, if the Senator desires, he can have the resolution go over.

Mr. REED of Pennsylvania. Mr. President, before the resolution goes over will the Senator permit me to suggest a possible amendment which I think might give us other information that would be enlightening? That is as to the difference in the methods of the grading of wheat between America and Canada.

I am told that the Canadian farmer and the Canadian exporter have an advantage over the American farmer and exporter of 4 to 5 cents a bushel of wheat, on the average, because of the fact that a very much stricter method of grading is adopted in the United States against United States wheat than is adopted in Canada against wheat that goes out from their ports, and that if American wheat were graded by the same methods that are adopted in Canada it would redound to

the advantage of the American farmer to the extent of 4 or 5 cents per bushel and would also increase the amount of grain passing through American ports.

Mr. ROBINSON of Arkansas. Does the Senator mean that that would affect the freight rates 4 or 5 cents a bushel?

Mr. REED of Pennsylvania. It would affect the yield to the farmer, because at present the farmer suffers from what is called dockage, for an arbitrarily assumed content of foreign matter, and that same dockage is not levied in the Canadian ports. American wheat which goes through Canadian ports yields a tribute to the Canadian exporter or broker of 4 or 5 cents, which the American farmer never gets because the grain of the farmer in America is subjected to dockage, and the farmer is paid by the middleman minus that dockage, which the middleman does not have to pay on his export of wheat to foreign countries. But the Senator from Massachusetts is more familiar with that matter than I.

Mr. WALSH of Massachusetts. I have much correspondence which I intend to introduce for the RECORD, possibly to-day or to-morrow.

Mr. REED of Pennsylvania. I believe the Senator will agree with me that that is an appropriate subject for which we might ask for information in this connection.

Mr. WALSH of Massachusetts. I quite agree with the Senator, but I think I shall take it up separately.

Mr. GLASS. Mr. President, may I suggest that the discussion be postponed until we can consider the resolution in regular order.

Mr. FESS. Let the resolution go over.

Mr. COPELAND. Mr. President, the Senator from Pennsylvania calls attention to a very important matter which has been urged upon us by the Senator from Massachusetts [Mr. WALSH] as the result of the grain-grading system used in this country. Almost all of the American wheat which is exported is sent through Montreal. We sent through Montreal of American wheat last year 93,000,000 bushels, while through our Atlantic ports we sent but 40,000,000 bushels, largely because of this 2 or 3 cent dockage rate imposed by the grading law. I am sure that matter should be brought to the attention of the Senate.

I hope the resolution of the Senator from Montana will prevail, because he will not get any comfort out of the report. When it comes back it will not help the cause of the St. Lawrence canal. So long as the rate on wheat from Saskatchewan and Alberta to the lake head is only 26 cents over the Canadian lines, while from his State of Montana to the lake head it is 44½ cents, there is no magic in the St. Lawrence canal which will solve the Senator's problem.

But I hope the information will be brought to the Senate. I am sure it will help to convince the Senate that if the canal is to be built, it should not be built by way of the St. Lawrence. American money should not be spent to develop a canal which will be almost exclusively of benefit to Canada and to England.

Mr. LA FOLLETTE. Mr. President, I feel constrained to ask for the regular order.

The VICE PRESIDENT. The resolution goes over under objection. The regular order is demanded. Morning business is closed. The calendar, under Rule VIII, is in order.

### NEW YORK STATE BARGE CANAL

Mr. COPELAND. I ask unanimous consent to have printed in the RECORD the reply of Edward C. Carrington, president of the Great Lakes-Hudson Deeper Waterway Association, to Hon. W. L. Harding, of Iowa, and an excerpt from the Encyclopedia Americana on the New York State Barge Canal.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

[Reply of Edward C. Carrington, president of Great Lakes-Hudson Deeper Waterway Association, on the joint debate with Hon. W. L. Harding, of Iowa, on the issue: *"Resolved*, That the deep waterway connecting the Great Lakes with the Atlantic Ocean shall be by the St. Lawrence River rather than by the New York State route and Hudson River," Colonel Carrington speaking on the negative side and for the New York State route before the City Club of New York, April 17, 1928]

#### INTRODUCTION

Mr. Chairman, Governor Harding, ladies, and gentlemen, Governor Harding has done a big, generous thing to be willing to come here to-night in what is, using a phrase of the late William Jennings Bryan, "In the home of the enemy," to discuss these two canal proposals: One, opening the landlocked ports of the Great Lakes and the rich, fertile country adjoining thereon by way of the St. Lawrence River to the open sea, and the other opening up the Great Lakes ports and the rich manufacturing section abutting thereon by way of the barge canal and the historic Hudson River. I agree with him, and I am sure we all do, that the people of the lake section, some forty-odd million people, are entitled to a gateway to the open sea. As a matter of fact, our discussion to-night is limited by this moot resolution to the selection of one or the other of these two canal routes. Under this resolution it is inevitable that one or the other will be constructed, so that it is not pertinent for us to discuss the advisability as to whether a canal should be built from the Great Lakes to the Atlantic Ocean.

I read casually in the newspapers that some 17 States of the West had organized in favor of this St. Lawrence project, but I was not really concerned nor did I take seriously the idea of construction of a canal by way of the St. Lawrence River until I saw that Governor Harding was actually delivering orations in favor of the St. Lawrence River in the cities of Rochester and Syracuse—on the very banks of our own barge canal.

The only thing I can say is that I will attempt to be equally sportsmanlike and will give him a return engagement in either Des Moines or the city of Chicago at his convenience, provided the time is before the assembling of the conventions of the Democratic and Republican Parties.

If in the course of my remarks I may asperse the purposes and the motives of some of the so-called proponents of the St. Lawrence canal, I want Governor Harding to feel and you, ladies and gentlemen, to feel that it is in no sense an aspersion on him. Governor Harding is a lawyer by profession and so am I, and a lawyer who attempts to determine the merits of a case or the motives of his client forsakes the rôle to advocate and assumes the province of a judge and jury. He is entitled to represent a weak case and a wicked client without transgressing the ethics of his profession or any proprieties. I will answer his remarks from three different angles. My first two answers are physical answers. The other is an intangible one, based on political and historic reminiscence.

#### THE BARGE CANAL

My first answer to Governor Harding is a physical one, the route of the Barge Canal to New York. I do not believe that some of those who are publicly advocating the St. Lawrence canal want a canal built at all. You probably recall the story in Scriptures when the Patriarch Isaac, blinded by old age, was visited by his son Jacob. Jacob's mother incased the boy's hands and arms in the wool of a lamb and she prepared venison for the aged man. Greeting his son, the blind father said, "The hand is the hand of Esau, but the voice is the voice of Jacob." In this canal proposition the voice is the voice of Herbert Hoover, and Governor Harding's eloquent remarks to-night are merely the echo of that voice, but the hand is the hand of the frontiers corporation—the General Electric Co., the Du Ponts, and the New York Central Railroad.

If the people of the Middle West want a canal and I believe that many of them do, if the proponents of the St. Lawrence Canal really want to afford these people an outlet to the sea, our answer is we have given you this outlet in the Barge Canal to New York. We, the people of the great Empire State, while representing only 10 per cent of the population of the United States, yet pay 26 per cent of all the Federal taxes. And we, the people of the Empire State, through legislative amendments and a direct vote of approval, have dedicated to the people of the United States and the world, a barge canal that reaches from tidewater at the city of Troy to the Lakes of Erie and Ontario, a canal 800 miles long, a canal which represents in round figures a cost of $200,000,000—half the approximate cost of the Panama Canal—a canal which from Oswego on the shores of Lake Ontario reaches down and joins the main canal of some one hundred and sixty-odd miles from the city of Albany. So, if you want an outlet, Governor Harding, you and your friends of the great West, we say that by way of the Welland Canal, which within two years will be 30 feet deep, by way of Oswego, the Barge Canal and the Hudson River, you have a canal which in a very few years can be in practical operation and carry ships of 30 feet in draft.

We of New York are often alluded to in the West as being selfish, yet we built that canal and we charge no tolls to American and Canadian shippers. It is our dedication to the Nation in order that the great Middle West can have here an outlet to deep water by way of the Barge Canal and the canal which God Almighty made when he built the Hudson from Troy to the Atlantic Ocean. Moreover, we have brought the Atlantic Ocean, with the help of the United States Government, 150 miles nearer to Lake Ontario than it ever was before. The Federal Government is spending from $11,000,000 to $12,000,000 in dredging a channel, which in effect is a canal, from the upper reaches of the Hudson to Albany and which brings the latter 150 miles nearer to Lake Ontario and Oswego by way of the Barge Canal.

We had the courage, we the people of New York, the selfish people of New York, to build this canal, expending some $200,000,000 of our money, expecting no financial return as we charge no tolls, as a dedication to the national welfare, dedication upon the shrine of public service.

It is not a perfect waterway, either in its inception or its execution. It has only 12 feet depth when it should have a depth of from 27 to 30 feet. But it is a canal and it is rendering a public service as evidenced by the fact that last year it carried two million seven hundred thousand and odd tons of freight, an increase of some 300,000 tons over the same period in 1926.

From Oswego to Albany the distance is 160 miles, so that it requires only 160 miles, plus the Welland Canal, to have a Canadian-American route from the Great Lake ports to the deep channel of the Hudson River and to the open sea. By the all-American route from Lake Erie at Buffalo the distance to Albany is only 350 miles. Now, our friends of the West tell us, the people of New York, to junk our canal—forget it—and join with them in building a canal through 60 per cent to 70 per cent of Canadian territory, or more properly British territory. They tell us to junk our canal and ask New York to contribute 26 per cent of the total cost of an Anglo-American canal. And we say to them in the same spirit of public service, the same spirit of patriotism that we showed when we built the canal with our own money without the hope and expectation of financial reward, we say build the canal, utilizing our own canal and then the latter, plus the new improvements, will be made the last word in canal construction in the world.

Within 2 miles of the New York Barge Canal are 73½ per cent of the population of New York State, and within two hours' drive of the waterway live three-fourths of the population of the State, about 8,000,000 people, or 7 per cent of the population of the whole United States. So much for the Barge Canal.

PORT OF NEW YORK

Now, I come to my second answer to the distinguished gentleman's remarks. The port of New York—and I say this with not only civic and State pride but with national pride—it is the greatest port in all the world, so we offer to our brothers of the West, not only our Barge Canal, which we built at an expenditure of $200,000,000 and which has been called "Nature's gateway to the sea from the heart of the continent." We offer not only a canal reaching from Troy to the mouth of New York City, the harbor of New York, but we offer to our neighbors of the West the facilities of the greatest port of the world—the port of New York. Most of our guests here to-night are, I assume, residents like myself of New York City, and they, too, have a justifiable pride in our port.

Now, Governor Harding, do the good people of Iowa, Michigan, and Wisconsin know that during every 20 minutes of daylight all the year round, in each of the 365 days, a ship leaves the port of New York bound for some foreign port, whereas in Montreal when the ice breaks up in June, the first captain who makes the passage into port is feted and dined by the people of Montreal and given a gold cane in recognition of his feat? Compare this condition with the port of New York, where navigation is open all the year and where we send out a ship every 20 minutes loaded with commodities for ultimate consumption at points throughout the world. Another fact, my good friend, is that there are 77 steamship companies operating out of the port of New York.

I probably have one advantage over Governor Harding, not in size or appearance, but in the fact that I am a practical transportation man myself. I operate boats on the Hudson River and I know something about transportation. I know the reason why 77 steamship companies operate from New York rather than from Montreal—it is because they get cargoes. They bring in cargoes and they get cargoes going the other way. Cargoes originating in various parts of the country are brought to New York and are loaded aboard steamers and conveyed to any part of the world without undue delay at the point of loading.

There is an annual traffic that flows down from the Great Lakes into the New York territory of approximately 140,000,000 tons per year. The bulk of this reaches New York by the railroads. Less than 6 per cent goes to the Continent of Europe. Part of this is bulk freight. That is, freight in the form of coal, iron, limestone, and grain, nearly all of which is for domestic consumption. It is logical for this lake tonnage to come to a port where it will secure the earliest service to ultimate foreign ports. Ships sail from the port of New York to South America, the Orient, South Africa, and other distant points every week, and in some cases twice weekly, carrying varied cargoes. Whether cargoes might be an item of 10,000 tons of bulk wheat, a knocked-down automobile, crated machinery, or what not, if shipped to New York it will find a steamer either within a week or at the latest two weeks that will carry it to any part of the world, and that is one of the reasons why the port of New York has grown so great and why it is going to continue to be the greatest port of all the ports of the world.

Our brothers of the West complain that they are landlocked, which is true. We say you are entitled to an outlet to the sea, but, pending the accomplishment of that, you are being served from the port of New York by eight trunk-line railroads that carry commodities to the people of the Great Lakes section and bring back lake cargoes, and I am somewhat proud of the fact that these railroads were built from New York, stretching out around the mountains, through the mountains, and over the mountains, to give the blessings of transportation to the people of our Middle West.

Contrast the situation of the port of New York to that of Montreal in respect to railroad facilities. Two railroads serve Montreal. The Grand Trunk and the Canadian National, whereas eight railroads serve the people of the Middle West by way of New York. So again I say I am proud that we have such a port and, so far as I am concerned, I do resent any attempt to have it supplanted by a British port of export and entry.

ST. LAWRENCE PROJECT ECONOMICALLY UNSOUND

Now, being a transportation man, I know that a lake steamship is one thing, a barge canal boat is another thing, a Hudson River night line boat is something else, and an ocean-going steamship is another matter. As a matter of fact, lake freighters are built to accommodate themselves with a maximum draft of 21 feet. They are big, wide, slow scows of comparatively shallow draft. In construction their hulls and machinery represent as against cargo capacity one-fifth as against four-fifths, so that a lake freighter of 10,000 tons capacity has 2,000 tons dedicated to hull and machinery, while in an ocean vessel three-fifths of capacity is dedicated to hull and machinery. An ocean-going vessel of 10,000 tons can only carry 4,000 tons of cargo, against the lake freighter of the same net tonnage with its capacity of 8,000 tons of cargo.

The ideas of some that a lake boat might be available for ocean traffic has already been proved fallacious. During the late World War when the demand for ships was at its greatest they tried and they did take lake freighters, sawed in half, down the canal and riveted them together at Montreal. But these ships broke up. None of them ever reached European waters, for they could not stand the turbulence of the Atlantic Ocean. So, if I am a lake shipper, there is only one thing for me to do—that is, bring my lake freighter down to a port where it can lay alongside of an ocean liner, transfer its cargo direct, and the ocean liner then will distribute the stuff all over the world.

Nothing in the record of traffic statistics of the Great Lakes points to the likelihood of a movement of export or import freight by the St. Lawrence route sufficient to justify an expenditure such as contemplated, even though deep-sea vessels in sufficient numbers should be available. Successful steamship operators declare that costs of operating ocean-going vessels over a tortuous, fog-bound channel, 1,500 miles long, with locks necessary for a lift of 600 feet, would eat up all profits. Steamers fitted for ocean navigation are not fitted for profitable navigation on the Lakes, and vice versa. The low freight rates claimed by advocates of the St. Lawrence project could not be obtained by use of ocean-going vessels.

The per ton displacement cost and operation cost of ocean-going vessels is twice the cost per ton of lake vessels. The character of the traffic would be largely what it is now—mostly one-way movement of export grain, the season for shipment of which is comparatively short.

With it recognized by experts that it will be uneconomic and impracticable for ocean liners to travel to lake ports through a deep-water canal, and also for a lake freighter to travel to foreign ports, I believe the solution will be the traversing of these loaded lake freighters through a canal to a deep-water port and alongside an ocean liner for transfer of goods. I do think it is entirely feasible to have a lake freighter come down through the Barge Canal when the latter has been enlarged, either by way of the Welland Canal that connects Lakes Erie and Ontario and then down the Barge Canal from Oswego to Albany, or from Lake Erie by way of Buffalo through the Barge Canal to Albany or New York City and there lay alongside the ocean liners.

THE GRAIN SITUATION

Now, who is really behind this St. Lawrence route? The grain shippers of the Great Lakes and the Middle West and the power interests. Now, let me give you a few facts about grain shipment. We produced in this country last year some 833,000,000 bushels of wheat. We consumed of that 6 bushels per capita. Our 117,000,000 people used something like 600,000,000 bushels of wheat, or in round figures two-thirds of our entire wheat crop is consumed in our own country. An additional 100,000,000 bushels are required for seed. This leaves only in ordinary years some 31,000,000 bushels for export. Canada, with a population of some 8,000,000, roughly about the same population as that of Greater New York, consumes 85,000,000 bushels of wheat in ordinary years, thus leaving for export 325,000,000 bushels. I should not say leaving for export; it must be exported. They can not eat it themselves. It has therefore no market value in Canada, so it must be exported.

So the proposal is that we build a canal through 70 per cent British territory in order that we may be able to export 31,000,000 bushels of wheat and that Canada may be able to export 325,000,000 bushels of wheat. It is quite obvious that Canada should be for the St. Lawrence route.

Another fact to be borne in mind is that of our 31,000,000 bushels of wheat that we have for export, some of it is exported west to the countries of the Orient. Now, it is claimed that there would be a saving of some 10 cents per bushel in Canadian inspection of wheat against the more rigid American inspection. This means that it would yearly save the American farmer some $3,000,000, which, distributed among 44,000,000 people, would be less than 10 cents per capita—not enough to take them into a first-class movie.

Now, being a transportation man and not a brilliant lawyer like Governor Harding, there is another thing that I know, that insurance

is a big factor with shipping people, not only insurance on your hull and your ships but insurance on your cargoes. The insurance period closes after the 1st of November on the St. Lawrence River and because of fogs, cross-currents, and the proximity to icebergs the cost of insurance by way of Montreal is prohibitive.

Some two or three years ago Mr. Hoover made a speech before the Chamber of Commerce or the Merchants Association of New York. At that time he was willing to express himself on any public question. Since he has been the outstanding candidate for the Republican nomination, nobody has heard him express himself on but two public questions; first, a very silly proposal that the United States Constitution as expressed in the eighteenth amendment, the statute commonly known as the Volstead Act, should be observed. For a man in public service to say that, because he took the oath to obey the Constitution before he received his commission, is very distasteful to men, especially lawyers like Governor Harding and myself, for we know when we were admitted to the bar some years ago, we took the oath to obey the Constitution of the United States. And I will say that I have observed every passage and every part and spirit of that Constitution as the result of my oath except the eighteenth amendment. And I think I would almost rather be a drunkard than a hypocrite. And I am not saying that Mr. Hoover is a hypocrite. I do not think that he touches a drop, but if anybody is interested in my personal affairs I will say that I do. But inasmuch as Mr. Hoover is a Quaker, I assume he neither fights nor drinks. It is one of the creeds of his religion.

At this luncheon, at which Mr. Hoover seemed to have a power of speech, before he became silent on public questions, he said that in 15 years this country would export no wheat but would be importing it.

I recall that there used to be lines organized just to export cattle to Europe, but the exporting of cattle to Europe has practically disappeared. We eat all the good beef that we then exported. We do not have to export cattle, which were our best cattle—we eat them. And that is what we will do with out wheat. So that in so far as having a canal built to export wheat, in 15 years, before the canal is finished, wheat as an item of export will have disappeared from the markets of the United States.

Now, if the canal is built to carry out the wheat of the United States and the wheat of Canada, what return cargoes is it going to bring in? It is certainly not going to bring in wheat. It is going to bring in finished commodities in competition with the finished commodites of our own country.

Since the St. Lawrence waterway is to carry wheat, it is worth inquiring whose wheat is most likely to be carried. Obviously Canadian wheat. Canada possesses large acreage of cheap land that can be toiled with cheap labor and thereby enjoys an advantage in American markets. Our immigration laws set up a barrier against the importation into this country of cheap labor. Canada can undersell us in the matter of the production of wheat. The average price of occupied land in the Province of Manitoba is only $30 as compared with the average of $96 in Mr. Harding's State of Iowa.

Given transportation facilities on a free waterway by the St. Lawrence built with our money, the Canadian wheat surplus will determine the price of all wheat by the quotations of the Liverpool market. It is obvious therefore that the Canadian wheat farmers have a tremendous stake in the St. Lawrence route, while here it is only a small stake. And I am now addressing myself to the wheat growers of the United States.

Canadian manufacturing interests have a much greater stake in the St. Lawrence route than we have because their manufactured product is largely surplus, and in a sense we are only building a club with which to hit our own heads. They propose to us to build the waterway, pay one-half of the costs thereon, in order that they can sell their wheat and manufactured products, not only in the markets of the world but in our own country should our tariffs be lowered. As I have said before, the only commodity that would be carried through the canal in any large quantity is wheat. And the return cargo must be in finished goods, so that we are invited by our friends of the Great Lakes to build a waterway that will afford severe competition to our wheat growers and will bring foreign goods into competition in the Lake regions with goods manufactured in this country, particularly in your section.

Of course, we want to cultivate international good will, but sometimes it is properly said that charity begins at home. And it certainly does not appeal to me that we should be called upon to finance and assume one-half of the maintenance of a waterway by way of the St. Lawrence so that the goods of Hamburg and Liverpool can be delivered more cheaply to Winnipeg than can be delivered from our own country, because charity begins at home.

The heavy estimate of the building of the St. Lawrence route, as I have said before, is now generally admitted to be around $1,000,000,000. This cost doesn't frighten me in the least. A billion dollars? What is a billion dollars? We here in New York have already spent $650,000,000 on our subways, and we have just voted to spend $300,000,000 more, or a grand total of approximately $1,000,000,000 just for subways. We spent $50,000,000 in building a vehicular tunnel, connecting the States of New York and New Jersey, but why spend $1,000,000,000 so that we may export 31,000,000 bushels of wheat by the shorter route to northern European ports and to develop hydro-electric power in an area 75 per cent of which would be in Canadian territory.

Our British friends want to picture us as worshiping the dollar. They say we are nothing but pigs and money grubbers. Why, my friends, we have spent $50,000,000 a year in our merchant marine in order that the Stars and Stripes may be kept afloat on merchant vessels. Last year we spent $20,000,000 in seeing that our flag was still carried on the stern of our ocean-going merchant vessels, and this expenditure was made without any word of national complaint or criticism. We spent 5 per cent on $400,000,000 just out of sentiment. We operate the *Leviathan* at an annual loss of from $3,000,000 to $4,000,000. Why? Because we love sentiment. We love the flag. To keep that flag flying on that monster vessel costs us $3,000,000 to $4,000,000 a year.

### ST. LAWRENCE NOT SHORTER

Now, it has been claimed that the St. Lawrence route is 600 miles shorter than the all-American route by way of New York. Certainly it is 600 miles shorter if the northern route is taken around the north of Newfoundland and the north of Ireland, where conditions of navigation make it frequently almost impossible for a ship to negotiate this passage. But it only happens to be 400 miles shorter if the route is south of Newfoundland and south of Ireland. And for the ships entering the Mediterranean ports through Gibraltar the distance from Montreal is the same distance as by way of the port of New York.

If the cargo is going to the Orient, and there are many cargoes going to the Orient, to the eastern slope of South America or the western slope, or the western slope of the United States or Canada, the New York route, by way of the Panama Canal, is 1,650 miles shorter than is the St. Lawrence route. And it is a route that is open all the year without any prohibitive charge for insurance as compared to the others, a route where marine insurance is suspended from November until June, and whose main port is open only from five to six months of the year.

I do not believe the farmers, if they knew the full facts, would be interested in the St. Lawrence canal, even though they have heard over 100 speeches by Governor Harding. The fact that Senator WALSH of Montana came out the other day and indorsed the St. Lawrence canal project doesn't relieve my mind as to who is back of it. I believe this St. Lawrence plan is fathered either or both by the power interests and the railroads of the United States. It may be fathered by those, who recalling that the people of the State of New York, having spent $200,000,000, realize that New York will ultimately rebuild the Barge Canal themselves to a depth of 27 or 30 feet if necessary in order to give our friends of the Middle West an outlet to the sea unless they are headed off by some other plan.

Of course, the New York Central doesn't want a barge canal that is really a deep-water canal. We have spent $200,000,000, and, to be perfectly frank with you, we have just made a start. The Barge Canal will have to be rebuilt, and will probably have to be rebuilt so as to accommodate boats of from 27 to 30 feet draft. We are going to finish this canal, St. Lawrence canal or not. This deep waterway is going to be completed by way of Lake Erie and Lake Ontario to the mouth of the Hudson River.

We are all selfish, but, as a resident and citizen of New York, I do not want to see our $200,000,000 junked and thrown into discard. I do want to see self-propelled boats economically operated that may bring cargoes from the Great Lakes into the port of New York. If this is a selfish motive, then I freely admit it. I will go further and say that I am ambitious to see the Hudson Navigation Co. expand its freight service to the ports of the Great Lakes. I am ambitious to be the head of the company that builds the proper kind of boats to give that service. I hope to live to see the day that this will be accomplished.

Our friends of the West have talked, have organized, and spread propaganda for the St. Lawrence canal. But we have built and spent our money. We have bought the right to speak in the money we have expended in the Barge Canal.

Somebody said I was selfish in this thing because I happen to be the head of and the largest stockholder of the Hudson River Navigation Corporation. This institution is 97 years old, built before the New York Central was built. It has defied competition of two railroads, as well as two concrete highways on both sides of the river. I know as a transportation man that I can take the Barge Canal to-day and with proper self-propelled equipment make it a paying institution for the people of the State of New York. I know that I can bring these lake freighters through the Welland Canal, if necessary, down to Oswego, down the canal, bring them down, and unload them alongside of ocean-going liners and make money out of the canal and out of the company that operates it. And I can do the same thing through Lake Erie, by way of the all-American route, if it is deemed this is the ultimate route.

We have only made a start on the Barge Canal. Two hundred million dollars is only a start, but we are going to finish it, with or with-

out the aid of the Federal Government, with or without the cooperation of our friends of the Middle West. We would have to pay 26 per cent of the cost of the St. Lawrence canal. I guess we might as well pay the remaining 74 per cent out of our own money and have the credit of building a real deep-water all-American canal.

Secretary of the Navy Wilbur in a speech in Nebraska a few weeks ago said that we could build ships in British yards at one-half the construction cost of American yards—warships, submarines, cruisers, and what not—but the American people insist that we build them in American yards, with American workmanship and with the workers enjoying the American standard of living.

A very distinguished gentleman in a speech the other day at the Hotel Roosevelt said the British people dislike us and that the feeling is getting more and more bitter for three reasons: First, because we are insistent in collecting our war debt; second, because our tourists have gotten cheaper; third, because the British people know they are confronted with a great national trade rivalry movement between the two countries. And yet our friends of the Middle West want to spend $500,000,000 or more for a great waterway to be built through Canadian and British territory.

Again I want to point out that there are some, at least, insincere in their advocacy of the St. Lawrence plan. The two railroad lines—the Grand Trunk and the Canadian National Railways—which serve the city of Montreal are Government owned; owned by the people. It is inconceivable to me that these two Government-owned railroads and their stockholders, the Canadian public, will permit a competitive canal to be built. And bear in mind that the recent conference in London gave the Province of Quebec the power of veto, and certainly that Province is going to do nothing to permit either her Government-owned railroads or her city of Montreal to be made to suffer in any way.

I am only the head of a comparatively small transportation company, but I do know that the port of New York is going to maintain its supremacy—St. Lawrence canal or not.

You build the St. Lawrence canal. You people with your power in Congress, which is nothing more than the inequitable distribution of political power. Build the canal with 26 per cent of our money. Our answer will be that we will build our own canal, notwithstanding, because the port of New York, the greatest port in all the world, is not going to yield to Montreal or any other port, especially a British port.

### THE MIRAGE OF CHEAP POWER

Mr. Hoover says that the development of a great hydroelectric plant, furnishing electricity and effecting savings and economies in coal and fuel, is a justification for building the St. Lawrence canal. I am willing to concede, for the purpose of argument, that horsepower of some millions can be developed by the St. Lawrence. But they ask us to pay, in effect, 75 per cent of the cost of that power, and they will have to distribute it largely in this country. If it is a good power proposition, why don't the power trusts, the Du Pont interests, the General Electric, and the frontier corporations erect suitable development plants and develop the power? Why don't they make a treaty with Canada and arrive at the proper understanding with the State of New York? Why don't they do as was done on the Susquehanna River in Maryland and Pennsylvania, where there are two power developments? One of these plants sends current into Baltimore, and the other sends current into Philadelphia, both generated by the same river, without canal subsidies, and both financed by private enterprise and by private investors of these two companies. If we are to have a power development, let the people who want to create the power and who expect to sell it build the plant to make it and not ask for a subsidy ranging up possibly to a billion dollars.

The talk of cheap power is a beautiful mirage. In considering the proposed St. Lawrence development it is necessary to consider the costs of production, the cost of transmission, cost of distribution, possible markets, and legal problems. It is estimated that 5,000,000 horsepower can be developed at an outlay variously placed at from $150,000,000 to $300,000,000. Lines capable of bringing 500,000 horsepower into New England would cost $50,000,000 (S. Ferguson, vice president Hartford Electric Light Co.). This estimate is as good as any other and quite good enough to make it very plain that the transmission charges are a very considerable part of the problem.

Proponents of the Canadian superpower project assume the feeding of the power in blocks of 300,000 kilowatts into distribution systems which do not exist and which are not likely to exist, because—

The hydroelectric power plants on the St. Lawrence system would be shut down by ice each year, thus making the power of no use for general distribution, as such a power system could not compete with steam. In support of this statement attention is called to the fact that 11 water-power plants have been in operation on the St. Lawrence and Niagara Rivers for many years, and the system of ice control has failed in all but one case. Even if the ice-control problem did not render the claim for cheap power illusory, there remains the well-known axiom of electrification experts that electricity can not be economically distributed for a greater distance than 250 miles. The site of the projected plants on the St. Lawrence are over 250 miles from the great industrial centers of New England and New York, and consequently their vaunted cheap power would not be able to compete with steam-generated current in these centers.

To bring power to New England from the St. Lawrence would require a long, expensive transmission line, central distributing stations, distributing systems to tie into existing lines, and a transmission of large blocks of power to make it profitable. The cost and time necessary to do all this are largely problematical, but a close estimate is absolutely vital to the final economical solution.

### ENGINEERING DIFFICULTY OF THE ST. LAWRENCE PROJECT WELL-NIGH INSURMOUNTABLE

The undertaking is the greatest engineering problem ever studied. The difficulties to be encountered on the St. Lawrence exceed those faced and conquered either by engineers who harnessed the Nile or by the builders of the Panama Canal.

The man who executes the St. Lawrence project must be able to build temporary structures that must stand in the St. Lawrence for from 5 to 8 to 10 years. There are not only greater depths, volumes, and velocities than have hitherto been overcome, but in addition, the ice flow during the protracted winter season must be successfully resisted. The temporary structures must stand in a stream down which 675,000 tons of ice frequently pass every hour of the day for a period of weeks. That means 10,000 tons of ice a minute, or a trainload every 15 seconds. The day the temporary structure fails to withstand the onslaught upon it, about $10,000,000 of perfectly good money will vanish downstream. There are no facts that show such structures or works could actually be erected. No such obstacles are met with on the all-American route. There the project resolves itself into one of elementary excavation and the building of locks, sidewalls, etc., for which ample precedents exists.

### COSTS OF THE CANALS

The matter of costs of the two proposed routes is also of interest. The best real estimate that I can obtain of the St. Lawrence project is about $1,000,000,000.

The joint board of engineers estimates the cost of the St. Lawrence project at from $123,000,000 and $148,000,000. This estimate appears to be vastly underestimated. A former estimate for a 25-foot channel, with only 1,464,000 horsepower developed was $242,728,200. To obtain a 30-foot channel, with 4,100,000 horsepower developed the estimate was $508,197,300. The estimate of Col. Hugh L. Cooper, an independent engineer, for the total expenses of the project is $1,100,000,000. From our bitter experience with public undertakings of this kind it is safe to predict that the ultimate cost will be close to, if it does not exceed, the figure last named.

The St. Lawrence commission, in its report to President Coolidge of December 6, 1926, estimated the cost of the Lake Ontario-Hudson route, via the Welland Canal, at $506,000,000 and that of the all-American route at $631,000,000. Apart from the power developed on the St. Lawrence route, it is, therefore, apparent that the all-American route can be built as cheaply, if not cheaper, than the St. Lawrence project. Much is made of the advantages to be derived from the cheap power to be developed on the Canadian route. It is claimed that the returns from this source will amortize the entire cost of the project within a relatively brief time. These claims are not borne out by a close examination.

I have conferred with Mr. Olin H. Landreth, Maj. Elihu Church, and Mr. Frank Goodrich, three distinguished and eminent engineers, and they tell me that there is no especial difficulty in providing water necessary to make a canal opening up the Great Lakes to the Atlantic Ocean through the State of New York; that there is no especial engineering difficulty in the way of the accomplishment of the construction of the canal.

Outside of the popular support of the wheat growers, there is no popular or honest support for the St. Lawrence Canal or any support or interest in the St. Lawrence waterways except by those interested in the sale and exploitation of its territory.

This fact of creating a new waterway to ship goods to Europe is to my mind a huge joke. They haven't the purchasing power of our goods and their purchasing power will continue to get less. They would like to precipitate themselves upon us, but the immigration laws of the United States stand in the way like a stone fence. They would like to precipitate upon us their products and with their pauper labor but our tariff wall shuts them out; so what is the use of spending $1,000,000,000 of our money to send goods to people that can not pay for them. Unless it is that they send their goods over here so as to compete with ours.

We are not so much concerned in building a waterway by way of New York to serve Europe, but a waterway that is going to open the Great Lakes to our rich Southern States, our rich Gulf States, to ports of South America, on the east as well as the west side, a canal that will help to realize the great commercial blessings of the Panama Canal, so that goods from Duluth, Chicago, Cleveland, Erie, or Buffalo may be routed by all-water bill of lading by way of the Barge Canal, the Hudson River, Atlantic Ocean, Panama Canal to Los Angeles, Seattle, Hawaii, Philippines, China, Japan, and eastern Asia.

Join with us, good friends of the Middle West, and help us build a waterway so that your automobiles and automobile parts, your steel, and all the other great commodities that are fabricated on the Great Lakes may come by way of the Barge Canal, the Hudson River an all-water shipment, the cheapest form of transportation that man has ever devised, and reach all the ports of the world and there be consumed or finished.

I think, friends, I have covered the first and second answers of Mr. Harding's remarks in his very able presentation of the economies of the St. Lawrence project. And now for a moment I will very briefly touch upon a few of the political and international features of this debate.

POLITICAL AND INTERNATIONAL COMPLICATIONS RENDER THE CONSTRUCTION OF THE ST. LAWRENCE ROUTE IMPRACTICABLE

My time is almost up and I must hurry along.

Gov. Alfred E. Smith, the Democratic Governor of the State of New York, with the unanimous concurrence of both branches of the New York Legislature, the majority of both branches being Republican, offered to dedicate to the United States Government for the good of the Nation, the Barge Canal of New York providing the United States Government utilizes it for the purpose of constructing a ship-canal opening up the Great Lakes to the Atlantic Ocean either by way of the Welland Canal and Lake Ontario, the Barge Canal at Oswego, and the Hudson River or by way of Buffalo across the State of New York to the Hudson—the all-American route—so that there are no international difficulties in the way of the construction of the canal through the State of New York.

On the other hand, the construction of a canal by way of the St. Lawrence River, the building of the power plants which are to make available the hydroelectric power that will be thus generated, require not only a treaty with Canada, Quebec enjoying a veto power, but, as I take it, the assent of the sovereign State of New York.

In January, 1911, the United States of America passed what was known as the reciprocity treaty with Canada. After a bitter and acrimonious controversy in both branches of the United States Congress, the measure was finally passed and the bill was signed by President Taft. Immediately the price of all American agriculaural products dropped from 30 to 40 per cent. A duty of 42 cents per bushel is paid on wheat imported from Canada, and 14,000,000 bushels of wheat were actually imported from Canada into the United States during the calendar year of 1927.

On September 17, 1911, the Dominion of Canada rejected the reciprocity treaty, with the result that the Laurier government, which has been in power in Canada for 15 years, was wrecked, the political fortunes of William Howard Taft were wrecked, and the reciprocity measure was really in large part the basis of the schism in the Republican Party that resulted in the disruption of the party in 1912 and the consequent election of Woodrow Wilson.

A partnership with Great Britain has never been or ever will be satisfactory to the people of this country. George Washington in his Farewell Address advised us to keep out of foreign entanglements. The construction of a canal through 60 per cent of British territory is a foreign entanglement. A partnership compact was made between Great Britain and ourselves to construct the Nicaragua canal. This partnership proved unsatisfactory, as Britain immediately proceeded to gain control of the Nicaragua route by colonizing the personnel of the zone with British subjects. Great Britain sought to have this partnership arrangement extended to the Panama Canal after we had with American dollars purchased the French concession. Roosevelt denied them this right, with the result we built and control the Panama Canal ourselves. The British questioned our right to fortify the canal, and they did everything which was conceivably possible to embarrass us in the construction of the canal. Great Britain has embarrassed us with Mexico in the oil fields. They threatened to go to war with Venezuela over a boundary dispute, violating the Monroe doctrine, but were frightened off by Grover Cleveland, who compelled Great Britain to resort to arbitration. By lending aid and comfort in every possible way to the seceding Southern States in the Civil War, Great Britain endeavored to divide this Nation.

A compact was made recently whereby a naval ratio was to be maintained on the basis of five, five, and three. Great Britain and the United States were to be placed on an equal parity as to naval armament and Japan was to have three-fifths of the parity of each of these two great powers. Great Britain has quietly and subtly, but nevertheless effectively, outstripped us in naval armament so that this parity no longer exists.

All our great wars have been with Great Britain and in every war we have had with a foreign country, outside of the Great War, when we came to the rescue of Great Britain, Great Britain has been in sympathy with our enemies.

Some day, perhaps, the Lake ports, especially if they are opened up to the Atlantic Ocean, may need the protection of American destroyers, submarines, and cruisers, and do they want their vessels sent to protect their ports under the protection of the Union Jack and subject to the hostility of British guns?

I am one of those old-fashioned people who learned their history from the chapters of the Revolution and the War of 1812, and down in Baltimore, from where I came, the Star-Spangled Banner was written while British shells screamed across the ramparts of Fort McHenry.

The American Nation will never be too proud to fight, and I hope it will always be prepared to fight. Our flag was built out of British tyranny and hate. I pray God that it may wave forever, not over North or South or East or West, but over a God-loving, God-fearing, united Nation of free men.

[Reprinted from the 1928 Encyclopedia Americana]

THE NEW YORK STATE BARGE CANAL

The improvement of the New York State canals authorized by a vote of the people in 1903 has become popularly known as the Barge Canal. This phrase is without particular significance in itself, being but the shortened form of "Thousand-Ton Barge Canal," the name which was first given, based on the proposed size, but which is now a misnomer, since subsequent legislation has increased the capacity of the canal two or three fold.

The Barge Canal is the improvement of four branches of the State waterway system. These canals had already undergone various enlargements, but the Barge Canal is more than an enlargement; in several respects it is a radical change in form of construction. Of these changes three are especially prominent. First, the new canal has no towing path and consequently no animal towage. Again, electrically driven machinery replaces hand operation. But the greatest change is the substitution of river canalization for independent canals. When the original State canals were built the best practice of the time dictated a channel separated from the natural streams. Canal builders naturally sought the valleys, but they put their waterways away from and slightly above the stream beds. Modern practice, because of ability to cope with floods, boldly chooses the valley bottoms and makes the natural stream into a canal. This procedure has largely changed the locations of canals in New York, in some instances placing the new channel several miles from the old waterway. Briefly, to summarize the chief changes, the Barge Canal is a thorough modernization in size, construction, and equipment.

The four branches improved are: (1) The Erie, or main canal, which stretches across the State from east to west and joins the Hudson River with Lake Erie; (2) the Champlain, which runs northerly from the eastern terminus of the Erie and enters the head of Lake Champlain; (3) the Oswego, which starts north, midway on the line of the Erie, and reaches Lake Ontario; (4) the Cayuga and Seneca, which leaves the Erie a little to the west of the Oswego junction and extends south, first to Cayuga Lake and then to Seneca Lake.

The Barge Canal, while differing from the earlier canals in many respects, is really but a stage in the development of the State waterways. The original Erie and Champlain Canals, completed in 1825 and 1923, respectively, were so successful that a vertiable mania for canal building spread over both the State and Nation. In New York this agitation resulted in the building of several additional canals and in the enlargement of the original Erie within 11 years after its opening, and a few years later in the enlargement of the three other canals which are now parts of the Barge Canal improvement. This first enlargement was protracted through 26 years and even then was not entirely finished. About a decade later a popular feeling of opposition to canals became so strong as to bring about, within the next half dozen years, the abandonment of several lateral branches. However, shortly after this the adverse sentiment gave place to a favorable attitude, and an improvement was undertaken which proved to be the beginning of a reawakening of interest in canals that has endured until the present time.

This period of reawakening found its first expression in 1884 in the lengthening of locks. In 1892 came the first official suggestion of an enlargement similar to what has become the Barge Canal. The constitutional convention of 1894, recognizing the popular demand for improved canals, included an article in its proposed amendments whereby such improvement could be authorized. This enlargement, ordered by the people in 1895 and calling for 9-foot depth in the Erie and Oswego Canals and 7 feet in the Champlain Canal, owing to the exhaustion of funds was but partially completed.

At the beginning of 1899 the State found itself in a quandary. The old canals were antiquated; the attempted improvement was unavailable without considerable additional outlay. As a result a committee of eminent citizens was appointed with authority to study the whole situation and in effect to formulate a canal policy for the State. This committee reported to the legislature of 1900 giving rough estimates for completing the attempted enlargement and also for making improvements on lines substantially like those later adopted, and recommending for immediate action the making of careful surveys and estimates for the latter scheme. Almost contemporaneously with the work of this committee two Federal investigations had been in progress—the deep-waterways survey and a study of relative costs of transportation between Lakes and sea by ships and by barges. These investigations produced valuable data and helped mold public sentiment.

The recommended survey was made in 1900, with a report to the legislature in 1901. Inability of canal advocates to concentrate on any one plan delayed legislative action till 1903. Then, after a revision of estimates, the measure was referred for a vote at the 1903 fall election. It was carried by a substantial majority and authorized the expenditure of $101,000,000 for improving the Erie, Champlain, and Oswego Canals. Plans were begun at once, but the undertaking was so enormous that actual construction did not begin till the spring of 1905. In 1909, after surveys had been made, the Cayuga and Seneca Canal was ordered to be enlarged to Barge Canal dimensions by a second referendum, which appropriated $7,000,000. Construction progressed steadily till 1915, when it became necessary to provide $27,000,000 more for the purpose of completing the three canals first undertaken. This was done by another referendum and was necessitated largely by court awards for damage and property claims and in lesser measure by very greatly increased costs for labor and materials.

To provide suitable terminals for the new canals, a fund of $19,800,000 became available by a vote of the people in 1911. Several years' agitation preceded this action. In 1909 a commission composed of certain State officials had been appointed to investigate and report on the subject. In 1910 this commission was sent to Europe to study the terminals there.

The Barge Canal may be aptly called nature's gateway to the heart of the continent. Nature surely prepared the route. The Hudson, which has a safe and commodious harbor at its mouth, is the only navigable Atlantic-seaboard river in the United States which cuts the Coast Range of mountains. In the center of the State a second range makes way for a valley. At Little Falls a rocky barrier was pierced during the last glacial overflow by the waters of the Great Lakes. Also, natural watercourses across the State—one from east to west across the center, one from the extreme south to the extreme north across the eastern side, and one almost across from north to south at the center—are provisions which man has appreciated and utilized. Westward from the canals the Great Lakes extend a thousand miles inland.

There are 442.6 miles of construction in the new canals. The 358.7 miles of intervening lakes and adjoining rivers make a total of 801.3 miles—the length of the State waterway system of Barge Canal dimensions. Of this whole system, about 72 per cent of the length is in river or lake channel. Thus it appears that the Barge Canal is largely a river canalization scheme. A brief description of the route will give force to this statement.

The Hudson River from the ocean to the mouth of the Mohawk is the first link. The bed or valley of the Mohawk is utilized from the Hudson to the old portage near Rome. Then Wood Creek, Oneida Lake, and Oneida, Seneca, and Clyde Rivers are used, carrying the channel to the western part of the State, where the streams run north and the alignment of the old channel is retained for the new canal. The other branches of the Barge Canal occupy natural streams throughout most of their length, the Champlain branch lying in the canalized Hudson River and Wood Creek, the Oswego branch utilizing Oswego River, and the Cayuga and Seneca Canal occupying the bed of Seneca River. Also, Lake Champlain and Onondaga, Cross, Cayuga, and Seneca Lakes form parts of the waterway system.

There are various "land lines" for passing around dams, cutting off bends, and other purposes, and in the western part of the State the new channel is largely a widening and deepening of the old canal.

The dimensions of the Barge Canal are the same for all four branches. Briefly, the minimum channel in earth cutting in the independent or artificial canal or land line is 75 feet wide at bottom and 123 to 171 feet at water surface. In rock cutting, with nearly vertical sides, the width is 94 feet. In river and lake channels the width is from 150 to 200 feet. There is a depth of 12 feet throughout. The actual dimensions vary greatly, but the minimum size is fixed by law. The locks are of uniform horizontal dimensions. Chambers, from lower gates to upper breast wall, are 310 feet long and 45 feet wide. The width of the United States Government lock at Troy is 44.44 feet. Rules adopted for navigating the canal system limit the size of barges to 300 by 42 feet. There are no fixed bridges over the channel at less than 15½ feet above water level at the highest navigable stage.

The critical points in supplying water to canals are the summit levels. The new Erie Canal has one summit level (in the vicinity of Rome) and one half summit (at the Lake Erie end). A glance at the profile will show these summits and how the canal descends from them. The natural flow of the streams which are canalized to form the Barge Canal is in general sufficient to maintain the requisite depth of water in the levels between the locks and also to supply the water required for lockage and incidental operations.

The greatest independent water supply for the Erie Canal is that for the western section. Fortunately an almost unlimited supply is available by tapping the Niagara River. From here it is necessary to carry a continuous supply easterly to the Seneca River. In order to pass this water in requisite volume the canal bottom on the long levels has been given a proper grade, which provides for carrying at least 1,237 cubic feet per second. It is estimated that this supply is adequate, not only for 10,000,000 tons seasonal traffic, for which the Barge Canal is designed, but also for the maximum traffic which the canal is capable of handling, namely, from 18,500,000 to 20,000,000 tons per season. To furnish the Rome summit level the existing sources of supply are retained and two new reservoirs, Delta and Hinckley, are built. The old Rome level was supplied by an extensive system of reservoirs and feeders, built largely in the Adirondack region. This entire system is retained, together with such portions of the old canal as are needed to bring the waters to the Barge Canal.

The Champlain Canal has a summit level between Lake Champlain and the Hudson River. The corresponding summit of the old canal was supplied by a feeder which took its water from the Hudson at Glens Falls. This same Glens Falls feeder, improved, supplies the needs of the northern portion of the new Champlain Canal, while the southern portion lies in the channel of the Hudson.

Seneca and Cayuga Lakes, lying at the heads of their respective stretches of the Cayuga and Seneca Canal, form natural reservoirs to supply both this canal and the Erie branch between its junction with the Cayuga and Seneca Canal and Three River Point.

The Oswego Canal begins at Three River Point. Here Oneida and Seneca Rivers unite, bringing their natural flow and also a part of the supplies from the Rome level reservoirs and Lake Erie. As the canal is chiefly in the Oswego River, its needs are amply met.

Electric equipment on the canal is of the newest design. In general a hydroelectric power station at each lock supplies the needed energy for lighting and operating. Some stations supply more than one lock, substations being provided where necessary. Gasoline electric stations are used at movable dams, where the head of water needed for developing power is destroyed by the act of raising the dam. The turbines and generators in each station are in duplicate. Also hand-operating devices are available in case both sets of electric installation are disabled.

The Barge Canal locks are built of concrete throughout, both side and cross walls and floor. At a few points, where favorable rock is encountered, the concrete floor has been dispensed with. The lifts range from 6 feet to 40½ feet. Within each side wall runs a culvert for filling and emptying the lock. The culverts are connected with ports that open into the chamber at the bottom of the walls. These culverts vary in size, the dimensions being 5 by 7 feet for locks of 12 feet lift or less, 6 by 8 feet for lifts between 12 and 23 feet, and 7 by 9 feet when the lift is 23 feet or more. The lock gates are of the mitering, girder type, carrying the principal load as beams. They are built of steel, with single skin plates, but have white oak quoin and toe posts. The quoin post swings on a cast-steel pivot, set in the concrete, and is held at the top by an adjustable anchorage. The bearing is against cast-iron quoin plates set in the side walls. The lock gates are each opened and closed by a steel spar equipped with a heavy coil spring to absorb shock and secured to the gate by a bronze pin. This gate spar is also equipped with a rack actuated by a 7-horsepower motor acting through a train of gears designed to open or close the gates in about one minute. Movement of the gates is controlled from operating stands, located at each end of each side wall. The valves regulating the flow of water to the culverts are suspended on two chains, which pass over chain wheels near the top of the valve wells to suitable cast-iron counterweights. The chain wheels are mounted on a shaft rotated by a motor operating through a train of gears. The movement of the valves is controlled in a manner similar to the movement of the gates. Electric capstans, one at each end of each lock, are provided to control the movement of boats along the approach walls and to tow them into and out of the lock chamber.

Reinforced-concrete power stations, 20 by 30 feet in plan and about 20 feet high, are, in general, constructed adjacent to the various locks. The hydroelectric power stations, operated by the water in the canal, are each equipped with two vertical-shaft turbines, which in all but a few cases are directly connected to 50-kilowatt vertical-shaft generators, supplying direct current at 250 volts. The gasoline electric stations are each equipped with two generators directly connected to gasoline engines designed to operate at a speed of 600 revolutions per minute.

New York has recognized the supreme weakness of most American waterways—the lack of terminals and efficient freight-handling machinery—and is supplying these needs in the Barge Canal. However, it was eight years after the canal was authorized before the terminals were added. But their construction was pushed with such vigor that they were ready with the opening of the completed canal. These terminals are located at some 50 cities and villages along the canal as well as on some of their connecting natural watercourses.

The character of the terminal varies to meet the needs of each particular locality, but in general a terminal consists of a suitable place for dockage, the machinery for handling goods quickly and cheaply, a building for temporary storage, and in many places connections with adjacent railways. The purpose of the State is to furnish a place where any shipper or boatman may have the advantages of efficient terminal facilities at a reasonable cost. Recent legislation has vested the State public service commission with power to require connections to be built between railroads and canal terminals as well as authority to regulate freight rates and control combinations of rail and water routes.

Since the barge canal lies so largely in lake and river channel, various aids to navigation are needed, such as lighthouses, range towers, beacons, buoys, and markings on bridges. Lights, either fixed, flashing, or occulting, are displayed by night. The Federal practice of marking channels has been adopted, but with the interpretation that upstream means proceeding away from the ocean toward the interior, irrespective of local conditions of actual upstream or downstream. Thus in going westerly from the Hudson on the Erie Canal or in proceeding away from the Erie Canal on any of the other canals, red lights are on the right or starboard side of the channel and white lights are on the left or port side. The buoys and beacons which show red lights are painted red, while those which show white lights are painted white.

A study of the distribution of population in New York State reveals some important conditions. It is discovered that within 2 miles of the State waterways live 73½ per cent of the people of the State. If the distance is extended so as to include the territory within 5, 10, and 20 miles, the percentages are 77, 82, and 87, respectively. Looking from another angle, it appears that within 20 miles lies 46 per cent of the area of the whole State. If lines are drawn on a map—one at 50 and one at 70 miles from the waterways—we find that 71 and 88 per cent, respectively, of the area lie within them. These are the respective distances which motor trucks of 3½ and 2 tons' capacity can cover in a day's run, going and returning. This fertile field for motor-truck operation in connection with the enlarged canals is full of promise. The importance commercially of the conditions revealed by this study is not generally appreciated, but a little consideration will discover what it means to the State and to the country at large that there live within a half-hour's walk of the waterways, three-quarters of the population of the State, about 8,000,000 people, or 7 per cent of the whole United States population, whose products and whose supplies may have available a means of cheap transportation.

The barge canal is the essential connecting link between two extensive and important waterway systems, which are in part existent and in part only projected. To the west lie the Great Lakes. Four noteworthy canals, to connect with these lakes, are in a fair way to be built. At the seaboard a project known as the intracoastal canals would give an inside passage along a large portion of our Atlantic coast. The Federal Government has made surveys for most of these canals, and some it has already built. Of this whole vast scheme, the mileage now in existence is already great—1,500 miles in the Lakes and 800 miles in New York waterways. The intracoastal chain would add 1,800 miles and the projects adjacent to the Lakes at least 800 miles more.

At the beginning of the 1918 season the Federal Government, as a war measure, assumed control of the barge canal in so far as traffic was concerned and continued such control until the middle of the navigating season of 1921.

Certain statistical data follow: Erie Canal—340.7 miles long; 35 locks, 678.35 feet total lockage; 2 guard locks; 1 terminal lock. Champlain Canal—62.6 miles long; 11 locks, 182.25 feet total lockage; 2 junction locks. Oswego Canal—23.8 miles long; 7 locks, 118.6 feet total lockage. Cayuga and Seneca Canal—92.7 miles long, including Cayuga and Seneca Lakes; 4 locks, 71 feet total lockage. Fifty-seven locks, 2 guard locks, and 1 terminal lock, all of barge canal dimensions, and 12 smaller locks have been built. Construction has included 30 new dams, 5 old dams with new crests, and 5 old dams used without change; also 300 bridges and various other structures, including guard gates, culverts, spillways, bulkheads, wasteweirs, by-passes, flumes, terminals, gatehouses, power houses, warehouses, lighthouses, and range towers. The total number of all kinds of structures exceeds 700. Some entirely new types of structure, siphon spillways, and automatic crests on dams have been originated in barge canal construction, and some novel and bold adaptations in design have occurred, such as the bridge type of movable dam, the siphon lock, the sector gate, and an enormous Taintor gate. The first construction was begun on April 24, 1905; the first work on the Erie on June 7, 1905. The entire system was put into service in 1918. Construction was completed about two years later. The tonnage since 1918 follows:

| Year— | Net tons |
|---|---|
| 1918 | 1,159,270 |
| 1919 | 1,238,844 |
| 1920 | 1,421,434 |
| 1921 | 1,270,407 |
| 1922 | 1,875,434 |
| 1923 | 2,006,284 |
| 1924 | 2,032,317 |
| 1925 | 2,344,013 |
| 1926 | 2,369,367 |
| 1927 | 2,581,892 |

NOBLE E. WHITFORD.

(Revised by T. H. Farrell.)

FARMERS' PRODUCE MARKET

Mr. GLASS. Mr. President, I ask unanimous consent for the present further consideration of the bill (H. R. 8298) authorizing acquisition of a site for the farmers' produce market, and for other purposes.

The VICE PRESIDENT. Is there objection to the request of the Senator from Virginia?

There being no objection, the Senate, as in Committee of the Whole, resumed the consideration of the bill.

Mr. TYDINGS. Mr. President, I offer an amendment to the bill, which I ask to have read.

The VICE PRESIDENT. The amendment will be read.

The CHIEF CLERK. It is proposed to strike out all after the enacting clause and insert in lieu thereof the following:

The Commissioners of the District of Columbia are hereby authorized and directed to acquire by purchase or by condemnation, or partially by purchase and partly by condemnation as they may deem best in the public interest, suitable land, north of Pennsylvania Avenue, within the District of Columbia, for use by the District of Columbia in conducting and operating a market devoted to the wholesale and retail purchase and sale of products of the farm and such other market purposes as the said commissioners may deem proper. There shall be constructed on said land, after same has been acquired, buildings, structures, rest rooms for women, dormitories, and such other improvements and facilities as the said commissioners may deem necessary for the operation of a market and for the public convenience and comfort.

SEC. 2. For the acquisition of said land, for said market, there is authorized to be appropriated the sum of $300,000, or so much thereof as may be necessary, payable out of any funds in the Treasury of the United States not otherwise appropriated, and charged against the revenues of the District of Columbia as are other appropriations to cover the expenses of the government of the District of Columbia. There is also authorized to be appropriated in the same manner such sum as may be necessary for clearing, grading, removing buildings from the said lands and all incidental expenses in connection with preparing said land for use as a market, for construction of necessary buildings and other improvements thereon, and for expenses of conducting and operating said market, including personal services.

SEC. 3. The said commissioners are authorized and directed to fix and establish such reasonable rents, fees, and charges for use and occupancy of space on said market for the sale of commodities as they may determine and to change same from time to time. The said commissioners are also authorized to make and promulgate, and to amend when they deem desirable, all necessary rules and regulations regarding the operation of said market and the use or occupancy thereof, and to provide for the enforcement of such rules and regulations by prescribing reasonable penalties for violations thereof, not to exceed $25 for each offense; and said commissioners may enforce in any court of the District of Columbia having jurisdiction of minor offenses, and in the same manner as such minor offenses are now by law prosecuted and punished. The regulations herein provided for shall when adopted be published in one or more daily newspapers published in the District of Columbia and no penalty for violation of same shall be enforced until 30 days after such publication.

SEC. 4. Selection of the land acquired under the provisions of this act shall be made jointly by the Commissioners of the District of Columbia, the Director of the Office of Public Buildings and Public Parks of the National Capital, and the Secretary of Agriculture or some official of the Department of Agriculture designated by the said Secretary for that purpose.

SEC. 5. All moneys collected under the provisions of this act shall be paid into the Treasury of the United States to the credit of the District of Columbia.

BOULDER DAM

The VICE PRESIDENT. The Senator from Virginia will suspend. The hour of 2 o'clock having arrived, the Chair lays before the Senate the unfinished business, Senate bill 728.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (S. 728) to provide for the construction of works for the protection and development of the lower Colorado River Basin, for the approval of the Colorado River compact, and for other purposes.

The VICE PRESIDENT. The Senator from Virginia [Mr. GLASS] is entitled to the floor. The Senate will receive a message from the House of Representatives.

DEATH OF REPRESENTATIVE MARTIN B. MADDEN

A message from the House of Representatives, by Mr. Chaffee, one of the clerks, communicated to the Senate the intelligence of the death of Hon. MARTIN B. MADDEN, a Representative from the State of Illinois, and transmitted the resolutions of the House thereon.

Mr. DENEEN. Mr. President, I ask the Chair to lay the resolutions of the House before the Senate.

The VICE PRESIDENT. The Chair lays before the Senate resolutions from the House, which will be read.

The Chief Clerk read the resolutions, as follows:

IN THE HOUSE OF REPRESENTATIVES,
*April 27, 1928.*

*Resolved*, That the House has heard with profound sorrow of the death of Hon. MARTIN B. MADDEN, a Representative from the State of Illinois.

*Resolved*, That the Clerk communicate these resolutions to the Senate and transmit a copy thereof to the family of the deceased.

*Resolved*, That as a further mark of respect this House do now adjourn.

Mr. DENEEN. Mr. President, it is with profound sorrow that I announce to the Senate the death of Hon. MARTIN B. MADDEN, Member of Congress from the first district of Illinois, which occurred a few minutes ago at the other end of the Capitol. At a later date I shall ask the Senate to set apart a day on which fitting tribute may be paid to the life, character, and public services of the deceased Representative.

I send resolutions to the desk and ask for their adoption.

The VICE PRESIDENT. The clerk will read the resolutions submitted by the Senator from Illinois.

The resolutions (S. Res. 210) were read, considered by unanimous consent, and unanimously agreed to, as follows:

*Resolved*, That the Senate has heard with profound sorrow the announcement of the death of Hon. MARTIN B. MADDEN, late a Representative from the State of Illinois.

*Resolved*, That the Secretary communicate these resolutions to the House of Representatives and transmit a copy thereof to the family of the deceased.

Mr. DENEEN. Mr. President, as a further mark of respect to the memory of the deceased Representative, I move that the Senate do now adjourn.

The motion was unanimously agreed to; and (at 2 o'clock and 5 minutes p. m.) the Senate adjourned until to-morrow, Saturday, April 28, 1928, at 12 o'clock meridian.

## HOUSE OF REPRESENTATIVES

FRIDAY, *April 27, 1928*

The House met at 12 o'clock noon.

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

O Lord God of heaven and earth, with new understanding and firmer assurance let us be summoned to our duties to-day. Passionate loyalty, springing from implicit faith that right makes might, is the power that lifts the world into the respect of angels and the love of God. We thank Thee that Thou art taught as Father and love as life's law; hence we would listen to Thy teachings and cherish Thy words as a precious heritage. There is no end to Thy loving purpose. There is a sea of blessedness, countless fathoms deep; undergirding the old earth is the arm of Thy never-failing mercy. O guide us when we can not see, comfort us when we are sad, deliver us when we are threatened, help us when we are weak and when all is over save us. In the presence of error—aye, when in the shadow of the strongholds of sin—inspire us to throw down the challenge. In the name of Jesus. Amen.

The Journal of the proceedings of yesterday was read and approved.

### MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Craven, its principal clerk, announced that the Senate, had passed a bill of the following title, in which the concurrence of the House of Representatives was requested:

S. 4180. An act authorizing the attendance of the Marine Band at the Confederate Veterans' Reunion at Little Rock, Ark.

The message also announced that the Senate insists upon its amendments to the bill (H. R. 10141) entitled "An act granting pensions and increase of pensions to certain soldiers and sailors of the Regular Army and Navy, etc., and certain soldiers and sailors of wars other than the Civil War, and to widows of such soldiers and sailors," disagreed to by the House of Representatives, agrees to the conference asked by the House on the disagreeing votes of the two Houses thereon, and appoints Mr. ROBINSON of Indiana, Mr. NORBECK, and Mr. STECK to be the conferees on the part of the Senate.

The message further announced that the Senate disagrees to the amendments of the House of Representatives to the bill (S. 1609) entitled, "An act recognizing the heroic conduct, devotion to duty, and skill on the part of the officers and crews of the U. S. S. *Republic, American Trader, President Roosevelt, President Harding*, and the British steamship *Cameronia*, and for other purposes," requests a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. JONES, Mr. MCNARY, and Mr. FLETCHER to be the conferees on the part of the Senate.

### SENATE ENROLLED BILLS SIGNED

The SPEAKER announced his signature to enrolled bills of the Senate of the following titles:

S. 1368. An act to extend the benefits of the employees' compensation act of September 7, 1916, to Martha A. Hauch; and

S. 2900. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors.

### NAVAL APPROPRIATION BILL

Mr. FRENCH. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H. R. 12286) making appropriations for the Navy Department and the naval service for the fiscal year ending June 30, 1929, and for other purposes, disagree to the Senate amendments, and ask for a conference.

The SPEAKER. The gentleman from Idaho asks unanimous consent to take from the Speaker's table the naval appropriation bill, H. R. 12286, disagree to the Senate amendments, and ask for a conference. Is there objection?

There was no objection.

The Chair appointed as conferees on the part of the House Mr. FRENCH, Mr. HARDY, Mr. TABER, Mr. AYRES, and Mr. OLIVER of Alabama.

### ADDRESS OF HON. CHARES E. HUGHES

Mr. BACON. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing a speech made last evening by former Secretary of State Charles E. Hughes on the results of the Parliamentary Conference at Habana.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. BACON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address of Charles E. Hughes, president of the American Society of International Law, before that organization, in Washington, on the evening of Thursday, April 26, 1928:

### PAN AMERICANISM

Mr. HUGHES. The cooperation of independent States, reflecting the persuasions of reason, and neither intrigue nor the pressure of force, must of necessity make slow advances. It awaits the quieting of fears and emancipation from national obsessions. It depends not only on a growing perception of community of interests but also on a fair appreciation of the antagonism of interests. When we demand cooperation abroad, we are apt to overlook the difficulties which beset cooperation at home. Our politics gives us the measure of these difficulties. Some seem to think it easy to obtain agreement among independent States, although it is plain that the varied desires and policies of communities, parties, and groups among us, under a single government, cause interminable delays. We have a vast amount of talk in relation to serious problems, with a small proportion of accomplishment. In external affairs we may readily extend the area of discussion, but any important extension of the area of accord is a real achievement.

The cooperation of individuals is happily less restricted than that of governments. Economic forces have freer play, and except as government may intervene for the protection of national interests, economic opportunity is readily sought by all everywhere as the spirit of progress urges and intelligence shows the way. But governments are trustees of particular peoples, with their racial distinctions, their historic apprehensions, with their perception of local needs, and with their hard-won positions of advantage. To effect international cooperation there must be a sense of substantial national gain and no persistent fear of serious national loss.

Pan American cooperation should find a good start in our contiguity. But until recently this geographical relation had an aspect of irony. For our systems of communication belied our nearness. South America was for all practical purposes nearer to Europe than to North America. Now, with the Panama Canal, with multiplying facilities of travel by steamship, with improved methods of communication by mail, by wire, and without wire, we have a keen sense of neighborhood. Lindbergh's recent flights are a prophecy of a new intimacy. With no uncertainties of north Atlantic weather to bring to naught the best-laid plans, with abundant opportunities for the provision of airports and regular and frequent services, we are destined to become very well acquainted with each other and to have countless mutual interests but little dreamed of in the past.

History abundantly demonstrates that mere propinquity is not enough. Fortunately, in this hemisphere we have a common political inheritance in our devotion to the ideals of liberty. We are all sons of the American revolutions. We have all revolted against tyranny. We have erected throughout the American continents the standards of national freedom and independence. We have thus been drawn together by a

common sentiment which makes us neighbors in spirit. If anyone is disposed to scoff at this expression, and to emphasize differences and regrettable expressions of unneighborly points of view, let him consider conditions elsewhere throughout the world—the jealousies, distrust, historic animosities found in every region and, unless he is a hopeless cynic, I think that he will conclude that the relations of the American States do not suffer in comparison. On the contrary, the recent conference, quite apart from its specific achievements, afforded a welcome and striking demonstration of mutual friendliness which put to shame the prophets of evil. An international conference is a very uncertain affair, almost as uncertain as a trans-Atlantic air flight, so much may go wrong in fogs and contrary winds. When delegates come out of an American conference with a more friendly feeling and a stronger confidence in each other, an advance of enormous importance has been made, because the spirit of friendship is the vital breath of Pan Americanism.

In considering the essence and the scope of Pan American cooperation we must rid ourselves of certain illusions. One of these seems to be widely cherished in this country. That is, that there is an entity known as Latin America on the one side, dealing with an entity known as the United States on the other. Attendance at a conference of the American States will dispel this illusion. There is no such entity as Latin America. There are 20 States, which comprise what is called Latin America, and these have distinct characteristics, aspirations, and policies. Even in language, Brazil, with its vast territory, stands separate. There is, properly speaking, no concert of Latin-American States. There is no group of Latin-American States which has, or can claim to have, dominance over other Latin-American States. There is no desire on the part of any Latin-American State to have its policy or rights determined by any other Latin-American State or by any selected number of Latin-American States. The sentiment of national independence is a very real sentiment in all the Latin-American States. It means independence of other Latin-American States as well as independence of the United States. The idea that any one power, or three or four important powers, in Latin America could be endowed with authority to make decisions or to undertake to determine policies in Latin-American affairs affecting other States is a chimera.

Another illusion that should be dispelled is that the United States is seeking to dominate Latin America. To one who knows the sentiment of the American people, such an idea seems fantastic. But it is fostered by writers at home and elsewhere, and is encouraged by an appreciation of our enormous resources and power. The "Colossus of the North" is pictured to the imagination as a ruthless giant, without conscience and with unrestrained lust. We make no apologies for our prosperity and power. But the conception of the giant takes no thought of the limitations of its organism. The policy of the United States is in the control of the American people, acting through representative institutions. Executives and Congress must bow to public opinion. The dominant spirit of the American people is generous, liberal, instinct with love of independence and respect for it. If misguided persons, abusing the power with which they were temporarily intrusted, attempted to embark on a policy hostile to the proper enjoyment by the Latin-American Republics of their sovereignty and independence, that policy would speedily and justly be repudiated and the authors of it condemned. Even efforts in the interest of public order, for the purpose of assisting in the maintenance of a reasonable stability and of protecting lives and property, meet with constant criticism, and are carefully watched to prevent the hatching of any imperialistic scheme. Liberal sentiment in this country constantly grows. Appreciation of our difficulties in making popular government successful is more general. Disinclination to undertake enterprises foreign to the purposes of our Government increase. We are, indeed, jealous of our rights, and I trust that we shall always have the stamina to maintain them with self-respect and with proper regard for the rights of others. But the notion that we are looking for opportunities to intervene in the concerns of our neighbors and to take upon ourselves the burdens of managing them, that we are animated by a desire to dominate Latin America, is due to vague and unfounded fears, and especially to an utter misconception of public opinion in this country. However, it is a persistent notion, constantly inculcated, and the illusion is one that interferes with efforts at cooperation. We should endeavor, so far as possible, to eradicate it, and especially should we be solicitous to conduct all our relations with Latin-American States in such a manner as not to facilitate its spread.

Another illusion is that national aspirations can be changed by international conferences. The most that can be done is to find common ground, to show that some common undertaking is promotive of national benefit or at least not opposed to national interest. Nations coming into conference do not change their fundamental viewpoints. A conference gives the advantage of discussion, of getting away from the routine and dilatoriness of diplomatic note writing, of informal contacts removing prejudices and giving a clearer understanding of reasons for action or inaction. Among friends, it is of the greatest value. But, despite the convenience of direct intercourse at conferences, there are certain difficulties inherent in the method itself. Delegates have instructions which they should follow. This sometimes prevents entire freedom in discussion. But it is better that governments should act through their representatives than that the latter should play a lone hand. Individual ambitions may have an important part in determining attitudes on particular questions. Then there are many matters which could readily be resolved if common sense could have its sway, but fear of misdirected popular criticism at home may prevent acquiescence. I was grateful for the publicity of proceedings at the Habana conference. On the whole, it was helpful. But it must be recognized that publicity not of action but in the discussions which must precede action sometimes prevents reasonable adjustments.

Then, while a conference facilitates settlements which can not be had by ordinary diplomatic exchanges, there are questions which should be dealt with by direct communications between particular governments and which can not be successfully handled at a general conference. The tendency is to bring before a conference matters with which it is incompetent to deal, as one party or another may try to get the leverage of support through the introduction of a subject which is not of general concern. This suggests another illusion, which it is hard to destroy, that a conference should undertake questions which need diversity of treatment. For example, at the Habana conference it was sought to deal with the question of frontier police. But it soon became apparent that there were different exigencies on different frontiers, and that separate negotiations or agreements would be more satisfactory than a general convention. So, in relation to development of water power, diversity of treatment may be needed, and the States directly affected may find it to their advantage to make particular agreements that are mutually acceptable.

The success of Pan American conferences will depend not only on a keen forward look, with broad vision, but also on a discriminating self-restraint. This illustrates the importance of careful preparation of the program for conferences, and such preparation, fortunately, had been made for the sixth conference by the governing board of the Pan American Union. The subjects thus presented for consideration at the conference may be classified broadly as follows: (1) Those relating to the organization and functions of the Pan American Union; (2) the codification of international law; (3) problems of communication; (4) various specific objects of cooperation; (5) plans for conciliation and arbitration.

THE PAN AMERICAN UNION

This is the organ of Pan American cooperation, at once its symbol and instrument. The union is in effect the permanent committee of the Pan American conferences with general and particular duties assigned to it by the resolutions of the conferences. Its widening activities show the growth and direction of Pan American sentiment. First organized as a bureau under the administration of the Secretary of State of the United States, it was placed in 1902, by the Second Pan American Conference, under the control of a governing board composed of the diplomatic representatives of the American States with the Secretary of State of the United States as chairman. At the fifth conference, held at Santiago, Chile, in 1923, representation of the American Republics on the governing board was declared to be a matter of right and provision was made for the election by the governing board of its chairman and vice chairman. States having no diplomatic representatives accredited to the Government of the United States were to be entitled to appoint special representatives on the governing board. Desirous of providing a permanent basis of organization, the governing board, pursuant to a resolution of the fifth conference, prepared a project of convention on this subject, which was submitted to the sixth conference. The wisdom of sacrificing the flexibility of organization under resolutions of the conferences to the rigidity of a convention, which if made effective by the ratification of all the American States could not be altered save by another convention also ratified by all, may be doubted. But in the discussions it became manifest that if a convention were to be adopted, it should be confined to a general outline of organization, appropriate for a constitution, and without the details which would be more satisfactorily provided from time to time by the legislation (resolutions) of the conferences. The result was the adoption of a simplified form of convention for submission to the respective governments and also of a resolution for the continuance of the union under the resolutions already in force with certain modifications.

The significant action of the sixth conference in respect to the Pan American Union lay in its disposition of certain proposals as to organization and functions. Mexico proposed, and most ably and vigorously supported the proposal, that the governing board should be composed of special representatives of the governments appointed for that purpose; that there should be rotation in the offices of chairman and vice chairman annually in the alphabetical order of the countries, and that the office of director general should be filled annually and be held in turn by the chairmen of the Pan American committees of the respective countries in similar alphabetical order. The selection of diplomats accredited to Washington as the representatives of the States on the governing board was criticized with charming naiveté. It was urged that an accredited diplomat of a Latin-American Republic must be persona grata to the Government of the United States. He was subject to the subtle influences of the Capital at Washington. He was not the dependable, upstanding, or, as we should say, "100 per cent" representative that his country needed for the important duty of serving

on the governing board of the Pan American Union. It was necessary, it was said, to "de-diplomatize" the union. But these criticisms did not meet with favor. They found no support among those who were most intimately acquainted with the work of the union. The committee dealing with these subjects had the advantage of the presidency of Dr. Olaya Herrera, and of the unremitting labors of its reporter, Dr. Jacobo Varela, both of whom had long been identified with the union and had intimate knowledge of its problems. It was recognized at once by the delegates that the governments should be free to select any representatives they chose, but it did not appear that displacing their own diplomatic representatives would be to their advantage. Special representatives on the governing board, no less than the accredited diplomatic representatives, would act in accordance with the instructions of their governments. These instructions could be given to accredited representatives as well as to special representatives. The right, so rarely exercised, to refuse an agrément as to a proposed diplomatic representative could hardly be regarded as seriously interfering with the freedom of choice. Moreover, unless the work of the union was to be embarrassed by interruptions and delays, special representatives would have to remain continuously in Washington and might be equally susceptible to the seductions of this delightful city and to the pleasant sense of comradeship which happily pervades the intercourse of those endeavoring to promote friendship and to reach reasonable adjustments. If the special representatives were continually in attendance, as they should be, the presence of two representatives of the same country, one as its minister or ambassador and another as its representative on the governing board of the Pan American Union, would not only largely increase the expense of representation but could hardly fail to impair the prestige of both, to say nothing of the prestige of the union itself. The conference disposed of the question by recognizing the right of every government to appoint such representative as it desired and thus to displace its diplomatic representative if it saw fit. But to avoid any ground for a different construction of its action, the conference expressly provided that a government might select, as heretofore, its diplomatic representative to serve on the governing board.

The fifth conference had already provided for the free election of chairman and vice chairman on the governing board and the proposal for an artificial rotation was rejected. In the discussion it was made clear that the Government of the United States did not desire any special privilege in the organization of the union, that the Secretary of State of the United States did not seek any position of prominence on the governing board, but that he wished to be considered a coworker with his colleagues in advancing the purposes of the union. As to the office of director general, it was apparent that continuity and not rotation was desirable. The tributes to the efficiency of the work of the present director general were spontaneous and universal. The proposal for rotation in his office was withdrawn.

There was, however, a proposal made by Mexico as to the functions of the union which met with approval. This was that the union should not "exercise functions of a political character." The emphatic indorsement of this limitation was of the utmost significance. It may be difficult to define with precision what is meant by "functions of a political character," but the spirit and intent of the proposal can not be misunderstood. It meant that the union should not attempt to intrude upon the domain of the respective governments in relation to the policies which normally would be determined by them in the exercise of their proper authority and which lay outside the administrative activities, the duties of an educational and cultural nature, and the various inquiries and studies confided to the union by the direction of the international conferences. The Pan American Union was to be an executive instrumentality of the conferences and an organ of cooperation along established lines of endeavor, but was not to be a means by which any State or group of States could obtain a leverage to affect the policy of other States in regard to questions which the latter wished to determine for themselves.

The attitude of the delegates to the conference in this matter disclosed the futility of plans for making the Pan American Union an arbiter of the policies or action of the American Governments. It was felt that any attempt of this sort would not only fail of its objective, but if seriously prosecuted would destroy the union. I have frequently been amazed at the lack of proper appreciation on the part of many who discuss this question of the manner in which the governing board acts. The notion of this board as a tribunal or council of supervision or of general advice, as an instrumentality to deal with delicate international situations, takes no account of its actual constitution and methods. The members of the governing board represent their governments. They act under instructions. If any subject is brought before the board which is not one of the merest routine and does not fall within clearest precedents or past instructions, the request is at once made by the members of the board for an opportunity to consult their governments. And there are 21 of these governments, each insisting on equality. No action could be taken which would not be as directed by these governments, and most probably, in any matter of serious import involving the policies of one or more States, there would be division into groups and no effective action would be possible. There is no recognition of great powers as maintaining and directing a permanent council. The decision that the union should not have functions of a political character crystallized the general desire that no endeavors should be made by any government to use the union to put even moral pressure on other governments; that is, to influence their action in matters where they desire to exercise their independent authority as sovereign states. This not only indicated the strength of nationalistic sentiment, but also a shrewd perception of the only way in which the union itself could be preserved.

Oddly enough, the preamble of the convention for the organization of the Pan American Union gave more trouble than any of the provisions of the convention. This was due to a determined effort, despite the adoption of the resolution denying functions of a political character, to make the union a vehicle for disputes relating to tariffs or regulations for the import or export of commodities. The proposal was not a popular one and won no adherents. Manifestly, every American State has its views as to its import and export duties, its methods of raising revenue, its administrative regulations. It does not consider these artificial, but adopts such laws and rules as it believes to be in its interest. The Latin-American States were as tenacious of their rights in this respect as is the United States, and there was no desire at the conference, apart from the effort of a single delegation, to introduce the Pan American Union into that field. Questions between particular governments as to particular laws, regulations, or imposts are appropriately the subject for agreement, so far as possible, between these governments. The quickest way to end the usefulness of the union would be to promote its intervention in matters where the realization of national interest is keenest. While the specific proposals in the interest of such a mistaken policy were rejected, the conference adopted a preamble for the proposed convention, and provisions defining the functions of their union, which in their generality of description left nothing untouched with which the union could appropriately deal. The specific resolutions of the conference intrusted the union with a large number of special and varied undertakings for the purpose of effecting the declared purposes of the conference, of securing information on many subjects, and arranging for numerous conferences of a special and technical character. Thus, while delimiting its work and protecting it from a premature and unwise intrusion into controversies which it could not successfully compose, the Pan American Union was placed on a firmer basis than ever before, and its opportunities for usefulness as an administrative and informing agency of Pan American cooperation were greatly extended. This definite settlement of the status of the union in itself made the conference important and successful.

CODIFICATION OF INTERNATIONAL LAW

In the field of public international law 12 projects formulated by the commission of jurists at their meeting in Rio de Janeiro were presented. These included the project for pacific settlement of international disputes, to which I shall refer later. There were also two projects embraced in this group, relating to exchange of publications and interchange of professors and students, which belonged in another category, and accordingly the conference dealt with them in connection with proposals if intellectual cooperation. Of the remaining nine projects, seven were adopted with certain modifications; that is, those concerning status of aliens, treaties, diplomatic agents, consuls, maritime neutrality, asylum, and obligations of states in the event of civil strife.

On the remaining projects, entitled "The fundamental bases of international law" and "States—existence, equality, recognition," no action was taken, and further consideration was postponed until the next international conference of the American Republics. The reason lay in the fact that one of these projects contained a fragmentary and inadequate declaration on the subject of intervention. It declared briefly and simply that "No state may intervene in the internal affairs of another." This reduced the problem of codification of the law on this subject to an engaging and delusive simplicity. There was no definition of "intervention" and none of "internal affairs." No distinction between action that was justified in certain exigencies and action that was unjustified was attempted. The learning and the discriminating postulates of international law found no place in the text. The manifest defect of the project lay in its failure to set forth the rights and duties of States in any manner that could be regarded as satisfactory and could thus provide an appropriate context.

Dr. Victor Maurtua, of Peru, the reporter of the committee dealing with this subject, pointed out these defects in a brilliant exposition and proposed four declarations—(1) of the fundamental bases of the codification of international law, (2) of the definitions and rules of application of international law, (3) on Pan American unity and solidarity, and (4) in relation to the recognition of governments. Deeming it essential that the basis should be found in a statement of the principle of respect for fundamental rights, Doctor Maurtua proposed, as the first division of his report, the adoption of the declaration of the American Institute of International Law formulated at its first

meeting in Washington in 1916. This declaration, prepared by the leading jurists of Latin America and the United States, and approved by many others abroad, is as follows:

"I. Every nation has the right to exist and to protect and to conserve its existence; but this right neither implies the right nor justifies the act of the State to protect itself or to conserve its existence by the commission of unlawful acts against innocent and unoffending states.

"II. Every nation has the right to independence, in the sense that it has a right to the pursuit of happiness and is free to develop itself without interference or control from other states, provided that in so doing it does not interfere with or violate the rights of other states.

"III. Every nation is in law and before law the equal of every other nation belonging to the society of nations, and all nations have the right to claim and, according to the Declaration of Independence of the United States, 'to assume, among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitled them.'

"IV. Every nation has the right to territory within defined boundaries and to exercise exclusive jurisdiction over its territory, and all persons whether native or foreign found therein.

"V. Every nation entitled to a right by the law of nations is entitled to have that right respected and protected by all other nations, for right and duty are correlative, and the right of one is the duty of all to observe.

"VI. International law is at one and the same time both national and international—national in the sense that it is the law of the land and applicable as such to the decision of all questions involving its principles; international in the sense that it is the law of the society of nations and applicable as such to all questions between and among the members of the society of nations involving its principles."

Strange as it may seem to an impartial observer, the submission of this fair and comprehensive statement provoked a debate. It was unwelcome to some who desired the adoption of the incomplete statement of the original project. Occasion was afforded for eloquent assertions of the rights of sovereignty, of the sacredness of independence, which no one had any desire to challenge. The declaration of the American Institute with its appropriate reference to the duties of States seemed to some to qualify the attributes of sovereignty. The balanced precepts of international law were thus in danger of being forgotten in the zeal for a trumpet call in defense of the ideal of liberty to which we are all devoted. The matter was referred to a subcommittee. It would have been easy to modify the language of the declaration of the American Institute so as to remove any possible ground for the suggestion—although such an interpretation seemed to be unwarrantable—that it impinged on sovereignty.

Slight changes could have removed any possible ground for criticism. But there were some who refused to accept the declaration, insisting on the letter of the original project, and thus unanimity became impossible. In this situation, as we were dealing with the codification of international law which should have unanimous approval, a postponement of further discussion was deemed to be advisable. This partial failure was not without its compensations. It gave opportunity for frank interchanges in committee, in subcommittee, and finally in plenary session, which cleared the air, promoted a fairer appreciation of opposing views and made us at the close of the conference much better friends than we were at the beginning. We did not codify this part of international law, but we did better than that. We strengthened the ties which are deeper than the law and made firmer the mutual respect and confidence without which the law is of slight avail.

I can not undertake at this time to discuss the principles of codification or to present the details of the projects which the conference adopted. It must suffice to say that in the adoption of seven projects gratifying progress was made in this most difficult of international enterprises. I may, however, suggest some reflections which do not detract from the importance of the work thus accomplished. It is always necessary to guard against a particularistic tendency in an endeavor which can be successful only as there is a general acceptance of results. While the American Republics can make, and are making, a notable contribution to the effort of codifying international law, they can not change, even with respect to themselves, the rights and duties of other States under international law. They will succeed only as they are able, with a comprehensive view and technical skill, to formulate not their particular doctrines but the law, which rests on the consent of all civilized states. At the Habana conference it was frequently necessary to point out, as, for example, in dealing with the subject of maritime neutrality, that it would be a vain effort to seek to change the general law establishing the rights of all neutrals by a special agreement of the States which were represented at the conference. There may indeed be special cases justifying a limited departure. Thus, Bolivia is without access to the sea, and it was deemed appropriate to provide that in case of war between American Republics neutral States should permit the transportation of war materials through their territory to a State shut off from the sea, provided the neutral States should not consider that their vital interests would be affected by such action.

In codifying international law, the temptation is strong to endeavor to incorporate in the code not the law but a mere political doctrine. Doubtless codification, even in the limited sense, will involve reconciliation of differences in statement and of points of view. But it is quite a different matter to abandon the rules of international law that are well known in order to set up different rules which suit the policies of particular States. New rules may be advisable, but it should be recognized that in proposing them one enters the field of legislation, and success can be had not in showing a past assent but only in obtaining a new accord.

To the work of the codification of international law a political conference is not well adapted. Even jurists as delegates to such a conference may lose their juristic detachment and their allegiance to the law, may yield to their patriotic espousal of the policies which the governments of their countries desire to maintain. Still a code of international law, in order to gain technical force, aside from the weight it may deserve as an exposition, must obtain the approval of governments, and a political conference may be the ultimate means of securing this approval. Before such a conference jurists must do their work with thoroughness and impartiality. And then, as it seems to me, before a final political conference is held to frame projects of conventions, there should be a preliminary conference in which not only distinguished jurists but the foreign offices of governments, through the members of their official legal staffs, should participate so that any conflicting views of the legal advisers of governments may be known and, if possible, brought into harmony before a final political conference is convened. Governments appoint jurists for the preliminary work of drafting, with a complete reservation as to the final attitude they will take as governments. When projects have been drafted they are submitted by each government, I assume, to its technical legal staff, and the views of the latter are most probably incorporated in the instructions to the delegates that deal with the projects. Thus apparent agreements at meetings of commissions of jurists may prove to be illusory in the face of new difficulties raised in foreign offices even as to matters of law. Through preliminary meetings of jurists with the attendance of technical advisers of governments, some, if not all, of these difficulties might be removed. If through such meetings agreements on certain subjects can not be reached, it will in most instances, as it seems to me, be idle to bring such matters to the decision of a political conference composed of delegates chosen with reference to governmental policies rather than for the appropriate formulation of statements of the law. The Habana conference wisely adopted a broad resolution governing further endeavors in codification, and this resolution, as it seems to me, can be availed of to secure the necessary cooperation.

In the field of private international law or what is ordinarily called conflict of laws, an advance of great importance was made at the Habana conference through the adoption, with slight changes of the code of private international law, prepared by Dr. Antonio Sanchez de Bustamante (the president of the conference), as approved by the Commission of Jurists at their meeting at Rio de Janeiro. In view of our system of government in the United States, with our 48 States and our Federal Government of limited powers, the United States could not join in this action, but it viewed with sympathetic interest the efforts of the other American States to obtain legislative uniformity. The Bustamante code was accepted by 18 affirmative votes, with definitive reservations ultimately maintained by Argentina, Brazil, Salvador, and the Dominican Republic. In addition, the conference passed a number of resolutions looking to further studies in this field and took appropriate action to secure the continuance of the necessary preparatory work by the Commission of Jurists. Thus the avenue is open for substantial progress before the next international conference.

The conference approved the proposal of its committee for the creation of an international American commission of women to prepare studies on the subject of the civil and political equality of women, and recommended that the governments of the American States should study and adopt legal measures to concede to women certain rights which they do not at present enjoy in some of the Republics. The resolutions of the fifth conference with respect to the arbitration of commercial disputes were again adopted. It was also recommended that the American States adhere to the conventions of Brussels relating to assistance and salvage of September 23, 1910, to that of naval privilege and mortgage of April 10, 1926, and to that of the limitation of responsibility of shipowners of November, 1922.

### PROBLEMS OF COMMUNICATION

One of the most important achievements of the sixth conference was the adoption of a liberal convention relating to aviation. Inter-American commercial aviation is assured equality of treatment and facilities. On the suggestion of the United States, opportunity was given to the United States and Panama to agree with respect to air routes and terminals so that the Panama Canal may be properly safeguarded without interfering with the legitimate demands of commercial communication. The interest of the United States in adequately protecting the canal at all times and under all conditions was distinctly stated and freely recognized by all. The safeguarding of the canal by the United States is in the interest of all the American Republics.

Resolutions were adopted in relation to the Pan American Railway which, when completed, will connect the cities of the United States with those of South America. Two-thirds of the railway has already been constructed. There were also resolutions as to the construction of the Pan American motor highway through the Isthmus of Panama with two divisions reaching eastern and western South America. Facility in communication will bind us together with the indisoluble ties of multiplying and interrelated economic interests. In the most practical sense, we are just beginning our relations to Latin America.

VARIOUS COOPERATIVE EFFORTS

I wish that it were possible to review the variety of interests which were considered by the conference and the numerous resolutions which were adopted evincing a sincere desire to promote cooperation in every practical way. This was especially manifest in relation to sanitation and to public health problems, and with respect to intellectual cooperation. Action was taken looking to the organization of a Pan American Geographical Institute, to the creation of an American institute of intellectual cooperation, to the promotion of interchanges of professors and students, the establishment of scholarships and special foundations for instruction in Spanish, English, Portuguese, and French, and the study of commercial legislation and of the history of the commercial and diplomatic relations of the American Republics.

There was provision for the calling and organization of a large number of special conferences, for example, of journalists, of commercial associations, of bibliographical experts, of students of pedagogy, of municipalities, and in relation to plant and sanitary control, trademarks, agricultural cooperation, communication statistics, and for many investigations of important subjects. It is through these special conference and studies, rather than through the more spectacular political conferences, that we may look for the most important results of the collaboration, not of the governments, but of the peoples of the American Continent.

CONCILIATION AND ARBITRATION

This subject was reached too late to permit the conference to prepare a convention. An able report was submitted to the committee on public international law by Dr. Ricardo J. Alfaro, of Panama. After a brief discussion all the questions presented were referred to a subcommittee composed of representatives of Brazil, Argentina, Chile, Peru, Colombia, Cuba, Panama, and the United States. The subcommittee under the leadership of its chairman, Dr. Raul Fernandez, of Brazil, proposed the following resolution, which was approved unanimously by the full committee and adopted by the conference:

"*The Sixth International Conference of American States resolves*—

"Whereas the American Republics desire to express that they condemn war as an instrument of national policy in their mutual relations; and

"Whereas the American Republics have the most fervent desire to contribute in every possible manner to the development of international means for the pacific settlement of conflicts between States;

"1. That the American Republics adopt obligatory arbitration as the means which they will employ for the pacific solution of their international differences of a juridical character.

"2. That the American Republics will meet in Washington within the period of one year in a conference of conciliation and arbitration to give conventional form to the realization of this principle, with the minimum exceptions which they may consider indispensable to safeguard the independence and sovereignty of the States, as well as matters of a domestic concern, and to the exclusion also of matters involving the interest or referring to the action of a State not a party to the convention.

"3. That the Governments of the American Republics will send for this end plenipotentiary jurisconsults with instructions regarding the maximum and the minimum which they would accept in the extension of obligatory arbitral jurisdiction.

"4. That the convention or conventions of conciliation and arbitration, which may be concluded, should leave open a protocol for progressive arbitration which would permit the development of this beneficial institution up to its maximum.

"5. That the convention or conventions which may be agreed upon, after signature, should be submitted immediately to the respective Governments for their ratification in the shortest possible time."

The conference also adopted, on the proposal of Mexico, a resolution as follows:

"Considering—

"That the American nations should always be inspired in solid cooperation for justice and the general good;

"That nothing is so opposed to this cooperation as the use of violence;

"That there is no international controversy, however serious it may be, which can not be peacefully arranged if the parties desire in reality to arrive at a pacific settlement;

"That war of aggression constitutes an international crime against the human species:

"*Resolves*—

"1. All aggression is considered illicit and as such is declared prohibited;

"2. The American States will employ all pacific means to settle conflicts which may arise between them."

The subcommittee was of the view, and the full committee decided, that no change should be recommended in the provisions of the Gondra convention which had been adopted at the fifth conference at Santiago. This convention has been ratified by the United States, Brazil, Chile, Cuba, Haiti, Mexico, Paraguay, Uruguay, Venezuela, Guatemala, and Panama. It still awaits ratification by a large number of the signatory States. It provides for the establishment of commissions of inquiry to undertake the investigation of disputes which it has been impossible to settle through diplomatic channels or to submit to arbitration in accordance with existing treaties. The parties undertook not to begin mobilization or concentration of troops on the frontier of the other party, nor to engage in any hostile acts of preparations for hostilities, from the time steps are taken to convene the commission of inquiry until the commission has rendered its report (which must be within a year unless the time is extended by agreement) or until six months after the report, this time being available for renewed negotiations to bring about a settlement. It is hoped that this convention will soon come into force through the necessary ratifications. If a State joins in a declaration condemning war as an instrument of policy and desires to extend the range of arbitral settlement, it would seem reasonable to expect that it at least would ratify the Gondra convention.

Under the resolution of the Habana conference the way is now open for a conference of plenipotentiary jurisconsults to be held in Washington during the current year to prepare an agreement for obligatory arbitration. That conference should have important results. It is apparent, however, from the terms of the resolution that an agreement for compulsory arbitration in all cases is not to be expected. Exceptions were suggested in Doctor Alfaro's report. The resolution of the conference itself suggests "the minimum exceptions" which may be considered indispensable "to safeguard the independence and sovereignty of the States," and the exclusion of "matters of a domestic concern" and also of "matters involving the interest or referring to the action of a State not a party to the convention." These are familiar categories of exception. The phrasing may be regarded as better than the old formula excepting questions affecting "vital interests" and "honor." Any question, however appropriately justiciable, might come under such a description as the last mentioned, which makes an agreement for arbitration an engagement solemn in form but one which might be without force in fact when most needed.

But it should be observed that appropriate exceptions to an agreement to arbitrate, made as definite as possible and relating to matters which the American States would not in any event, consent to arbitrate, are not inconsistent with the renunciation of war as an instrument of national policy. A nation may be unwilling to arbitrate a question which it would have no idea of fighting about, except in self-defense. Domestic questions afford an illustration. This country may refuse to submit controversies over its immigration laws to arbitration, but it has no reason to believe that any question as to the policy of its exercise of authority over such a subject would lead to war. Reservations as to sovereignty and independence, domestic questions, and matters relating to the interest or action of States not parties to the convention are really intended to prevent intrusion and pressure in relation to matters not deemed to be justiciable. Although the right to demand arbitration is denied, complaints may be withdrawn or modified and amicable settlements may be found.

Granted the propriety of such exceptions as the resolution indicates, there still remains a broad opportunity for the arbitration of justiciable disputes lying outside the exceptions, and in this field provisions should be made for obligatory arbitration. Nations which renounce war can not do less than provide this remedy wherever it is practicable. Not to provide it in cases of "international differences of a juridical character," as the resolution phrases it, would be to show slight interest in the practical institutions of peace.

But if we are to have obligatory arbitration of justiciable disputes which are not within excepted categories of a definite character, it will be necessary in this country to have an important advance in policy. Let me recall the history of the past 30 years in relation to this matter. During the Cleveland administration there was a strong public sentiment in favor of a general arbitration treaty between the United States and Great Britain, this being considered a step toward a similar plan for all civilized nations.

The Olney-Pauncefote treaty was signed in 1897, with provisions for compulsory arbitration having a wide scope. This treaty was supported not only by President Cleveland, but President McKinley strongly indorsed it in his annual message, urging its early approval "not merely as a matter of policy but as a duty to mankind." But, notwithstanding the safeguards established by the treaty, the provisions for compulsory arbitration were not approved and the treaty failed. In 1904 Secretary Hay negotiated a number of arbitration treaties. He limited the provision for obligatory arbitration to "differences which may arise of a

legal nature or relating to the interpretation of treaties existing between the two contracting parties, and which it may not have been possible to settle by diplomacy." Even with this limitation, there was the further proviso that the differences should be such as "do not affect the vital interests, the independence, or the honor of the two contracting States, and do not concern the interests of third parties." It was also provided that the parties should conclude a special agreement in each individual case "defining clearly the matter in dispute and the scope of the powers of the arbitrators, and fixing the periods for the formation of the arbitral tribunal and the several stages of the procedure." This provision was amended in the Senate by the substitution of the phrase "special treaty" for "special agreement," so that in every case of arbitration it would be necessary to make a special treaty with the advice and consent of the Senate. In view of this change, Secretary Hay announced that the President would not submit the amendment to the other governments. The Hague conventions of 1899 and 1907 do not make recourse to the arbitral tribunal compulsory. In approving the second Hague convention, the Senate, after repeating the declaration of reservation made on behalf of the United States in connection with the first Hague convention, specifically resolved that the approval of the United States was "with the understanding that recourse to the permanent court for the settlement of differences can be had only by agreement thereto through general or special treaties of arbitration heretofore or hereafter concluded between the parties in dispute," and that the "'compromis' required by any treaty of arbitration to which the United States may be a party shall be settled only by agreement between the contracting parties unless such treaty shall expressly provide otherwise." The arbitration treaties subsequently negotiated by Secretary Root expressly stipulated that the special agreement for each individual arbitration should be made by the President, by and with the advice and consent of the Senate.

In 1911 the Taft administration submitted to the Senate broad arbitration conventions with Great Britain and with France. There was a provision that in case a question arose whether a particular difference was subject to arbitration under the treaty, the issue should be settled by a proposed joint high commission. This provision was struck out in the Senate, which also added a number of limiting reservations. In the amended form the treaties were not acceptable to the administration and remained unratified.

The arbitration treaties recently signed and proposed to take the place of the Root treaties define more precisely the classes of questions to be excepted and also contain the provisions for a special agreement to be made with the approval of the Senate in the case of each submission to arbitration.

It is appropriate, of course, in the case of a submission to arbitration under a general arbitration treaty that there should be a particular agreement, or "compromis," providing the details of procedure in the given case, or that provision should be made for determining these details if the parties are unable to agree. It is also true that the Senate is not likely to refuse approval to a "compromis" under a treaty of compulsory arbitration when the case is not considered as falling within the exceptions, the provision for approval in such a case being deemed to be merely procedural. But it is evident that great importance must attach to the definiteness of the exceptions provided in the treaty, as the more loosely these are stated the greater is the danger that the treaty will be ineffectual to accomplish its purpose, if at the time of dispute there is an indisposition to resort to arbitration. If we are prepared to join in an agreement for obligatory arbitration with the Latin-American States, we should know precisely what it means and have no stipulations which could be regarded as a reservation of the right to refuse arbitration in the cases which lie outside the excepted classes.

I trust that in the interest of our relation to the promotion of peaceful settlement of international controversies, the United States may be in a position to meet her sister Republics of Latin America in the coming arbitration conference with a clear-cut policy for genuinely obligatory arbitration of justiciable questions. Is it not possible to have appropriate exceptions plainly set forth, and in cases which are not within the exceptions, to have the agreement to submit to arbitration in such terms that all parties to it will recognize the obligation as being definite and inescapable? We could make no more hopeful endeavor to cement our friendship with Latin-American countries or to justify the leadership we desire to take in the cause of peace.

In conclusion permit me to give you a few personal impressions of the atmosphere of the conference, of men and methods. The Cuban Government and the Cuban people were most generous hosts. The beautiful and commodious buildings of the university were placed at the command of the conference and every facility was provided for the meetings of committees and for plenary sessions. The visit of President Coolidge was greeted with enthusiasm and President Machado gave lavishly of his time to attest his deep interest in the proceedings. The delegates from the Latin-American countries were men of exceptional ability. Among them were many distinguished jurists. They were men of large experience, with broad knowledge of affairs. It was a high privilege to come into intimate association with men of such character and distinction. Much is made of the differences between the Latin American and the Anglo-Saxon temperaments. The differences undoubtedly exist, but aside from the use of a different language, there was little to distinguish the assembly from those gatherings to which we are accustomed. For the most part the proceedings were direct and without more lost motion than is characteristic of conferences everywhere. I should expect as much prolixity, if not more, in our legislative bodies. Even the barrier of language, I was happy to find, was not a very serious one. A great deal was accomplished in a relatively short time. We had no filibusters.

The atmosphere of the conference was friendly. The constant association of the delegates brought them into fairly close intimacy and they learned to know each other well. This tended to promote esteem and to remove distrust. If there were any cabals, they did not prosper. Peoples can not know each other in the abstract. We judge nations by the men we meet rather than by the books we read. Whatever else may be said of the results of the conference at Habana, representative men met and learned to work together to the advantage of all our countries.

GEORGE HAND, JR.

Mr. MACGREGOR. Mr. Speaker, I call up a privileged resolution, House Resolution 156, from the Committee on Accounts.

The Clerk read the resolution, as follows:

House Resolution 156

*Resolved*, That there shall be paid, out of the contingent fund of the House, to George Hand, jr., son of George R. Hand, late clerk to Hon. CHARLES E. WINTER, an amount equal to six months' salary and an additional sum, not exceeding $250, to defray the funeral expenses of said George R. Hand.

The resolution was agreed to.

EUROPEAN CORN BORER—BRIDGE ACROSS THE WHITE RVER

The SPEAKER laid before the House the following order:

IN THE SENATE OF THE UNITED STATES.

*Ordered*, That the House of Representatives be respectfully requested to return to the Senate the bill (H. R. 12632) entitled "An act to provide for the eradication or control of the European corn borer."

The request was granted.

Also the following order:

IN THE SENATE OF THE UNITED STATES.

*Ordered*, That the House of Representatives be respectfully requested to return to the Senate the bill (S. 3511) entitled "An act granting the consent of Congress to the State Highway Commission of Arkansas to construct, maintain, and operate a bridge across the White River at or near Cotter, Ark."

The request was granted.

ABUSE OF THE FRANKING PRIVILEGE

Mr. ANDREW. Mr. Speaker, I ask unanimous consent to address the House for 15 minutes.

The SPEAKER. The gentleman from Massachusetts asks unanimous consent to address the House for 15 minutes. Is there objection?

Mr. McCLINTIC. Reserving the right to object, Mr. Speaker, I want to ask unanimous consent that I be given five minutes to reply.

The SPEAKER. The gentleman from Oklahoma asks unanimous consent that he may be permitted to address the House for five minutes at the conclusion of the remarks of the gentleman from Massachusetts. Is there objection?

There was no objection.

Mr. ANDREW. Mr. Speaker and gentlemen, yesterday on the floor of the House, when I was not present, the gentleman from Oklahoma used language in my regard which has been described by my fellow Members of the House as discourteous, intemperate, and unseemly. Some of that language has been stricken from the record, although it has appeared in the press. I am not particularly concerned with the character of the language which was used, except in so far as it reflects upon the dignity of the House, because I think more injury results to the reputation for judgment and good taste of the man who utters such opprobrious epithets than to the man against whom they are uttered. I have observed that in the revision of yesterday's RECORD a number of statements in the course of a running colloquy made by my colleagues in my behalf have been eliminated, and I have been informed that they were eliminated without the consent of the Speaker or of those who made the remarks.

Mr. McCLINTIC. Will the gentleman yield?

Mr. ANDREW. Yes; I yield to the gentleman.

Mr. McCLINTIC. I may be wrong, but I have understood that when permission is granted to revise and extend remarks in the RECORD it was wholly within the province of the Member

to take out anything that came from the other side. I may be wrong, but that was my understanding.

Mr. ANDREW. I understood the Speaker to make a ruling some weeks ago that in case of a running colloquy there could be no elimination or change in the colloquy without the consent of the parties concerned and of the Speaker. I am informed by some whose remarks were excised that it was done without their knowledge or consent.

However, I will let that pass. The gentleman from Oklahoma yesterday stated or implied that because of a difference of opinion between him and me on the needs of the Navy I had sought to injure his reputation. I do not feel called upon to comment upon or deny such an attribution of motive on my part, for it seems to me palpably absurd.

The gentleman further said that I had broadcast through the press of the country that he had misused his frank.

That I categorically deny. I have never said publicly or privately that he had misused his frank. In fact, I have said just the contrary. I have not even thought he had misused his frank. I have only felt sympathy for him, because it seemed to me that he had been imposed upon by others, who had so misused his frank.

My colleague stated before the Naval Affairs Committee a few days ago that he had turned over to Frederick J. Libby, the secretary and directing genius of an organization known as the National Council for the Prevention of War, which I believe a few years ago was known as the National Council for Disarmament, or something of the sort, some 20,000 copies of a speech which he made in the House in opposition to the naval construction program, and that this speech was turned over in franked envelopes, which were sealed in the folding room.

Such sealing, I may say, incidentally, as many of you know, is not an hermetical thing. It does not require "steaming" to open them. Such envelopes can be easily unsealed with the thumb, without in any way mutilating the envelope. My colleague was perfectly within his rights as I understand them in turning over these speeches in franked envelopes to Mr. Libby. I have never even in my own mind questioned his right to turn over any quantity of his speeches in envelopes to any organization whatever.

About a fortnight or so ago I received a letter from a veteran of the World War in my part of the country, a man who had a very gallant record in the war, and who on that account was especially interested in our national defense. He said that letters were being received by people in his vicinity from the National Council for Prevention of War, signed by Frederick J. Libby, appealing for funds for carrying on the purposes of that organization, and that these letters had come in a franked envelope. I wrote him at once and asked him to send me an example of such an envelope, with all of the inclosures that it contained. This letter came in due season. The envelope bore the frank of my colleague, who I trust is still my friend, Congressman McCLINTIC, and it contained a four-page speech of the Congressman, which was evidently frankable.

Mr. McCLINTIC. Mr. Speaker, will the gentleman yield?

Mr. ANDREW. I can not yield at present, because I want to tell the story, if I may. It also contained five other documents. It contained, first of all, a letter on the stationery of the National Council for the Prevention of War, signed by Frederick J. Libby, appealing for $100,000 or more to carry on the work of that organization during the present year. Secondly, it contained a subscription card, on which the recipient could pledge the amount of his contribution; third, it contained an envelope addressed to this organization, in which the subscription card could be inclosed and returned; fourth, it contained a pamphlet published by the National Council for the Prevention of War entitled "What Our Backers' Money Did in 1927." In this pamphlet it was stated that during 1927 this organization had distributed more than 1,000,000 pieces of "literature," which had been sent to 13,600 newspapers, to 75,000 ministers, and others; and that on the subject of the Navy construction bill, which had then just been before the House, 350,000 pieces of literature had been distributed against the President's naval program.

It further stated that a budget had been voted for the coming year of $113,000, that a staff of 11 persons was maintained in the two offices in Washington and California, with 7 stenographers, 14 clerks, and 3 speakers in the field. The fifth inclosure in this envelope was a pamphlet of the National Council for Prevention of War, giving the names of their officers and affiliated organizations, which I shall not read to you, their monthly budget and a general appeal for cooperation from the ministers, teachers, grange lecturers, editors, and club leaders of all sorts.

The envelope containing that letter was addressed by a stencil, and Mr. Libby's letter was addressed by the same stencil, as could easily be seen by anyone not a detective, by comparing the spacing of the letters and the defects in the type. It was evidently addressed by such a stencil as is used in an addressing machine. I will go further and say that this letter could not have been addressed in or sent from the office of my colleague the gentleman from Oklahoma [Mr. McCLINTIC] because the name that was stenciled on the letter and on the envelope was the name of a man who does not exist, except in the correspondence files of the National Council for Prevention of War. This World War veteran of whom I have spoken wrote me that for some time, with a desire to find out what kind of propaganda was being sent out to the press, to clergymen, and others throughout the country by the National Council for Prevention of War, propaganda against the foreign policy of the United States and against its policy of national defense, had corresponded with Mr. Libby under a fictitious name, giving, however, his own home address. The envelope and the letter were addressed to this fictitious name. I will say, further, that if I did not altogether trust the disavowal of my colleague Mr. McCLINTIC in this regard, that this fact alone would be sufficient to prove that Mr. McCLINTIC had nothing to do with the addressing of the envelope or the addressing of the heading of the letter which it contained.

About a week ago by accident there came into my office a distinguished Boston lawyer, who was pleading before the Supreme Court. He came to my office for another purpose. By hazard I asked him if, by any chance, he knew this veteran who had written to me. He replied, "I know him very well; I have known him for 10 years or more. He is a man entitled to every consideration and confidence, a keen, intelligent, and energetic young man." I asked this lawyer, knowing that this case would soon be under discussion, if he would not, when he returned to Boston, get in touch with the veteran and ask him to send a sworn affidavit, stating exactly what he had written to me.

And this he did, and I have here his affidavit. I should like to read this affidavit to the House, or have it read, because my colleague, I think unintentionally, stated yesterday that "he," meaning me, quoting from the RECORD, stated—

> he did not know where it came from; that it was apparent he did not know whether it came from a white man or a black man; he did not know whether the man was sufficiently educated to know its contents; he did not know whether it had ever been read to him before it was presented to him for his signature.

Of course, I never said anything of the sort, and it is on that account that I have tried to explain, with perhaps more detail than I should, the circumstances under which this matter came to my attention and how the affidavit happened to be written. With your consent, I will read this affidavit, which was sworn to before the Boston lawyer of whom I have spoken, Mr. Judson Hannigan, who is a notary public. I read:

AFFIDAVIT OF HAROLD M. WEEKS

On this 20th day of April, 1928, at Boston, Mass., personally appeared before me Harold M. Weeks, a citizen of the Commonwealth of Massachusetts, to me personally known for more than 10 years as a person of good moral character and of good reputation for truth and veracity, and made and signed the statement hereinafter following in my presence after having been sworn as follows: "I solemnly swear that the statement hereinafter made and by me subscribed is true; so help me God."

(Signed) JUDSON HANNIGAN,
*Notary Public.*

---

SWORN STATEMENT OF HAROLD M. WEEKS

On or about March 29, 1928, there was delivered to my home at 101 Oakland Street, Wellesley, Mass., by a United States postal carrier, a long brown-paper envelope of the size and style sometimes employed by Congressmen in distributing copies of speeches to their constituents, and bearing in its upper right-hand corner the congressional frank of Congressman McCLINTIC. There was no postage stamp upon the envelope. The envelope bore the address "John Weeks, 101 Oakland Street, Wellesley Hills, Mass." This is the name under which for a period of several years I have received propaganda distributed by the National Council for the Prevention of War, whose offices are in Washington, D. C., and which is principally directed against the defense policies of the Federal Government.

The envelope was sealed. I broke the seal and took therefrom the following documents:

Pamphlet. What Our Backers' Money Did In 1927.

Pamphlet. What is the National Council?

Pledge card of the National Council for the Prevention of War.

Return envelope addressed to the same organization.

A speech directed against the naval shipbuilding program by Congressman McCLINTIC, of Oklahoma.

Letter signed by Frederick J. Libby, of the National Council for the Prevention of War.

On the same day I wrote Congressman ANDREW a letter about the instant use of the frank. As a result of a reply from him, I sent him the envelope and inclosures above referred to.

(Signed) HAROLD M. WEEKS.

I hereby certify that the statement hereinbefore set out is the statement to which the said Harold M. Weeks made oath and subscribed his name.

(Signed) JUDSON HANNIGAN,
*Notary Public.*

Witness to oath and signatures of Harold M. Weeks and Judson Hannigan:

MARIE T. MONTAGNE.

The SPEAKER. The time of the gentleman from Massachusetts has expired.

Mr. ANDREW. Mr. Speaker, I ask unanimous consent to proceed for 10 minutes more.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. McCLINTIC. I would like to ask the gentleman just one question there.

Mr. ANDREW. I do not want to argue, but I will answer a question for information. But first let me finish this.

Mr. HASTINGS. It has been represented that a very large amount of similar literature has been sent out by this organization and that my colleague [Mr. McCLINTIC] had turned over to this organization a very large number of speeches. Now, is it charged that anyone else has received literature of this character under the frank of Mr. McCLINTIC? I can understand that where an organization has speeches of his, where some of the envelopes came unsealed and a large amount of literature is being sent out, it could be done through a mistake. Hence I think it is very important to know whether or not it has been brought to the attention of any member of the committee or any Member of the House that a very large number of these documents under the frank of my colleague Representative McCLINTIC was sent out?

Mr. ANDREW. I will say to the gentleman this, that I have been informed that others have been received; but I have no other affidavit at the present moment.

Mr. HASTINGS. I want to say this, that——

Mr. ANDREW. I do not care to discuss that. The matter has all been turned over to the Post Office Department, under instructions of the Naval Affairs Committee, for investigation.

Mr. HASTINGS. No member of the Committee on Naval Affairs has any direct information that the frank was improperly used other than in this particular case?

Mr. ANDREW. I have been told of others who have received them, but I can not give you the specific information at this time.

Mr. RANKIN. Mr. Speaker, will the gentleman yield right there?

Mr. ANDREW. All I want to add is, if you have followed what I have tried to say, that I intended to make it clear that in my judgment my colleague is exonerated from participation in anything that was illegal. He only did what we have all done from time to time; that is, turned over to individuals and to organizations who asked for them certain quantities of speeches in envelopes.

Mr. HASTINGS. Mr. Speaker, will the gentleman yield again?

Mr. ANDREW. Please wait a moment, until I have finished what I started to say.

The matter came before the Committee on Naval Affairs two or three days ago, and the committee voted to turn it over for investigation to the Postmaster General; and that has been done, and I have here a copy of the letter of transmittal, which I should like to have read into the RECORD at the end of my remarks.

Mr. McCLINTIC. Mr. Speaker, will the gentleman yield?

Mr. ANDREW. Certainly.

Mr. McCLINTIC. I would like for the gentleman to say whether or not he was advised to see me concerning this subject before the publicity was given out.

Mr. ANDREW. I regret as much as the gentleman or anyone else could regret that the publicity occurred. I intended and hoped to see you before there was any public discussion of the matter. I called you on the telephone, and I remember stopping you in the Hall one day and said that I wanted to see you, but you were hurrying to meet some one at lunch.

Mr. McCLINTIC. And if you had followed the usual practice and had advised me or come to see me there would not have been any publicity such as has occurred. Members of Congress should have the proper respect for each other, and especially those who serve together on the same committee. In view of the fact that it has brought about a lot of controversy, why did you not introduce a resolution giving some committee authority to bring witnesses in here and go to the bottom of it? I have never defended any organization that violated the law.

Mr. ANDREW. I am in accord with the spirit of the gentleman and I should like to see it done. I can say to the gentleman that I am as averse to any publicity as he is, and as is the man who brought my attention to these facts, because he said he did not want to be brought into a controversy, and he asked that his name be not mentioned. I regret the controversy as much as you do. But in some way these things slip out. I was called up one day by a correspondent who already had the story. I had spoken to only a few people about this, and in confidence, with the idea of finding what would be the best method of procedure. I had tried to see the gentleman and expected to talk the matter over with him before arriving at any decision. Then suddenly and without intention on my part the story appeared.

Mr. RANKIN. Will the gentleman yield?

Mr. ANDREW. Yes.

Mr. RANKIN. Did I understand the gentleman to say that the man who made this affidavit had been parading under an assumed name and had been receiving literature under an assumed name for 10 years?

Mr. ANDREW. I did not say "parading," nor "10 years."

Mr. RANKIN. Well, for some time?

Mr. ANDREW. I think so; yes.

Mr. RANKIN. That he had been receiving this literature under an assumed name for some time?

Mr. ANDREW. Yes; at his own address.

Mr. RANKIN. But had withheld his name?

Mr. ANDREW. Withheld his name from whom?

Mr. RANKIN. He had withheld his name from the people from whom he was getting this literature?

Mr. ANDREW. Yes; that is true. It was probably the only way he could get all of the information without attracting the suspicion of some of Mr. Libby's numerous agents.

Mr. RANKIN. Does not the gentleman think we are going far afield when we take the affidavit of a man who admits he has been parading under an assumed name, when he alleges one instance of the violation of the franking privilege?

Mr. ANDREW. I will leave that to the gentleman's judgment. I have told, as frankly as I could, the story as I know it. I feel it is a matter of serious consideration if the Government frank is used to collect money for any purpose, whether that purpose be to undermine the national defense or to disparage the foreign policy of this Government, as was the case in the use of the frank by Mr. Libby and the National Council for the Prevention of War, or for any other purpose. That is all I care to say to-day on the matter. [Applause.]

The letter sent to the Postmaster General, to which I have referred, is as follows:

APRIL 26, 1928.

To the POSTMASTER GENERAL,
*Washington, D. C.*

SIR: I am instructed by the House Committee on Naval Affairs to ask you to investigate the misuse of the franking privilege by Frederick J. Libby, executive secretary of the National Council for Prevention of War, as indicated in the affidavit and accompanying documents inclosed herewith. The committee, believing that the Post Office Department has jurisdiction in these matters, desires that a full investigation be made, and if this investigation establishes that the facts are as stated that appropriate action be taken in the courts or otherwise.

The affidavit signed and sworn to by Harold M. Weeks, of 101 Oakland Street, Wellesley Hills, Mass., affirms that Mr. Weeks received through the mail on or about March 29, 1928, a sealed and unstamped envelope bearing the frank of Congressman McCLINTIC and containing along with a speech of Congressman McCLINTIC's, which, of course, was frankable, five other documents which were not frankable. The envelope and the six inclosures are forwarded herewith. They include—

1. A letter on the stationery of the National Council for Prevention of War signed by Frederick J. Libby appealing for $100,000 or more to carry on the work of that organization.

2. A subscription card on which the recipient could pledge the amount of his contribution.

3. A return envelope addressed to the same organization.

4. A pamphlet published by the National Council for Prevention of War entitled "What Our Backers' Money Did in 1927," in which it is stated that during 1927 "more than 1,000,000 pieces of literature" were sent to 13,600 newspapers, 75,000 ministers, and others; that "350,000 pieces of literature" against the President's naval program alone were distributed; that a budget of $113,000 has been voted for 1928; and that a staff of 11 persons in their two offices in Washington and California, with 7 stenographers, 14 clerks, and 3 "speakers in the field" is being maintained.

5. A pamphlet of the National Council for Prevention of War giving the names of their officers and affiliated organizations, their monthly budget, and a general appeal for cooperation on the part of "ministers, teachers, editors, club leaders of all sorts, grange lecturers," etc.

The committee accepts without question the statement of Mr. McCLINTIC that the 20,000 franked envelopes containing his speech, which he placed at Mr. Libby's disposal, inclosed nothing else when turned over, and that this particular envelope with its inclosures was neither addressed in nor sent from the Congressman's office. That it was sent from the Libby offices would seem to be indicated by the fact that the address on the envelope and upon the heading of Mr. Libby's letter, which even a casual examination shows to have been printed from the same stencil, bore the name of a man who does not exist outside of the correspondence files of the National Council for Prevention of War. The signer of the affidavit, Mr. Harold M. Weeks, has used this name of John Weeks at his home address in Wellesley Hills, Mass., for several years in correspondence with the Libby organization for the purpose of keeping informed as to its propaganda against the defense policies of the National Government. Such being the case, the name and address on Mr. Libby's letter and on the envelope could only have been furnished by the National Council for Prevention of War.

It, of course, does not concern the Post Office Department that much of the so-called "literature" emanating from Mr. Libby's office is a tissue of deception, concealment, and misrepresentation, calculated to disparage the foreign policies of the American Government or to place hindrances in the way of our national defense. * * * But the Naval Affairs Committee of the House believes it clearly within the province of the Post Office Department to examine into such misuse of a Congressman's frank as seems indicated by the affidavit and inclosures transmitted herewith.

The signer of the affidavit writes that "he has made a sworn statement of the facts of the receipt by him of this franked envelope and its contents fully cognizant that if perjury was committed by him in so doing, he would go to jail."

The House Naval Affairs Committee turned over these documents with the request that the matter be promptly and thoroughly investigated and appropriate action taken.

Yours very truly,

A. PIATT ANDREW.

Mr. McCLINTIC. Mr. Speaker and Members of the House, the gentleman from Massachusetts could have avoided all of this controversy if he had done that which he was advised to do, namely, to see me before allowing this matter to receive a lot of undesirable and unnecessary publicity. He and I view this situation in the same way. We are not apart. He has made a very nice speech before this House, and I regret exceedingly that he did not follow certain suggestions that were made by men high up in his party council, and then I would have joined him in any way that is possible for the purpose of making an investigation. I am hoping that he will introduce a resolution so that we may go to the bottom of this thing, and if anybody has violated the franking privilege he ought to be censured in the very strongest terms possible, and I will not hesitate to do so.

Mr. ANDREW. Will the gentleman yield?

Mr. McCLINTIC. Yes.

Mr. ANDREW. I understand that the gentleman from Minnesota [Mr. MAAS] has introduced a resolution looking toward a general investigation along this line.

Mr. McCLINTIC. Will the gentleman support it?

Mr. ANDREW. I have told the gentleman all along that I would support it.

Mr. McCLINTIC. I will gladly join the gentleman. In my section of the country we do not give much credit to the kind of affidavit you have filed with the Post Office Department for the reason this person admits he has been living under an assumed name or carrying on a correspondence under an assumed name. I can not conceive of any reason why an honest man finds it necessary to deceive anyone, and if I were the Post Office Department investigators, I certainly should view with suspicion an affidavit of this kind when it is not supported by testimony from any other source. If my franking privilege has been violated and there was an intent on the part of those responsible, then others throughout the Nation would have received this same kind of literature as is complained of in the affidavit filed by the gentleman from Massachusetts [Mr. ANDREW].

Mr. ANDREW. Will the gentleman yield?

Mr. McCLINTIC. Yes.

Mr. ANDREW. I want to say on behalf of this veteran that he has not been living under an assumed name in any way.

Mr. McCLINTIC. Then I misunderstood the gentleman.

Mr. ANDREW. He has not been living under an assumed name. The only way in which he has ever assumed a name has been in correspondence with the National Council for the Prevention of War, and if he had not done so I think they would have found out that he was not a pacifist, but one who by his life and example evidenced his belief that our country must be prepared to defend its rights, the lives of its citizens, and its national policies. As soon as they found out that he would not have gotten their literature. His purpose was patriotic, and I can not see anything objectionable in his method.

Mr. McCLINTIC. In reply to the gentleman, it would seem that an organization that seeks to prevent war would be glad to have an opportunity to correspond with any person concerning this subject; anyhow, whether a person was named Jones, Smith, or Brown would have nothing to do with covering up his identity; therefore it does not seem to me that the explanation given in this connection has very much merit.

I want to say to the House that in view of the fact that the gentleman from Massachusetts has to-day exonerated me from any blame in any way in connection with the alleged charge of abuse of my franking privilege, I regret exceedingly that I felt it was necessary yesterday to make a speech in which I severely criticized him and the attitude he took in this matter. [Applause.]

I sincerely hope that it will not be necessary to take up any more of the time of this House speaking on this subject. I should prefer that a special committee be authorized with full power to look into every phase of the franking privilege; however, in view of the fact that this subject is to be considered by the Post Office Department, I desire to call attention to a letter which I have this day addressed to the Hon. Harry S. New, Postmaster General:

APRIL 27, 1928.

The Hon. HARRY STEWART NEW,

*Postmaster General, Washington, D. C.*

DEAR SIR: According to a statement published in the United States Daily under date of April 27, 1928, Congressman A. PIATT ANDREW has filed with you a copy of an affidavit and certain other inclosures which seek to substantiate the claim that my franking privilege has been violated and requests that a full investigation be made.

In this connection I desire to say that from the beginning of this controversy up to the present time I have repeatedly asked that a full investigation of this subject be made. Every record in my office is available for the use of any inspector that may be assigned to this case, and, in addition, I shall be glad to cooperate with your department in every way possible.

In the consideration of this matter I desire to have the department carefully consider the following facts:

(1) The envelopes and the speeches were printed at the Government Printing Office and were frankable matter;

(2) They were sealed by House Office Building folding room employees under Government supervision;

(3) After being sealed they were transported by the Post Office Department from the House Office Building to the office of the National Council for the Prevention of War to be addressed;

(4) For the reason that all of the envelopes had my name printed in the upper right-hand corner, such as were not delivered came back to my office, and myself and my secretary will testify that the several hundred which were opened contained nothing in them but the frankable matter, and it would seem that if the franking privilege had been violated some of the returned envelopes would have contained the unfrankable data;

(5) In addition, when this charge was first made, I carried over to the House of Representatives all of the unopened envelopes in my possession, and while delivering a speech I had an employee open the same in the presence of the Members of Congress for the purpose of finding out whether or not any of them contained extraneous matter, and no irregularities were found;

(6) I have made several speeches on this subject, and in each case have requested the opportunity of being confronted with any witness who claimed to have found extraneous matter in my franked envelope, and when an attempt was made to have this matter investigated by the Naval Affairs Committee I offered to pay the railroad fare of the one witness who filed an affidavit alleging misuse of my frank if those interested in the subject would bring him to Washington;

(7) The National Council for the Prevention of War makes the statement that several days after my sealed franked envelopes were mailed out a second letter, containing proper postage, was mailed to the same persons inclosing literature and other communications which were not frankable; therefore the same persons received both of these communications, and it would have been an easy matter for an unscrupulous individual to take the unfrankable matter, place it in my envelope, and mail the same to some Member of Congress, claiming that he had received it under my frank;

(8) To me it is inconceivable that an organization employing a number of persons would attempt to unseal by steaming or otherwise a lot of franked envelopes for the purpose of avoiding the payment of

postage; therefore the interrogating of those who looked after the mailing of these two classes of mail would seem to be advisable;

(9) The gentleman who presented the charge in this connection, Mr. A. PIATT ANDREW, in a speech to-day said, in substance, that the person who made this affidavit admitted that he had been corresponding with this organization for a number of years under an assumed name; that he did it for the purpose of finding out what was going on without allowing his identity to be known; and that such mail came to him under a name that was not his own. A perusal of the House debate to-day will show that Members of Congress have expressed themselves as having no confidence in this type of an individual;

(10) If this franking privilege has been violated, then your departmental investigators should be able to find others who received extraneous matter in my envelope, for if they do not, then the majority of the Members of Congress will feel that this is a trumped-up charge for the purpose of satisfying the enmity of the person who admits deception with respect to the correspondence he has been carrying on with the National Council for the Prevention of War; and

(11) I am going to suggest that your investigators secure from the National Council for the Prevention of War the mailing list that was used in this connection with respect to the State of Massachusetts, so that others who received the franked envelope may testify as to whether or not it contained anything that was not frankable.

In conclusion I desire to say that I would not hesitate to censure any organization that would abuse my franking privilege; neither would I ever permit anyone to be wrongfully accused of violating a law when there is sufficient testimony in the CONGRESSIONAL RECORD and elsewhere to show an animosity which may be construed to be of a nature that would cause a person to do a particular thing, having in mind the injurying of such an organization that is wholly out of line when it comes to his views on the subject of national defense. Therefore I respectfully request that this investigation be proceeded with as promptly as possible.

Very truly yours, J. V. MCCLINTIC, M. C.

Mr. LAGUARDIA. Mr. Speaker, I ask unanimous consent to address the House for five minutes.

The SPEAKER. The gentleman from New York asks unanimous consent to address the House for five minutes. Is there objection?

Mr. ASWELL. Mr. Speaker, I want to serve notice that after this speech I shall have to object.

The SPEAKER. Is there objection?

There was no objection.

Mr. LAGUARDIA. Mr. Speaker, I believe that every Member of the House has a high regard for the post office. The Post Office Department renders a great public service. It does its work well. There is not a better set of employees cleaner and more loyal than the men and women in the Postal Service throughout the country. I rise this morning to protest against other departments seeking to misuse the Postal Department. The duties and functions of the post offices and postal employees are well defined by law. I have here in my hand an original letter sent out by a prohibition director which seeks to make use of the Post Office Department, or rather, let me say, to misuse the post office and its employees to do some snooping, spying, and some dirty work for the prohibition department. We do not want the post office employees to be contaminated by any prohibition administrator. The prohibition administrator of Pittsburgh is making use of the Post Office Department to spy upon prospective jurors in the Federal courts and to have postal employees, as well as other sources, obtain private, personal, political, religious, and family information concerning men who are to serve as jurors in the Federal court of the western district of Pennsylvania. I charge specifically that this information is sought for no good, valid, or lawful purposes. It is sought in order to be able to coerce the judgment of jurors or otherwise improperly use the information in order to influence the judgment of these jurors. First let me read the letter:

(Office of prohibition administrator, western judicial district of Pennsylvania and State of West Virginia)

TREASURY DEPARTMENT,
UNITED STATES PROHIBITION SERVICE,
*Pittsburgh, Pa., April 23, 1928.*

DEAR SIR: This office is very anxious to know something about the caliber of men who have been drawn for petit jury service for the May term of the United States district court, beginning Monday, May 21, 1928, at Pittsburgh.

Inclosed are forms to be filled out regarding the jurors belonging to your post-office district. Would you be good enough to furnish the information desired and return the forms to us at the earliest date possible?

We will greatly appreciate your favor.

Yours very truly,

JOHN D. PENNINGTON,
*Federal Prohibition Administrator.*

Now I will read the questionnaire referred to in the commissioner's letter and inclosed therein. I will say that each questionnaire contains the name and address of a juror drawn for petit jury service in the western district of Pennsylvania for the May term. Then each questionnaire contains a number, which I believe is for the purpose of identifying the source from whence the questionnaire is returned. I have purposely deleted the number and the name in the original which I have, but, of course, I will be glad to show the original to any of my colleagues. Now let me read the questionnaire:

1. Name (deleted by Mr. LAGUARDIA).
2. Address (deleted by Mr. LAGUARDIA).
3. Education.
4. Age.
5. Approximate wealth.
6. Occupation (deleted by Mr. LAGUARDIA).
7. If in business for himself, what business?
8. If employed by others, by whom?
9. If employed by a firm or corporation, who is his immediate superior or boss?
10. To what lodge does he belong?
11. To what church does he belong or attend?
12. Has this man ever been involved in any litigation?
13. Has this man ever been reported to have been in any crooked or shady transactions?
14. Is he a drinking man?
15. What friends, if any, does this man have among lawyers?
16. To what political party does he belong?
17. Who are the political friends of this man?
18. Do you know if any particular person controls or influences his vote, and if so whom?
19. What attitude does he have toward railroad corporations?
20. As to liquor questions:
    1. Is he dry?
    2. Is he wet?
21. How many children has he?
22. How many daughters and what are their ages?
23. In your opinion, would he make a good juror?

No. (number deleted by Mr. LAGUARDIA).

The House will note some very significant and pertinent questions. Some of the information which the prohibition administrator of Pittsburgh seeks to obtain I submit to every lawyer of the House would be improper to ask of the jurors by litigants in the courtroom. After all, in a court of justice the prohibition administrator and his office have no greater standing than any other litigant. Please note some of the questions and the information which the prohibition administrator is tabulating on each juror serving in the Federal court. After asking information concerning education and age, he asks as to the "approximate wealth." Every lawyer knows that question could not be asked of a juror in seeking to qualify or disqualify him at the trial of a case. Then asking as to the juror's business connections, it is sought to ascertain "who is his immediate superior or boss." Now, gentlemen, get this:

To what lodge does he belong?
To what church does he belong or attend?

What is the purpose of those two questions? Then there is this question—please give attention to these three questions:

To what political party does he belong?
Who are the political friends of this man?
Do you know if any particular person controls or influences his vote, and if so whom?

Not only through this spying and snooping system is it sought to ascertain the political affiliation of the juror, but also to what particular faction within the party he belongs and just who his political friends are. Do you gentlemen think that these questions are asked out of idle curiosity? Not at all. I charge that this information is sought not for the purpose of law enforcement, but of law evasion. Everybody knows that bootlegging has become political patronage in the city of Pittsburgh. Apparently Pennington wants to make sure that the political faction that he is playing with does not send any of their own henchmen to jail. [Laughter.] On the other hand, when he goes into the details as to just who are the juror's political friends, just who influences his vote, he can not escape answering the charge that a hand-picked jury of this kind could be used to hit and hit hard all who do not happen to be in right with a particular political group within a party.

Now, let me read one more question—

What attitude does he have toward railroad corporations?

Why that question? Why, surely, the administrator wants to make sure that juries will not commence prying into the affairs of railroad companies in Pennsylvania. Seemingly it is un-

lawful for anyone to transport liquor in Pennsylvania except railroad corporations. I make this statement because some of you will recall that when the predecessor of the present prohibition administrator in Pittsburgh was in office I charged right here on the floor of this House that besides his Government salary he was being paid by a railroad corporation in order to keep him on that job. I pointed out then that the mere fact that he accepted this extra pay from the railroad corporation was in violation of the law, and I then submitted the facts to the Attorney General, and asked for an indictment. I then pointed out that during his administration there were no investigations of railroads violating the prohibition law and there were no indictments.

I have prepared and shall introduce resolutions of inquiry calling upon the Post Office Department to inform this House how many of its employees and how much time has been given to do this work for the prohibition administrator of Pittsburgh. I shall also call upon the Comptroller General of the United States to demand upon what authority of law money appropriated for the Postal Service can be used by the Prohibition Department for unlawful and disgraceful purposes. I shall introduce a resolution demanding to know whether or not the prohibition administrator of Pittsburgh acted on orders or else with the knowledge and consent of the Secretary of the Treasury, and I shall introduce a resolution calling upon the Attorney General to make an explanation in this matter. That is all I have to say now. More later. [Applause.]

MINORITY VIEWS ON H. R. 6518

Mr. BACHMANN. Mr. Speaker, as a member of the Committee on the Civil Service, I ask unanimous consent to file minority views in reference to H. R. 6518, known as the Welch bill.

Mrs. ROGERS. Mr. Speaker, reserving the right to object, I would like to ask the gentleman a question. Is it true that certain salaries were decreased in this bill, because I feel sure it was not the understanding of the committee that any salaries would be decreased, and it would be manifestly unfair if we had recommended that any salaries be cut.

Mr. BACHMANN. In reporting the Welch bill, the committee struck out the recommendations of the Bureau of the Budget for four additional grades in certain branches of the service, thereby automatically decreasing the salaries of employees in the present grades of those branches. These decreases will range as high as $1,500. That is, in part, what is set forth in this minority report.

Mrs. ROGERS. And the report explains that?

Mr. BACHMANN. This report covers that.

Mr. LAGUARDIA. Otherwise the gentleman is in favor of what increases we can get now?

Mr. BACHMANN. Provided the provision recommended by the Bureau of the Budget asking that employees in the upper grades be increased to the amount of $9,000 is agreed to in accordance with their recommendation.

Mrs. ROGERS. I also favored the increases in the upper grades.

Mr. WOODRUM. Will the gentleman yield?

Mr. BACHMANN. Yes.

Mr. CRAMTON. Mr. Speaker, I ask for the regular order.

Mrs. ROGERS. Mr. Speaker, I withdraw my objection.

Mr. WOODRUM. I hope the gentleman will not demand the regular order.

Mr. CRAMTON. This bill is not before us for debate. The farm relief bill is before us now.

Mr. WOODRUM. Then, I object to the request.

Mr. BACHMANN. I hope the gentleman from Virginia will not object. The gentleman knows I reserved the right in committee day before yesterday to file these minority views. The gentleman himself is a member of the Civil Service Committee.

Mr. MADDEN. The gentleman has the right to file his report.

Mr. BACHMANN. The majority report has been filed.

Mr. WOODRUM. I reserve the right to object simply to clear up a little matter that will only take a second. The gentleman does not mean to leave the impression on the House, in answering the question of the lady from Massachusetts [Mrs. ROGERS], that the committee intentionally decreased any salaries?

Mr. BACHMANN. I want to leave the impression on the House that the committee unintentionally decreased these salaries.

Mr. MADDEN. Regular order, Mr. Speaker.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

ORDER OF BUSINESS

Mr. TILSON. Mr. Speaker, I ask unanimous consent that in the consideration of the farm relief bill this afternoon it shall be in order to move to take a recess until 8 o'clock this evening and that only general debate shall be in order between the hours of 8 o'clock and not later than 11 o'clock this evening; and that whatever time is thus used in general debate shall be divided in the same proportion as is provided in the rule.

Mr. KINCHELOE. Reserving the right to object, Mr. Speaker, is this with the understanding that the time used in general debate will not be taken out of the 12 hours?

Mr. TILSON. It will not be taken out of the time under the rule, but is to be in addition and shall be divided in the same proportion as is provided in the rule.

The SPEAKER. The gentleman from Connecticut asks unanimous consent that it shall be in order this afternoon to move that the House take a recess until 8 o'clock, the time between 8 o'clock, and not later than 11 o'clock, to be controlled equally between the gentleman from Iowa and the gentleman from Louisiana, such time not to be taken from the time for general debate provided under the rule.

Mr. HASTINGS and Mr. CRAMTON rose.

Mr. HASTINGS. Is it the purpose to move along about 5 o'clock or about the usual time that the committee rise?

Mr. TILSON. I would so understand, but it would be in order at any time for the chairman of the Committee on Agriculture to move to rise.

Mr. HASTINGS. But that is what is in contemplation now?

Mr. TILSON. That is what is in contemplation now; yes.

Mr. CRAMTON. Reserving the right to object, will it be understood that when the committee does rise in the evening that no other business of any kind will be transacted in the House except to adjourn?

Mr. TILSON. That is my request, that no business will be transacted except general debate on the farm relief bill.

Mr. KINCHELOE. Reserving the right to object, the Speaker stated that the time was to be divided equally between the gentleman from Iowa for the bill and the gentleman from Louisiana against the bill.

Mr. TILSON. This is the wording of the rule.

Mr. KINCHELOE. But it is with the understanding that it will be divided in the same proportion that the 12 hours has been divided?

Mr. HAUGEN. Yes; I will yield half of my time to the gentleman from Texas.

Mr. CRAMTON. Further reserving the right to object, if I can have the attention of the gentleman from Connecticut, my question does not seem to have been understood by others around me. I would like to have a definite understanding, that after the committee rises there will be no other business transacted in the House except to adjourn.

Mr. TILSON. My request is that no other business shall be in order except general debate on the farm relief bill.

Mr. OLIVER of Alabama. Do I understand that after the committee rises this afternoon, and before the House continues to recess, there will be no other business transacted?

Mr. TILSON. No; that is not exactly the understanding. A parliamentary inquiry, Mr. Speaker.

The SPEAKER. The gentleman will state it.

Mr. TILSON. Would it be in order for the committee to take a recess?

The SPEAKER. The Chair thinks that would be in order by unanimous consent.

Mr. TILSON. Then I ask unanimous consent that it may be in order for the Committee of the Whole to take a recess instead of the House taking a recess.

Mr. CHINDBLOM. That would be giving the committee the power to pass on a recess. I think that is a dangerous practice. I think the House should direct the recess and not permit the committee to pass on the question. It is in violation of the rules and all precedents that have ever occurred.

The SPEAKER. The Chair thinks the House can make such an order by unanimous consent.

Mr. GREEN. Mr. Speaker, reserving the right to object, I would like to call the attention of the Agricultural Committee to the urgency of at once calling a meeting and bringing out suitable legislation for the relief of the farmers in southern Alabama, Georgia, and Florida in the recent flood in the way of buying seed and fertilizer.

The SPEAKER. Is there objection to the request of the gentleman from Connecticut.

There was no objection.

THE AGRICULTURAL SURPLUS CONTROL BILL

Mr. HAUGEN. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill (S. 3555) to establish a Federal farm board to aid in the orderly marketing and in the control and disposition of surplus agricultural commodities in interstate and foreign commerce.

The motion was agreed to.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union, with Mr. MAPES in the chair.

The Clerk read the title of the bill.

Mr. HAUGEN. Mr. Chairman, I yield to the gentleman from Illinois [Mr. WILLIAM E. HULL].

Mr. WILLIAM E. HULL. Mr. Chairman, the farmer thinks that Congress has done something for every other industry except agriculture. He believes that he has been sinned against and that no one has been his protector. He believes that the Congress of the United States has not been diligent in supporting some measure for his benefit.

The Republican Party in 1924 said in their platform on agriculture:

> We recognize the agricultural activities are still struggling with adverse conditions that have brought deep distress. We pledge the party to take whatever steps are necessary to bring back a balanced condition between agriculture, industry, and labor, which was destroyed by the Democratic Party through an unfortunate administration of legislation passed as a war measure.

The Republican Party should stand by this pledge, but the Republican Party should be no more responsible for farm legislation than the Democratic Party, because agriculture throughout this Nation covers a territory that is dominated by both parties.

In the Central West and the West the Republican Party controls. In the South, a large agricultural area, the Democratic Party is in power, and therefore this should not be a political measure; it should be one in which the Democratic Party and the Republican Party could unite and clasp the hands of friendship together in order to bring about a relief to agriculture.

We have one man in these United States of America who has been more prominent, more sincere, and more dominant than any other individual in the country for the relief of agriculture. He is a man of great political prominence, a man of great wealth, a man of great ability, with a sincerity that can be questioned by no one. In spite of his great wealth he has given his sincere support to this campaign for relief for no other purpose than to help his fellow man, the agriculturist. He said to me:

> Whether I am President or not matters little; I owe to the agricultural industry of the Nation my support for its relief.

This man is no other than Frank O. Lowden, of the State of Illinois. And, in order that I may bring before the Congress of the United States a few of his thoughts, I am going to quote him in several instances.

Frank O. Lowden said:

> The discussion over the farm situation has reached a new stage. It is being seen that it is not only the farmer who is involved. The business world is now viewing the problem as one in which business is vitally interested.

No one can doubt but what these words are words of truth; no one can doubt the fact that the business interests of this Nation are dependent upon the success of agriculture; no one can but say that if the agriculture of the Nation is destroyed or allowed to lapse, business will immediately feel the effect. If we are to keep up the prosperity of the Nation and go along as we are at the present time, it is absolutely necessary to keep the farmer in a position where he can pay his bills, where he can purchase the products that are manufactured in this country, where he can furnish the sinews that are carrying on to the factured products.

great manufacturing centers, by being able to buy the manu-

This country can not export its manufactured products on account of the high standard of living, thus creating a high price for the labor of the Nation. And therefore it is necessary for this country to develop itself and to be prosperous within itself, so that the factories can be kept running by the purchases made in the rural sections of the country. Frank O. Lowden has sent a message to the industrial section of this country—a word that should be heeded by those interested in industry.

I again quote Frank O. Lowden as follows:

> Nor am I unmindful of the great body of consumers of farm products. They are already paying in most instances as much and in many instances more than they should for the products of the farm. The trouble with the present system of marketing and distribution is that too small a part of what they pay goes to the producer and too large a part is absorbed in the cost of distribution.

It is not hard for any layman to analyze this statement, because we all know that the cost of distribution of farm products is away beyond what it should be. For instance, I will take apples that are raised in Washington and Oregon and shipped to New York. By the time they reach New York, we are obliged to pay as high as 10 and 15 cents for a small apple.

Go back to the time when I lived on a farm, apples were sold at from 20 to 25 cents a bushel; and here we are to-day purchasing the apples in the East that come from the West on a basis of 15 cents apiece. A vast difference in price and still the orchard man is not prosperous. The differential in price on apples from the producer to the consumer is caused by the transportation of the apples from the orchard to the market. The high standard of living of this Nation causes the railroads to advance their rates because they are obliged to pay an advanced price for materials for the railroads and a high price for the labor on the railroads. The cost of transportation and the profit of the middleman is the cause of the advance in price to the consumer. This also applies from the manufacturer to the farmer. The farmer is forced to pay a high price for the manufactured products on account of the high cost of wages and the high cost of transportation.

But there is another reason for the high cost of the selling of farm products and that is the middleman. In addition to the distributor's costs, the middleman, who buys from the producer and sells to the consumer, must make his profit. Speculation in all farm products is rife and results are that those who purchase are not only paying for the actual cost and a small profit to the farmer but he is paying the profit that goes to the middleman and to the retail man, and therefore the purchase price of the farm product becomes high. And so it would seem to me that this statement has delivered a message to the consumer that is worth his consideration.

Frank O. Lowden said:

> I know that agriculture can not flourish with industry prostrate, with railroads bankrupt, with commerce languishing. All I seek to do is to bring agriculture up to the level of these other forces in our national life.

This is a commendable statement; it shows the true frankness of the man; it shows that he is not trying to give agriculture an advantage over industry, but to bring it to a level with industry.

And again he said:

> The farmer is always confronted with this dilemma: If he produces too little, men and women and children will be but meagerly supplied with the necessities of life; if he produces too much, the surplus for the time may break the price he receives for his product to a point where it would have been better for him if he had let his fields lie fallow throughout the year.

A message of this kind to the poor people of the Nation is one for them to think about. If the farmer should decide that he would be better off financially by not tilling the soil and allowing his land to go without production, he probably would be better off from a standpoint of profit even though he would lose the interest on his investment. On the other hand, if he should follow this course, then what would happen? The production would be decreased; necessarily the costs would be increased. The farmer would benefit only to the extent that he would not lose by overproduction; but the poor people of the Nation, who are obliged to purchase the commodities of the farm to live, would be the sufferers. In that case, legislation might be required to make the farmer produce. But you can not expect the farmer to continue production at a loss. And so it becomes an absolute necessity that legislation should be passed that will regulate production and orderly marketing, and it is a duty of this Congress to try and put some legislation through that will at least make an attempt to do the very things that are indicated in this paragraph quoted from Frank O. Lowden, who further states:

> There must be substituted centralized selling agencies for each of the principal farm products if we would bring agriculture into its proper relation with the modern industrial and commercial world. In this way farmers, too, can follow their products all the way or nearly all the way to the consumer, just as industry so largely does. In this way farmers will acquire a voice in determining the prices which they are to receive. Speculation will be largely eliminated in agricultural products as it has been in industrial products. By this method they can carry burdensome occasional surpluses without demoralization of the markets in the meantime. They can make the tariff effective just as industry does, by selling a relatively small surplus abroad in the world's markets, and maintaining a domestic price level for domestic needs.

His idea is to stop, wherever it is possible, speculation on agricultural products. He believes that the tariff will be made effective to the farmer; he believes that we can export enough of the surplus to maintain a domestic price level for domestic needs.

If you can stabilize the prices upon farm products so that the consumer knows exactly what his food is to cost, then the consumer will arrange his budget so as to take care of the necessities of life that come from the farm. In this way the farmer will receive a reasonable profit for his products. The consumer will buy the products on a bas's fair to the farmer; the industry of the country will proceed to manufacture its products, and, in turn, sell them to the farmers of the Nation.

I want to close the few remarks that I have made by quoting Frank O Lowden again:

It may be that there is a better solution of the problem than the one that I have suggested. I am not insisting upon any particular remedy. I only say that there is a farm problem of the gravest importance, and that a solution must be found if we would preserve our civilization. There are many earnest men who believe there is no solution. I come across them with increasing frequency. They say that there has been always a conflict between rural and urban civilization; that in this conflict rural civilization always has gone down; that there is no reason why we should be an exception to the general rule; that a decaying agriculture always has marked the first stage in the decline of a nation; and that we are helpless in the grip of this relentless law of the rise and fall of nations.

I can not follow them in their despair of finding some power somewhere which will arrest this decay. I have more faith in the capacity of society to save itself. Our civilization has been marked by an increasing control of man over the forces of nature. So in the new era we shall learn how to make institutions respond to needs of men.

I now close this speech by saying to the Congress of the United States that the agricultural industry of the Nation is in need. Legislation should be passed that will at least make some attempt to bring relief to this fundamental industry. It is the duty of every Congressman, regardless of politics, to vote for this bill, and it would then be even better if the Nation would select a man who is conversant with the farm troubles, who is honest, who is sincere in all of his statements regarding agriculture, and who will give a good administration to the Nation, and that is no one but Frank O. Lowden.

Mr. JONES. Mr. Chairman, I yield two minutes to the gentleman from New York [Mr. JACOBSTEIN].

Mr. JACOBSTEIN. Mr. Chairman and Members of the House, I rise to explain very briefly the amendment that I have proposed to the present farm relief bill which is before the House, the effect of which would be to exclude fruits and vegetables from the operation of this bill in the event it became a law. The bill would then be operative as to all agricultural commodities, but the definition of an agricultural commodity is "a commodity which is not a fruit or vegetable."

I am seeking, in cooperation with many of my colleagues, to exclude fruits and vegetables from the operation of the entire bill, not merely from the operation of the equalization fee provision.

The Senate incorporated in the McNary-Haugen bill (S. 3555) Senator COPELAND'S amendment, which does the very thing that I am proposing in the House bill. You will find this amendment in the Senate bill under "General definitions," page 29, line 6, which reads:

The words "agricultural commodity" mean an agricultural commodity which is not a fruit or vegetable, or beef or beef products.

So far as I have been able to learn—and I have taken pains to inquire—growers, packers, and shippers of fruits and vegetables are opposed to being included in this farm relief bill. In the correspondence that I have received they state very clearly that they do not need this relief which the bill seeks to give them. Furthermore, they feel that if the bill became a law it would overstimulate the building of storing and marketing facilities. This would be so because of the loan provisions of the bill, by which a cooperative can secure capital on easy terms. This would lead to competition between newly built plants in competition with those now owned and operated by cooperative growers' associations who own their own equipment for marketing purposes. I shall insert at this point a memorandum which was submitted to me by Mr. Raymond G. Phillips, secretary of the International Apple Shippers' Association, which has its headquarters in my home city of Rochester, N. Y. This memorandum sets forth the argument not only of the apple shippers but of other cooperatives that are opposed to the inclusion of fruits and vegetables in this farm relief bill:

The International Apple Shippers' Association, headquarters Rochester, N. Y. (R. G. Phillips, secretary), is opposed to the inclusion of apples and pears in the farm relief bills, and asks that they be definitely excluded from all of the provisions of these bills.

The International Apple Shippers' Association is composed of the largest shippers, receivers, and exporters of apples in the United States, with a substantial membership in England, Scotland, continental Europe, Scandinavia, Cuba, Tasmania, and Canada. Our membership is in every producing section in the United States and in all important consuming markets.

Among our United States members are such growers' cooperative associations and organizations as—

1. Sebastopol Apple Growers Union, Sebastopol, Calif. (Largest apple cooperative organization in this territory.)
2. Hood River Apple Growers Association, Hood River, Oreg. (This organization ships 65 per cent of the tonnage of the Hood River Valley.)
3. Mosier Fruit Growers Association, Mosier, Oreg.
4. Northwestern Fruit Exchange, Wenatchee, Wash. (One of the largest growers' marketing organizations in the country.)
5. Wenatchee District Cooperative Association, Wenatchee, Wash. (The largest cooperative association in the Wenatchee district.)
6. The Yakima County Horticultural Union, Yakima, Wash.
7. The Yakima Fruit Growers Association, Yakima, Wash. (These two foregoing organizations are among the leading fruit growers' cooperative shipping organizations in the United States.)
8. Illinois Fruit Growers Association, Centralia, Ill. (The largest in the State.)
9. The Door County Fruit Growers Union, Sturgeon Bay, Wis. (This is the outstanding and only growers' organization in this apple section.)
10. The Adams County Fruit Packing and Distributing Co., Biglerville, Pa. (A large growers' marketing organization.)
11. Clintondale Fruit Growers Cooperative Association, Clintondale, N. Y. (The leading organization in eastern New York.)
12. Fennville Fruit Exchange, Fennville, Mich. (One of the outstanding organizations in Michigan.)
13. Nashoba Apple Packing Association, Littleton, Mass. (The leading growers' packing association in New England.)
14. Consolidated Apple Growers Exchange, Cornelia, Ga.

The foregoing are illustrative.

All of these and many more similar organizations, both within and without our membership, are opposed to the inclusion of apples in these bills.

The American Fruit Growers (Inc.), of Pittsburgh, with an investment of five to six million dollars in orchards and vegetable production throughout the United States, and shipping about 42,000 cars per year, are opposed.

The Montana Fruit Distributors, of Hamilton, Mont., producing and shipping 33 per cent to 50 per cent of the apples of Montana, are opposed to including fruit.

The president of the New York Horticultural Society, Mr. Burritt, is opposed.

In addition, we have scores of individual growers, firms, grower-owned cold storages and warehouses who are opposed.

Furthermore, our shipping members, comprising the leading shippers in all producing sections, are opposed, as well as our distributing and exporting members.

We are opposed to the inclusion of apples in the marketing agreement and equalization-fee provisions for the reasons set forth in our letter No. 284 attached hereto, and for the further reason that England would at once place preferential duties against us to protect her colonies.

We are opposed to their inclusion in section 6, because facilities at both ends of the line are already excellent and are constantly being improved.

Proposed forcible combinations through clearing-house associations will still further relocate the industry, to the prejudice of establishing sections, stimulate overproduction, and lead to disastrous cutthroat competition. The near-by sections will never combine with the remote or semiremote for the benefit of the latter any more than the Dutch combined with Great Britain to restrict the rubber output. On the other hand, the Dutch said godspeed to Great Britain, while the Dutch and others went out to produce their heads off and capture the British rubber market. The result is well known. All producers are injured. Relocation and decentralization have already been stimulated in our line by high freight rates and other costs, good roads, and motor trucks, in every case to the danger of long-established districts. If there is any further stimulation along this line, all the sections will be injured.

The minute one section starts to combine and restrict under these bills, that minute many other sections are going to jump in and overexpand, to the detriment of the whole industry.

Furthermore, a vast mass of competing factors are not even eligible to participate in section 6. Does anyone think they are going to quit cold? On the contrary, you will have intense competition, overstimulation, overproduction, and disorderly marketing.

Finally, the doctrine of force is back of this whole section—to compel growers to come in whether they wish to or not and regardless of economic necessity or economic wisdom.

We have seen quite enough of this and the results. Wrecked cooperatives, founded by professional promoters and agitators, growers losing their crops year after year, and assessments levied to pay off the debts when the corpse was buried.

Section 6 presents a fertile field for the professional promoter and the wielder of the big stick to drive people in. In fact, Mr. Omar Wright, vice president of the Illinois Bankers' Association, openly states that membership must be made compulsory and not optional. A remarkable doctrine.

We are opposed to being in the loan features of the bill for the reason that this industry doesn't need any loans from the Government Treasury. If, anything, we have too many facilities now to make both ends meet. Cold storages, warehouses, packing plants, by-product plants, etc., are more than ample. There are hundreds of grower-owned cold storages, packing houses, warehouses, packing, by-product, and other facilities, built and developed by their own initiative and financing in the regular way, which is as it should be. Any further stimulation by reaching the hand into the Government Treasury would not only be unnecessary but destructive of all that has already been developed.

The professional promoter, the propagandist, the theorist, with nothing to lose, would have a splendid opportunity and a fertile field under the loan provisions.

The industry has never asked to stick its hand in the Government Treasury. We have developed our own facilities as we should. Having done that, it is fundamentally wrong for the Government to come along and, in effect, erect competing facilities—for that is precisely what it amounts to.

No doubt there are certain persons who would like to get their hands into the Government money bags. Beyond question, there are those who would try to do so, regardless of experience, knowledge, or wisdom. The great mass of our particular part of the farm industry, however, is opposed to any such policy.

The present Capper-Volstead Act is ample to meet any legitimate and economically sound development in the fruit industry. Until this industry asks for Government donations and hand-outs don't force it on us.

We do not pretend to speak for wheat, cotton, etc., but so far as fruits and vegetables are concerned, there is too much financing rather than too little. A substantial mass of illegitimate and marginal production is given a shot in the arm year after year, to the undoing of the legitimate producer and the illegitimate. Under this system you surely will have the peasant farmer, but it won't be because of underfinancing.

If you stimulate any more production or any more facilities for fruit by loans from the Government Treasury, or in any other way, you are going to injure the industry instead of help it. You can't cure overproduction, high freight rates, high labor costs, and the high cost of everything that enters into production, by loans.

Senator GLASS on the floor of the Senate on April 11 admirably summed up the situation when he said:

"Mr. President, if the Senator will permit me, the fruit growers of Virginia have, and for a long time have had, their own organization. They have their own cold-storage plants. They have their own marketing facilities. They are perfectly independent of anything of this sort. They do not want their business interfered with by the Federal Government in any way, shape, or form. As the Senator from New York has so aptly said, they are not willing to occupy the humiliating position of undertaking to avail themselves of any advantages of legislation without accepting the responsibilities, and they want neither."

The loan provisions, so far as fruit is concerned, are a direct slap in the face of that great body of fruit growers that have developed their own industry and their own facilities. What incentive is there to any longer intelligently develop one's own facilities if the Government is going into the business of lending to various aggregations artificially stimulated by persons with axes to grind?

Mr. MOORE of Virginia. Will the gentleman yield?

Mr. JACOBSTEIN. I yield.

Mr. MOORE of Virginia. I would like to say that the sentiment the gentleman has just expressed as being entertained by the people of New York State is generally entertained by the people of Virginia.

Mr. JACOBSTEIN. Yes; and the growers of fruit in Oregon, Washington, Illinois, Wisconsin, and most of the States of the Union have expressed themselves as favoring the amendment I am proposing. New York State, which I have the honor in part of representing, is a great fruit and vegetable growing State, and in it there are many grower cooperative associations. So far as I can learn, they are practically a unit in desiring to be excluded from the operation of this farm relief bill. I have discussed this matter with many of my colleagues from my State representing districts in which fruits and vegetables are grown, and they also have indicated their desire to have the amendment which I have proposed written into the House farm relief bill. The New York Representatives who have expressed themselves to me personally as favoring this amendment are the following:

Hon. H. J. PRATT (Ulster, Greene, and Columbia Counties).
Hon. HAMILTON FISH (Dutchess County).
Hon. A. D. SANDERS (Monroe County).
Hon. JOHN TABER (Auburn County).
Hon. CLARENCE MACGREGOR (Erie County).
Hon. WALLACE DEMPSEY (Niagara County).

I have also been informed that Members of the House representing the great fruit-growing sections in other States—in Washington, in Oregon, Massachusetts, Rhode Island, Pennsylvania, Virginia, Montana—that these sections likewise hold the same view.

Senator COPELAND has received many communications indorsing his amendment, of which the following is typical:

RADA, W. VA., *April 24, 1928.*

Hon. ROYAL S. COPELAND,
*Senate Office Building, Washington, D. C.*

DEAR SENATOR COPELAND: The writer, who is president of the West Virginia State Horticultural Society, and a grower of apples, producing approximately 20,000 barrels yearly, has been requested by certain other large growers in this State to forward you copies of messages sent to Senator NEELY, Senator GOFF, and Congressman BOWMAN.

We feel that the majority of growers in this State are in accord with growers in your State, in that they want no connection with the McNary-Haugen bill or other legislation of this type.

We appreciate your efforts in endeavoring to have fruits and vegetables excluded from the McNary-Haugen bill, and trust that you will continue your fight to have your amendment adopted and included in the McNary-Haugen bill in its final form.

Very sincerely yours,

E. A. LEATHERMAN.

The messages of indorsement referred to in this communication were signed by the following fruit growers of West Virginia:

H. W. Miller, president Consolidated Orchard Co., Paw Paw, W. Va.
L. P. Miller, owner Chertland Orchard and Mount Dale Orchard, Paw Paw, W. Va.
P. R. Harrison, Martinsburg, W. Va.
E. Graham Wilson, Charles Town, W. Va.
E. A. Leatherman, Rada, W. Va.
Oakland Orchard Co., Charles Town, W. Va.
American Fruit Growers (Inc.), Martinsburg, W. Va.
Export Apple Co., Martinsburg, W. Va.

I have received many letters from men who are themselves farmers, or who are in close touch with the farm situation in my State, asking that fruit and vegetables be taken out from under the bill. I am listing herewith the names of these correspondents:

Samuel Fraser, Geneseo, N. Y.
John P. Street, secretary New York State Canners' Association, Rochester, N. Y.
John B. Frey Co., shippers of farm products, Rochester, N. Y.
Austin & Fosmire, wholesale fruit shippers, Spencerport, N. Y.
F. Hofman, shipper of fruits and vegetables, Rochester, N. Y.
Dixon Produce Co., Hall, N. Y.
Charles Dye, fruit distributor, Medina, N. Y.
Pennington-Black Co. (Inc.), Seneca Castle, N. Y.
Judson Snyder, Newark, N. Y.
Geneva Refrigerating Corporation, M. W. Black, manager.
Howard M. Lum, Hilton, N. Y.
W. P. Rogers, Williamson, N. Y.
F. W. Moffett, Rochester, N. Y.
H. B. Fiske & Co., Providence, R. I.
C. H. Musselman Co., Biglerville, Pa.
William H. Baggs, American Fruit Growers, Pittsburgh, Pa.
Sodus Cold Storage Co., Sodus, N. Y., with 15 signatures.
F. W. Cornwall, Shore Acres Fruit Farms, Pultneyville, N. Y., with petition signed by 14 growers and shippers of Wayne County, N. Y.

In conclusion, I repeat again that I hope Senator COPELAND'S amendment will be retained in the House bill, the effect of which would be to exclude fruits and vegetables from the operation of the act.

Mr. KETCHAM. Mr. Chairman and members of the committee, since coming to Congress, in 1921, I have consistently labored to the best of my ability to advocate and support legislation which I thought would be to the advantage of agriculture and for the good of the country. This course has been followed not only because of my direct connection with and my special interest in farm people, but also because I believe that a progressive and prosperous agriculture is a prime essential in the maintenance of world leadership by the United States. I am confident that this attitude reflects accurately that of the entire membership of the Committee on Agriculture, as well as a very large majority of the Members of the House.

A continuous flow of food supplies and raw materials is of vital importance to the great industrial centers of our country, and, on the other hand, these industrial centers are likewise vitally concerned in a thriving agriculture because that means a very important outlet for the products of their mills and factories. Every consideration, therefore, of class and sectional interest as well as public policy demands that all that legislation can possibly do to place agriculture on an equality with all other classes and groups of our people should be gladly and speedily done.

In a word, therefore, I believe that we are unanimously agreed that economic equality for agriculture as measured by price relationship is the goal toward which legislation should aim. Scores of suggestions have been offered by thoughtful, high-minded, and patriotic men for the consideration of those of us who bear legislative responsibility. Consideration of these suggestions as reflected in discussions, editorials, and resolutions has principally centered upon three proposals.

The first is that of cooperation and orderly marketing. It is practically agreed that if the cooperative movement could cover 75 to 80 per cent of the sale of all farm commodities the problem of price equality would thereby be solved. Remarkable progress in the cooperative movement has been made when we consider that it was first recognized by Federal statute in the Capper-Volstead Act of 1921. Cooperative organizations cover the land and reach into every farm commodity. Notwithstanding this rapid growth, not more than one-fifth of the total agricultural products are thus marketed. This leads us fairly to the conclusion that some supplementary legislation is necessary before agricultural equality can be secured.

The second legislative proposal very widely indorsed and very earnestly supported is known as the equalization-fee plan, which is the heart of the measure before the committee for consideration. Its merits and demerits have been very thoroughly presented in discussions here and elsewhere for the last four or five years.

In the time at my disposal I desire to present the merits of the third plan to place agriculture on a price equality, namely, the export debenture plan as embodied in H. R. 12892 and H. R. 12893, introduced by my colleague, Mr. JONES, of Texas, and myself.

Before proceeding to explain the export debenture plan, these brief statements are submitted in the interest of clear thinking:

First, as to the present relative price situation of agricultural commodities. Agriculture is and has been since 1921 seriously below the general price level. Taking 1913 as the average prewar condition at 100 as an index, the present condition of agriculture is shown by the fact that the labor index to-day is 2.28; transportation, 1.57; the all-commodity index, which represents average price levels of 400 commodities, is 1.52; while the agricultural commodity index is 1.38. Expressing in terms of percentage, then, the farm price of agricultural commodities is therefore 91 per cent. In 1921 this percentage was 69. There has been a remarkable improvement since that time, but in all fairness we should endeavor, so far as legislation can do it, to put agricultural commodities on a price parity with the all-commodity list.

Mr. MURPHY. Mr. Chairman, will the gentleman yield?

Mr. KETCHAM. Yes.

Mr. MURPHY. Does the gentleman say that agricultural commodities now are just 9 per cent under the average of all other commodities?

Mr. KETCHAM. Yes; so far as the farm price is concerned.

Mr. MURPHY. They are 91 per cent of the average price of all other commodities?

Mr. KETCHAM. Yes; of the all-commodity list.

Mr. MURPHY. In other words, they are only 9 per cent to the bad?

Mr. KETCHAM. Conditions have improved from 69 per cent in 1921 to 91 per cent in March of this year.

Mr. MURPHY. And this has been done without any legislation?

Mr. KETCHAM. Not entirely without legislation. There have been some very excellent pieces of legislation written, as the gentleman will recall, since 1921.

Mr. GARBER. Mr. Chairman, will the gentleman yield?

Mr. KETCHAM. Yes.

Mr. GARBER. As I understand it, the gentleman has taken 100 per cent as the basis?

Mr. KETCHAM. I have taken the conditions in 1913 as 100 per cent.

Mr. GARBER. And the present purchasing power of agricultural products is 91 per cent of the average of all other commodities.

Mr. KETCHAM. Yes.

Mr. GARBER. That would be nine points below the 100 basis for 1913.

Mr. KETCHAM. In purchasing power 9 per cent below. That is correct.

Mr. BURTNESS. And relatively, as I understand, that means a 9 per cent discount, not of net profits or anything of that sort, but a 9 per cent discount from the gross receipts of agriculture.

Mr. KETCHAM. In price relationship.

Mr. BURTNESS. And does the gentleman know of any other business that could have supported a 9 to 20 per cent loss of gross and have existed at all?

Mr. KETCHAM. I certainly think that very few lines of business would have been able to do it, other than agriculture.

Mr. BURTNESS. Some seem to think that 9 per cent is very small. I point out that that means not 9 per cent of net income or profit but 9 per cent of gross income, which means wiping out all of the profit, and going in on the capital invested.

Mr. LAGUARDIA. In order to get a proper comparison, what would be the percentage on the same index number, say, of the steel industry, automobiles, and textiles as compared to the 91 per cent for farms?

Mr. KETCHAM. I could get that information if the gentleman desires, but I have not got it at hand. I shall put it in.

Mr. SUMMERS of Washington. And does this refer to the wholesale commodity prices?

Mr. KETCHAM. The all-commodity index is the wholesale price, but that of agriculture is the farm price index.

Mr. SUMMERS of Washington. And so as to get a real picture, we ought to have the farm price on the 400, which will bring about a spread of about 20 or 25 per cent instead of 9 per cent.

Mr. KETCHAM. The second proposal which I think is essential to clear thinking is Federal legislation advantageous to labor, industry, and commerce which has been enacted in recent years. The Adamson law, immigration restriction, railroad-rate legislation, patent legislation, and the drawback provision of our tariff law may be cited as illustrations.

Third. If price equality is to be secured for agriculture, two methods are in sight—the repeal of the various acts which have raised other price levels or the enactment of legislation that will give agriculture a corresponding advantage so far as its commodity values are concerned.

Bear in mind, I am not finding fault with that legislation, but simply giving it as an illustration of how it has been deemed wise on the part of Congress to better the price position of the groups of people that are referred to in the legislation which has been enacted. I simply am calling attention to that situation and not finding fault.

Needless to say, all real friends of agriculture take the constructive view. Two plans have been submitted to put farmers on an equal basis in the price structure we have erected in the United States.

In that connection I am sure that all of you agree with me that the only constructive thing to do is to enact some legislation that will put the farmer in the price picture without resorting to that other questionable practice, which would do harm to the other groups and which always has been found to do immeasurable harm to agriculture, namely, to repeal the other legislation that has already been enacted.

Mr. ARNOLD. Mr. Chairman, will the gentleman yield?

Mr. KETCHAM. Yes.

Mr. ARNOLD. Is there any inconsistency in the equalization plan and the debenture plan advocated by the gentleman which would interfere with the debenture plan being made a part of the general legislation, including the equalization plan?

Mr. KETCHAM. I have not given that subject any considerable thought, but I can see no particular inconsistency now.

Mr. ARNOLD. It seems to me that they are entirely consistent, and that the debenture feature might very well be added to the bill that we now have under consideration containing the equalization plan.

Mr. KETCHAM. That will be the subject of discussion a little bit later on. It is a very interesting inquiry at this point.

Mr. LANKFORD. I think if the debenture plan could be drafted on to the present McNary-Haugen bill it would not be inconsistent, and that the two plans could be worked together.

Mr. KETCHAM. Now, what is the export debenture plan? These are the fewest words I can use in describing what it is: It is a plan to provide for the payment upon exportable agricultural commodities, and the products of such commodities, export premiums, by means of export debentures, sufficient to equalize the difference between the cost of producing such commodities in the United States and the cost of producing such commodities in foreign countries.

I appreciate, of course, that this is a pretty comprehensive definition; but it puts it in the fewest words I can possibly use.

Mr. LAGUARDIA. Mr. Chairman, will the gentleman yield?

Mr. KETCHAM. Yes.

Mr. LAGUARDIA. Who pays for it?

Mr. KETCHAM. That will appear in a moment, if you will let the argument run along consecutively.

Mr. HARE. Mr. Chairman, will the gentleman yield?

Mr. KETCHAM. Yes.

Mr. HARE. As I understand, it is proposed to include agricultural crops and the products of agricultural crops. Would that include cloth made from cotton?

Mr. KETCHAM. The portion of it that goes into export.

Mr. MURPHY. Mr. Chairman, will the gentleman yield?

Mr. KETCHAM. Yes.

Mr. MURPHY. The gentleman states this would apply to cotton cloth. Would it apply to exports of coal?

Mr. KETCHAM. It would apply to exported agricultural products.

Mr. MURPHY. Would it be applicable to coal just as it is applicable to cotton?

Mr. KETCHAM. I have not given that thought. Perhaps some other committee could apply the principle to coal. We are talking now, you know, about agricultural production.

In the original form of the bill—H. R. 10568—the export-debenture plan was the sole proposition. However, because of the fact that there seems to be almost unanimous agreement among the friends of agriculture that any farm relief bill should have at least three other features, the friends of the idea have incorporated in the form of the bill before you the additional features of a Federal farm board, a loan provision which is practically identical with that in the McNary-Haugen bill, and also an insurance plan.

It is the intention of the sponsors of H. R. 12892 to move to substitute it for H. R. 12687 at the first opportunity given under the rules. If a point of order is made against it we are prepared to show that it is germane, and we sincerely hope the Chair will sustain our view. If it shall be held in order and should be substituted it will then be before the committee for amendment.

With that idea in mind it has seemed wise to take up the various provisions of the bill in order and explain its plan and purpose and to urge it as the most simple, direct, and feasible plan of securing equality for agriculture.

In the first place, the export debenture bill sets up a Federal farm board, which is to consist of the Secretary of Agriculture and four other members to be appointed by the President of the United States by and with the consent of the Senate. This is in contrast with the board of 12 members provided in the McNary-Haugen bill. This change is made in the interest of economy, the duties of the board under the export-debenture plan being fewer and less complicated than those imposed under the cumbersome equalization-fee organization.

Section 3 of the bill sets up the powers and duties of the board in connection with the administration of the act, the most important of which are the study of crop-price prospects, supply, and demand at home and abroad, with particular reference to the existence of a surplus. The advising of producers through organizations as to suitable programs of planting and breeding to avoid unnecessary crop surpluses and the determination of crop production conditions that depress or tend to depress the price of exportable commodities below the actual average cost during the preceding five years.

The loan provisions of the bill are to be used to assist cooperative associations or corporations created and controlled by them to aid in controlling seasonal or year's surplus production in the United States, either local or national in extent, in the interest of orderly marketing of that particular commodity.

Loans made by the board to cooperative associations and corporations organized by cooperatives shall bear interest at the rate of 4 per cent per annum and may not exceed $150,000,000.

If the board finds that its advice as to a program of planting or breeding of any agricultural commodity, as provided in section (3) (i), has been substantially disregarded by the producers of the commodity, or that the planting or breeding of any agricultural commodity for any year is substantially greater than a normal increase as determined by the board, over the average planting or breeding of such commodity for the preceding five years, the board may refuse to make loans.

So much for the set-up of the Federal farm board and its powers and duties and the loan features of the bill.

Mr. GARBER. Mr. Chairman, will the gentleman yield there?

Mr. KETCHAM. Yes.

Mr. GARBER. The gentleman from Michigan is a member of the Committee on Agriculture and has made for years a study of the agricultural problem. I want to ask whether or not that prohibition on productive enterprise will operate as a satisfactory brake on the production that is stimulated by a premium on export?

Mr. KETCHAM. I do not think it will be a sufficient brake, but other brakes will be applied later in the bill. We have a number of brakes here which I would like to tell the gentleman from Oklahoma about.

Now, I believe the export debenture feature to be the heart of this bill, as I believe the equalization fee to be the heart of the bill now pending before the committee for consideration. This bill provides that when the board, by affirmative finding, determines that there have been surpluses that tend to depreciate the price, so that the American farmers are not receiving the cost of production by reason of the fact that they sell these crops in the world market, and therefore can not take advantage of the tariff on that particular article; if they find that these conditions exist, then they may promulgate regulations, and under these regulations the Secretary of the Treasury shall issue to the farmers, cooperative organizations, and other persons, including export corporations, export debentures upon any exportable and debenturable commodity upon which the board has determined that such debenture shall be issued. The export debenture shall be computed on the commodity or product effective at the time of the exportation.

For the first year the bill provides that the debenture rate shall be only one-half of the existing tariff rate. Upon those exportable commodities where there is no tariff the rate for the first year is fixed upon a comparative basis.

The exportable commodities are wheat, corn, rice, swine, cattle, cotton, tobacco, and any other agricultural commodities which may be designated by the board under section (7), together with food products and articles so named and designated.

Mr. COLE of Iowa. Mr. Chairman, will the gentleman yield?

Mr. KETCHAM. Yes.

Mr. COLE of Iowa. Why issue a debenture when the end would be directly reached by the payment of money out of the Treasury? Why give the beneficiary a piece of paper?

Mr. KETCHAM. For the same reason that in the operation of a protective tariff we do not take the money directly out of the Treasury and put it directly into the pockets of the beneficiaries of that legislation. This is to be a complement, a completion, of the great system of protective legislation, that was designed by Alexander Hamilton over a hundred years ago.

Mr. COLE of Iowa. The farmer who makes the export gets the debenture, and he has to sell that himself and probably at a discount. Does not that reach the line of speculation?

Mr. KETCHAM. Well, I have a little suspicion that the gentleman's question is not entirely friendly. [Laughter.] At least I do not think I could make a convert of the gentleman even if I talked all the afternoon. The fairest consideration has been given to that very point, and we have asked every witness who we thought could give us information on that point, and this is the conclusion reached by all of them, that this debenture would be subject only to a very slight discount, and the amount of the debenture would come back to the farmer practically in its entire value. The bill puts the rate on wheat for the first year at 21 cents. All those familiar with these matters have advised us that the discount would be less than one-half of 1 per cent.

Mr. COLE of Iowa. Why have any discount at all if you are going to give this to the farmer as a subsidy? Why not give it to him direct in money instead of a piece of paper?

Mr. KETCHAM. If he does business himself, of course, he would have this export debenture, which would be to him an instrument of the United States Government, and it would have its full face value.

Mr. COLE of Iowa. Why not give him the money?

Mr. KETCHAM. I have given the reasons for it.

Mr. WILLIAMSON. Mr. Chairman, will the gentleman yield?

Mr. KETCHAM. Certainly.

Mr. WILLIAMSON. I want to say, in partial answer to the question propounded by the gentleman from Iowa [Mr. COLE], that the payment of the debenture on the exported product would raise the price level on the entire crop.

Mr. KETCHAM. The gentleman from Iowa is only referring to the portion that was exported. Of course, the gentleman from South Dakota has correctly stated the theory of the bill, that it would operate not only to lift the price level to the extent of the debenture on that particular commodity, in so far as that portion which is exported is concerned, but that it

would be reflected back on the part that was sold in this country. The farmer would get cash for that sold at home. He would get the world price plus the debenture rate.

Mr. BRIGHAM. Will the gentleman yield?

Mr. KETCHAM. Yes.

Mr. BRIGHAM. As I understand it, the debenture could only be used in paying import duties on other commodities?

Mr. KETCHAM. Yes; that is correct.

Mr. BRIGHAM. And the demand would depend somewhat upon the amount of goods imported?

Mr. KETCHAM. It would. But the very fact that the importation of goods goes far beyond any limit as to the amount of debentures. It would seem to me if I were an importer looking for something that would give me 100 cents on the dollar, and if I could get a discount of $25 on $10,000 of import duties, that as a good business man I would be looking around for an opportunity to do that very thing. That is the sum and substance which we think to be the operation so far as the debenture is concerned.

Mr. ANDRESEN. Will the gentleman yield?

Mr. KETCHAM. Yes.

Mr. ANDRESEN. The purpose of all this legislation is to benefit the producer. Now, the export bounty is paid to the exporter, and can the gentleman tell the committee how it is going to be reflected back to the producer so that he gets the benefit of all this legislation?

Mr. KETCHAM. My answer to that is the same answer I would give in discussing the equalization fee. The advantages under the equalization fee, when they are reflected back to the farmer himself, are going to be subject to all the exigencies of trade. There can not be any question about that. To state it in plain language, the man who buys the wheat from the farmer is not going to pay any more for it than he would have to, so that the same laws will operate in one instance as in the other. Under this plan we have a definite amount of money which is to come to the crop that is to be exported, and in the case of the equalization fee you have a like advantage, but there is an assessment made upon the farmer himself.

Mr. ANDRESEN. And in the case of the equalization fee, when the farmer brings his product in for sale and pays his fee he gets the world price, plus the tariff, less the fee; but under the debenture plan, that goes to the exporter. Why can you not pay the debenture directly to the farmer when he sells instead of having it go to the exporter?

Mr. JONES. If the gentleman from Michigan will permit, in Sweden they leave the debenture at the customhouse and they get full value in cash.

Mr. MURPHY. Will the gentleman yield?

Mr. KETCHAM. Yes.

Mr. MURPHY. I am a little curious to know how our European friends would look upon this sort of a plan of marketing our surplus?

Mr. KETCHAM. I will be very glad to answer that. I can see no reason why they should be disturbed at all, because the world price is not to be affected by this, but here in America our own farmers are to receive 21 cents more per bushel in order that they may go into the world market and compete.

Now, so far as rates are concerned, the basis of this entire legislation is this: That the American farmer is entitled to the difference in the cost of production between here and abroad. That is the theory upon which we build our protective tariffs.

The theory of the tariff applies to products flowing into the United States. It is particularly helpful to manufactured products. The surplus of agricultural commodities flows outward and comes in contact with world price conditions, and these world prices effect not only the portion that goes into export but likewise the domestic price of that particular commodity. The export debenture, therefore, is the same theory applied to agriculture as the tariff theory applies to manufacturing.

The proponents of the bill may differ in their views as to the tariff, but they are in agreement that under whatever system we operate, whether that of a high or low protective tariff, there should be some device in the system that will make the tariff provision operative upon farm products in which there is an exportable surplus as it does in connection with manufactured articles.

The debenture idea is not a new one; in fact, it was first advocated by Alexander Hamilton as a part of the original tariff system in the United States and was regarded by him as necessary to preserve equality of its operation upon our people of the great system which he believed essential to the development of the United States.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

Mr. KETCHAM. Mr. Chairman, I yield myself another 15 minutes. As I said, we are proceeding in this legislation upon the theory that the protective-tariff principle has been generally accepted by the country, and it enables us to pay our laboring men a higher wage scale and still enable our manufacturers to meet world competition. We maintain that if that is logical—and we agree that it is—then certainly some device similar in its effect should be applied to the business of agriculture. We have searched high and low and we can find none that in our judgment is so direct, so simple, so practical, and where the cost to all the people of the country, whether it is from the Treasury or from the people in any other way, will be less than the cost that is provided in the bill we now have before us for consideration.

Mr. MURPHY. Will the gentleman yield?

Mr. KETCHAM. Yes.

Mr. MURPHY. Will the gentleman tell the committee how it is planned to arrive at the cost of production abroad of these various commodities? The reason I ask that question is this: I represent a district where we manufacture pottery. I have been for two years trying to get the Tariff Commission to undertake to find the cost of the production of pottery in some country.

They spent a year on the cost of producing pottery in Germany. Then at the close of the year they found that Japan was making it a little cheaper, so they threw away all they had done in the preceding months and began another investigation, while the pottery industry in my district is languishing. Now, if a bureau or a department of the Government operates in that way, what chance are you going to have to find the cost in time to market your wheat or whatever you happen to have?

Mr. KETCHAM. Well, I can simply make a very general statement with reference to that. I am very sure the board set up and given the powers that are given it in our bill, would certainly have no difficulty in arriving at the fact that there is a very marked difference, at least, between the cost of production of wheat, shall we say, here and in the Argentine; and, if this be true, certainly an improvement over the present situation would be a very desirable one indeed. At least, no one can say but what based upon that proposition we would find a higher production cost in the United States than in the Argentine and in many of the other countries.

Mr. SPROUL of Kansas. Will the gentleman yield?

Mr. KETCHAM. I am very sorry, gentlemen; but if you will be kind enough to let me complete the general statement I may say that Mr. JONES and myself have been given about two and a half hours, and possibly well toward three hours, and to the best of our ability we will undertake to answer the various inquiries that may be directed, but I think it best now that I take the remaining 10 minutes in running through, in a general way, the other provisions of the bill, and then leave the questions to a later time.

Mr. ANDRESEN. If the gentleman will permit just one short question, does the gentleman propose to offer this as an amendment or as a substitute for the bill?

Mr. KETCHAM. We propose, as I indicated a short while ago, at the proper time to offer this as a substitute for the bill now under consideration by the committee.

So far as rates are concerned, those of you who have read the bill have noted that for the first year we set up specific rates. Some one, of course, propounds the question immediately, How do you know that these rates are based upon proper determinations. And our answer, of course, is that we do not know; but we did feel that the urgency is so very great that we ought not to wait until a scientific determination can be made of the differences in the costs of production, and so we selected, for instance, as a basis for our reckoning, 21 cents on wheat, which is one-half of the tariff rate, and that is set up as a definite debenture rate for the first year. Following that first year, studies will be made and other debenture rates set up as costs of production here and abroad in the production of agricultural commodities shall be determined.

I may say that with 21 cents, one-half of the tariff on wheat, as the basis, we have gone through the debenture list that is mentioned in the bill and have set up rates that we think would be fairly comparable to the rate provided for wheat. I take it you will not be interested in my reading the rates.

Mr. BURTNESS. Generally speaking, it is one-half of the tariff?

Mr. KETCHAM. Generally speaking, it is one-half of the tariff except upon cotton where there is no tariff. There we attempted to set up a rate that was comparable, contrasting the varying units in wheat and cotton.

Mr. BURTNESS. Of course, on wheat the Tariff Commission has found that the actual difference in the cost of production is 42 cents.

Mr. KETCHAM. Yes; 42 cents.

I next call the attention of the committee to the flexible rates of the export debenture bill, which I think are very important.

I think it will be readily agreed that to-day agriculture is in its unfavorable situation by reason of the increased costs of production that have come in various ways, some of them, of course, by legislation, as I referred to a moment ago. It may be that in the days ahead, in the adjustment of tariff rates, the Tariff Commission will find reason for raising or lowering the tariff rates on many of these debenturable commodities. If this shall be found to be the case, then under the flexible provisions of the export debenture plan the board is given the power to likewise vary the debenture rates that may be set up. I think one of the most important features of the bill is this: That should these costs of production be equalized, or in other words, the commodity prices of the American farmer come to the level of the all-commodity list, then by the very terms and provisions of this bill, the debenture rates themselves pass out and the law becomes inoperative because it is no longer required, and I call the attention of gentlemen especially to that provision because I think it is extremely significant.

I do not know what all of you who are friends of agriculture believe, but this is my view: That in 5 or 10 years, with average conditions, as they have been in the last 8 or 10 years, all this price inequality will naturally cure itself, and when that price inequality is cured, and agriculture in its price levels comes to the all-commodity level, then I am sure we will not insist that there is not any call for this kind of legislation or for any special farm relief legislation. In other words, if the farmers to-day had their price relationships on a level with those of other industries, I do not believe they would be here asking for this legislation. Please do not forget that under the terms of the export debenture plan that as costs of production of farm commodities are reduced, or in other words, when the all-commodity price level is on an equality with the price level of farm commodities, this bill, by its own terms, automatically fades out of the picture so far as the debenture features are concerned. Its provisions would remain in force, however, for renewed application should situations like that which agriculture has faced since 1921 reappear. We are here urging the debenture plan to-day because we believe that now is the time, this is the year, when this maladjustment, so far as price relationships are concerned, ought to be corrected, and we believe that this measure can be enacted into law; and if enacted into law it can become operative within 60 days and may apply, if you please, to the crop season of 1928.

This, I am sure, is a very material consideration on the part of those of you who are anxious, more than anxious, desperate, for some sort of farm relief legislation that will be effective at the earliest possible moment.

Mr. JOHNSON of Washington and Mr. UNDERWOOD rose.

Mr. KETCHAM. I only have a few moments left.

Mr. JOHNSON of Washington. I will not press the gentleman.

Mr. KETCHAM. If the gentlemen will save their questions until I finish, I will be glad to answer them.

The concluding feature of the bill is the loan feature, which is similar to that in the McNary-Haugen bill, with one exception, which will be developed a bit later in the debate.

In a very rough, hurried, and sketchy way, these are the main provisions of the bill. I think possibly I could do no better in closing this part of the discussion to-day than to read for the information of the committee a few questions and the answers to them, which are very short, that get right to the heart of the proposition.

I am going to refer to the testimony given before the committee by a splendid gentleman from Illinois, Prof. Charles L. Stewart. At the conclusion of his testimony I asked him some direct and simple questions, which I want to read from the hearings, as follows:

Mr. KETCHAM. I have six questions I want to ask, and they can all be answered yes or no. I know it is hard for an economist to answer questions yes or no. It is pretty hard to give a categorical answer. But these are the vital things we men have to answer in the ordinary discussion of this bill. Will you please answer these questions?

In the first place, is this any radical or new departure from our traditional system?

Mr. STEWART. I think that it is amply founded upon precedent.

Mr. KETCHAM. Second, is it constitutional, in your judgment?

Mr. STEWART. It is.

Mr. KETCHAM. Third, is it economically sound?

Mr. STEWART. It can be administered so that it will be consistent with the welfare of producers and consumers.

Mr. KETCHAM. That is what you mean by "economically sound"?

Mr. STEWART. That is what I mean.

Mr. KETCHAM. In the fourth place, in your judgment, is it practicable?

Mr. STEWART. It is workable.

Mr. KETCHAM. That is what I want.

Mr. STEWART. And it should be consistent with the resources of the Federal Government.

Mr. KETCHAM. That is what I want, exactly. Now, will you say whether or not, in your judgment, this leads to dumping?

Mr. STEWART. In my judgment, it is not of that species of practice which would be classified by other countries as "dumping."

Mr. KETCHAM. Now, last, in your judgment are the penalty provisions against overproduction carried in this bill as direct and specifically applicable as they are in any other proposition that has been presented to us?

Mr. STEWART. That is a harder question to answer. I should say that you can make it so, if it is not that way.

Mr. KETCHAM. One further question: In contrast with any other plans, do you regard this as the simplest and the least free from machinery?

Mr. STEWART. Perhaps because I have studied it most, it is to me the simplest.

Now, I come directly to the point the gentleman from Oklahoma inquired about. May I say that in the form of the bill now before you for consideration the penalty provisions are very brief indeed, and I am sure they will appeal to you as being sufficiently powerful to act as a brake. This is the language of the bill:

(1) For a computed increase in production or acreage of less than 5 per cent, there shall be no reduction.

(2) For a computed increase in production or acreage of 5 per cent but less than 10 per cent, there shall be a reduction of 25 per cent.

(3) For a computed increase in production or acreage of 10 per cent but less than 15 per cent, there shall be a reduction of 50 per cent.

(4) For a computed increase in production or acreage of 15 per cent or more, the issuance of debentures shall be suspended for a period of one year.

I think that is entirely adequate.

Mr. BRIGHAM. Will the gentleman yield?

Mr. KETCHAM. I will.

Mr. BRIGHAM. Will the gentleman tell us how much money he thinks this bill would keep from going into the Federal Treasury?

Mr. KETCHAM. This bill will keep $146,000,000 from going into the United States Treasury.

Mr. HAUGEN. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and Mr. TILSON having taken the chair as Speaker pro tempore, Mr. HOCH, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill S. 3555, the agricultural surplus control bill, and had come to no resolution thereon.

## DEATH OF HON. MARTIN B. MADDEN

Mr. WILLIAMS. Mr. Speaker, it becomes my painful duty to announce to the House the death a moment ago of the Hon. MARTIN B. MADDEN, Member of Congress from the first district of the State of Illinois. Mr. MADDEN'S death brings to a close a career of great usefulness and of great length in our State. One of the most prominent business men of the State, for many years a member of the city council in the city of Chicago, where he served as chairman of the finance committee; for 24 years a Member of this House, where he has made as great a reputation as chairman of the Appropriations Committee as any who have ever served here. His death will be profoundly mourned by the people of the State he so ably served and so highly honored. At a future time there will be suitable and proper memorial exercises on his career. I submit the following resolutions:

House Resolution 177

*Resolved*, That the House has heard with profound sorrow of the death of Hon. MARTIN B. MADDEN, a Representative from the State of Illinois.

*Resolved*, That the Clerk communicate these resolutions to the Senate and transmit a copy thereof to the family of the deceased.

*Resolved*, That as a further mark of respect the House do now adjourn.

The SPEAKER pro tempore. The Speaker will later appoint a committee to attend the funeral. The question is on agreeing to the resolutions.

The resolutions were agreed to.

Accordingly (at 1 o'clock and 48 minutes p. m.) the House adjourned until to-morrow, Saturday, April 28, 1928, at 12 o'clock noon.

## COMMITTEE HEARINGS

Mr. TILSON submitted the following tentative list of committee hearings scheduled for Saturday, April 28, 1928, as reported to the floor leader by clerks of the several committees:

COMMITTEE ON EDUCATION

(10.30 a. m.)

To create a department of education (H. R. 7).

COMMITTEE ON THE DISTRICT OF COLUMBIA

(10.30 a. m.)

To authorize the merger of street-railway corporations operating in the District of Columbia (H. J. Res. 276).

## EXECUTIVE COMMUNICATIONS, ETC.

469. Under clause 2 of Rule XXIV, a letter from the Secretary of the Navy, transmitting draft of a proposed bill "Authorizing the Secretary of the Navy to assign to the Chief of Naval Operations, the public quarters originally constructed for the superintendent of the Naval Observatory in the District of Columbia," was taken from the Speaker's table and referred to the Committee on Naval Affairs.

## REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of Rule XIII,

Mr. MACGREGOR: Committee on Accounts. H. Res. 156. A resolution to pay George Hand, jr., son of George R. Hand, late clerk to Hon. CHARLES E. WINTER, a sum equal to six months' salary and $250 for funeral expenses (Rept. No. 1392). (Ordered to be printed.)

## REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of Rule XIII,

Mr. JAMES: Committee on Military Affairs. H. R. 13331. A bill to authorize the President to present the distinguished flying cross to Ehrenfried Gunther von Huenefeld, James C. FitzMaurice, and Hermann Koehl; without amendment (Rept. No. 1393). Referred to the Committee of the Whole House.

Mr. HUDSPETH: Committee on Claims. H. R. 4083. A bill authorizing Porter Bros. & Biffle and others to bring suit against the United States of America for loss and damage sustained through erroneous certification by the Bureau of Animal Industry; without amendment (Rept. No. 1394). Referred to the Committee of the Whole House.

## PUBLIC BILLS AND RESOLUTIONS

Under clause 3 of Rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BUTLER: A bill (H. R. 13370) authorizing the Secretary of the Navy to assign to the Chief of Naval Operations the public quarters originally constructed for the superintendent of the Naval Observatory in the District of Columbia; to the Committee on Naval Affairs.

By Mr. MORROW: A bill (H. R. 13371) authorizing appropriations to cover Mexico's proportionate share of the cost of operating the Rio Grande Federal irrigation project; to the Committee on Irrigation and Reclamation.

By Mr. PEAVEY: A bill (H. R. 13372) granting to the State of Wisconsin certain unappropriated public lands in meandered areas; to the Committee on the Public Lands.

By Mr. TATGENHORST: A bill (H. R. 13373) exempting building and loan associations from being adjudged involuntary bankrupts; to the Committee on the Judiciary.

By Mr. HILL of Alabama: Joint resolution (H. J. Res. 291) providing for the suspension of the provisions of section 7 of the act of March 1, 1911, requiring the consent of the State legislature for the acquisition of any unacquired lands within the present exterior boundaries of the Alabama National Forest until and including December 31, 1930; to the Committee on Agriculture.

## PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. FRENCH: A bill (H. R. 13374) granting a pension to Noble Henry; to the Committee on Pensions.

Also, a bill (H. R. 13375) granting a pension to Charlie Jackson, alias Kah-yah-pah-tas-in, alias Lilth-Ka-Meet-Sa; to the Committee on Pensions.

By Mr. IRWIN: A bill (H. R. 13376) granting an increase of pension to Margaret Clark; to the Committee on Invalid Pensions.

By Mr. MOORE of Kentucky: A bill (H. R. 13377) granting an increase of pension to Will G. Travelstead; to the Committee on Pensions.

By Mr. REED of Arkansas: A bill (H. R. 13378) granting a pension to S. A. Ashcraft; to the Committee on Invalid Pensions.

By Mr. SEARS of Nebraska: A bill (H. R. 13379) to provide appointment of William O. Boger, first sergeant, detached enlisted men's list, Organized Reserves, Eighty-ninth Division, Army Building, Omaha, Nebr., a warrant officer in the United States Army; to the Committee on Military Affairs.

## PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

7272. By Mr. BACON: Petition of sundry citizens of Patchogue, Long Island, N. Y., in favor of the Lehlbach retirement bill (H. R. 25); to the Committee on the Civil Service.

7273. Also, petition of sundry residents of Brookhaven and Patchogue, Long Island, N. Y., urging passage of the Sproul bill (H. R. 11410); to the Committee on the Judiciary.

7274. By Mr. CHINDBLOM: Petition sent by Mrs. S. E. Morrow, Zion, Ill., containing signatures of 24 citizens, urging the passage of legislation providing increased pensions for Civil War survivors and widows; to the Committee on Invalid Pensions.

7275. By Mr. JOHNSON of Texas: Petition of Judge Joe Y. McNutt, of Franklin, Tex., indorsing the Tyson-Fitzgerald bill (S. 777, H. R. 500) for the retirement of disabled emergency officers; to the Committee on Rules.

7276. By Mr. KETCHAM: Petition of J. B. Buck and 21 other residents of Hastings and Freeport, Mich., protesting against the passage of House bill 78, or any other bill providing for compulsory Sunday observance; to the Committee on the District of Columbia.

7277. By Mr. LEAVITT: Petition of numerous citizens of Lewistown, Mont., urging increases in pensions for Civil War veterans and widows of veterans; to the Committee on Invalid Pensions.

7278. By Mr. LINDSAY: Petition of Italian Chamber of Commerce in New York, indorsing and recommending favorable action by Congress on House Joint Resolution 84 and Senate Joint Resolution 6, authorizing the President to proclaim October 12 as Columbus day for the observance of the anniversary of the discovery of America; to the Committee on the Judiciary.

7279. Also, petition of American Association for Labor Legislation, 131 East Twenty-third Street, New York City, urging the prompt enactment of Senate bill 3565, providing for workmen's compensation in the District of Columbia, and House bill 11027, providing for vocational rehabilitation in the District of Columbia; to the Committee on the District of Columbia.

7280. Also, petition of C. I. T. Corporation, 1 Park Avenue, New York City, urging early consideration of House bill 12730, prescribing the procedure for forfeiture of vessels under the customs, navigation, and internal revenue laws; to the Committee on the Judiciary.

7281. Also, petition of E. S. Reynolds, 111 Broadway, New York City, urging favorable vote for the Tyson bill (S. 777), unamended, as expressing views of many veterans; to the Committee on World War Veterans' Legislation.

7282. Also, petition of Mother M. Spann, superioress, Ursuline Convent, Columbia, S. C., praying for the passage of Senate bill 3863, introduced by Senator COLE BLEASE, for indemnification for the burning of the Ursuline Convent and Academy when Columbia was occupied by the Union Army in 1865; to the Committee on War Claims.

7283. Also, petition of New York State Home Economics Association, Aurora, N. Y., urging support and passage of the Reed educational bill (H. R. 12241); to the Committee on Education.

7284. By Mr. O'CONNELL: Petition of the American Association for Labor Legislation, American Federation of Labor, favoring the passage of the Blaine bill (S. 3565) providing workmen's compensation; also the Summers bill (H. R. 11027) providing vocational rehabilitation of those crippled in the District of Columbia; to the Committee on Education.

7285. Also, petition of C. I. T. Corporation, 100 Park Avenue, New York City, favoring the passage of the Bachmann bill (H. R. 12730) prescribing the procedure for forfeiture of vessels under customs, navigation, and internal revenue laws; to the Committee on the Judiciary.

7286. Also, petition of B. F. Yoakum, New York City, suggesting certain amendments to the McNary-Haugen farm relief bill; to the Committee on Agriculture.

7287. Also, petition of E. S. Reynolds, 111 Broadway, New York City, favoring the passage of the Tyson bill (S. 777) unamended; to the Committee on World War Veterans' Legislation.

7288. Also, petition of the Frontier Development Co., Buffalo, N. Y., favoring the passage of the emergency officers' retirement bill (S. 777); to the Committee on World War Veterans' Legislation.

7289. Also, petition of the Paper Cutters, Binding Machine Operators, and Embossers' Protective Union, No. 119, New York City, favoring the enactment of the Griest postal bill; to the Committee on the Post Office and Post Roads.

7290. By Mr. QUAYLE: Petition of New York State Home Economics Association, favoring the passage of the Reed bill (H. R. 12141) for vocational education; to the Committee on World War Veterans' Legislation.

7291. Also, petition of M. Fine & Sons, of New York, favoring the passage of the Hawes-Cooper bill (H. R. 7729); to the Committee on Labor.

7292. Also, petition of Frontier Development Co., of Buffalo, N. Y., favoring the passage of the Tyson-Fitzgerald bill, for the retirement of emergency officers; to the Committee on Military Affairs.

7293. Also, petition of National Board of Tobacco Salesmen's Association, of New York City, favoring the passage of the Robinson bill (H. R. 668) to amend section 1 of the interstate commerce act; to the Committee on Interstate and Foreign Commerce.

7294. Also, petition of C. I. T. Corporation of New York City, favoring the passage of the Bachmann bill (H. R. 12730) prescribing the procedure for forfeiture of vessels under the customs, navigation, and internal revenue laws; to the Committee on the Judiciary.

7295. Also, petition of American Association for Labor Legislation, of New York City, favoring the passage of the Blaine bill (S. 3565) providing workmen's compensation for private employees in the District of Columbia; to the Committee on the District of Columbia.

7296. By Mr. SINCLAIR: Letter of C. E. Cunningham, cashier of the Commercial Bank, Williston, N. Dak., against the Oddie bill; to the Committee on the Post Office and Post Roads.

7297. By Mr. WINTER: Resolution re House bill 9956, from G. R. Anderson, commander Travis Snow Post, No. 5, Torrington, Wyo.; to the Committee on Irrigation and Reclamation.

---

## SENATE

### SATURDAY, *April 28, 1928*

The Chaplain, Rev. ZeBarney T. Phillips, D. D., offered the following prayer:

O God, who comest to us in an hour when we think not and in ways we least expect, we thank Thee that Thou hast clothed Thyself in our frail form, hast consented to walk our ways, endure our sorrows, and to taste for us the bitterness of death, look with loving pity upon those who have been called to drink the cup of tears, and be unto them a refuge in this their hour of utmost need.

Breathe into our hearts, O God, by the divine alchemy of Thy grace, such spirit of devotion to our tasks that when our summons comes we may receive that blessing which Thy well-beloved Son shall pronounce to all who love and serve Thee, saying, "Come ye blessed children of my Father, receive the kingdom prepared for you from the beginning of the world." Grant this, O Father, through Jesus Christ, our Mediator and Redeemer. Amen.

The Chief Clerk proceeded to read the Journal of yesterday's proceedings, when, on request of Mr. CURTIS and by unanimous consent, the further reading was dispensed with and the Journal was approved.

#### CALL OF THE ROLL

Mr. CURTIS. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

| | | | |
|---|---|---|---|
| Ashurst | Fess | King | Shortridge |
| Barkley | Fletcher | La Follette | Simmons |
| Bayard | Frazier | Locher | Smoot |
| Bingham | George | McKellar | Steck |
| Black | Gerry | McNary | Steiwer |
| Blaine | Goff | Mayfield | Stephens |
| Blease | Gooding | Neely | Swanson |
| Bratton | Gould | Norbeck | Thomas |
| Broussard | Greene | Norris | Tydings |
| Bruce | Hale | Nye | Tyson |
| Capper | Harris | Oddie | Vandenberg |
| Caraway | Harrison | Overman | Wagner |
| Copeland | Hayden | Phipps | Walsh, Mass. |
| Couzens | Heflin | Pittman | Walsh, Mont. |
| Curtis | Howell | Ransdell | Warren |
| Dale | Johnson | Robinson, Ark. | Waterman |
| Deneen | Jones | Sackett | Wheeler |
| Dill | Kendrick | Schall | |
| Edge | Keyes | Sheppard | |

Mr. GERRY. I wish to announce that the junior Senator from New Jersey [Mr. EDWARDS] is necessarily detained from the Senate by reason of illness in his family.

The VICE PRESIDENT. Seventy-four Senators having answered to their names, a quorum is present.

#### MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Chaffee, one of its clerks, announced that the House had adopted the following resolution (H. Res. 178):

*Resolved*, That a committee of the House be appointed to take order for superintending the funeral of Hon. MARTIN B. MADDEN in the House of Representatives at 12 o'clock meridian on Sunday, April 29, 1928, and that the House of Representatives attend the same.

*Resolved*, That as a further mark of respect the remains of Mr. MADDEN be removed from Washington to Chicago, Ill., in charge of the Sergeant at Arms, attended by the committee, who shall have full power to carry these resolutions into effect, and that the necessary expenses in connection therewith be paid out of the contingent fund of the House.

*Resolved*, That the Clerk of the House communicate these proceedings to the Senate and invite the Vice President and the Senate to attend the funeral in the House of Representatives and to appoint a committee to act with the committee of the House.

*Resolved*, That invitations be extended to the President of the United States and the members of his Cabinet, the Chief Justice and Associate Justices of the Supreme Court of the United States, the diplomatic corps (through the Secretary of State), the General of the Army, and the Chief of Naval Operations to attend the funeral in the Hall of the House of Representatives.

The message also announced that, pursuant to House Resolution 178, the Speaker appointed the following committee on the part of the House to superintend the funeral of the late Representative MARTIN B. MADDEN, viz: Representatives D. R. ANTHONY, Jr., Kansas; BURTON L. FRENCH, Idaho; W. W. GRIEST, Pennsylvania; FRED A. BRITTEN, Illinois; LOUIS C. CRAMTON, Michigan; EDWARD E. DENISON, Illinois; EDWARD J. KING, Illinois; GEORGE H. TINKHAM, Massachusetts; EDWARD H. WASON, New Hampshire; THOMAS S. WILLIAMS, Illinois; WILLIAM R. WOOD, Indiana; MILTON W. SHREVE, Pennsylvania; ERNEST R. ACKERMAN, New Jersey; HENRY E. BARBOUR, California; CARL R. CHINDBLOM, Illinois; L. J. DICKINSON, Iowa; GUY U. HARDY, Colorado; FRANK MURPHY, Ohio; WALTER H. NEWTON, Minnesota; JOHN W. SUMMERS, Washington; RICHARD YATES, Illinois; FRANK CLAGUE, Minnesota; M. ALFRED MICHAELSON, Illinois; ELLIOTT W. SPROUL, Illinois; ROBERT L. BACON, New York; WILLIAM P. HOLADAY, Illinois; MORTON D. HULL, Illinois; WILLIAM E. HULL, Illinois; HENRY R. RATHBONE, Illinois; FRANK R. REID, Illinois; ROBERT G. SIMMONS, Nebraska; JOHN TABER, New York; MAURICE H. THATCHER, Kentucky; GEORGE A. WELSH, Pennsylvania; CHARLES ADKINS, Illinois; JOHN C. ALLEN, Illinois; ED. M. IRWIN, Illinois; WILLIAM R. JOHNSON, Illinois; JOHN T. BUCKBEE, Illinois; HOMER W. HALL, Illinois; HENRY T. RAINEY, Illinois; ADOLPH J. SABATH, Illinois; JOSEPH W. BYRNS, Tennessee; EDWARD T. TAYLOR, Colorado; JAMES P. BUCHANAN, Texas; WILLIAM B. OLIVER, Alabama; ANTHONY J. GRIFFIN, New York; WILLIAM A. AYRES, Kansas; THOMAS W. HARRISON, Virginia; WILLIAM W. HASTINGS, Oklahoma; THOMAS H. CULLEN, New York; JOHN J. CASEY, Pennsylvania; ROSS A. COLLINS, Mississippi; STANLEY H. KUNZ, Illinois; JOHN N. SANDLIN, Louisiana; WILLIAM W. ARNOLD, Illinois; THOMAS A. DOYLE, Illinois; FRED M. VINSON, Kentucky; J. EARL MAJOR, Illinois; and JAMES T. IGOE, Illinois.

The message further announced that the House insisted upon its amendments to the bill (S. 3740) for the control of floods on the Mississippi River and its tributaries, and for other purposes, disagreed to by the Senate, agreed to the conference requested by the Senate on the disagreeing votes of the two Houses thereon, and that Mr. REID of Illinois, Mr. CURRY, Mr. ROY G. FITZGERALD, Mr. WILSON of Louisiana, and Mr. DRIVER were appointed managers on the part of the House at the conference.

The message also announced that the House had passed a bill (H. R. 13331) to authorize the President to present the distinguished flying cross to Ehrenfried Gunther von Huenefeld, James C. FitzMaurice, and Hermann Koehl, in which it requested the concurrence of the Senate.

ENROLLED BILL SIGNED

The message further announced that the Speaker had affixed his signature to the enrolled bill (S. 3437) to provide for the conservation of fish, and for other purposes, and it was signed by the Vice President.

FUNERAL OF THE LATE REPRESENTATIVE MADDEN

Mr. CURTIS. Mr. President, I ask the Chair to lay the resolution from the House before the Senate; and in connection with it I propose a resolution, which I send to the desk and ask unanimous consent for its immediate consideration.

The VICE PRESIDENT. The Chair lays before the Senate a resolution from the House of Representatives, which will be read.

The Chief Clerk read House Resolution No. 178.

Mr. CURTIS. I ask unanimous consent for the adoption of the resolution which I send to the desk.

The VICE PRESIDENT. The resolution will be read.

The Chief Clerk read the resolution (S. Res. 211), as follows:

*Resolved*, That the Senate accept the invitation of the House of Representatives to attend the funeral of Hon. MARTIN B. MADDEN, late a Representative from the State of Illinois, in the House of Representatives at 12 o'clock meridian on Sunday, April 29, 1928, and that a committee of 10 Senators be appointed by the Vice President to act with the committee appointed by the House of Representatives to take order for superintending the funeral.

The VICE PRESIDENT. The question is on agreeing to the resolution.

The resolution was unanimously agreed to; and the Vice President appointed as members of the committee on the part of the Senate Mr. DENEEN, Mr. CURTIS, Mr. ROBINSON of Arkansas, Mr. WARREN, Mr. OVERMAN, Mr. SMOOT, Mr. WALSH of Montana, Mr. MCNARY, Mr. HARRISON, and Mr. STECK.

Mr. CURTIS. I ask unanimous consent that when the Senate concludes its business to-day it shall take a recess until 11.45 to-morrow for the purpose of enabling the Senate to attend the funeral in a body, and that at the conclusion of the funeral services the Senate shall stand adjourned until Monday at 12 o'clock noon.

The VICE PRESIDENT. Is there objection to the order requested by the Senator from Kansas? The Chair hears none.

EQUITABLE USE OF WATERS OF LOWER COLORADO RIVER

The VICE PRESIDENT laid before the Senate a communication from the Acting Secretary of the Interior, transmitting, in response to Senate Resolution 181, agreed to April 20, 1928, copies of all correspondence on file in the Bureau of Reclamation regarding the equitable use of the waters of the lower Colorado River and the Rio Grande, which, with the accompanying papers, was ordered to lie on the table.

RIKER MISSISSIPPI SPILLWAY PLAN FOR FLOOD CONTROL

The VICE PRESIDENT laid before the Senate a communication from the Chief of Engineers, War Department, reporting in response to Senate Resolution 206, agreed to April 25, 1928 (submitted by Mr. FRAZIER), relative to the Riker Mississippi spillway plan for flood control, which was referred to the Committee on Commerce and ordered to be printed in the RECORD, as follows:

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ENGINEERS,
*Washington, April 28, 1928.*

The PRESIDENT OF THE SENATE,
*Washington, D. C.*

SIR: Referring to the resolution passed by the Senate April 25, 1928, requesting the Chief of Engineers to report to the Senate upon the merits of the Riker Mississippi spillway plan for flood control, I attended the hearing of the Committee on Commerce on February 11, 1928, and heard Mr. Riker describe to the committee his Mississippi spillway plan for flood control. My comments thereon are printed on pages 652 and 653 of the hearings before the Committee on Commerce, United States Senate, Seventieth Congress, first session, part 3.

On April 16 I examined the model of the Riker spillway plan on exhibition in the basement of the Senate Office Building.

Flood ways for the relief of the main river below the mouth of the Arkansas are essential for flood control of the Mississippi if the maximum possible flood is to be protected against. But flood ways in the St. Francis or Yazoo Valleys are not an essential part of the plan and would result in claims for damages as lands have not been subject to overflow frequently in recent years.

The levees proposed along the Riker flood ways are in my opinion too high for safety, and the estimated cost for the whole project—$785,000,000—is too low. The low unit cost for earthwork is out of line with the experience of contractors and of the Government on work of a similar nature. The dredge proposed by him for use in building these levees is of a design that has not been proved. Drainage of the alluvial valley itself would be expensive and unsatisfactory, as most of the water would have to be pumped. The proposed dams would be expensive and uncertain in their operation. There are other matters of hydraulics and engineering, such as capacity and velocity of flow in the spillway and erosion of the bed and banks of the spillway, that are open to objection, as, for example, the natural slope of the ground from Red River to the Gulf of Mexico is very small, and a cleared flood way 3 miles wide with such a small slope will have insufficient capacity to carry the water brought to it from above, and therefore more water would be thrown down the main Mississippi River and pass New Orleans than can be carried in its channel between existing levees.

In general the plan would involve much greater costs than are necessary to a sound solution and can not be depended upon to secure the desired results.

Respectfully,

EDGAR JADWIN,
*Major General, Chief of Engineers.*

PETITIONS AND MEMORIALS

The VICE PRESIDENT laid before the Senate a resolution adopted by the New Jersey Annual Conference of the Methodist Episcopal Church at Atlantic City, N. J., favoring the establishment of a bureau of peace to promote the best possible relationships with all nations, which was referred to the Committee on Foreign Relations.

Mr. COPELAND presented a resolution adopted by the West End Citizens Association, of Washington, D. C., indorsing Senate bill 3107 to regulate the practice of the healing art to protect public health in the District of Columbia, which was ordered to lie on the table.

Mr. JONES presented a petition of sundry citizens of Spokane, Wash., praying for the prompt passage of Senate bill 860, the so-called McKellar-Fitzgerald bill, allowing credit to postal and substitute postal employees for time served in the Army, Navy, or Marine Corps of the United States, which was referred to the Committee on Post Offices and Post Roads.

Mr. WARREN presented resolutions adopted by the Lions Club of Casper and Saratoga, in the State of Wyoming, favoring the passage of legislation providing for aided and directed settlement on Federal reclamation projects, which were referred to the Committee on Irrigation and Reclamation.

Mr. FESS presented petitions numerously signed by sundry citizens of the State of Ohio, praying for the passage of the so-called Gillett resolution, being the resolution (S. Res. 139) suggesting a further exchange of views relative to the World Court, which were referred to the Committee on Foreign Relations.

Mr. LOCHER presented petitions numerously signed by sundry citizens of the State of Ohio, praying for the passage of the so-called Gillett resolution, being the resolution (S. Res. 139) suggesting a further exchange of views relative to the World Court, which were referred to the Committee on Foreign Relations.

Mr. CAPPER presented a resolution adopted by the Ashland Community Club, of Ashland, Kans., favoring the passage of the so-called Capper universal draft bill, which was referred to the Committee on Military Affairs.

Mr. WALSH of Massachusetts presented a petition of sundry members of the Woman's Interdenominational Union of Philadelphia, in annual session, April 23, 1928, authorizing the indorsement by the union, representing 52,129 members of various religious denominations throughout the United States and 23 interdenominational groups, of Senate Joint Resolution 122, providing for the reunion of families of alien declarants, and praying for its passage, which was referred to the Committee on Immigration.

He also presented telegrams signed by Miss Esther L. Anderson, general secretary Young Women's Christian Association, Springfield, Mass.; Mrs. A. J. Armstrong, president Adult Class First Unitarian Church, Erie, Pa.; and Miss Violet C. Baur, secretary League of Women Voters of Erie County, Pa., and letters from Sundry citizens of Dorchester, Mass., Detroit, Mich., and Los Angeles, Calif., all praying for the passage of Senate Joint Resolution 122, providing for the reunion of families of alien declarants, which were referred to the Committee on Immigration.

He also presented letters, in the nature of petitions, from Miss Frances C. Moore, executive secretary Young Women's Christian Association, Worcester, Mass.; Mrs. W. Spore, secre-

tary Young Women's Christian Association, Austin, Tex.; Mrs. Joel B. Davis, chairman Kensington Branch, Young Women's Christian Association, Philadelphia, Pa.; Mr. Aaron M. Lopez, executive director Jewish Welfare Society, Erie, Pa., and petitions of sundry citizens and members of the Young Women's Christian Association, Milwaukee, Wis., and Philadelphia, Pa.; the Yale Graduates' Discussion Group, New Haven, Conn., and the Woman's Center, Young Women's Christian Association, Detroit, Mich., all praying for the passage of Senate Joint Resolution 122, providing for the reunion of families of alien declarants, which were referred to the Committee on Immigration.

PERMANENT COURT OF INTERNATIONAL JUSTICE

Mr. SHORTRIDGE. Mr. President, I present a petition accompanied by a letter addressed to me from Mr. George M. Day, of the department of economics and sociology of the Occidental College, Los Angeles, Calif. The petition is signed by the members of the faculty of the college, the purport being that the United States adhere to the Court of International Justice. I move that the petition be referred to the Committee on Foreign Relations and printed in the RECORD with the names of the signers.

There being no objection, the petition and accompanying letter were referred to the Committee on Foreign Relations and ordered to be printed in the RECORD with the signatures attached, as follows:

OCCIDENTAL COLLEGE,
*Los Angeles, Calif., April 24, 1928.*

DEAR SENATOR SHORTRIDGE: May I commend to your interest the attached petition forwarded by the members of Occidental College to you in the hope that their interest in the Gillett resolution will be shared by you.

May we respectfully request that this petition, with its complete names of signatures, be inserted in the CONGRESSIONAL RECORD, where it will undoubtedly prove of interest to the other Members of the Senate.

Respectfully,

GEORGE M. DAY,
*Department of Economics and Sociology.*

---

OCCIDENTAL COLLEGE,
*Los Angeles, Calif.*

The undersigned members of the faculty of Occidental College hereby express deep interest in the adherence of the United States to the Permanent Court of International Justice and urge every member of the Foreign Relations Committee to support the following Gillett resolution:

Resolution

Whereas the Senate on January 27, 1926, by a vote of 76 to 17 gave its advice and consent to the adherence of the United States to the Permanent Court of International Justice upon certain conditions and with certain reservations; and

Whereas the signatory States in transmitting their replies reverred to "such further exchange of views as the Government of the United States may think useful": Therefore be it

*Resolved*, That the Senate of the United States respectfully suggests to the President the advisability of a further exchange of views with the signatory States in order to establish whether the differences between the United States and the signatory States can be satisfactorily adjusted.

Signers of resolution, Occidental College, Los Angeles, Calif.: Remsen D. Bird, president of the college; Thomas G. Burt, dean of the college; Irene T. Myers, dean of women; Wallace Emerson, assistant professor of education; Ernestine A. Kinney, instructor of education; Lowell J. Chawner, registrar; John Parke Young, professor of economics; Robert G. Cleland, vice president and professor of history; Julia A. Opal, director of student activities; Arthur G. Coons, assistant professor of economics; James Huntley Sinclair, professor of education; George M. Day, professor of economics and sociology; G. A. Thompson, associate professor of English; B. F. Stelter, professor of English; Wm. B. Allison, professor of Spanish; F. W. Brid, professor of political science; Wm. G. Bell, professor of French; J. Hudson Ballard, professor of religion; Ernest E. Allen, professor of mathematics; D. J. Teviotdale, instructor in economics; Hugh S. Lowther, professor of Latin; Martin J. Stormzand, professor of education; Elbert E. Chandler, professor of chemistry.

FLOOD CONTROL

Mr. FRAZIER. I present resolutions recently adopted by the board of direction of the American Society of Civil Engineers, relative to the Mississippi flood-control problem. I think the petition is very apropos at this time, the flood control bill being before the Senate and House. I ask that the resolutions be printed in the RECORD and lie on the table.

There being no objection, the resolutions were ordered to lie on the table and to be printed in the RECORD, as follows:

Resolutions regarding control of Mississippi River floods unanimously adopted by the board of direction of the American Society of Civil Engineers

Whereas the control of Mississippi River floods affects important interests other than navigation, including agriculture, railway and highway transportation, the operation of industry and business, and the water supply and sanitation of municipalities; and

Whereas many features of the proposed control and regulating works will be unprecedented in design and magnitude, and will cost much more than any works heretofore undertaken by the Federal Government; and

Whereas no representative commercial or industrial organization would undertake a task of comparable nature without the most thorough review and analysis of the character, details, and scope of the proposed plans by competent agencies independent of the personnel selected for the accomplishment of the task: Now, therefore, be it

*Resolved*, That the board of direction of the American Society of Civil Engineers—

First. Commends the President for his position in insisting upon the very important principle of local participation in the cost of protection, in proportion to the benefits derived, and in proportion to the resources and responsibilities of the interests affected;

Second. Approves the principle of placing the responsibility for construction in an executive department;

Third. Inasmuch as a great amount of flood-control work on the Mississippi River remains unfinished, which already has been approved by the Congress or is generally agreed upon as essential to any comprehensive plan, that the Congress be requested to make appropriations without delay for such work, to be constructed at once without waiting for the completion of a general plan;

Fourth. Earnestly recommends the creation of a board of at least nine disinterested engineers, chosen by the President for their outstanding training, experience, and accomplishments in hydraulic and river-control problems, and in the design, organization, and construction of large and important public works—this board to confer with the departmental officials responsible for the preparation of plans, and to make a complete review and analysis and a report to the Congress on the scope and the technical and economic features of the comprehensive plan and program;

Fifth. In view of the paucity of data, incompleteness of surveys, and lack of information necessary for solving many controversial features of the Mississippi River problems, that Congress be requested to authorize and appropriate sufficient funds for such studies, and the creation of such a board to carry on such work and to report to the next Congress.

HYDRAULIC MINING INVESTIGATIONS, CALIFORNIA (S. DOC. NO. 90)

Mr. JONES presented a letter from Maj. Gen. Edgar Jadwin, Chief of Engineers, relative to hydraulic mining investigations in the State of California, which, with the accompanying reports and data, was ordered to be printed as a document with illustrations.

REPORTS OF COMMITTEES

Mr. SHEPPARD, from the Committee on Military Affairs, to which was referred the bill (H. R. 10139) for the relief of Edmund F. Hubbard, reported it without amendment and submitted a report (No. 919) thereon.

Mr. McKELLAR, from the Committee on the Library, to which was referred the bill (S. 3171) providing for a Presidents' plaza and memorial in the city of Nashville, State of Tennessee, to Andrew Jackson, James K. Polk, and Andrew Johnson, former Presidents of the United States, reported it without amendment and submitted a report (No. 920) thereon.

Mr. NYE, from the Committee on Claims, to which was referred the bill (H. R. 3029) for the relief of Vern E. Townsend, reported it without amendment and submitted a report (No. 921) thereon.

Mr. FLETCHER, from the Committee on Military Affairs, to which was referred the bill (S. 3752) to amend section 3 of an act entitled "An act authorizing the use for permanent construction at military posts of the proceeds from the sale of surplus War Department real property, and authorizing the sale of certain military reservations, and for other purposes," approved March 12, 1926, reported it without amendment and submitted a report (No. 922) thereon.

Mr. NORBECK, from the Committee on Pensions, to which was referred the bill (H. R. 12381) granting pensions and increase of pensions to certain soldiers and sailors of the Regular Army and Navy, etc., and certain soldiers and sailors of wars other than the Civil War, and to widows of such

soldiers and sailors, reported it with amendments and submitted a report (No. 923) thereon.

Mr. BINGHAM, from the Committee on Military Affairs, to which were referred the following bills, reported them each without amendment and submitted reports thereon:

A bill (S. 4216) to authorize the adjustment and settlement of claims for armory drill pay (Rept. No. 924); and

A bill (S. 4235) to amend section 12 of the act entitled "An act to provide more effectively for the national defense by increasing the efficiency of the Air Corps of the Army of the United States, and for other purposes," approved July 2, 1926 (Rept. No. 925).

ENROLLED BILLS PRESENTED

Mr. GREENE, from the Committee on Enrolled Bills, reported that that committee presented to the President of the United States the following enrolled bills:

On April 27, 1928:

S. 1368. An act to extend the benefits of the employees' compensation act of September 7, 1916, to Martha A. Hauch; and

S. 2900. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors.

On April 28, 1928:

S. 3437. An act to provide for the conservation of fish, and for other purposes.

DISTINGUISHED-FLYING CROSS

Mr. BINGHAM. Mr. President, from the Committee on Military Affairs I report back favorably, with amendments, the bill (S. 4218) to authorize the President to present the distinguished-flying cross to Ehrenfried Gunther von Huenefeld, James C. FitzMaurice, and Hermann Koehl. I ask unanimous consent for its immediate consideration.

The VICE PRESIDENT. Is there objection to the request of the Senator from Connecticut?

Mr. BLEASE. Mr. President, I object.

Mr. ROBINSON of Arkansas. Mr. President, I hope the Senator from South Carolina will not object to the consideration of the bill.

Mr. BLEASE. I am coming to the belief that this question of hero worship has gone far enough, and I do object.

Mr. BINGHAM. Mr. President, will the Senator permit me to make a brief explanation?

Mr. BLEASE. I have no objection to that.

Mr. BINGHAM. When we passed the bill with regard to the distinguished-flying cross we made no provision permitting the President to present it to any aviators except those in the Army, Navy, and Marine Corps. There was no provision made to permit us to give it to distinguished foreign aviators who might arrive in this country.

May I say to the Senator from South Carolina that whenever any of our aviators have crossed the ocean into foreign lands, either the first naval aviators to cross the north Atlantic, Commander Read and his friends, or Colonel Lindbergh, or Chamberlin, or any of the others, when they have arrived in foreign countries it has been the universal custom of the governments of those countries to give our aviators decorations? It is only a matter of common courtesy, it seems to me, that we should be permitted to do the same thing in return.

Since the law at present does not permit it, we have incorporated in the bill, reported unanimously from the Committee on Military Affairs, although the Senator from South Carolina was not present at the meeting, a provision permitting the President to give the distinguished-flying cross to the Italian, Col. Francesco de Pinedo, who made his wonderful flight last summer, and to the Frenchmen, Lieut. Commander Joseph Le Brix and Lieut. Dieudonne Costes, who were received on the floor of the Senate not very long ago, as well as to the two German aviators and the Irish aviator who are at present our guests in Washington.

In vew of the fact that this is only a matter of international comity, reciprocating the courtesies which our own aviators have received in foreign lands, I hope very much my good friend the Senator from South Carolina will be willing to withdraw his objection.

Mr. ROBINSON of Arkansas. Mr. President, I wish to make a brief statement. I trust there will be no objection to the consideration of the bill. It is a recognition of the achievements of these distinguished foreigners which I regard as peculiarly appropriate at this time. It would be, in my judgment, regrettable if the recognition contemplated by the bill should be denied. I ask the Senator from South Carolina if he will not withdraw the objection and permit the Senate to consider the bill?

Mr. BLEASE. No; I will not withdraw the objection.

Mr. ROBINSON of Arkansas. Then I give notice that when the opportune time arrives I shall move the consideration of the bill.

Mr. BLEASE. Mr. President, when this Congress favors a bill which will allow honors to our boys, which will allow our boys who went across the water and fought and who have been certified for bravery, to receive the honors due them as shown by those certificates which are now in the office of the Secretary of War, then I shall consent to the further bestowal of honors of this kind. I think before we go so far as to continually pass bills here conferring medals of honor and crosses of honor and other such things upon people of foreign governments we owe fair treatment to our boys who went abroad to fight for this country—one of whom is a Member of this body—and who have been cited for bravery; and yet Congress sits here year after year giving them no opportunity to receive their citations.

I think it is high time for the Senate and for the body at the other end of the Capitol to give recognition to the American boys who have already been cited for bravery, but who have been deprived of receiving the honors which should be conferred upon them. I think it is time for the Senate to stop the conferring of honors upon people of other nations and to look after our own American boys who have been cited for bravery and who certainly should have the honors recommended conferred upon them.

I have no objection to the bill, so far as the bill itself is concerned, but I do object to going on and on in this way, and at the same time choking off and refusing to give identical honors to American boys, and still conferring them upon foreigners. That is the reason why I object. I am willing that the American people should know my objection and my reason. I am willing to go back to my people, who have boys entitled to citations, and ask them whether they are willing to continue to confer honors upon foreigners and at the same time, after their sons have been cited for bravery, not permit them to receive the honors which have been recommended for them or to receive the recognition which their officers have said they deserve.

Mr. President, I ask permission to have inserted as a part of my remarks a message I sent to Colonel Lindbergh at Paris, France, at the time of his flight.

The VICE PRESIDENT. Is there objection?

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

COLUMBIA, S. C., *May 21, 1927.*

LINDBERGH,

*Paris, France:*

I congratulate you upon your success. Wish we had more Americans like you who trust in their own knowledge and their God for success and receive dictation from no one.

COLE L. BLEASE.

Mr. ROBINSON of Arkansas. Mr. President, I am anxious to afford to American soldiers and veterans every recognition which may be appropriately accorded them. I do feel that it would be very unfortunate to deny the recognition carried in this bill because of the failure of any Senator or Senators to present measures here appropriately recognizing the services of American soldiers and sailors.

I do not know whether it is permitted under the procedure of the Senate at this juncture to make the motion which I said a moment ago I would make. I inquire whether it is in order?

The VICE PRESIDENT. Under Rule XXVI action would have to be postponed for one day if objection was made.

Mr. ROBINSON of Arkansas. Very well. I give notice that if the Senator from South Carolina persists in his objection, I shall move, unless some other Senator makes the motion, to proceed to the consideration of the bill when it is permissible to do so. I regret that the recognition to which I believe these great aviators are entitled should be denied them for any length of time by arbitrary objection made in the Senate.

Mr. FESS. Mr. President, in my judgment there has never been any achievement more inspiring than that which some of these aviators have accomplished; and I should like to have this expression made at this time, if the Senator from South Carolina will be kind enough to withdraw his objection.

Mr. BLEASE. Mr. President, having made the point which I wished to impress on the American people as to the neglect of their own children, I will withdraw the point.

Mr. ROBINSON of Arkansas. I thank the Senator.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill which had been reported from the Committee on Military Affairs, with an amendment, to add at the end of the bill the following clauses:

That the President be, and is hereby, authorized to present the distinguished-flying cross to Col. Francesco de Pinedo in recognition of his

extraordinary achievement in making an aerial journey of 25,000 miles by flying boat in the course of which he arrived in the United States by air from Rome.

That the President be, and is hereby, authorized to present the distinguished-flying cross to Dieudonne Costes and Joseph Le Brix in recognition of their extraordinary achievement in an aerial journey of 35,000 miles in the course of which they arrived in the United States by air after making the first nonstop flight across the South Atlantic.

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended so as to read: "To authorize the President to present the distinguished-flying cross to Col. Francesco de Pinedo, Dieudonne Costes, Joseph La Brix, Ehrenfried Gunther von Huenefeld, James C. FitzMaurice, and Hermann Koehl."

COL. CHARLES A. LINDBERGH

Mr. FESS. Mr. President, I desire to make an inquiry of the Senator from Arkansas.

The Senator from Arkansas introduced a bill in regard to Colonel Lindbergh as to striking a medal. We passed it unanimously, and it went over to the House. There another measure similar to it, I think identical, was introduced, and the House passed the House measure. Instead of acting upon our bill they sent the House joint resolution back here.

Mr. ROBINSON of Arkansas. Mr. President, to me it is inexplicable that with a bill passed unanimously through this body, the body at the other end of the Capitol would fail to take action on the Senate bill, after the Senate bill had been received by the House of Representatives, and proceed to the consideration of a House measure.

The littleness of spirit that is involved in that course can not, however, be characterized appropriately under the rules of the Senate; and I shall be glad to move the consideration of the House joint resolution if the procedure in the Senate permits that action at this time. I ask unanimous consent that the Committee on the Library be discharged from the further consideration of the House joint resolution and that the Senate proceed now to its consideration.

Mr. FESS. The committee have already acted favorably on it.

Mr. BRUCE. Mr. President, may I ask what measure this is?

Mr. ROBINSON of Arkansas. This is a House joint resolution to confer a medal on Colonel Lindbergh. The Senate had already passed a bill introduced by myself, and sent that bill to the House. The House took no action on the Senate bill, but passed a House joint resolution, which is similar, and I now ask unanimous consent for the present consideration of the House joint resolution.

The VICE PRESIDENT. Is there objection? The Chair hears none.

Mr. FLETCHER. Mr. President, do I correctly understand that the Senator from Ohio has reported the joint resolution?

Mr. FESS. The joint resolution was acted upon by the committee; but the procedure of the House was so unusual that the committee asked me not to report it until I got the consent of the author of the Senate bill. We are ready to report it at any time.

Mr. ROBINSON of Arkansas. I ask, then, that the committee be discharged from the further consideration of the joint resolution and that it be put on its passage.

Mr. HEFLIN. Are the measures identical?

Mr. ROBINSON of Arkansas. No; they are not identical, but they are very similar.

Mr. FESS. Mr. President, I ask for a few moments' delay, until I can get hold of the joint resolution.

Mr. ROBINSON of Arkansas. Why not let us pass it? I ask unanimous consent that the committee be discharged from the further consideration of the House joint resolution and that the Senate proceed to its consideration.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

The Senate, as in Committee of the Whole, proceeded to consider the joint resolution (H. J. Res. 192) to provide for the coinage of a medal in commemoration of the achievements of Col. Charles A. Lindbergh, which was read, as follows:

*Resolved, etc.*, That in recognition of the achievements of Col. Charles A. Lindbergh the Secretary of the Treasury is authorized and directed to cause to be struck and presented to Col. Charles A. Lindbergh a gold medal with suitable emblems, devices, and inscriptions to be determined by the Secretary. For such purpose there is authorized to be appropriated the sum of $1,500.

SEC. 2. The Secretary of the Treasury shall cause duplicates in bronze of such medal to be coined and sold, under such regulations as he may prescribe, at a price sufficient to cover the cost thereof (including labor), and the appropriations used for carrying out the provisions of this section shall be reimbursed out of the proceeds of such sale.

Mr. BINGHAM. Mr. President, the House joint resolution is not as good a measure as the one which the Senator from Arkansas introduced. It seems to me that the joint resolution ought to be amended so as to conform to the measure which the Senator from Arkansas introduced and which the Senate passed. The Treasury Department, as I understand, has reported that the House joint resolution is not in as good form as was the bill presented by the Senator from Arkansas.

Mr. ROBINSON of Arkansas. I know; but I would not withhold for one hour a recognition to Colonel Lindbergh because of the obstinacy of the body at the other end of the Capitol. I do not want to be in the attitude of taking that course.

The joint resolution was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

GOLD-STAR MOTHERS

Mr. BRATTON. Mr. President, may I have the attention of the Senator from Connecticut [Mr. BINGHAM]? While we are discussing subjects of the character of those that we have been talking about, I call the attention of the Senator from Connecticut to a bill, H. R. 5494, commonly called the gold-star mothers' bill. It passed the House more than two months ago. It is still pending before the Committee on Military Affairs in the Senate. The session is drawing toward its close. I am so much interested in the passage of that bill in some appropriate form that I am prompted to ask the Senator from Connecticut what the prospects are for allowing the Senate to consider that measure at some reasonably early date.

Mr. BINGHAM. Mr. President, the bill to which the Senator refers is now before a subcommittee of which I am a member, and it would have been considered earlier had we not had a great many other matters before us. It is the intention of the subcommittee to consider the bill at an early date. I will say to the Senator that there are a good many objections to it; there are a good many amendments that have been suggested; there are people who desire to be heard, and it is our intention to have a hearing at an early date.

Mr. BRATTON. With that assurance, I shall make no further observation about that measure now, but I take occasion, while I have the floor, to say that I think legislation of that nature is sufficiently important that it must receive the attention of the committee and the Senate itself before this session of the Congress adjourns. I am sure the Senator from Connecticut will see that expedition is had in connection with the bill before the committee.

LINCOLN ELLSWORTH

Mr. COPELAND. Mr. President, I am so much in sympathy with what has been done this morning with reference to the foreign fliers and Colonel Lindbergh that I did not rise before to speak about another matter, but we have pending before us a proposal to give a medal to Lincoln Ellsworth.

Sometimes we forget our own heroes. Here is a man who went over the North Pole, and his companion was honored by his government—a foreign government—while we have done nothing. I assume, from what I am told by the Senator from Connecticut [Mr. BINGHAM]—who seems to be in charge of all honors to aviators—that there is pending, in process of formulation, a bill which will take care of Lincoln Ellsworth. Am I correct in that assumption, may I ask the Senator from Connecticut?

Mr. BINGHAM. Mr. President, the Senate Military Affairs Committee has had under consideration several bills for giving medals to American aviators for their heroic flights. At present the chairman of the committee is not here, but my recollection is that at a recent meeting of the committee it was determined to put into one bill all American aviators who were deemed deserving of the thanks of Congress; and I suggested to the Senator from New York that the name of Lincoln Ellsworth might, with propriety, be included in that omnibus bill.

Mr. ROBINSON of Arkansas. Mr. President, if the Senator from Connecticut is going to object to the consideration of this bill at this time, I want to serve notice upon him that it is my intention to move to discharge the committee from the consideration of Senate bill 3919, and to proceed to its consideration.

This bill has been pending here for a long time, and is now pending on the calendar. I have received a letter which, unfortunately, I have not at hand just now, not anticipating that these matters would be raised this morning, from Commander Richard E. Byrd, whose name is well known to all Senators

and to almost every citizen of the United States as one of the greatest explorers of modern times, pointing out the fact that this recognition to Lincoln Ellsworth ought to have been accorded more promptly than it is being done.

I ask the Senator from Connecticut if he will not permit the Senate to dispose of this matter at this time?

Mr. BINGHAM. Mr. President, I hope the Senator will withdraw that request.

Mr. ROBINSON of Arkansas. I will not withdraw the request; and I intend to move at the first opportunity to discharge the committee from the consideration of the bill, and to proceed to its consideration.

Mr. BINGHAM. Mr. President, the bill to which the Senator refers is not before the committee. It is on the calendar.

Mr. ROBINSON of Arkansas. Then I shall move to proceed to the consideration of the bill on the calendar. The Senator's correction is justified.

Mr. FLETCHER. Mr. President, I think the motion is out of order.

The VICE PRESIDENT. The question is on the motion of the Senator from Arkansas.

Mr. FLETCHER. I call for the regular order.

The VICE PRESIDENT. The motion is not in order until 1 o'clock.

Mr. ROBINSON of Arkansas. I realize that, and that the Senator from Florida and the Senator from Connecticut, by objecting, can postpone the consideration of this bill; but I give notice now that when it is in order I shall move its consideration.

Mr. FLETCHER. There is no reason for giving any notice of that sort, because it could be done anyhow; but what I wanted to say to the Senator from Arkansas is that there is a question before the Senate Military Affairs Committee as to the exact form of the honor which was intended to be bestowed.

Mr. ROBINSON of Arkansas. Why, the complete answer to that statement is that the Committee on Military Affairs has reported the bill.

Mr. BINGHAM. Mr. President, the Senator is mistaken. It was reported from the Committee on Commerce.

Mr. FLETCHER. We want, if we can, to follow some harmonious procedure here. In other words, what we are trying to do is to bestow proper recognition on these heroes, these men of great courage and fortitude and skill; but we want to make it uniform and confer the same sort of honor, the same sort of medal, the same sort of distinction, or, perhaps, the same sort of recognition, in one case as we do in others.

In some bills a medal is provided for. In other bills something else is provided for—the thanks of Congress, or a decoration, and that sort of thing. What is troubling the Committee on Military Affairs has been to make this legislation uniform. Am I not correct in that?

Mr. BINGHAM. That is correct.

Mr. ROBINSON of Arkansas. Mr. President, will the Senator yield?

Mr. FLETCHER. Yes.

Mr. ROBINSON of Arkansas. When I proposed to have the Committee on Military Affairs discharged from the consideration of the bill, I was informed by the Senator from Connecticut that it was not necessary to do that, because the bill is on the calendar, having already been reported. Now, it appears that it has been reported from one great committee of the Senate, and that the Committee on Military Affairs has withheld action on the bill since the 5th of December, 1927, when the bill was referred to the committee.

I think it is high time that this bill should be disposed of. I do not believe that it would be adequate under the circumstances to pass an omnibus bill recognizing a great many other aviators in connection with the achievement of this very distinguished person. I have sent to my office for the letter to which I referred a few moments ago. When it reaches the Senate I shall ask to have the letter read at the clerk's desk.

This is a proposal to recognize one of the greatest achievements of modern times by a renowned American aviator. It authorizes the granting of a gold medal to Lincoln Ellsworth, the distinguished American explorer, who made a polar flight in 1925 and a transpolar flight in 1926.

I doubt if the records of modern times contain a more thrilling and interesting story than that which relates to the achievements of Lincoln Ellsworth. Through storms and the unvoyaged currents of the air, in company with distinguished foreign aviators, after he had been unable to secure financial support and assistance from his own country and the people of his own country, he succeeded in this polar flight.

Lincoln Ellsworth is a modest man, who has never rushed into the public press as a means of exploiting his triumphs. He has never sought any recognition here or elsewhere. He has been content to remain in practical obscurity.

When men like Commander Byrd feel aggrieved at the failure of the Congress to volunteer appropriate and admittedly deserved recognition to brave, daring men like Lincoln Ellsworth, if we are going to pursue or continue the policy of conferring special medals on men who perform extraordinary achievements, we ought to do this, and we ought to do it without delay.

We do not have to discharge the committee, because the committee—one of the great committees of the Senate—has reported favorably, and I have heard it said by some who now stand in the way of the passage of this bill that the bill should not pass because Lincoln Ellsworth braved the perils of the polar storms in company with foreign aviators. This morning I appealed to the Senate to authorize the President to confer a medal on a group of foreign aviators. Objection was temporarily made because we should first recognize men like Lincoln Ellsworth.

For four months this bill has been in the pigeonholes of the Committee on Military Affairs.

Mr. BINGHAM. Mr. President, will the Senator permit me to interrupt him?

Mr. ROBINSON of Arkansas. I yield.

Mr. BINGHAM. The Senator is mistaken. The bill was never referred to the Committee on Military Affairs. The Senator has it mixed up with some other bill; I do not know what measure. The bill originated in the Committee on Commerce and was very properly reported by that committee. It was never pigeonholed anywhere. It has been on the calendar for some time. The Committee on Military Affairs has never had anything to do with it.

Mr. ROBINSON of Arkansas. I thought I was following the correction the Senator from Connecticut made during an early period of my remarks.

Mr. BINGHAM. Will the Senator yield at that point?

Mr. ROBINSON of Arkansas. If the bill has been reported by a committee, and the jurisdiction of the committee has not been challenged, I do not know why we should wait for another committee, to which the bill has not been referred, according to the statement of the Senator from Connecticut, to take some action, which it may or may not take, merely because the Senator from Connecticut is on that committee. What jurisdiction has the Military Affairs Committee of this bill if the bill has never been referred to it? And why should the Military Affairs Committee insist on preventing action upon it?

Mr. WARREN. Mr. President, will the Senator yield to me?

Mr. ROBINSON of Arkansas. I yield, of course.

Mr. WARREN. I never heard of the bill in the Committee on Military Affairs, as far as I am concerned; so I judge it never has been before the committee. I wish to say that I shall support the measure which the Senator from Arkansas apparently proposes now to bring up.

Mr. ROBINSON of Arkansas. I thank the Senator from Wyoming. He displays his usual spirit of good will, fairness, and frankness.

Mr. COPELAND. Mr. President, will the Senator from Arkansas yield?

Mr. ROBINSON of Arkansas. I yield.

Mr. COPELAND. I hope there will be no question about the passage of this bill. I want to say to the Senator from Arkansas that the bill was reported at the last session of Congress, and was on the calendar. Then it was considered again by the Committee on Commerce, and, in deference to the Senator from Connecticut, certain changes were made in the bill. There is no reason in the world why the bill should not be acted on at to-day's session.

Mr. ROBINSON of Arkansas. Mr. President, we have gone out of our way this morning, properly, as I insisted, to recognize by medal the services and achievements of foreign aviators.

Mr. MAYFIELD. Mr. President, if the Senator will yield, speaking about measures being referred to the Committee on Military Affairs, I direct attention to the fact that the measure known as the gold-star mothers' measure, which passed the House some time ago, providing for a pilgrimage to the battle fields of France of the mothers of American soldiers who gave up their lives in France, has been referred to a subcommittee of the Committee on Military Affairs, and I understand that it is impossible to get a hearing on it.

Mr. ROBINSON of Arkansas. Mr. President, we have a most amazing situation here. The bill of which I am speaking was introduced in the Senate by the Senator from New York [Mr. COPELAND], referred to the Committee on Commerce, and by that committee favorably reported. No member of the Committee on Military Affairs, or any other Senator, ever raised

any question as to the jurisdiction of the Committee on Commerce.

As I understand it, the Committee on Military Affairs neither took nor attempted to take any action. The bill is on the calendar; it is not before the Committee on Military Affairs. A motion will be required to refer it to that committee, to give the Military Affairs Committee the right even to consider the bill. That motion has not been made, and it is not proposed to be made now.

I feel justified in taking the position that if the Congress is to confer this honor, it ought to do it graciously. A perusal of the letter from Commander Byrd, to which I have referred and which I shall presently ask to have read to the Senate, will disclose just how little it is for us, while conferring medals on renowned foreign aviators, to deny a medal to an American, whose achievement was unparalleled in the history of the United States, merely because he was compelled to take flight in a foreign machine and to associate himself with foreign aviators.

Mr. BRATTON. Mr. President, will the Senator yield?

Mr. ROBINSON of Arkansas. I yield.

Mr. BRATTON. The bill has received action by the Committee on Commerce and never has been referred to the Committee on Military Affairs.

Mr. ROBINSON of Arkansas. That is true.

Mr. BRATTON. May I inquire of the Senator in what way the Committee on Military Affairs, or any member of that committee, is now attempting to preclude action on the bill?

Mr. ROBINSON of Arkansas. By objecting to the consideration of this bill and forcing me to make the motion I am going to make just as soon as the opportunity arises.

Mr. President, I now ask that there be read to the Senate the letter from Commander Byrd to which I have referred.

The VICE PRESIDENT. Without objection, the clerk will read.

The Chief Clerk read as follows:

BYRD ANTARCTIC EXPEDITION,
*Boston, Mass., April 2, 1928.*

Senator JOSEPH T. ROBINSON,
*United States Senate, Washington, D. C.*

MY DEAR SENATOR: Here is the information concerning Lincoln Ellsworth:

It gives me much pleasure to send it to you, and I trust it will be of some value.

Lincoln Ellsworth has always been an idealist and a dreamer. Even as a youngster he dreamed of exploring. His mind turned to the Arctic.

His first chance came in 1913 when George Borup selected him as the third member, along with McMillan, of the original Crocker Land expedition, but lost his chance to go when Borup was drowned a few weeks before the expedition was due to start.

Previous to meeting Borup, Ellsworth was connected for five years with the Grand Trunk Pacific Railway as an engineer on most of their exploration surveys looking for a route across the continent.

When Ellsworth learned that Peary advocated the use of airplanes for exploration in the Arctic he obtained an introduction to him from Henry Fairfield Osborne. He went over the matter with Peary and was most anxious to go into the Arctic with airplanes, but his father opposed his going and Ellsworth had no money himself.

He then went to see Gilbert Grosvenor, of the National Geographic Society, about the project; but, without funds and without any previous experience, it was impossible for him to get backing.

This did not discourage him. In 1916 he went to the Curtiss Aviation School at Norfolk to try to learn aviation. He waited a week there to try to get training, but without success.

There were countless people ahead of him. He then attempted to secure his father's aid to buy the ice steamer *Carluk* and join Stefansson. Henry Fairfield Osborne repeatedly interceded with Mr. Ellsworth for his son, but without success. The affair kept dragging until Stefansson had to go to Canada for the necessary aid to carry through his expedition.

Before the war, early in 1917, Ellsworth joined the ambulance service and sailed for France. There he made a great effort to get into the Franco-American Flying Corps, but was told by Doctor Gros, medical officer of the organization, that, though he was physically fit, he was 14 years beyond the age limit for pilots. He was then 37.

While in Paris he received an urgent letter from Henry Fairfield Osborne saying that he had just lunched with Amundsen and that he—Amundsen—was going to "steal Ellsworth's thunder," as he was planning to fly across the Arctic.

Shortly after this Amundsen himself came to Paris. Ellsworth wanted to join his Arctic ship the *Maude*, but Amundsen said the personnel was all made up.

Shortly afterwards America joined the war. As he was too old to pilot, Ellsworth filled out his papers to be an airplane observer, took his physical test, passed, and was enlisted in the American Army as a second-class private.

There was no observation training school in France. He was sent to Tours and, in spite of the regulation about age, was started in as a pilot with the French. He learned to "solo" and received from the French his one wing badge in recognition of it.

On account of his age, he was not given a fair show as a pilot, and, fearing that he would never get over the line, he again requested duty as an airplane observer.

He was then taken down with flu-pneumonia and was quite ill.

He still persisted, however, in his desire to go to an observation school, but as there was no such school in France, he had to be sent back to the States. He had no more than filled out his papers when the armistice took place.

The pneumonia left him incapacitated for almost three years and he had two relapses of pleurisy.

In 1924, not having been able to get sufficient backing to go into the Arctic, he organized the Ellsworth expedition to Peru, and together, with Dr. Joseph T. Singewald, jr.—under the auspices of the Johns Hopkins University—he ran the first complete geologic cross section of the Andes through central Peru.

During all these years Ellsworth never gave up his great desire to go into the Arctic, and he continued to make every effort possible to obtain backing in America, but without success. It seems to me that this has a very important bearing on his final tie-up with a foreign expedition.

Later he was for three years a field assistant of the United States Biological Survey which contributed both to the National and American Museum of Natural History.

At the end of that time he returned from his duties in South America and was about to start back again to continue his work in the Andes, when he learned that Amundsen was in America. Here he felt was an opportunity to get into exploration work in the Arctic.

He called on Amundsen at the Waldorf and convinced him of his great desire to go into the Arctic. Amundsen himself had also been disappointed in raising money for his air flight, and had brought with him all of his belongings as he intended to go to Wainright and to live there indefinitely unless he could raise some money.

Hoping that the expedition could be organized in America and that it could fly the American flag exclusively, Ellsworth made a determined effort to raise some funds. He went to Washington and interviewed a number of people, but was unable to interest anyone.

After considerable effort to raise money, Amundsen and Ellsworth found that the only people interested enough to help was the Norwegian Aero Club.

When Ellsworth's father found that he was determined to go into the Arctic to explore, and that he would probably try to get up there "whether or no," he decided to help the expedition. Ellsworth was an only son, and his father's desire to keep him from the dangers of flying in the Arctic had only been natural.

On May 20, 1925, the Amundsen-Ellsworth North Pole flight started from Kings Bay, Spitzbergen. Ellsworth had command of and navigated one of the planes and Amundsen had command of the other plane. All went well with the expedition until they met fog and then, through no fault of their own, they got lost, but managed to land on the polar sea without injuring any of the personnel and without breaking up the planes. Subsequently, however, one of the planes was lost in an ice jam and the remaining personnel of six had to depend upon the one plane to get back to civilization.

They had landed on the polar sea at latitude 87° 44′ north, 136 miles from the North Pole. It was a colossal task for those six men to level down one of the ice fields so that they could take off with the plane. It took 25 days of superhuman effort to do this, and during that time the Norwegian and American flags waved side by side.

Finally, on the twenty-fifth day, the crew of six just managed to get off the snow, almost hitting a hunk of ice as they got into the air, and they got back safely to Spitzbergen and were picked up by a whaling steamer and brought back to civilization. Their plane, the *N-25*, was afterwards salvaged and is still flying.

This is one of the greatest epics of adventure in all history, the expedition traversing areas on the polar sea never before explored.

Amundsen and Ellsworth then decided that, due to the hazards of a forced landing on the polar sea, it would be better to attempt to reach the pole by airship. They still were unable to get backing in the United States. The Norwegian Aero Club agreed to back them and since the only suitable airship within the means of the expedition that was available was in Italy, they went to that country to purchase the airship.

The airship was named the *Norge*, and out of courtesy to Nobile, the designer of the ship and its navigator, the organization was called the Amundsen-Ellsworth-Nobile expedition.

The expedition reached Kings Bay, Spitzbergen, the first part of May, 1926, and at 8.55 a. m. on the 11th of May set out for Alaska. The airship reached the North Pole at 11.30 a. m. May 12, and Ellsworth dropped the American flag. They then continued on across the polar sea to Point Barrow, Alaska, and until they got within sight of

Point Barrow every bit of the way from the pole was over unexplored areas, a total distance of 1,200 miles.

This is one of the greatest pieces of exploration in all history and one of the greatest flights on record.

The distance they had traveled across the Arctic Ocean from Spitzbergen to Point Barrow was 1,950 miles. They reached Point Barrow at 6.50 p. m., Greenwich meridian time, on May 13, 1926, 46 hours 45 minutes after leaving Kings Bay.

After reaching Point Barrow the expedition continued on to Tellier, Alaska, reaching there about 8 a. m., Greenwich time, May 14, after having been in the air 71 hours, having bisected a million miles of unknown arctic regions by a trail approximately 100 miles in width, except where fog obstructed the view.

This expedition would not have been possible without the initiative and help of Lincoln Ellsworth. His was a very great accomplishment and has earned him a place in history.

He has received scant recognition for his magnificent contribution to science, and I feel very keenly that our Government should give this splendid American some recognition.

His success was the result of long endeavor and years of preparation, and it seems a pity that our country has given him so little credit.

It is interesting to note that so great did the Italians consider the achievement of this expedition that the Italian Government promoted Nobile from colonel to general and made him military head of the air department to which he belonged.

Faithfully yours,

R. E. BYRD.

Mr. ROBINSON of Arkansas. Mr. President, the hour of 1 o'clock having arrived, I desire to submit a motion that the Senate proceed to the consideration of the bill (S. 3919) awarding a gold medal to Lincoln Ellsworth.

The motion was agreed to; and the Senate, as in Committee of the Whole, proceeded to consider the bill.

Mr. HEFLIN. Mr. President, before the Senator proceeds will he let me call up a bill?

Mr. ROBINSON of Arkansas. I yield to the Senator from Alabama if it will not lead to any discussion.

Mr. HEFLIN. I ask unanimous consent for the present consideration of Calendar No. 866, being the bill (S. 3845) to prohibit predictions with respect to cotton or grain prices in any report, bulletin, or other publication issued by any department or other establishment in the executive branch of the Government.

Mr. McNARY. Mr. President, a parliamentary inquiry.

Mr. HEFLIN. I am going to be away from the Senate for two or three days, and I am very anxious to get the bill passed and over to the House, so they can get to work on it there.

The VICE PRESIDENT. The Senator from Oregon will state his parliamentary inquiry.

Mr. McNARY. Under what order are we proceeding? How far have we proceeded with morning business?

The VICE PRESIDENT. Reports of committees were called for, but, the hour of 1 o'clock having arrived, the motion submitted by the Senator from Arkansas was in order.

Mr. McNARY. This despite the fact that morning business has not been concluded?

The VICE PRESIDENT. Yes.

Mr. HEFLIN. The Senator from Arkansas had already moved to take up his bill when I asked him to yield to me, and then we got into this discussion.

Mr. McNARY. For what purpose did the Senator yield?

Mr. HEFLIN. To enable me to call up Calendar 866, Senate bill 3845.

Mr. McNARY. May we have the bill read?

The VICE PRESIDENT. The bill will be read.

The Chief Clerk read the bill by title.

Mr. HEFLIN. The word "grain" has been stricken out of the bill.

Mr. BINGHAM. Mr. President, are we not considering the other bill? I inquire because, on behalf of the Senator from Rhode Island [Mr. METCALF], I shall have to object to the request of the Senator from Alabama.

Mr. ROBINSON of Arkansas. I yielded to the Senator from Alabama to enable him to call up his bill.

Mr. HEFLIN. I want to make this request in the open. I am going to continue to make it in the open. I am preparing a speech upon the subject, and I want those who are interposing objections to the bill to know that I am going to discuss it and give their names. I have their names here in the RECORD, and I am going to give the reasons why some of them are objecting.

Mr. NORBECK. Mr. President, if the Senator from Alabama will refrain from making a speech, I will vote for his bill. [Laughter.]

Mr. HEFLIN. Mr. President, the Senator from Arkansas yielded to me to call up the bill by unanimous consent. If he would permit me to move its consideration——

Mr. ROBINSON of Arkansas. Objection having been made, it is not in order to proceed with the discussion of the Senator's bill at this time. The Senator from Alabama, of course, understands that. Objection was made in behalf of a Senator who is absent.

The VICE PRESIDENT. Objection is made to the request of the Senator from Alabama. The Senator from Arkansas is entitled to the floor.

Mr. ROBINSON of Arkansas. Mr. President, I merely wish to take a moment or two. As I said, the hour of 1 o'clock having arrived, I have submitted the motion, it has been agreed to, and the bill is now before the Senate. I merely wish to point out to the Senate that not only has another committee of the Senate than the Committee on Military Affairs reported the bill or a similar bill, and that the Committee on Military Affairs has never sought jurisdiction of it, but there is, in fact, no reason why the Committee on Military Affairs should assume to direct the legislation. It was a commercial achievement, in no sense a military achievement, and no reason occurs to my mind why the Senator from Connecticut, who speaks for the Military Affairs Committee and frequently controls its action, should assume to object to the consideration of the bill.

Mr. SWANSON. Mr. President, will the Senator from Arkansas yield to me?

Mr. ROBINSON of Arkansas. I yield.

Mr. SWANSON. Mr. President, I want to appeal to the Senator from Connecticut not to oppose the bill. The only difference of opinion seems to be whether Lincoln Ellsworth shall have a vote of thanks by Congress or shall have a gold medal. The important thing is to determine whether the man has done something to deserve a vote of thanks by Congress or a gold medal. If he has done it, I am not going to begrudge giving him anything he should have. I believe we should be generous and give him a medal so he may transmit it to his family.

I did not know anything about this matter until Commander Byrd discussed it with me. This man has received no recognition and has been shown less appreciation than anyone else connected with these wonderful achievements. It does seem to me, after this long delay, and considering the heroic achievements involved, that the Senator from Connecticut should withdraw his objection and let us unanimously pass the bill to reward this act of heroism combined with years of hard work and toil.

Mr. BINGHAM. Mr. President——

Mr. ROBINSON of Arkansas. I yield to the Senator from Connecticut.

Mr. BINGHAM. The Senator from Arkansas has placed a construction on my opposition to the bill that is not fair. I never objected to it because it was referred to the Committee on Commerce. Indeed, that was the committee to which it should have been referred. I should have liked to have had a hearing before that committee, but due to some misunderstanding that privilege was not accorded me. However, that has nothing whatsoever to do with my objection to it.

Mr. ROBINSON of Arkansas. Will the Senator allow me to ask him a question?

Mr. BINGHAM. So many statements have been made as to the basis of my objection to this measure being the committee to which the bill was referred, that I think, in fairness, I ought to be allowed to state that that has nothing whatsoever to do with it at all. The only reason why I mentioned to the Committee on Military Affairs this morning was the debate had in that committee when the Senator from Iowa [Mr. BROOKHART] introduced a bill a few days ago to give the congressional medal of honor to one of the trans-Atlantic flyers, I think, Mr. Chamberlin. That bill is before the Committee on Military Affairs. We considered the subject of what was the right thing to be done for our trans-Atlantic and transoceanic flyers in order to give them that recognition which everybody wants to see them have.

I am sure that no one will accuse me of wanting to see an aviator get any less than his due. Indeed, I have repeatedly asked that measures be passed to give aviators their due, and only day before yesterday I introduced an amendment to the bill giving the German flyers the distinguished flying cross so as to provide for other aviators who had crossed the ocean from Europe.

My objection to the pending bill has nothing whatever to do with any such petty technicalities as the Senator from Arkansas seems to imply. When I may secure the floor in my own right I desire to make a statement in regard to my opposition to

giving a gold medal to that very distinguished American explorer, whom I admire, against whom I hold nothing at all, Mr. Lincoln Ellsworth. When the Senator from Arkansas will let me have the floor for that purpose I shall be glad to state my objections, which are in no way personal or based on any action of any committee to which it was referred or anything which the Military Affairs Committee now has before it.

Mr. ROBINSON of Arkansas. The Senator has complained that the Committee on Commerce denied him the opportunity of a hearing. I ask if he requested the Committee on Commerce for a hearing on the bill before the committee had reported it?

Mr. BINGHAM. I spoke to the chairman of the committee last year when the matter was up. The chairman of the committee knew I was interested in it. The committee held no hearings on it that I was aware of and I knew nothing about the action until the bill was reported. Then I asked that the bill might go back to the committee so I could be heard. But that has nothing to do whatever with my objection to the bill. At the same time I wish I might have had the opportunity of presenting to the committee the facts which I shall present to the Senate when I secure the floor in my own right.

Mr. ROBINSON of Arkansas. The Senator may present them now if he desires to do so. I wanted to conclude my own statement, however. I have shown that it is not a matter for the Military Affairs Committee. Even if it had not already been decided by the Committee on Commerce, the Military Affairs Committee would not have jurisdiction. That was prompted by the statement of the Senator from Connecticut that the Military Affairs Committee was preparing a bill or contemplated preparing a bill which would take care of a number of aviators in an omnibus measure.

I do not understand yet the ground of opposition which the Senator asserts to the bill. If it is on the theory that the bill provides for a gold medal, and he would like to do something else, I would not consent to that change now, for it would imply that Lincoln Ellsworth is not worthy of the recognition which this bill seeks to confer on him. I think, in accordance with Commander Byrd, that his achievement was one of the most daring, courageous, brilliant, and renowned recorded in modern history.

I regret that the Senator from Connecticut, who was willing to confer a medal on foreign aviators, whose achievements may or may not be compared with that of Lincoln Ellsworth, and whom I supported just a few moments ago with all the ardor that I could, finds some mysterious reason, which requires an address on his part to explain, for opposing the passage of this bill.

I desire to ask that the report of the committee on the bill be incorporated in the RECORD in connection with my remarks. It will disclose, as also does the letter of Commander Byrd, how great, how brilliant was this unrewarded and unrecognized triumph of Lincoln Ellsworth.

The VICE PRESIDENT. Without objection, it is so ordered. The report is as follows:

[Senate Report No. 831, Seventieth Congress, first session]

A MEDAL OF HONOR TO LINCOLN ELLSWORTH

Mr. COPELAND, from the Committee on Commerce, submitted the following report (to accompany S. 3919):

The Committee on Commerce, to whom was referred the bill, presents the following report recommending the passage of S. 3919.

The purpose of this bill is to indicate to Lincoln Ellsworth the appreciation of the American people for his conspicuous courage, sagacity, and perservance, shown in his famous polar flight of 1925 and the transpolar flight of 1926.

By request of the committee, Mr. Harold T. Clark, a personal friend of Lincoln Ellsworth, was requested to present a memorandum regarding Mr. Ellsworth and his contribution to the cause of exploration and the advancement of American commerce. His letter is printed herewith and the memorandum follows:

"Lincoln Ellsworth, civil engineer and explorer, was born in Chicago, Ill., May 12, 1880, the son of James William and Eva (Butler) Ellsworth.

"On both his father's and mother's sides his ancestors have been Americans for many generations, there being numbered among them some of the leading figures in the early history of New England. When the Western Reserve was opened in Ohio several representatives of the line were among the early settlers.

"Mr. Ellsworth was educated at the Hill School, Pottstown, Pa., and in the School of Mines and Engineering at Columbia University.

"Fascinated in early youth by the exhibits of northern life, sledges, skiis, and other gear of Arctic and Antarctic expeditions on view in the American Museum of Natural History in New York City, he became an omnivorous reader of all stories and accounts of those who had ventured into the frozen wastes of the world and carefully traced the progress of their expeditions on the relief maps which are on the walls of the museum. It was then he resolved to explore the Arctic unknown. Nansen's Farthest North played an important part in leading to this determination. After two years of special courses in the engineering school of Columbia University he worked as axman and chainman for the Grand Trunk Pacific surveys in Ontario and Saskatchewan, this being the work nearest in keeping with his ambitions he could then secure.

"When this work was completed he spent three months as a leveler and making underground surveys in Pennsylvania coal mines, then followed a year when he was assistant engineer on surveys for the Kougarock Mining Co. of Nome, Alaska. Returning to Pennsylvania from Alaska, Lincoln Ellsworth built 180 coke ovens in five months for a mining company. The lure of the open and his ambition for exploration, however, predominated, and he was successively transit man of the Grand Trunk Pacific exploratory survey, mountain division, which laid the line from Edmonton west to Yellowhead Pass, Alberta; transit man on location of the location survey of Coeur d'Alene Mountains, Wash.; resident engineer in charge of party on topographical and town-site work in Prince Rupert, British Columbia; and transit man and resident engineer on double-track construction for the Canadian Pacific Railway in Ontario.

"During these years he was continually seeking an opportunity to organize his own or to become a part of an Arctic expedition. Finally he was chosen, wholly because of his personal qualifications, the third member of the Crocker Land polar expedition organized by George Borup. The time before the scheduled start of this quest Mr. Ellsworth profitably spent studying astronomical observation under the auspices of the American Museum of Natural History, meteorology with the United States Coast and Geodetic Survey, and further took instruction in geographical surveying at the Royal Geographic Society in London. The project, however, was doomed when Mr. Borup was accidentally drowned soon before the proposed start.

"Following this disappointment Lincoln Ellsworth accepted the post of field assistant of the United States Biological Survey and for three years studied the animal distribution of North America and collected specimens from Mexico to Alaska. In the meantime no stone was left upturned in his effort to become an Arctic explorer. Dr. Henry Fairfield Osborn, of the American Museum of Natural History, for years made every effort to place him with an expedition and to get backers for an Ellsworth Arctic expedition, all to no avail. Officers of the National Geographic Society of America were appealed to and Ellsworth had a conference with Peary at which, among other things, the feasibility of using airplanes in Arctic exploration was discussed. Nothing materialized for no one could be found to finance such an expedition.

"Early in 1917, before the entrance of the United States in the World War, Ellsworth joined the ambulance service and sailed for France. There he made a great effort to get into the Franco-American Flying Corps, but was told by Doctor Gros, medical officer of the organization, that, though he was physically fit, he was 14 years beyond the age limit for pilots. He was then 37.

"While in Paris he received an urgent letter from Dr. Henry Fairfield Osborn, saying that he had just lunched with Amundsen and that he, Amundsen, was going to 'steal Ellsworth's thunder,' as he was planning to fly across the Arctic.

"Shortly after this Amundsen himself came to Paris. Ellsworth wanted to join the *Maud*, but Amundsen said the personnel was all made up.

"Shortly afterwards America joined the war. As he was too old to pilot, Ellsworth filled out his papers to be an observer, took his physical test, passed, and was enlisted in the American Army as a second-class private.

"There was no observation training school in France. He was sent to Tours, and, in spite of the regulation about age, was started in as a pilot with the French. He learned to 'solo' and received from the French his one-wing badge in recognition of it.

"On account of his age he had trouble in being sent to the front as a pilot, and fearing that he might never get over the line he again requested duty as an airplane observer.

"He was then taken down with flu-pneumonia and was quite ill.

"He still persisted, however, in his desire to go to an observation school, but as there was no such school in France, he had to be sent back to the States. He had no more than filled out his papers when the armistice took place.

"The pneumonia left him incapacitated for almost three years and he had two relapses of pleurisy.

"After the war, with still no apparent opportunity to go 'North,' he went in 1924 as coleader of the Ellsworth expedition of Johns Hopkins University with Dr. Joseph T. Singewald, jr., and made the first geological survey of the Andes Mountains in Peru. After returning to New York and while preparing to again go to South America he saw in the paper that Amundsen was in New York and came into touch with him. They agreed to join forces, with their object an exploratory trip across the polar sea which then consisted of 1,000,000 square miles of unknown.

"Ellsworth had but $25,000. His father was continually discouraging his ambition for polar exploration and literally offered him castles,

villas, a life of ease, and all the comforts offered by the arts and culture of the centuries of the world's civilization. However, his purpose never wavered, and at last his father was persuaded to contribute $85,000 to an Amundsen-Ellsworth expedition.

This was but enough for two airplanes, and the original plan was to fly from Spitzbergen to the pole with these; land, refuel one from the other, which was to be abandoned, and go on to Alaska. Every effort was made to get American backing and sponsorship for the flight, but no money or interest could be aroused. Ellsworth made an attempt to borrow parachutes, instruments, and equipment from the Government at Washington; but, although members of the Air Service were interested, he was informed that no help could be given except by act of Congress, and that it seemed impossible to secure such action. At last the Aero Club of Norway was appealed to, and they agreed to sponsor the trip, but only if it was agreed to make of it a reconnoitering expedition as far as the pole. It was necessary for Amundsen and Ellsworth to accept these terms.

On the Amundsen-Ellsworth expedition in 1925 Ellsworth navigated one plane and Amundsen the other. These flew from Spitzbergen to a point 136 miles from the North Pole, where they landed and spent 25 days. It was then found necessary to abandon one of the planes. The six men on the expedition then returned to Spitzbergen after a very narrow escape. While the party was still caught on the ice Ellsworth saved Dietrichsen and Omdal, two members of the expedition, from drowning. A brief account of this appears in the extract from Boy's Life for March, 1928, hereto attached.

In describing this incident, on page 248 of Our Polar Flight, Dietrichsen wrote:

"We had both had a narrow escape and we have to thank Ellsworth's self-possession and quickness that we escaped with our lives. The honor which he received later—the gold medal for bravery—pleased Omdal and myself as much as it pleased him. It was well earned."

In his first public lecture about this airplane expedition in the National Theater at Oslo, August 14, 1925, before the King and Queen of Norway and the American minister, Amundsen paid a glowing tribute to Ellsworth and stated that "when he saved Dietrichsen and Omdal from drowning he saved the whole expedition, and he, therefore, deeply appreciated the King's act in conferring on Ellsworth the gold medal for the saving of life."

This airplane expedition of 1925 was intended as a reconnoitering expedition in preparation for the transpolar flight which took place in 1926. The scientific results of both of these expeditions are well set forth in the report hereunto attached.

In preparation for the transpolar flight a most careful study had been made of available airships. Because of the stormy conditions which might prevail in the Arctic and which were in fact encountered over Alaska, where the *Norge* battled a 75-mile gale for 31 hours, it was decided that the most desirable type of airship would be a semirigid one. The United States did not have a dirigible of this type. The *Shenandoah* was a rigid one and as subsequent events so tragically proved was not suitable for such an expedition. The only airship in the world which seemed to meet the needs was the one belonging to Italy, which was only about half the size of the *Shenandoah* and was semirigid. This airship was purchased and renamed the *Norge*.

In an article by Captain Amundsen in the New York Times for Sunday, March 14, 1926, entitled "The coming polar flight," he wrote as follows:

"That is our main purpose—to find land. If it is found, it will be priceless. No matter how small it may be, a bit of land that blooms in the summer as does Alaska would be an invaluable connecting link between America and Europe and Asia. It is only 2,000 miles from Alaska to Spitzbergen, not farther than Alcock and Brown flew on their transatlantic flight. Consider what a stopping place in the middle would have meant to those aviators. It would make possible commercial air lines that would greatly reduce distances between Europe and Asia. Some day commercial aviation will travel routes across the pole—there is no doubt of that—and this land would then be a way station. And it would have a strategic value that can not be measured in money.

"The Amundsen-Ellsworth expedition expects to fly in a dirigible from Spitzbergen to Point Barrow, Alaska. That will take us in almost a straight line across the pole and through the center of the unexplored part of the area in the polar sea.

"We have only one objective in view. That is to get to Point Barrow, and, of course, to do all that is possible on the way in exploration. If we have time, we will circle about any interesting thing that we wish to examine carefully. We may chart out a much larger part of the unexplored region than we could do in a straight flight. But the main purpose is to get across. Only the best men have been selected. We are taking only those who are expert in their respective fields.

"Lincoln Ellsworth and I will be the leaders. We will work, however, more as a team of specialists.

"He—Lincoln Ellsworth—has been a tower of strength to us, and he is an explorer of resources, courage, and ability."

In My Life as an Explorer, at page 136, Amundsen wrote:

"I intended that the *Norge* expedition should be primarily a Norwegian-American enterprise, as I had planned it a year before. * * * Ellsworth and I have been congenial companions in dangers and achievement. I was delighted to share the national honors with my beloved American friend. * * * The expedition was Ellsworth's and mine. It was our idea."

At the American Embassy in Oslo, Norway, on April 10, Minister Swenson handed to Lincoln Ellsworth, on behalf of the President of the United States, an American flag to be dropped at the North Pole, in the acceptance of which Mr. Ellsworth responded:

"Mr. Minister, I am deeply conscious of the significance of this occasion. I am proud to be an American, prouder to-day than I have ever been in my life, because I have been intrusted by my President to carry the flag of my country to the North Pole, to be left there together with those of Norway and Italy, in commemoration of the transpolar flight by the three nations who participated. Through the ages to come, Mr. Minister, may the significance of those three flags, lying entwined together in the bleak arctic waste, ever remain as a symbol between the nations who left them, because the spirit in which they were planted was one of devotion to a common ideal, 'to seek, to find, and not to yield,' in an effort to add to man's knowledge concerning the planet on which he lives.

"The significance of this occasion is deep with another meaning also which can not be overlooked. We are upon the threshold of a new era in exploration—it is a milestone in the progress of civilization. For almost 400 years the Arctic has zealously guarded her secrets against man's invasion. But man will ever persist until the last secret is won. What they may eventually be worth in sheer dollars and cents no one can foretell, but the nations who have paid the price with their manhood to learn them, will not have paid in vain, for there is a gain in 'going exploring.' The work in hand imperiously and ruthlessly demands many of the best gifts of manhood, both of body and mind. It tempers the will for the conquests of difficulties, it is a school in manliness. But beyond that, driving man forward on the path of evolution is its greatest illusion—its complete devotion to an idea. Out of man's passionate curiosity as to the ways of nature has come this civilization we live in. Man peering into space, looking in every direction and striving to understand, is the creator and the builder."

An interesting editorial appears in Boy's Life for April, 1928. It is as follows:

[From editorial page of Boy's Life, April, 1928]

LINCOLN ELLSWORTH

"Lincoln Ellsworth's manhood has been the fulfillment of boyhood dreams. If for no other reason his place is secure in the heart of American boys in whom the pioneer instinct and the desire for worthwhile adventure runs strong. But his accomplishments, even in the day of adventure by land and sea and air, make him stand out as a giant. He was the last man to see the buffalo in its wild state, he explored the Andes, he spent years in the high Rockies of America and Canada. But through all of this the lure of the Arctic, which fired his imagination as a boy, was calling to him. His answer to that challenge is a story that will live as long as men and boys honor the courage, fortitude, daring, and imagination that spurred the pioneer and explorer to penetrate the unknown, to tame the wilderness, and seek knowledge at any cost."

The committee desires to call attention to the speech of Congressman ROY O. WOODRUFF, of Michigan, delivered in the House of Representatives on Friday, the 25th of February, 1927. In this Mr. WOODRUFF outlines the accomplishments and significance of the Byrd Arctic expedition and the Amundsen-Ellsworth-Nobile expedition. He points out the major geographic and navigational achievements of the Amundsen-Ellsworth-Nobile expedition. These men contributed valuable astronomic observations and reductions, magnetic observations and reductions. Valuable meteorologic and climatologic data were gathered as well as data regarding polar glaciology. The zoological and botanical observations, the use of the radio, advancement of aeronautics, and valuable engineering conclusions are other products of this venture.

In a letter to Senator COPELAND, Commander Byrd said: "I want to tell you again how deeply we all appreciate what you are doing for Lincoln Ellsworth." This brave pioneer has urged that Congress honor Ellsworth in the manner proposed.

The director of the American Geographical Society, under date of April 10, wrote to Senator COPELAND as follows:

AMERICAN GEOGRAPHICAL SOCIETY,
*New York, April 10, 1928.*

Senator ROYAL S. COPELAND,
*United States Senate, Washington, D. C.*

MY DEAR SENATOR: I write on behalf of Mr. Lincoln Ellsworth, who, with Amundsen, made the transpolar flight in the *Norge*. It has been a matter of surprise to me that he has not received the honor that he so abundantly deserves, of a congressional medal. Doubtless you have had the matter under consideration, and if so I want to add my support to whatever agencies favor him and to assure you that it

would give me great satisfaction to see him thus honored. I hope that whatever Congress does may be done with sufficient promptness so that the satisfaction that he would take in such an honor would not be diminished by long delay.

I have made no attempt in this letter to appraise his work in detail or to analyze it, or even to argue the merits of the case. I take it that all this is quite unnecessary; that you are as fully informed as I am as to the nature and value of his work, and that like myself you desire to honor him.

Faithfully yours,

ISAIAH BOWMAN, *Director.*

The propriety and justice of this act must be apparent to every citizen. Such an achievement appeals to the imagination of the American people. It is only right that this action should be taken at the earliest possible moment.

Mr. JONES. Mr. President, I think I should make a brief statement in view of what has been said with reference to the action of the Committee on Commerce. I did know that the Senator from Connecticut was interested in the measure in opposition to it. I think he was a member of the committee in the preceding Congress when a similar bill came up, and expressed his opposition to it.

The Senator said he spoke to me about a hearing. I have no doubt that he did, although I must say that I have no recollection of it, and there was no reason in the world why the committee should not give the Senator from Connecticut a hearing if it knew he desired it. It must have slipped my mind, because I did not call the matter to the attention of the committee, and action was taken. I regret that very much. Whatever failure there was in the committee in not giving hearings is due to my not remembering the request of the Senator from Connecticut. I am very sorry, indeed, that I did so, because I know of no reason in the world why there should not be a hearing given to him with reference to this or any other measure.

Mr. COPELAND. Mr. President, I would like to call the attention of the Senator from Connecticut to this fact: Last year, when my bill came before the Committee on Commerce the Senator from Connecticut was in opposition to the form of the bill. He has never expressed to me any other feeling than a desire to honor Mr. Ellsworth, but he did not like the form of the bill. This year, when I introduced the bill again and it was referred to the Committee on Commerce, I endeavored to express the view and the feeling, as I understood them, of the Senator from Connecticut, and made the suggested change so that instead of giving the congressional medal, the bill provides for the giving of a medal.

I appeal to the Senator from Connecticut not in any way to tarnish the glory and the joy that will come from the granting of this medal or its receipt. I know perfectly well the Senator from Connecticut has lofty ideals. He is interested in the great subject of aviation.

He has contributed largely to our knowledge on the subject of aviation; but here is one of our citizens who has performed a brave deed which we think entitles him to a distinction of some sort at the hands of Congress. I know that the Senator from Connecticut takes the same view. Perhaps this is not the best way to recognize it, and we want to do it in the best way possible; but this is what is proposed. If we deviate from this course, if we change our action, or perhaps if we defeat this action, we only give sorrow where we ought to give joy.

The Senator from Connecticut has manfully expressed his views. He has been candid with the Senate. Let us not spoil this day of triumph for Lincoln Ellsworth, however, by any question about the form of the bill, but let us enact it into law at the earliest possible moment.

Mr. BINGHAM. Mr. President, I had hoped to be spared from the necessity of making these remarks for the very reasons to which the Senator from New York refers. Debates in regard to honors are best held in private. I had talked over the matter with him in private, and I thought it was agreed that the Senate should not be asked to do more for this distinguished explorer than we did for the first American aviator to cross the Atlantic Ocean.

Mr. COPELAND. Mr. President, will the Senator yield at that point? I want the Senator to bear in mind that I did not bring up this motion this morning.

Mr. BINGHAM. I understand that perfectly.

Mr. COPELAND. In a colloquy with the Senator, I asked what his plan was; but the bill is now before us. Through no fault or virtue of mine, through no fault or virtue of the Senator from Connecticut, it is here. Now, let us not spoil this day. Let us not in any way reflect upon this man by anything which may be considered a criticism either of him or his friends, among whom I am numbered, by our way of proceeding in this matter.

The Senator from Connecticut has expressed his view. I hope that he will let the matter rest there, and let the bill pass.

Mr. BINGHAM. Mr. President, would the Senator who introduced the bill be willing to substitute the thanks of Congress for a gold medal?

Mr. ROBINSON of Arkansas. I would not, Mr. President. After the debate has proceeded as it has, I would not consent to any change of that nature. Of course, the Senator can offer an amendment—he understands that very well—and if it prevails that will decide the matter.

Mr. BINGHAM. Mr. President, in view of the fact that the Congress of the United States, as regards the first flight across the Atlantic Ocean, commanded by an American naval officer, Commander Read, gave no recognition of it for many, many years, and only recently in this Congress recognized the first trans-Atlantic flight by giving to Commander Read the thanks of Congress and not a medal, I move at the proper place in the bill, in lines 3 and 4, in place of the words "the President of the United States is hereby authorized to present a gold medal," to substitute the words "that the thanks of Congress are hereby given."

Mr. ROBINSON of Arkansas. Mr. President, I merely want to say that I am opposed to that amendment. I think it would be very unfortunate to deny this medal after a committee of the Congress has recommended that it be granted.

Mr. BRUCE. Mr. President, may I suggest to the Senator from Connecticut that he might amend in such a way as to confer a medal on Commander Read, too. Is he living?

Mr. BINGHAM. Yes, indeed.

Mr. BRUCE. It might be done, and I am bound to say that I hope it will be done.

Mr. ROBINSON of Arkansas. Certainly, at an opportune time, when such a proposition is presented.

Mr. BRUCE. I am simply going to say that I think one of the meanest things in the world is to do a thing that is essentially generous and magnanimous and yet at the same time do it in such an ungracious, niggardly, or begrudging manner as to destroy altogether the moral effect of it. I think we have had too much of that sort of thing in the Senate.

Mr. HEFLIN. Mr. President, if the amendment offered by the Senator from Connecticut prevails it will be a very humiliating thing to this young man. He knows that the matter is up for consideration; and it will be humiliating to him to be told that Congress has refused to give him a medal, but that it did write him a letter sending to him its best regards, and expressing appreciation for what he has done. The fact must be borne home to him that the Congress does not appreciate what he has done, and that, when the effort was made to give him a medal, when it has been recommended by a committee of Congress, Congress after debating the matter decided not to do it, and just sent him a letter.

I hope the amendment will be rejected.

The VICE PRESIDENT. The question is on the amendment of the Senator from Connecticut [Mr. BINGHAM].

The amendment was rejected.

Mr. BINGHAM. Mr. President, as I stated, my objections to this are in no sense personal and have nothing to do with the action of the committee.

When the matter was first brought to my attention last year I stated clearly my objections to giving a gold medal for the transpolar flight of the airship *Norge*. My reasons are these:

This flight of the airship *Norge* from Italy to Spitzbergen, and later across the pole to Point Barrow in Alaska, was a great achievement. There is no question whatever about that. To whom belongs the chief credit for that achievement?

The chief credit belongs in the first place to the man who designed the airship, who was the great Italian airship designer, Captain Nobile, later made a colonel, and for this flight made a general. The credit belongs in the second place to the pilot who navigated that ship, and his crew. The pilot was the great Italian, Captain Nobile. The crew who navigated it and who maneuvered it were Italians. It brought tremendous credit to Italy, and deservedly, for the first great successful airship flight over the polar ice. It was recognized by Italy as a tremendous achievement. It was acclaimed throughout Italy as being a magnificent thing for that country.

The officer who had designed the ship, who was in command of it, and who flew it, was given promotion to the grade of general and decorated by the King of Italy. Nothing that I am saying is in the slightest degree intended to reflect on the achievement or on those who accomplished it.

The name of the ship was the *Norge*, because the Norwegian Aero Club had by various arrangements succeeded in raising a certain amount of money to help pay the expenses of the expedition.

The first flag to be dropped when this ship got over the North Pole, by arrangement, was the Norwegian flag. That was the first flag to be carried to the North Pole by airship. A few days previously, in an American airplane, the great American aviator, Commander Byrd—who now so generously comes before us with this letter presented by the Senator from Arkansas [Mr. ROBINSON] and asks for recognition for his competitor, Lincoln Ellsworth—was the first to fly to the North Pole in an airplane, an American airplane, with an American pilot whom we honored yesterday at Arlington.

Mr. President, just what was it that Lincoln Ellsworth did in this connection? First, in order that I may not be misunderstood, let me say frankly that Lincoln Ellsworth is a great explorer. As Commander Byrd says, he is an idealist, a born explorer, who has taken part in certain remarkably interesting expeditions. For this it would have been natural that he should have been recognized by the geographical societies of this country, who have it in their power—and it is, indeed, their duty—to recognize the work of exploration, and to give to the great explorers medals recognizing exploration.

The American Geographical Society—which, I believe, is the oldest in this country, and which is very particular in regard to its medals—considered giving a medal to Lincoln Ellsworth for his geographical exploration. It had the matter under consideration for a very long time. The director of the American Geographical Society writes me that they had given to Lincoln Ellsworth more attention than to any other explorer. His deeds are well known. Yet they have given him no medal for his exploration; and the reason is that they feel that their medals should be given to Americans who lead American expeditions.

But we are asked to confer a gold medal, not upon an aviator, for Mr. Ellsworth is not an aviator; not upon an airship pilot, for he is not an airship pilot; but upon a fine, upstanding young American, against whom there is not a word of criticism, who took money which he inherited from his father, money made in this country, and used it, not for the credit of American aviation, not for the credit of American airships, not for the credit of American airship pilots, but for the credit of foreign airship designers, foreign airship pilots, and the work of a foreign crew. Is that the business of the American Congress?

Mr. President, I have no objection to what Mr. Ellsworth did, if a man chooses to do it. Nevertheless, as I said to Commander Byrd in a conversation the other day over this very matter when he came to see me to ask me to withdraw my objection, "What would you say if the Congress of the United States were to say, 'We will confer a gold medal on any young rich American who is willing to put up half a million dollars to buy 10 French airplanes, and hire 10 or a dozen French aviators to fly to the South Pole as fast as possible, and beat you to it?' Would you think that was a fine thing for the Congress of the United States to do?" Of course, to that he made no answer. Yet that is what we are now asked to do.

We are asked to give a gold medal to a rich young American who took his money to bring great credit to an Italian airship designer, an Italian airship pilot, an Italian crew, and an airship bearing the name of Norway. Possibly for the sake of the comity of nations we ought to confer medals on all those concerned in that transpolar expedition; but there is no mention here of any gold medal for Colonel Nobile—or General Nobile, as he was made after this expedition—or any gold medal for Amundsen, who helped to raise the money in Norway for it. It seems to me a very extraordinary thing for the Congress of the United States, which is so chary of its gold medals that it has not even given gold medals to the men who first flew across the Atlantic, and who are officers and men of the United States Navy, and which neglected them entirely for years and paid no attention whatsoever to their exploits, now, because of the public interest in aviation, to go so far in the other direction as to desire to give a gold medal to a rich young American who hired some foreigners to do a very distinguished piece of work, even though he had a very praiseworthy part in it.

That, Mr. President, has been my objection to it from the beginning, as those interested in the bill have known. It is my earnest and whole-hearted desire to promote American aviation, and to do everything in my power to promote the designing of the best airplanes and the best airships in this country. I desire to promote American airplane pilots and American airship pilots and to do everything in my power to give them credit for their heroic acts. The distinguished-flying crosses which we this morning voted to confer on certain distinguished foreigners visiting this country, partly at my suggestion, were originally authorized in the bill creating such medals at my suggestion. I mention that, Mr. President, in no way to boast but rather to explain, because of the attack that has been made on me on the floor. My attitude has always been to try and promote aviation. My actions in this matter are in no way personal. Nevertheless, I believe that the Congress of the United States, when it confers gold medals for things of this kind, should be just as careful to see to it that it is conferring a gold medal upon an American for an American achievement as is the American Geographical Society.

Mr. BRUCE. Mr. President——

Mr. BINGHAM. I yield to the Senator from Maryland.

Mr. BRUCE. I want to ask the Senator whether he does not think, however, that Ellsworth contributed something besides money to this enterprise? Of course, money was indispensable to its successful consummation, and he was fortunate to be in position to contribute that; but did he not contribute to the original conception of the enterprise? Was it not his energy and activity that organized it and correlated all the forces leading to its triumphant consummation?

Mr. ROBINSON of Arkansas. Mr. President, he was actually in command of one of the planes during a portion of the expedition, and it was called the Amundsen-Ellsworth-Nobile expedition.

Mr. BINGHAM. The Senator is mistaken. No planes were used on that expedition, but on an earlier one to which I had not yet referred.

Mr. BRUCE. I recall the fact that only last year one of the most splendid banquets at which I have ever been was given in Baltimore to Mr. Van Lear Black, one of the most conspicuous citizens of that city, whose achievement consisted in the fact that he had conceived the idea of flying, with the aid of a Dutch pilot, from Holland to the Far East. In doing this he exhibited such a high degree of courage, intelligence, and foresight, and such a keen eye to the proper adaptation of means to ends that his admiring fellow citizens thought him worthy, as I have intimated, of a splendid banquet. At that banquet, gathered not merely from friendship—though Mr. Black has a host of friends in Baltimore—but from public motives, were the most representative citizens of the city of Baltimore, such as bankers, manufacturers, merchants, lawyers, and doctors. I think all the persons who were present might well have thought that they would not have gone too far even if they had conferred a gold medal on Mr. Van Lear Black, not simply because of the hazards that he had incurred but because of the energy, the skill, the foresight, the resource that he had shown in organizing his flight.

Mr. ROBINSON of Arkansas. Mr. President, will the Senator yield to me?

Mr. BINGHAM. Yes.

Mr. ROBINSON of Arkansas. Some time ago, in his remarks, the Senator implied, as I understand him, that the Geographical Society had doubt as to whether this distinction should be conferred. I want to call his attention to the fact that there is already in the RECORD a letter from the Director of the American Geographic Society of New York, as follows:

> It has been a matter of surprise to me that he has not received the honor that he so abundantly deserves of a congressional medal. Doubtless you have had the matter under consideration, and if so I want to add my support to whatever agencies favor him and to assure you that it would give me great satisfaction to see him thus honored.

In addition to that suggestion, I want to point out that for some mysterious reason the Senator from Connecticut is referring to Lincoln Ellsworth as a rich young man. I think that reference, and the plain implication that it carries, is unworthy of this debate and this measure.

Mr. BINGHAM. The reference was not made with the slightest idea of casting any reflection on him.

Mr. ROBINSON of Arkansas. I do not know why. I heard the Senator myself, three times at least, talk about this "rich young man"; as if that had any relationship to the proposal to give this gallant, brilliant, daring young American a recognition that he so richly deserves in the opinion of everyone in the Senate, except the Senator from Connecticut, including that gallant old soldier from Wyoming, Senator WARREN.

Mr. FLETCHER. Mr. President, the Senator was going through the accomplishments and achievements and the actual things done by Mr. Ellsworth, but he had not reached this point mentioned in the bill, "made his famous polar flight of 1925, and the transpolar flight of 1926." To what does that refer, if I may ask?

Mr. BINGHAM. Mr. President, there were two occasions on which Lincoln Ellsworth and Mr. Amundsen went to the Arctic. On the first occasion they took two airplanes, two seaplanes. My recollection is that those planes were built either in Norway or in Germany, and the pilots were either Norwegian

or German. There were no American pilots concerned with that.

Mr. FLETCHER. He was a passenger?

Mr. BINGHAM. He was a navigator of one of the planes, and Amundsen was the navigator of the other plane. On that flight, the Senator will remember, one of the planes fell, and they, with great difficulty, got back to civilization at all. It is the testimony of Amundsen and others on the expedition that the return to civilization depended in no small degree upon the heroism and ability of Mr. Ellsworth.

Mr. BRUCE. Mr. President——

Mr. BINGHAM. Will the Senator kindly permit me to reply to the question of the Senator from Florida?

The transpolar flight of 1926 is the flight to which I have been referring, the flight of the airship *Norge*. Some of my friends here even object to the fact that I referred to Mr. Ellsworth as a rich young man. Had he not been a rich young man the expedition could not have occurred. It was his money that bought the airship. I have no objection to anyone being a rich young man. But it seems to me that for the Congress of the United States to give a gold medal to a young American who can afford to buy an airship—let us put it in that way, so that the Senator from Arkansas may not think I am casting any aspersions upon him because of his wealth, for that would be the last thing I should desire to do—it seems to me a most extraordinary thing that the Congress of the United States should be asked to give a gold medal to a young American who bought a foreign airship and hired a foreign airship crew. He could have gone to one of the American manufacturers of airships—for instance, to a company in Ohio that makes excellent airships, and has made them; and, by a strange coincidence, the very money he spent originally came from Ohio, and it seems to me it would have been a very natural thing to do to have gone to the Ohio company which makes airships and to have taken American airship pilots, of whom there were several second to none in the world, and to have organized an all-American expedition to the North Pole in an American airship, with an American pilot; and I can say to the Senator that I would like to have been the first, if possible, to have asked Congress for recognition of such an all-American expedition.

Mr. SWANSON. Mr. President, will the Senator yield?

Mr. BINGHAM. I yield.

Mr. SWANSON. What is the issue here? It is inferred we should not give the reward for heroism, should not give the reward for sacrifice, should not give the reward for the great risk and danger Mr. Ellsworth took, but it must be supplemented by his using an American airplane, aircraft. I deny that the American people feel that way. I deny that the very people who built the aircraft would like for that to be the measure of reward for heroism. I for one will never vote to give a medal, and insist as a condition precedent that the aircraft must be bought in America.

Mr. ROBINSON of Arkansas. We ought to have made Lafayette buy his uniform in the United States.

Mr. SWANSON. I do not believe in that principle. Heroism does not know any State. Heroism does not know any nation. Sacrifice and heroism know only the people who are willing to take risks of danger that ordinary people will not take, and when an American citizen does that anywhere, under any circumstances, his heroism and sacrifice and risk stir my blood, whether he went in a plane from Ohio or from Langley Field, in Virginia. So help me God, I am voting to give the medal for heroism, and not for the plane he flew in.

Mr. BINGHAM. Well, Mr. President, of course it is very easy to get eloquent expressions of the sort we have just had from the Senator from Virginia about a matter of this kind. And it is a little difficult to consider the actual facts coolly.

With regard to this great transpolar flight, the evidence is that Mr. Ellsworth was chiefly a passenger. He had nothing to do with navigating the airship. He went along as the owner of the airship and as an observer. It does not appear to me that that took unusual sacrifice or heroism. Perhaps I am mistaken.

If we are going to give gold medals to any young American who is able to afford it, and is willing to be taken along as a passenger on a heroic expedition, well and good, if that is to be our policy. But let me call to the attention of the Senator from Virginia, to whose oratory we have just listened, the fact that, although American naval officers and American enlisted men first flew across the North Atlantic nearly eight years ago, he never on this floor offered a bill to give them a gold medal or any recognition for their heroism and sacrifice.

Mr. SWANSON. Mr. President, if any one had offered a bill to bestow a gold medal for that heroic action, I would not have humiliated those men by saying, "We will give them the thanks of Congress." If they deserve it, give it to them. If they do not deserve it, do not give it to them. But why should justice be refused to a man because another man did not get justice?

I understood the Senator to say that if this had been an American expedition, manned with an American crew, and in an American airplane, the Senator would be here voting to award the gold medal. I say that I do not believe the American people are disposed to inquire, in rewarding heroism and sacrifice and risk, as to where the recipients got the plane.

Mr. COPELAND. Mr. President, will the Senator yield?

Mr. BINGHAM. I yield.

Mr. COPELAND. Let me ask the Senator a question. He is more interested in aviation than anybody else in the Senate. He has been our mentor and guide here. Why has not the Senator from Connecticut introduced a bill to honor the flight of the first plane that crossed the Atlantic?

Mr. BINGHAM. I will say to the Senator that I did prepare a bill with that end in view, but since Commander Read came from the State of New Hampshire, I did not desire to have it appear that I was trying to take away any credit from the representatives of that State, and I showed the bill to one of the Senators from New Hampshire, who prepared a bill which he thought was better than the one I showed him, he introduced it, and in due course the Naval Affairs Committee reported the bill and the Congress passed it without anyone's objection.

It seemed to me, in view of the fact that the Congress has been content to merely give the thanks of Congress for that great event, it was more or less casting a shadow on the first flight across the Atlantic to give a gold medal of an unusual sort, as the Senator will recognize this is, for something which is not as great a credit to our country and our fellow citizens as that particular event.

Mr. SWANSON. Mr. President, if the Senator will permit, the bill to which the Senator refers was sent to the Naval Affairs Committee, and I thought he and his friends wanted it promptly reported. His bill was here for Commander Byrd. I insisted and put through one for Floyd Bennett, giving him the same honors and the same rights, though he was not from my State, because I believe heroism deserves the generous reward of the Nation. I think this man is entitled to something for his conspicuous flight or nothing, and if he has been brave enough and has sacrificed enough and has been bold enough to spend $500,000, as a rich man, instead of indulging in luxury, instead of dissipation, to do a heroic thing, I think he deserves credit for that more than condemnation. I would like to encourage men who have fortunes, instead of spending their lives in luxury and all kinds of dissipation, to take a risk, to be men, to go to the North Pole, to take a risk and show heroism, instead of being dudes around these dissipated social functions. I commend this man for having done this deed, and I am glad to vote him a medal for the sacrifice.

Mr. BINGHAM. Mr. President, it seems to me very strange to hear on this floor a statement that the Congress of the United States is prepared to vote gold medals to any young American who chooses to go out of his way to expose his life and to promote the deeds of foreign aviators by hiring them to take risks, who is going to bring honor to other countries rather than to his own country. The transpolar flight mentioned in this bill is not one that brought credit to America. It brought the very greatest credit to Italy, and was properly recognized by Italy. It brought great credit to Norway, and was properly recognized by Norway, but I can not see where it brought credit to this country, notwithstanding the heroism of the observer who went along as the owner of the airship, and who deserves credit for having promoted the enterprise.

But we are nearing the hour of 2 o'clock, and I have no desire to prevent a vote on this bill, so I shall conclude briefly.

I merely wished to express the reasons why I have opposed this legislation for the past year in order that Senators might fully understand the facts in the case. If, with full understanding, it is the wish of Congress to give gold medals for this kind of thing, I shall be glad to try to see to it in the future that explorers and aviators who do similar acts get similar recognition by the Congress in order that justice may be done.

Mr. BRUCE. Mr. President, if the Senator will permit me, I had no intention at all of impugning his motives about this matter. I did not mean to intimate that his motives did not deserve as much respect as did mine or those of any other Senator.

Mr. SWANSON. I have high respect for the Senator.

Mr. BRUCE. As far as Commander Read is concerned, I am ready to vote a medal for him, too.

The VICE PRESIDENT. The bill is in Committee of the Whole and open to amendment. If there be no amendment to be proposed, the bill will be reported to the Senate.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

BILLS AND JOINT RESOLUTION INTRODUCED

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. BAYARD:

A bill (S. 4255) granting an increase of pension to Martha A. Smith (with an accompanying paper); to the Committee on Pensions.

By Mr. DALE:

A bill (S. 4256) granting an increase of pension to Mary Ann Shepard (with accompanying papers); to the Committee on Pensions.

By Mr. NORBECK (by request):

A bill (S. 4257) to authorize the payment of certain salaries or compensation to Federal officials and employees by the treasurer of the Territory of Alaska; to the Committee on Territories and Insular Possessions.

By Mr. DILL:

A bill (S. 4258) granting a pension to Mary A. McClure;

A bill (S. 4259) granting a pension to Absalom J. Price; and

A bill (S. 4260) granting a pension to Andrew J. Smith; to the Committee on Pensions.

By Mr. TYDINGS:

A bill (S. 4261) for the relief of Clarence Joseph Deutsch; to the Committee on Naval Affairs.

A bill (S. 4262) to renew and extend certain letters patent; to the Committee on Patents.

By Mr. FRAZIER (by request):

A bill (S. 4263) to authorize the collection of penalties and fees for stock trespassing on Indian lands; to the Committee on Indian Affairs.

By Mr. CAPPER:

A bill (S. 4264) to amend the packers and stockyards act, 1921; to the Committee on Agriculture and Forestry.

By Mr. FESS (for Mr. WATSON):

A bill (S. 4265) granting a pension to Anna Wheeler; and

A bill (S. 4266) granting a pension to Harriet S. Fredericks; to the Committee on Pensions.

By Mr. THOMAS:

A joint resolution (S. J. Res. 139) for the relief of the Iowa Tribe of Indians; to the Committee on Indian Affairs.

RAILWAY RATES ON GRAIN

Mr. WALSH of Massachusetts submitted an amendment intended to be proposed by him to the resolution (S. Res. 208) calling for certain information from the Secretary of Commerce relative to freight rates on wheat, which was ordered to lie on the table and to be printed.

REGULATION OF POSTAL RATES

Mr. COPELAND submitted three amendments intended to be proposed by him to the bill (H. R. 12030) to amend Title II of an act approved February 28, 1928 (43 Stat. 1066, U. S. C., title 39), regulating postal rates, and for other purposes, which were ordered to lie on the table and to be printed.

COMMITTEE SERVICE

On motion of Mr. ROBINSON of Arkansas, it was—

*Ordered*, That Mr. HAYDEN be assigned to service on the Committee on Mines and Mining; that Mr. SHEPPARD be assigned to service on the Committee on Education and Labor; that Mr. THOMAS be assigned to service on the Committee on the Library; that Mr. GEORGE be excused from further service on the Committee on Military Affairs and assigned to service on the Committee on Foreign Relations; and that Mr. LOCHER be assigned to service on the Committee on Military Affairs.

RIKER MISSISSIPPI SPILLWAY

Mr. FRAZIER submitted the following concurrent resolution (S. Con. Res. 17), which was referred to the Committee on Commerce:

Whereas Senate Joint Resolution 7, Seventieth Congress, first session, provided for joint hearings upon the merits of the Riker Mississippi spillway project; and

Whereas said Senate resolution asked for an appropriation of $6,000 to construct a model of the Riker Mississippi spillway in the basement of the Senate Office Building; and

Whereas it was stated by the chairman of the Commerce Committee that such an appropriation could not be secured (if at all) in time to permit the construction of the model for consideration by this Congress; and

Whereas to avoid any such delay Mr. Carroll L. Riker built the aforesaid model at his own expense, at a cost of more than $5,000, with the reasonable expectation that the joint hearing requested in the aforesaid resolution would be accorded him; and

Whereas the Commerce Committee of the Senate and the Flood Control Committee of the House, during their extended hearings, have acquired great knowledge concerning the subject of flood control, and therefore an expression of opinion upon the subject by a joint committee to be selected from the aforesaid committees should bear great weight in future consideration of this matter by Congress: Therefore be it

*Resolved by the Senate (the House of Representatives concurring)*, That a joint committee consisting of members of the Commerce Committee of the Senate and the Flood Control Committee of the House, to be appointed by the respective committees, is hereby authorized and requested to conduct hearings upon the merits of the Riker Mississippi spillway project for control and utilization of the waters of the Mississippi and Missouri Rivers and ramifications; and which said committee shall call and (if necessary) subpœna at least three disinterested civilian engineers which the American Society of Engineers will be requested to select for their outstanding training, experience, and accomplishments in hydraulic engineering, and in addition thereto Maj. Gen. Edgar Jadwin, Chief of Engineers, United States Army, and General Bixby, Chief of Engineers, retired, as experts upon the various factors involved in the proposed project.

Mr. FRAZIER submitted the following resolution (S. Res. 212), which was referred to the Committee on Commerce:

Whereas Senate Joint Resolution 7, Seventieth Congress, first session, provided for joint hearings upon the merits of the Riker Mississippi spillway project; and

Whereas said Senate resolution asked for an appropriation of $6,000 to construct a model of the Riker Mississippi spillway in the base of the Senate Office Building; and

Whereas it was stated by the chairman of the Commerce Committee that such an appropriation could not be secured (if at all) in time to permit the construction of the model for consideration by this Congress; and

Whereas to avoid any such delay Mr. Carroll L. Riker built the aforesaid model at his own expense, at a cost of more than $5,000, with the reasonable expectation that the joint hearing requested in the aforesaid resolution would be accorded him; and

Whereas the Commerce Committee of the Senate during its extended hearings has acquired great knowledge concerning the subject of flood control, and expression of opinion upon the subject by it should bear great weight in future consideration of this matter by Congress: Now, therefore, be it

*Resolved*, That the Commerce Committee of the Senate is hereby authorized and requested to conduct hearings upon the merits of the Riker Mississippi spillway for control and utilization of the waters of the Mississippi River below Cairo, Ill., and for the drainage of the valley; and which said committee shall call and (if necessary) subpœna at least three disinterested civilian engineers which the American Society of Civil Engineers shall be requested to select for their outstanding training, experience, and accomplishments in hydraulic engineering, and in addition thereto Maj. Gen. Edgar Jadwin, Chief of Engineers, United States Army, and General Bixby, Chief of Engineers, retired, as experts upon the various factors involved in the proposed project.

TAX ASSESSMENT OF SENIOR SENATOR FROM MICHIGAN

Mr. LA FOLLETTE submitted the following resolution (S. Res. 213), which was referred to the Committee on the Judiciary:

Whereas the senior Senator from Michigan, Mr. COUZENS, on April 12, 1928, presented to the Senate certain statements which indicate—

(a) That a Senator of the United States was subjected to intimidation in a threat of a huge additional tax assessment by the Bureau of Internal Revenue at the time a committee of which the Senator was chairman was investigating the Bureau of Internal Revenue; and

(b) That David H. Blair, Commissioner of Internal Revenue, formally advised the taxpayer, the senior Senator from Michigan, that the Bureau of Internal Revenue had no information to justify the original assessment in this case, and investigation later revealed the Bureau had extensive information in its files to show that the original assessment had been investigated many times and always had been approved; and

(c) That there is evidence of collusion between high bureau officials and so-called tax experts in an endeavor to extort a huge fee from the taxpayer; and

(d) That these facts were revealed to David H. Blair, Commissioner of Internal Revenue, and there is no evidence of any action taken by him to thoroughly investigate these circumstances; and

Whereas there is involved in this statement by the senior Senator from Michigan, Mr. COUZENS, the honor of the United States Senate and the liberty of action on the part of Senators of the United States; and

Whereas it is due the United States Senate, the Bureau of Internal Revenue, the Treasury Department, the senior Senator from Michigan, and officials of the Treasury Department that each and every fact relating to this transaction be investigated immediately: Therefore be it

*Resolved*, That the statements made to the United States Senate on April 12, 1928, by the senior Senator from Michigan, Mr. COUZENS, be referred to the Committee on the Judiciary; and that the Committee on the Judiciary, or any subcommittee thereof, is authorized and instructed immediately to proceed to investigate these circumstances; and that in making this investigation the Committee on the Judiciary, or any subcommittee thereof, may subpœna books, papers, and documents in any way related to these circumstances and this transaction, and any and all persons who may be associated with or have any relation to the transaction; and that the committee, or any subcommittee thereof, has authority to sit during this session of Congress, or the recesses of this Congress, and shall report to the Senate in writing at the earliest opportunity.

PRESIDENTIAL APPROVALS

A message from the President of the United States, by Mr. Latta, one of his secretaries, announced that the President had approved and signed the following acts:

On April 26, 1928:

S. 205. An act to authorize the Secretary of the Treasury to pay the claim of Mary Clerkin;

S. 802. An act for the relief of Frank Hanley;

S. 1377. An act for the relief of Lieut. Robert Stanley Robertson, jr., United States Navy; and

S. 2442. An act for the relief of Lieut. Henry C. Weber, Medical Corps, United States Navy.

On April 27, 1928:

S. 463. An act for the relief of David J. Williams;

S. 484. An act for the relief of Joe W. Williams;

S. 1758. An act for the relief of Fred A. Knauf;

S. 1848. An act for the relief of Frank Dixon; and

S. 2008. An act for the relief of the parents of Wyman Henry Beckstead.

On April 28, 1928:

S. 3506. An act for the relief of the owners of the British steamship *Larchgrove*; and

S. 3507. An act for the relief of the Eagle Transport Co. (Ltd.) and the West of England Steamship Owners' Protection & Indemnity Association (Ltd.).

VIEWS ON GOVERNMENT

Mr. WALSH of Massachusetts. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by Senator BRATTON, of New Mexico, on April 19, 1928 (Patriots' Day), before the Knights of Columbus at Boston, Mass.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My pleasure in being here is increased when I think of the appropriateness of commemorating the historic event which transpired 153 years ago to-day, when the British made an overt and open attack on the Americans at Lexington under the command of that patriot, Capt. John Parker. That was epoch making in its character. It was important within itself and was increasingly so because it preceded other engagements in the great struggle we call the Revolutionary War, so pregnant with wonderful possibilities concerning the entire civilized world. It is to pay tribute to those veterans who stood in defense of liberty and freedom for themselves, their families, their fellow men, and the unborn generations to follow that we have come together this evening. Not only so, but we may well reflect upon the other valorous deeds preceding and concurrent with the establishment of American independence. It is reassuring to know that men in this busy and prosperous State in the New England section of the country are not too engaged nor engrossed with modern things bearing relation to business and professional affairs to stop and even turn backward into the shades of antiquity for the purpose of paying tribute to our forbears who founded this country at a tremendous sacrifice in order that freemen might live here in peace and happiness. It was President Harding who took delight in referring to them as the Founding Fathers. It was through their foresight, bravery, and manhood that our Nation, now incomparable in its record with anything in the history of the world, was set upon the highway of national existence. Let us pause long enough to consider what a tremendous change would have followed those eventful days of 1775 and the immediately subsequent years had our forbears failed to meet the challenge that was hurled against freedom and independence; had they failed through almost superhuman courage to overcome the apparently insurmountable difficulties and odds. What if they had faltered, submitted, or surrendered?

The entire Republic of mankind would have been affected. The world would be entirely different to-day. We are independent and free. We possess more than one-third of the combined wealth of the world and only about one-sixteenth of the population. Even though we are absorbed with many complicated questions, both domestic and foreign, we must never become too busy to keep freshly in mind the innumerable acts of bravery, valor, and ingenuity of those stalwart men and noble-hearted women who wrought our national existence at a stupendous cost. They must never be forgotten. They and their record must be kept green with the moss of repetition. This period of history must be taught throughout the length and breadth of the land in every appropriate way. The childhood of the country should receive it through every proper channel. The adult population should review it with pride.

The magnificent part taken by your own State in those colorful days should be known and duly appreciated by every real American. No State has a record more resplendent with events of importance and glory than has Massachusetts. She was among the leaders from the Boston Tea Party even to this very hour. During the Revolutionary War she gave an inspiring account of herself. Immediately following the war, when the Colonies were groping and grappling with their problems, some advocating an association or union of some kind, the exact nature of which was vague and indefinite, while others favored complete independence and dissociation from each other, Massachusetts took her rightful place in molding sentiment among her people as well as the inhabitants of her neighboring Colonies which led the New World into paths of right decision and success. Later, when steps were taken to formulate the convention at Philadelphia for the contemplated purpose of amending and thus improving the Articles of Confederation, your own State was again to the fore. When the delegates determined that it was expedient to depart from the purpose for which they had been selected and, instead of amending the Articles of Confederation, to write a completely new document to be called the Constitution of the United States, the State of which you rightfully are proud, was not remiss in meeting her obligation. She played her part in provoking discussion through the press and elsewhere which had much to do with the final ratification and adoption of that most remarkable document, guaranteeing protection to life and property. From that eventful period until now, Massachusetts has never failed either as a sovereign State or as an integral part of the Union. She met every obligation devolving upon her during the recent World War, by furnishing means, munitions, men, and patriotism.

With this marvelous record, it is perfectly natural to find such a splendid aggregation of men assembled here for the laudable purpose for which you have gathered. Your object is to pay tribute to the men and sentiment blended and typified into the event in commemoration of which we meet. Not only so, but it is altogether appropriate that the assemblage should be held by the distinguished organization to which you belong and which you represent. Knighthood, in the generally accepted sense of the term, has enjoyed a well-understood meaning since its origin in the distant days of history. It has signified an attribute of chivalry, dignity, and bravery. Knighthood in this organization carries a significant meaning which constitutes a challenge to every man fortunate enough to possess it. That challenge is to meet every duty devolving upon you as men, citizens, and Knights of Columbus and to discharge it well. Many duties constantly are resting upon American citizens to-day. Science has done much for mankind. It has lengthened the span of life almost 20 years; it has reduced infant mortality to a minimum; through reclamation it has carried water into the desert and converted vast areas of waste into highly productive assets; it has developed hydroelectric energy at the natural power site and carried it hundreds of miles where homes are lighted, factory wheels are turned, railways are propelled, gigantic machinery is operated, and the burdens of man in innumerable ways have been made lighter. Indeed, science has mastered the sea, the air, and the depths beneath the sea. There is none among us who can forget that wonderful scientific achievement of so recent date when a lone and unknown American boy took to the air in the United States and landed safely in France. Even so, there is much for men yet to do. These are momentous times. We enjoy peace, but I sometimes think there is as much to do then as in times of national conflict. It is the duty of every man to educate himself in order that he may serve his fellow man in the largest possible way. This within itself is a stupendous challenge. When we speak of education we do not mean merely passing the courses or curricula of college or university. That is not a completed education. It is merely a beginning. The time was not long ago when education was looked upon as a means of gaining or earning a living. We have corrected that error now, because education is generally regarded as a means of living. Not how to make a living but how to live. In this sense education is never completed. It runs with the race of life. In this sense the educated man always wants those about him to enjoy the advantages of education, and consequently he is ever engaged in advocating it and encourage others, particularly the youth, to equip themselves in this manner so that they may know how to live.

Education therefore means harmony, brotherly love, union of forces, and Christian companionship, as well as steady progress toward improved conditions and better things. I can not depart from this thought without saying that your distinguished organization has stood at the front in the encouragement of real education in the sense with which I have endeavored to present the subject. That is a cause for much deep and sincere gratification.

Another thing with which we should concern ourselves is to see that one of our organic principles of government; namely, religious tolerance and freedom is perpetuated and made safe as one of the tenets

of our existence. It must be preserved and perpetuated if our well-being is not to become imperiled. The right to entertain our own concept respecting religious beliefs has been advocated by the outstanding men of the Nation at every period since its foundation. An emphatic declaration upon the subject was made in Jefferson's first inaugural address. He said that the principles of our Government rested upon "equal and exact justice to all men, of whatever state or persuasion, religious or political." Later he announced the doctrine of "freedom of religion, freedom of the press, and of the person." In this Jefferson does not stand alone. Leaders in every age, without respect to political affiliation, have joined in the advocacy and urge of this life-giving principle as a part of our existence and well-being. Frankness compels all of us to admit that there are those who are engaged in an effort to proscribe others with respect to religious freedom. Such a course is narrow, intolerant, and death dealing in its results. Nothing is more dangerous to our peace and happiness. We must hold fast to the doctrine that freedom of religion is an inalienable right of every free man in this country. When intolerance enters through the door, freedom departs through the window. The religious views of any man should not be considered as a factor in the equasion of his usefulness as a citizen or suitability as a public official. It should never be taken into account in determining his qualification for public service. To do so strikes at the very warp and woof of our independence. It tends toward internal bondage. So dangerous and destructive is this tendency on the part of some of our citizenry that every right-thinking individual should accept it as a challenge and throw himself with his full force against it. It must be annihilated else we become impaled with danger.

Another condition which concerns our well-being is the startling indifference on the part of the masses with respect to exercising the right of suffrage. Statistics tell us that less than 30 per cent of the qualified electors throughout the country have voted during recent years. This is a terrible indictment and yet it is literally true. The laxity with which people have treated this right of freemen is appalling. It becomes increasingly alarming when we realize that the safety of the country lies in having a live, active, virile citizenry awake to the needs of the hour and jealous in their perpetuity. When more than 70 per cent of those who are entitled to vote fail to exercise that right, it augers for bad results. But, you say, what is the remedy? How can this ill be cured? My answer would be a recrudesence in the study of the history and policy of our Government, both State and National. I fear that the rapid schedule over which we travel has tended to cause us to push aside consideration of such matters, making them give way to other things having a more direct bearing upon our immediate affairs. Obviously we can not appreciate citizenship in our country, nor respond to its rightful demands, unless we know and understand something of our Government; the things for which it stands; the protection which it grants. Neither can we give ourselves to the solution of any of the problems of the day unless we learn something about them. A study of public questions is essential to a well-guided leadership. Incidentally we have some gigantic problems just now. They command the serious application of our entire population. Some of these are Muscle Shoals, Boulder Dam, Mississippi River, reduction of taxes, and other matters too numerous to justify enumeration here. In addition the so-called St. Lawrence River waterway problem, a matter nearer to yourselves, soon will confront us with a demand for its solution. Too, we must evolve a definite policy concerning our foreign relations. Much is being said about our position in Nicaragua. It is discussed almost daily in the Senate. Do the people generally have a settled opinion as to whether we were justified in sending marines there originally, also as to whether we are now justified in keeping them there? Have they determined whether our action in this regard is in harmony or in conflict with the Monroe doctrine? How can they help determine that question without becoming familiar with the facts; and yet it is their very affair. I urge a more diligent study of public questions, with the result that the masses of people shall know more about them and can take a more active part in their solution. The best means of accomplishing this is an active participation in political party activities. I do not mean to advance the cause of any political party. It would be highly inappropriate for me to do so here. I apprehend that there are many Democrats and numerous Republicans listening to me. You are here without reference to being party adherents.

I do not covet having the air in this beautiful room surcharged with partisan politics when I have concluded my remarks. I content myself with urging an active alliance with one of the dominant political parties. In other words, it is my belief that we should have party control and party responsibility. Let the party in power, possessed of the facilities with which to serve the public, be responsible to the people. Neither am I urging that every man run for public office. I appeal to the laymen of the country, who are bearing the burdens of the day, to become more active in public affairs and devote more of their time and talents to the welfare of society, because politics always affects society. Demand clean men of the highest order as candidates and straight, clean-cut issues. When this is done I shall entertain no fears about the welfare of the country. I have implicit confidence in the American people. I hold that the heart of the American people is sound and right; that they despise corruption in public office regardless of party affiliation. We saw a recent illustration of this. The State of Illinois elected Frank L. Smith as a Senator from that State. He came to Washington, presented his credentials, and demanded his seat in the Senate of the United States. It was made known to the Senate that while he was chairman of the Utilities Commission of the State of Illinois he accepted campaign contributions exceeding $125,000 from Mr. Samuel Insull, a man heavily interested in public-utilities companies transacting business in that State, in violation of a State statute providing that no member of the commission should accept any such contribution from an agent or employee of any utility company. On this account Mr. Smith was suspended at the bar of the Senate. After a hearing before the proper committee he was finally denied the right to take the oath or hold membership. He submitted himself as a candidate before the people of Illinois in the recent primary. His issue was vindication from the reflection thus cast upon him and the sovereign State of Illinois. The Republicans of that State rejected him by an overwhelming majority, thus putting themselves on record as demanding purity among their public officials. It illustrates in a most forceful way the truth of my declaration that the people, without regard to party lines, want clean government. They want honesty, efficiency, and economy in governmental affairs. The party that can give the largest measure of this will find a welcome among the people. On the other hand, the party that realizes this demand and adheres to it will, in the final outcome, be the most successful.

The question raised by the action of the Senate in rejecting Mr. Smith is an important one which should receive the serious consideration of the inhabitants of this State as well as all others. It is held by some that the power of the Senate in its inquiry into the right of a Senator elect to take his seat is confined to his age, residence, and inhabitance. This is denied by others who believe that no such limitation applies. I have reached the conclusion that, under the two pertinent sections of the Constitution, the Senate is not limited, but may reject upon any ground sufficient, in its judgment. One section of the Constitution provides that in order to be elected to the Senate of the United States a person must be more than 30 years of age, nine years a citizen of the United States, and an inhabitant of the State from which he is elected. Another section provides that each branch of the Congress shall be the sole judge of the election, returns, and qualification of its Members. In my opinion the one provision should not be regarded as a restriction upon the other unless that was manifestly the intention of the framers of the instrument, or unless it is necessary to do so in order to give harmonious effect to the two provisions involved, as well as the entire instrument. I believe no such condition is presented here. The provision with respect to age, residence, and inhabitance is a restriction upon the several States. It provides that no one of them shall elect a person to the Senate unless he has attained that age, has been a citizen of the United States for that period, and is an inhabitant of his State at the time of his election. That plainly is designed to bring about unity among Senators. It is intended to prevent one State from providing certain qualifications, like the ownership of real estate, being the head of a family or other provisions of that character, while another State might provide an entirely different set of requirements. The restriction, according to my belief, is directed against the several States. It in no manner affects the House or Senate. The other provision is directed to each branch of the Congress. It is a grant of power to inquire into the election, returns, and qualifications of its Members. There are no limitations to be found there. The grant is without restriction. The result of this process of reasoning is that the two provisions of the Constitution can be given full force and effect without the slightest conflict and the entire instrument can be brought to a harmonious result. In such case there is no occasion for adopting a construction which makes one provision restrict or abridge the other.

The action of the Senate, which received concurrence of the majority of that body, may not express the interpretation of the statute desired by the people. Accordingly, attention should be arrested, discussion provoked, and sentiment molded to the end that correction shall be made in the proper and orderly way. That is my purpose in bringing the subject matter before you this evening. That is my sole desire.

Captain Parker and his comrades, as well as all other patriots who suffered and sacrificed, fought that a nation might be founded here upon the principles of freedom and independence. That was their joint purpose and common hope. Among these was the right of every freeman to raise his voice without interference in the solution of all public questions. They demanded that no feudal system should find its place here. It was upon those lofty principles that this country started upon its national course. During recent years the country was utterly astounded at the excessively large sums of money that were gathered and expended in connection with the election of certain candidates for office. Nothing comparable with the enormity of these sums was ever known in the entire history of the land. This means corruption and debauchery. It means dishonesty in public life. Such things run squarely afoul with the principles for which our forefathers suffered and bled. It means that they struggled in vain. Such acts of corruption and debauchery, regardless of the political party in which

they are found, must meet with a stern rebuke. They must suffer universal condemnation. They must be stricken down, else the principles upon which our Government rests will be subordinated to them. The two can not stand together.

While we are engaged in reviewing the history and wonderful achievement of our country, I address myself to another matter which I deem to be vital. I refer to the startlingly rapid growth of bureaucracy. This is a danger that is lurking but always present. There has been a steady and never-varying policy during the last decade to create bureaus and commissions at Washington and elsewhere throughout the country to administer law upon every conceivable subject. It has been the policy of the Congress in the enactment of laws to create a bureau or commission and then provide that such agency shall administer the law under such rules and regulations as it may prescribe. This is the tendency of a great percentage of the modern legislation. The result is that rules and regulations are promulgated; they have the same binding force and effect as a statute duly enacted by the Congress. These bureaus are always grasping for additional power. They are never satisfied. They constantly desire an expansion of their prerogatives. This has become so true that they are not servants of the people, but masters of the people. They master you, and yet you never have the opportunity to vote for or against them except in a most indirect and remote way. We now have hundreds of these agencies busily engaged in supervising all kinds of industrial and commercial activities. For this millions of dollars are spent annually. This danger has been referred to as the sleeping paralysis of the Republic. I fully agree with the characterization. It is subtle in its steady grasp but increasingly firm in its mastery of every avenue of government. If I can arouse you to this one danger and send you away as apostles of warning, I shall be abundantly recompensed for my time and travel in coming here.

I have not essayed to be oratorical. It has been my purpose to leave some thought with you upon which you may dwell after I have departed. If anything I have said will provoke thought or discussion among you, I shall have accomplished my purpose abundantly. May your State continue to be prosperous; may you continue to be happy personally and useful in building a greater civilization.

### PROHIBITION ENFORCEMENT

Mr. BRUCE. Mr. President, I ask that a statement made in Philadelphia on April 24, 1928, by William Dudley Foulke, of Indiana, formerly a member of the Civil Service Commission, in relation to the bill now pending in the Senate, proposing to cover in the prohibition agents who failed on the recent civil-service examination, be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

### SELECTION OF PROHIBITION ENFORCEMENT OFFICERS

When George William Curtis, Carl Schurz, Theodore Roosevelt, and their associates first undertook the work of civil-service reform, what was their primary object? To eradicate the spoils system. Of this system Lincoln had said, pointing to the crowds of office seekers who beset the White House, "There is a graver danger to our Republic than the rebellion itself." "The bribery chest" (as Roosevelt called it) of the hundreds of thousands of officers was at the disposal of the members of the party in power to use for their own purposes in corrupting the whole electorate by holding out these places as the rewards of political activity and support. The inefficiency of the service and the wasteful expenditure of the millions required to sustain it was a mere incident; the gravamen of the evil was that it infected the moral and patriotic fiber of the Republic. Think you that those who devoted so much of their lives to this cause without hope of reward would have done so for the mere purpose of saving the Government some money or somewhat improving the output of public service? No; it was to save the lifeblood of America from the infection of the spoils of office.

A great deal has been accomplished. Over 400,000 places in the Federal civil service have been withdrawn from patronage; nine States and a considerable number of cities have been more or less protected by the substitution of competitive tests for political appointments. But the work has not yet been half done. Indeed, there are evidences everywhere that the enemies of clean government are attacking us to-day with a fury and venom as dangerous as in the first days of our struggle.

Nowhere has this more clearly appeared than in the Prohibition Enforcement Unit. Let us review for a moment the history of that branch of the service.

I shall say nothing of the intrinsic merits of prohibition itself; but while the amendment and the laws exist it is the plain duty of the Government to enforce them and to appoint for this purpose a corps of officials, competent, honest, and energetic, who will devote their energies to this enforcement and not to lining their own pockets by bribery—not to help carry the district for their Congressman nor to advance the interest of the person or party to whom they owe their appointments. And yet the latter things have been the objects to which their official activities have been hitherto largely devoted. Why is this?

When Volstead and Wayne B. Wheeler drew the law on the demand of the Anti-Saloon League they put in a provision that all the field force engaged in actual enforcement and not mere clerical duties should be excepted from the provisions of the civil service act—that is, that it should become the object of mere congressional or other political patronage. The Anti-Saloon League feared that perhaps under civil-service examinations some agents or other officers would get in who were not in favor of prohibition. The Anti-Saloon League wanted none but its own creatures or adherents and believed it could get these by patronage and favor better than by impartial tests. Therefore at this time it favored excepting these places from the civil service law. Congressmen would no doubt help them to get good prohibitionists who would do just what they wanted. They thought they could control these appointments themselves. So these propagandists of temperance and Christian morality joined hands with the spoilsmen. No doubt some of them would have been in favor of the merit system then, but Wayne B. Wheeler told them, as he also told us, that it was not "practicable." Various Congressmen who wanted these places for their own retainers told the heads of the Anti-Saloon League that they could not get votes enough to pass the Volstead bill if they did not let the Congressmen have the appointments. This was not true. Public opinion at that time demanded the law so strongly not only as a temperance measure but as a war necessity that these Congressmen would have been left at home had they refused to support it. The immense majority in Congress and all the State legislatures which supported the eighteenth amendment had shown this. But the timid representatives of the Anti-Saloon League trembled in their boots under the threat and gave to the Congressmen all the plunder they wanted in the shape of offices in return for their votes.

This transaction had many of the moral attributes of bald, naked bribery. The moral principles of the church organizations taking part in the political deal seemed to be limited to one thing—to prohibition. This sacred cause justified any means, however discreditable, to accomplish it. Political corruption and debauchery were unimportant in comparison, and they might even be tolerated and encouraged. The preachers and bishops who took part in this trade might have called it in others "Jesuitical."

The places thus made political plunder were financially of immense value. Officials in the Prohibition Unit have made many millions of dollars by prostituting their officers and aiding the bootleggers to defeat the law. They have been participants in fraud, hijacking, piracy, and murder. Witness the testimony given in countless criminal trials in which they were involved.

When these public officers were thus sold to venal politicians, what happened? At the time the Volstead Act was passed the Democrats were in power, and these thousands of places were distributed by Democratic Congressmen among their Democratic henchmen, who waxed fat upon the proceeds of their venality. When Harding came in the Democratic rascals were turned out and Republican rascals turned in to fill their places, waxing fatter still, for they had a much longer opportunity. The enforcement service became putrid in its corruption. True, it still contained some honest men who risked their lives to carry out the law; yet in general it was so corrupt that the very name of prohibition agent soon became a byword for venality. President Harding declared that this nonenforcement and betrayal of the law had become a national scandal.

The Anti-Saloon League kept telling us month after month, year after year, that things were getting better while we all knew they were getting worse. Deaths from alcoholism were increasing, arrests, prosecutions, convictions, and violations of the law kept growing constantly. Intemperance, which at first had declined rapidly, soon began to increase, and as shown by police-court records, kept going back again, year after year, closer and closer to its pre-Volstead level, while crimes of far graver character, homicides, burglaries, bank robberies, and hold-ups increased as never before until there are more than 10,000 homicides every year. Of course, all of this was not due to bad men in the Prohibition Service, but they had much to do with it, not only as participants but by encouraging that general defiance of law of which they furnished such nauseating and conspicuous examples. My friends, you know these things are true, you know that this service was thoroughly debauched.

Now, who was responsible? Not only these degraded and criminal officers of the Prohibition Unit, but the Congressmen and other politicians who recommended them for appointment, and the Anti-Saloon League which afterwards certified to the high qualifications of vast numbers of these precious scoundrels before they could get their appointments. It is true that after a while the Anti-Saloon League and Wayne B. Wheeler, its counsel, found out their mistake, and then they claimed that they had been in favor of the merit system all the time but had been overawed by the representations of Congressmen that they could not get votes enough to pass the bill unless they gave Congress the patronage. That made their conduct only more reprehensible. If they had honestly believed in the spoils system, there might have been some excuse, but thus to become the traders of offices for votes when they knew it to be wrong was not only weak but immoral.

And after they found out how badly the spoils system worked, what did they do? They introduced a bill to classify this service and to cover into it all the precious rascals who had been appointed under the spoils system and thus make more permanent the iniquities they had brought into the service. We opposed this bill with all our power and it was not enacted. Then they took a further step by way of compromise. They offered to let the mere subordinates be examined in competition with outsiders but proposed to "cover in" all the more important and higher administrative officers. But it was in these high places that corruption was most rampant. Many of those higher up were the most guilty of all, and we were just as unwilling to keep in these more important miscreants as we were to keep in their less guilty subordinates. So we urged President Coolidge to recommend to Congress that the whole enforcement unit be classified and that all the officers in the bureau, high and low, should have to compete with other applicants from the outside on equal terms. He made this recommendation in two successive messages.

The spoilsmen in Congress were now in a dilemma. They could not vote to perpetuate this bureau thus defiled with iniquity and at the same time keep the support of their constituents, and so they delayed as long as possible and finally voted in the last session of Congress for the bill we wanted.

---

NATIONAL CIVIL SERVICE REFORM LEAGUE,
*New York City.*

To the EDITOR:

The following is an extract from an address by Hon. William Dudley Foulke, of Richmond, Ind., to the Council of the National Civil Service Reform League at its meeting in Philadelphia on Tuesday evening, April 24. Mr. Foulke, who is a former president of the league and a former member of the United States Civil Service Commission by appointment of President Roosevelt, first reviews the entire history of the scandals in the Prohibition Enforcement Bureau, due to political manipulation and the facts that led up to the recent examinations held by the United States Civil Service Commission for the incumbents of prohibition enforcement offices. After reciting the fact of the passage of the bill requiring examinations at the last session of Congress, Mr. Foulke goes on to say:

"A filibuster in the Senate at the close of the last session prevented the passage of the deficiency appropriation bill and the Civil Service Commission was deprived of the means of providing the necessary examinations. They went ahead as far as they could and some examinations for the higher administrative officers were held, but examinations for the great mass of subordinates could not be held until the present session of Congress, when at last that body passed the deficiency appropriation bill and gave the commission the necessary funds. Year after year had gone by, nearly eight in all, and at last the commission has begun to hold examinations. The first of these was the written test to show the intelligence of the applicant. This examination was to be followed by inquiries into his personality and character.

"What happened after this first examination? It was found that not less than two-thirds of the worthies foisted upon the country by Congressmen and other politicians, with the cooperation of the Anti-Saloon League, were incapable of answering correctly even 60 per cent of the written questions asked. It became evident that they were devoid even of the necessary intelligence to perform their duties, to say nothing of their honesty and moral qualifications. What a commentary on political patronage!

"And now the spoilsmongers, driven to the wall, betake themselves to the pitiable excuse that it was not the fault of these officials that they could not pass, but of the Civil Service Commission, who had made these examinations too hard. And the questions asked, it was said, were not proper tests at all. That is the same wretched pretense that has been made for now, nearly 40 years, by every patronage peddler in America. It is the same false accusation that was utterly refuted by Theodore Roosevelt when he was Civil Service Commissioner, and it has been overthrown ever since wherever it lifted its venomous head.

"Of course, no perfect tests have ever been devised, nor can they be. But the questions asked of these applicants referred only to the duties they were expected to perform and were eminently practical and reasonable—witness the following:

"'Assume that you are a prohibition officer working occasionally with agents Jenkins and Thompson, both of whom you have known for about six months. During the progress of an important investigation upon which all three of you are engaged, agent Jenkins approaches you with a statement that Thompson is crooked and is negotiating regularly with violators of the national prohibition act. Assume such facts as you may desire, not inconsistent with those given here, and state in approximately 150 words what, in your opinion, you should do under the circumstances.'

"Can you devise anything fairer to test general intelligence such as would be required of an applicant for the place of prohibition officer?

"Yet one of the applicants in far less than 150 words answers the question: 'There is no truth in the charge.' Though this was a mere problem to test the applicants' judgment, it may well be asked whether applicants like this should be 'covered in' by special act of Congress.

"Of course, mistakes may be made in the ratings of some of these applicants—when this is true, they can be remedied by rerating when the commission is satisfied that a mistake has been made and this has been done in many cases, but to say that good and bad must all be kept in office is as ridiculous as to say that there ought to be a general jail delivery because one or two convicted men were found to be innocent.

"For in spite of the practical character of the examination there are some, even among those who have heretofore protested their devotion to the merit system, who say, not merely that the commission should make the examination easier and give these incompetents another chance (that would be bad enough), but that they should thus be 'covered in' despite their ascertained unfitness by a special act of Congress which would thus perpetuate the scandals they have already created.

"Two bills have been introduced in Congress for this purpose, one in the Senate by Senator BROOKHART, of Iowa (S. 1995), and the other (H. R. 11193) in the House of Representatives by Mr. ROBINSON of Iowa. These were referred to the Committees on the Civil Service of the two Houses, respectively, and the Senate bill has already been favorably reported, and is likely to pass at any time.

"By this proposed bill all the enormous expenditure authorized by this Congress already appropriated and spent to hold the examinations is to be thrown into the wastebasket.

"Moreover, the outsiders who took the examination in good faith are entitled to consideration in connection with filling these positions and it would be monstrously unjust to permit the offices to which they are entitled to be filled in violation of their rights by the retention of those who are now filling these places. Nothing could more discourage honest competition nor more deeply discredit the merit system than such dishonorable treatment.

"Yet the critics take no account of this at all. They tell us, moreover, that civil-service reformers have now got quite beyond the need of protecting the country from spoils into that purer region where they may confine their energies to devising a 'system of scientific employment.' As if such a system were of any value whatever where the régime of political plunder still holds sway. The argument by which these critics would continue the perpetuation of spoils is this: 'The evidence as to the efficacy of former tests,' they say, 'is none too reassuring. Every investigation which has been made shows that the written tests in use are highly unreliable. Were the prohibition officers tested actually ignorant or were the tests themselves seriously at fault as measuring instruments? Would it not be better to let the operating officer decide who should go and who should stay?' Now, if operating officers were always free agents, honest, impartial, and skillful, they might make the selection better than could be done by any formal tests. But they are not free agents, but are subject to politicians high in office, appointed under the patronage system. Can these politicians be trusted to eliminate the patronage that has given them their places and to retain only the best employees? Will they not select and retain their subordinates on the orders—recommendations they are called, but woe to him who disregards them—of the politicians, Congressmen, or bosses who gave them their own positions, in such a way as will best please their patrons? They are not impartial nor disinterested.

"Often the operating officer can not even turn out the rascal who has dishonored the service lest some Senator, Representative, or other politician will demand his reinstatement and the officer, fearing that he may himself lose his place, weakly submits to what the politician requires.

"Even if it were true, as our critics say, that 'prohibition authorities declare that the Civil Service Commission has eliminated employees whom they think highly of about as frequently as those whose performance is not satisfactory,' this would mean little, for some of these operating officers themselves seem to think highly of those who have aided them in the perpetuation of political spoils. But it is not true that the 'prohibition authorities' have in general given this kind of testimony. As a rule the tests given have generally weeded out the least efficient. And in the formation of the tests the commission has had the aid, sympathy, and support of high prohibition authorities.

"Another argument of our critics is this: 'If you exclude all the men who could not answer even 60 per cent of the questions there may not be eligibles enough to carry on the work and prohibition enforcement will be demoralized for months.'

"How could this be? The men now in office, of course, will be retained until the new list of eligibles is ready and the new appointments made.

"And it would be far better to have the Prohibition Bureau demoralized for some months than to have it demoralized permanently by keeping in the present variegated assortment of politicians appointed by politicians for political or personal ends. Nearly all the men in the service, high and low, are Republicans. Most of them are spoilsmen who accepted office given to them as a personal and political favor. How can you trust these men to eliminate the unfit through their own action and keep in only those who are qualified? Have they done it during all these years?

"The wiseacres who are criticizing the commission's examination rather than repudiating the ignorant applicants who failed to pass, say that the examination must have been a bad one because the mortality was highest, not in the wet East where corruption was common but in the South and West where prohibition is favored. What sort of an argument is this? The examination held by the commission was merely a test of their intelligence. No question regarding their personality or character was included in it at all. These questions were to come later with the oral examination and with the character investigation. How is a test of a candidate's general intelligence affected by the opinions in regard to prohibition of the section of the country from which he comes, or even by his own opinions or by those of his 'angel'—Congressman or otherwise—who has secured the place for him? Who will say that either the drys or the wets have any special monopoly or advantage in general intelligence? When the advocates of retaining these spoilsmen are so hard put to it that they have to resort to such claptrap as this for argument, it is safe to conclude that their logic may be very weak in other particulars.

"But even if it were desirable that all of these political appointees should be covered in, although they could not pass the examination, there is no need whatever of a new act of Congress to accomplish this great eleemosynary scheme for the protection of the incompetent. The President has full power to cover them all in under the law as it stands. The civil service act provides that the President may except any person or persons from its provisions. Why do the critics insist that Congress shall direct him to do it? It is because they know that he does not desire to keep these places any longer in the hands of political spoilsmen, for he has already twice recommended in his message that the tests should be given equally to all, to those already in the service and to applicants from the outside.

"Which can best be trusted, a President like Mr. Coolidge, who seeks no new term of office for himself and is quite above the thirst for peddling patronage in the Prohibition Bureau, or rather the politicians in Congress, many of whom still want it for themselves? Shame on the man who urges these specious arguments in order to perpetuate the iniquity which exists to-day.

"It is said that some of those in the Prohibition Bureau (who are themselves political appointees) complain that the Civil Service Commission did not consult them in preparing the examination questions. Should the commission confide in the impartiality of men appointed by partisan politics to keep the service out of partisan politics? Should they trust without discrimination the officials of a bureau so deeply honeycombed with inefficiency and corruption to help prepare tests which would undo their own evil course? Should they have the opportunity to disseminate among officials and employees of this bureau a knowledge of what the questions were to be so that some unworthy member could inform favored applicants just how to answer them? The commission did well to keep its own counsel and prepare its tests with advisers of its own selection both in the bureau and outside.

"It is said that it is the general custom to 'cover in' all those in service when a particular branch is classified and that to require them to compete with outsiders is quite unusual. That is true in branches of the service that have done their work with reasonable efficiency untainted by gross scandal, though there are many instances where the employees have been required to compete with outsiders to retain their places to the manifest advantage of the service. But the Prohibition Enforcement Bureau has been for years thoroughly debauched and corrupted.

"Do you say this is all past history and that we have now an administration which is redeeming that past and that all will go well hereafter? We have heard that song for years, and if the corps of miscreants who have caused these scandals are now all covered in, to be dismissed only by those already in the service, we will hear it for another generation.

"It was only last September that Maj. Chester O. Mills, who had been appointed Federal administrator in the largest district in America, thus reports its condition:

"'Gen. Lincoln C. Andrews, who was then in charge of prohibition enforcement, had notified the public,' says Major Mills, 'as he had repeatedly assured me, that politics would have no place in enforcement. * * * Gradually orders to exclude politicians were modified. I was told to advise with the local party leaders regarding appointments to the force of 240 men working under me. * * * In scores of cases involving useless and venal agents, suspected alcohol promoters, and outlaw breweries I felt the working of the political machine, whose wheels do not grind slowly, although they grind exceeding fine. Through weeks and months contests with the politicians multiplied, bickering increased, until finally action taken against the worst agents I have ever encountered provoked the politicians into open mutiny. * * * They complained that out of the 240 men in my district, nearly one-tenth of the entire Federal dry force, 103 were Democrats. The full roster was submitted to the bosses for inspection. There were only 12 Democrats on the force. * * * General Andrews ordered me to consult Charles D. Hilles, the national committeeman of the Republican Party from New York. Mr. Hilles and I had a conference lasting two and one-half hours. * * * He pointed out that the patronage system prevailed in every prohibition district throughout the country and that my territory would not be an exception.'

"Major Mills now gives a list of the various convicted criminals and other jailbirds who were foisted on him by the Republican politicians.

"'A typical recommendation for a dry agent's job is one from Chairman Livingston: "This is to certify that Samuel Gross is an enrolled Republican." If the candidate was not hired, a long series of letters and telephone conversations resulted. If he was fired, two and three times that volume of forensic literature developed. * * * Prohibition as at present operated is a party spoils system. Three-fourths of the 2,500 dry agents are ward-heelers and sycophants, named by the politicians, and the politicians, whether professionally wet or professionally dry, want prohibition, because they regard prohibition as they regard postmasterships—a reservoir of jobs for henchmen and as favors for friends.'

"It is hardly necessary to add that the politicians secured Major Mills's removal.

"That the bureau is largely filled to-day with grafters is evident from Commissioner James M. Doran's statement last January to the United Press, in which he says, criticizing the Civil Service Commission, 'The examinations have created a corps of discontents and grafters. These men have been advised by the commission that they failed in the examinations and sooner or later must leave the service. Consequently they are discontented, and many are "selling out."'

"Why would they be selling out unless they were already venal and corrupt? The bureau is at this very moment honeycombed with men who are betraying and ready to betray their trust.

"Commissioner Doran is further quoted as saying of the civil-service examination, 'It is certain to cause discontent and make potential grafters among the rejected personnel.'

"As the New York Times remarks in an editorial, 'Could there be a sweeter testimonial to the virtue of his flock?' Why should the authors and beneficiaries of this corruption remain and keep their ill-gotten appointments in spite of their proved incompetency? Why should they be in a better position than competent outsiders who are able to pass the examinations in which they failed?

"'The results,' says the critics, 'are too uncertain to justify the use of the tests for eliminating employees who have undergone an expensive training course and have met the requirements of their superiors.' The course has indeed been expensive, not only in the money wasted by corruption but in the degraded morality and general lawlessness whose contagion has infected the whole body politic. And now we are told that we must not eliminate in this manner the political hirelings who have 'met the requirements' of their political patrons. These requirments have too often involved not only mere partisan activity but even the willful violation of the law they are sworn to enforce.

"Need it be said that this sort of an argument, whether it proceed from a willful desire to cripple the civil-service system and discredit its advocates or merely from ignorance of the inevitable results of such evil counsel, will be hailed with delight by every political plunderer who is anxious to see the spoils system retained and the deep infamy of the prohibition service indefinitely perpetuated. The views of the man who promulgates such doctrines should neither be indorsed nor followed by those who love the honor of our country."

## FARM RELIEF

Mr. BAYARD. Mr. President, I ask unanimous consent to have printed in the RECORD a very interesting letter from Mr. B. F. Yoakum in relation to the McNary-Haugen bill.

The VICE PRESIDENT. Without objection, it is so ordered. The letter is as follows:

NEW YORK, *April 23, 1928.*

HON. GILBERT N. HAUGEN,
*Chairman of the Committee of Agriculture,*
*House of Representatives, Washington, D. C.*

DEAR MR. HAUGEN: Knowing how sincerely you favor farm relief and how earnestly you have worked to that end, I want to say before the final "die is cast" that many of us who could not support the McNary-Haugen bill hoped that some measure might be reported by your committee that would overcome its objections and put the business of farming on a permanently self-supporting basis.

The present bill, while meeting some of the objections which the President in his veto message of the original McNary-Haugen bill pointed out, is in its basic principles and most important features unchanged.

The "equalization fee," which the Attorney General pronounced unconstitutional, remains. True, an alternative plan is provided, but, as you said in your letter to the Greene County (Mo.) Farmers' Association, the backers of the measure believe that this fee is "the all-essential feature of the bill." I see that you have included a clause that if any one provision is held invalid the remainder of the act shall stand. But as this "equalization fee" is still the backbone of the bill, if that is declared unconstitutional it would be mainly loan legislation.

If the "equalization fee" remains, its collection would not be imposed during high prices; therefore the farmer would be taxed at a time of low prices, when he is least able to bear it. He would have no say as to when this tax would be imposed, as the Federal Farm Loan Board would have the power to declare a marketing emergency and impose the fee, with or without the request of the commodity advisory councils or representatives of the producers. The door is thus opened for the worst kind of tyranny, taxation without representation.

Under the new bill the producers would have no voice whatever in the choice of this board which would control the destinies of millions of farmers. It would be, like various other Federal commissions, purely appointive. Mr. Coolidge would, we may be confident, name men he considered best fitted for the task, but some other Executive might not be so scrupulous. The board would necessarily be political in character and might become an ideal resting place for "lame ducks" and politicians whose alleged friendship for the farmer is their chief stock in trade.

With the equalization fee out the bill becomes principally a matter of loans to cooperative or other corporations. No one more strongly favors cooperation in marketing than I do, but to be effective it must be nation-wide "farm-commodity marketing." In no other way can marketing of crops be controlled so as to establish and maintain stabilized prices. Worthy as they are, the hundreds of scattered cooperatives can not separately accomplish the desired result. They must be brought together and each farm commodity organized on a national basis, controlled and managed by its rightful owners, the farmers.

The bill does not provide for this nor for any effective marketing system national in scope. It does provide for huge governmental loans. At first $250,000,000 was pronounced ample. Now the amount has been raised to $400,000,000, and no man can tell what the eventual limit might be. Government loans and appropriations grow by what they feed on, and this is staggering to begin with, with no benefit to marketing.

The farm bill lobbyists have not sold the McNary-Haugen bill to farmers on its merits; they have sold it to farmers on a false theory. The average farmer has been led to believe that in some way he will get a share of the $400,000,000. It has not been made clear to the average real farmer that the assessment of an equalization fee constitutes a claim against them from which there is no escape.

The bill does not touch the chief cause of the trouble, which is the tremendous spread between the producer and consumer, the immense profits made by dealers in whose interest the bill will work. An efficient nation-wide marketing-control system would remedy this, assuring a larger return to farmers and not raising prices to consumers.
